MAMLŪK STUDIES
REVIEW

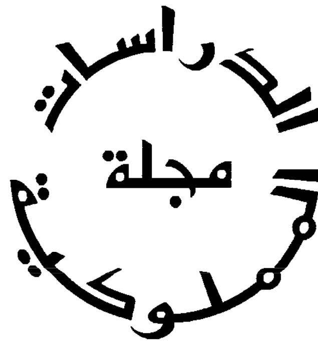
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648-922/1250-1517). The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal will include both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy.

Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page http://www.lib.uchicago.edu/LibInfo/SourcesBySubject/MiddleEast/medoc.html. This site provides a link to the searchable Mamluk bibliography maintained by MEDOC and has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.



ISSN 1086-170X.

David Ayalon, 1914-1998

Reuven Amitai
Hebrew University of Jerusalem

David Ayalon, 1914-1998

On 25 June 1998 Professor David Ayalon, emeritus professor of Islamic history at the Hebrew University, passed away in Jerusalem, after a long illness. David Ayalon is best known for his seminal studies on the nature of military slavery in the medieval Islamic world and the history of the Mamluk Sultanate. At the same time his interests and studies ranged from the beginnings of Islam up to the modern, even contemporary, history of the Middle East. He was also celebrated as a lexicographer: his *Arabic-Hebrew Dictionary of Modern Arabic*, compiled with his friend and colleague Pessah Shinar in 1947, has continued in print for over 50 years and remains a mainstay for the study of Arabic in Israel.

Born David Neustadt in Haifa in 1914, Ayalon (who changed his surname in the late 1940s) spent his childhood in Zikhron Ya'akov and Rosh Pinah. It was in the latter town that he came into extensive contact with local Arab children and his first exposure to the Arabic language. Upon completing his secondary education in Haifa, Ayalon arrived in Jerusalem in 1933 to study at the recently founded Hebrew University. His chosen subjects were Arabic language and literature, Islamic culture, and Jewish history, and he was the first locally-born student in the newly-formed Institute of Oriental Studies (today the Institute of Asian and African Studies). As part of his studies, and encouraged by Prof. S. D. Goitein, Ayalon went off to spend a year at the American University of Beirut. His experiences there became the basis of his first article, ″Some Characteristics of Educated Arab Youth,″ published in Hebrew in *ha-Po'el ha-Tsa'ir* in 1935; in it Ayalon gave a prominent place to the impression made by European fascism on his Lebanese classmates.

Returning to Jerusalem, Ayalon appears to have devoted himself to the Jewish aspect of the medieval Islamic world. In the late 1930s he published in Hebrew two pieces of research in *Zion*: ″Notes on the Economic History of the Jews and their Settlement in Egypt in the Middle Ages″ (1937) and ″On the Office of Nagid in the Middle Ages″ (1939). Subsequently, he turned towards Islamic history, and specifically the study of the Mamluk institution, primarily during the time of the Sultanate. Ayalon′s studies were disrupted by service in the British army during World War II, but at times during these years (1941-45), he was in circumstances which enabled him to return to his work, at least partially. His doctorate was

awarded in 1946. Ayalon had reminisced that relations with his supervisor, L. A. Mayer, were on occasion difficult, and at times even strained. There appears to have been fundamental disagreement on the nature of the Mamluk institution. We can be thankful that Ayalon persevered in his way of thinking.

Although he published his first scholarly work in English in 1946 (still under the name Neustadt), Ayalon's main concerns at this time were not academic. In the years just prior to Israel's independence he worked in the Political Department of the Jewish Agency, which in 1948 became the nucleus of the new Foreign Ministry, Ayalon becoming head of research in the Middle East section. It was around this time that he Hebraicized his surname.

In 1950, he was called back to the Hebrew University by Profs. Goitein and Baneth, and invited to establish a new department of Modern Middle Eastern History. The following year he was joined by the Turkologist Uriel Heyd, who had been serving in Israel's embassy in Washington. These two, together with Gabriel Baer who joined them somewhat later, were the pillars of the Department, today known as the Department of Islamic and Middle Eastern Studies, throughout the 1950s and '60s. Particularly in the first decade, much of Ayalon's teaching load was devoted to modern history: he later joked that he taught the first course in the world on Middle East oil. Ayalon headed the Department until 1956, and from 1953-57 was chairman of the Institute of Asian and African Studies. During these years some of Ayalon's most important studies were published, most importantly, *L'esclavage du mamelouk* (1951), "Studies on the Structure of the Mamlūk Army" (1953-54) and *Gunpowder and Firearms in the Mamlūk Kingdom* (1956). He then commenced his researches on the later Egyptian historian al-Jabartī, and subsequently on his broader considerations of relations between the peoples of the Eurasian Steppe and the Islamic world. Around 1970, Ayalon embarked on a completely new area of research: the Mongol *Yāsa* (law) and its role in the Mamluk Sultanate. He launched an extensive discussion of the nature of the *Yāsa* and its place among the Mongols, which in many ways radically changed the way students of Mongol history view the *Yāsa*. Ayalon's main conclusion, however, was that the role of the *Yāsa* in the Sultanate was much more limited than had been previously thought by both Mamluk writers and many modern historians.

During the fifties and sixties, Ayalon maintained an avid interest in sports, serving for many years as the head of the committee for sports at the Hebrew University. He himself was a sprinter of no mean distinction and up to the mid-sixties was faculty champion at the University in short distant running. In 1966 he married Miriam Rosen, now professor of Islamic art and archeology at the Hebrew University.

In the 1960s and ´70s the Department of Modern Middle Eastern History expanded greatly (changing its name in the process). Many of Ayalon´s students from the fifties to seventies completed doctorates in Jerusalem and abroad, and went on to become the pillars of the various departments of Middle Eastern studies and Arabic language and literature in Israeli universities. Ayalon´s lectures and seminars had a profound effect on two generations of Israeli students of Islamic history, and not just those who wrote dissertations with him or specialized in medieval history. His influence went well beyond academia. It would be safe to say that hundreds of graduates who have served in public service, journalism and education in Israel saw him as their *ustādh*, and this sense of devotion was not limited only to Jewish Israelis.[1]

Ayalon´s works can be divided up into several broad categories. First are those studies dealing with the institutions of the Mamluk Sultanate, primarily military slavery and its interaction with the state. In an indirect way, Ayalon was writing the social history of the Mamluk elite. Many of these studies were of a highly technical nature, while others painted a broader canvas. Secondly, he devoted himself to the history of the development of military slavery in Islamic society, and the crucial role it played for some 1000 years. Related to this were his considerations on the encounter between the Muslim peoples and those of the Inner Asian steppe. This was expressed in a scheme of three stages: (1) Mamluks (from the ninth century onward); (2) Turkish tribes under the Seljuqs (from the eleventh century); and (3) the Mongols (thirteenth and fourteenth centuries). Ayalon was adamant in expressing his view that this centuries-long encounter provides the context, and at times the well-spring, for much of Islamic history and culture. A further area of his investigations was the *Yāsa*, of which mention has been made.

Ayalon´s basic method was shaped by his philological training and early work as a lexicographer. He placed great importance on the investigation of terminology as it was understood by contemporaries. His extensive reading in the sources enabled him to gather disparate evidence, discerning phenomena and patterns in the morass of details. His greatness as a scholar lay in his ability to see beyond the particulars, to which he paid a great deal of attention, and to look at the larger picture. This double nature of his scholarship is found in both his technical studies and his more interpretive essays. Without disparaging the need to look at the trees, Ayalon was also able to see the forest.

In recognition of the importance of his studies as well as his role as an educator, Ayalon was awarded in 1972 the Israel Prize, the highest civilian award

in the State of Israel. He retired in 1983 and some two years later was presented with a jubilee volume (*Studies in Islamic History and Civilization*, ed. Moshe Sharon) in honor of his seventieth birthday. He was a member of the Israel Academy of Sciences and Humanities, an honorary member of the Middle East Medievalists from its inception in 1990, and, in 1997, he was made an honorary foreign member of the American Historical Association.

During his retirement, Ayalon continued his research, which resulted in the writing of *Eunuchs, Caliphs and Sultans: A Study of Power Relationships* (which will shortly be published by Magnes Press). This book was the culmination of his concern, lasting over two decades, with eunuchs and their role in Mamluk military society and Islamic society as a whole, a preoccupation fueled by an on-going polemic with another scholar. This study shows the breadth and depth of his reading in the Arabic sources and the wide horizon of his historical gaze.

Ayalon at times could wage a polemic without restraint and did not always brook dissent from his views. But he was ever generous with his time with colleagues and young scholars, and forever loyal to, and solicitous of, his students and friends. He combined a superb knowledge of Arabic, historical insight, and great learning with wit and a down-to-earth demeanor. He will be greatly missed in the Israeli Arabist and historical community, and among a wide circle of scholars around the world.

″Quis Custodiet Custodes?″ Revisited: The Prosecution of Crime in the Late Mamluk Sultanate*

In 1956, Ann Lambton published her now-classic article in *Studia Islamica*, with its subtitle ″Some Reflections on the Persian Theory of Government.″ [1]While Lambton was not concerned about issues of crime or disruption of public order per se, she confronted the endemic dilemma of accountability for protecting society from criminal acts or upholding public order. Lambton traced the evolution of royal authority in Iran from the post-conquest period to the establishment of the Pahlavi regime in 1925. Her commentary clearly focused on the medieval and early modern eras. The article became a reference standard because, beyond its path-breaking descriptive survey, it posed a question of profound relevance to the evolution of political practice in pre-modern Muslim societies. And in fact, this question is significant for any society that equates its moral integrity with the assurance of political stability: How is the conduct of those who bear responsibility for guaranteeing rule by law itself subjected to the dictates of that law? No temporal authority can force them to do so since nothing but God′s sanction stands over them.

This question is particularly applicable to the Mamluk Sultanate, which was paradoxical in its conception of public duty and obsession with conspiratorial politics. The Mamluk regime was acutely conscious of its obligation to defend the *sharīʻah* in the central Islamic lands. Yet simultaneously, the Sultanate indulged enthusiastically in factional disputes (what Michael Chamberlain has euphemistically described as ″positive *fitnah*″[2]) as the operative medium of its political agenda. Contemporary observers were keenly aware of the contradiction implicit in these divergent tendencies, especially since, in the Mamluk system, *fitnah* was pursued with relish and on occasion erupted into violence that affected

the lives of many outside the military caste. For all its emphasis on guardianship of legal propriety, the Mamluk Sultanate was itself the product of usurpation, with no tradition of legitimacy posited on lineage or descent.

The Sultanate inherited an elaborate administrative bureaucracy from its predecessors that included institutions charged with enforcement of the *sharī'ah* and suppression of criminal acts. The offices of *wālī al-shurṭah* (Prefect of Police) and *ra's nawbah* (Captain of the Guard) loom large in the higher echelons of the ruling oligarchy of Mamluk amirs. Yet, as on-site observers were eager to point out, these officials, formally bound to preserve order and quell disruption, were themselves guilty of undermining order and promoting disruption. Having successfully advanced through a combative political system, the Mamluk oligarchy looked upon disruption pragmatically rather than ethically. They realized that the routine function of civil society was requisite to sustaining its production of commodities and generation of assets the regime tapped for its own support. Society could not endure conditions of endemic insecurity. Their civilian subjects, who bore the brunt of disruption tolerated—if not condoned—by their rulers, also looked upon their vulnerability pragmatically. They did not expect lofty ethics, but they did want stability. How stability was enforced remained the regime's prerogative.

The Mamluk oligarchy was readily disposed (a) to collude with criminal elements if mutual profit was available to both sides, and (b) to ignore or gloss over disorder it did not regard as a menace to its privileged status in society. We shall see that the regime's enforcement of legal principle or suppression of criminal acts was calculatingly selective. The Mamluk oligarchy showed little philosophical antipathy towards disruption or violence. It is in this context that the study examines the process of enforcement, the prosecution of crime by the Mamluk oligarchy during the late Sultanate: specifically, the reigns of al-Ashraf Qāytbāy (872-901/1468-96) and Qānṣūh al-Ghawrī (906-22/1501-16). Why this period? Because I have surveyed the narrative chronicle literature in Arabic for these two reigns, and I have compiled a file of criminal or disruptive acts committed by both civilians and militarists that they recorded. The study's objectives are two: (1) to compare profiles of crime/disruption committed by civilians with those exhibited by the Mamluks themselves; (2) to develop hypotheses about the militarists' conception of criminality. How did they interpret it, as distinct from political disruption? Whom did they regard as culpable and whom did they tolerate? What acts, committed by which individuals or groups, were prosecuted, and concomitantly who were allowed to behave with impunity? If the Mamluk oligarchy did not regard all crime or disruption as meriting prosecution, what rationales are discernible for the distinctions they drew between tolerable and intolerable behavior?

This study is derived from descriptions of crime or disruption committed, prosecuted, or ignored by members of the military elite, primarily in Cairo, in four chronicles: *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr* by Jamāl al-Dīn ibn Taghrībirdī (813-74/1411-69),[3] *Inbā' al-Haṣr bi-Abnā' al-'Aṣr* by Ibn al-Jawharī al-Ṣayrafī (819-ca. 900/1416-95),[4] ″al-Rawḍ al-Bāsim fī Ḥawādith al-'Umr wa-al-Tarājim″ by 'Abd al-Bāsiṭ ibn Khalīl al-Malaṭī (844-920/1440-1514),[5] and *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr* by Ibn Iyās (852-930/1448-1524).[6] These four works constitute the primary narrative (not archival) sources in Arabic for events within the Egyptian capital at this time. They refer frequently to the criminal activity discussed above, but they cannot be interpreted as accurate or replete registers of crime or disruption. On the contrary, their selectivity reveals significant biases in their coverage of such episodes. These biases, effectively an interpretive—or distorting—lens through which we are allowed to observe these writers′ impressions of crime, warrant attention as an important question in its own right.

The preceding issues can be more sharply focused and succinctly addressed if the range of criminal or disruptive acts committed by civilians and militarists are compared. Differences emerged between the behavior of the two classes, and this divergence implies contrasting motives—even for acts that appeared superficially similar. In a previous analysis of civilian crime, the categories of theft and homicide predominated.[7] Incidents of theft were evenly divided between heists by individuals and collective brigandage elaborately planned—in some cases, indicating the presence of organized gangs. Homicides by civilians revealed a diverse set of circumstances, but the prominence of slaves or indentured persons murdering their masters was vividly apparent from the figures that emerged. By contrast, militarists—from recently manumitted recruits to senior officers—were more likely to engage in assaults (against their peers or civilian subordinates), factional quarrels, long-term vendettas, riots, and systematic pillaging (as distinguished from spontaneous thievery). The chronicles commented on these disruptions fulsomely, and yet placed little emphasis on personal motives behind them. That is, in comparison with explanations offered for civilian transgressions or ″crimes of

[7]″Disruptive ′Others′ as Depicted in Chronicles of the Late Mamluk Period,″ paper presented at a conference on *The Historiography of Islamic Egypt* convened by the Department of Mediaeval History at the University of St. Andrews, Scotland, 27-31 August 1997, and scheduled for publication in a volume of its proceedings.

passion,″ the narrative authors seem to have been ill-informed, or indisposed, to speculate on the emotions of individuals within the military class—in the context of describing disruption. That the chroniclers had less access to details about the motives of militarists than for civilians is not credible. Their reluctance to dwell on them thus merits subsequent consideration.

To assume that either theft or homicide figured modestly in militarist crime would be misleading. Among militarists, however, individual thievery appeared less frequently, and was less graphically described, than were acts of pillage by bands of soldiers rampaging through Cairo′s markets or residential districts. And homicides by militarists at all ranks were recounted rather tersely. Their depictions tended not to reflect the passions or sexual frustrations that often characterized reports of murders committed by both free civilians or indentured persons. Quite possibly, the chroniclers could glean such details from registers of open court hearings in which civilian murderers were tried. We shall see that militarists were less likely to be summoned before tribunals, and when they were such proceedings may have been closed to spectators or even to civil jurists. But the consequence of these seeming contrasts in legal accountability was a void of documentation for homicides committed by members of the military elite, regardless of rank.

With regard to cases of homicide by militarists, discernible motives emerged from rivalries between factions, outbursts of rage over presumed insults from subordinates, and simmering anger over stymied access to revenue sources. Eight incidents on the part of amirs or their adjutants were reported. These included the assassination of a Ḥanbalī deputy judge (*nā᾽ib qāḍī*) near the Aydamur Square by a groom (*ghulām*) and his Mamluk patron in Rabīʻ II of 874/October-November 1469. Al-Ṣayrafī, so informative about cases of homicides by civilians, offered no explanation for this murder of a jurist, but merely observed that the Sultan ordered an inquiry.[8] He mentioned nothing about the perpetrators′ punishment. But the same author did describe the fate of a *sulṭānī mamlūk* named Yūnus who belonged to the faction of the deceased Sultan al-Ẓāhir Khushqadam. In Muḥarram of 875/July 1470, this man shot an arrow into a rival during a drunken brawl. Sultan Qāytbāy, still insecure in his position and intolerant of factional disputes that had plagued the capital before his enthronement, ordered this Yūnus cut in half.[9] Qāytbāy was apparently more inclined to gloss over a jurist′s assassination than a shooting that might precipitate a major riot. His action may also have been aimed at appeasing the deceased′s comrades.

Only one of these incidents involved a matter of sullied honor. In Rajab 876/December 1471-January 1472, an officer′s son, unnamed by al-Ṣayrafī, fatally

---

[8]*Inbā᾽*, 149, line 2.

[9]*Inbā᾽*, 193, line 4.

stabbed a woman who owed him an indemnity, secured (apparently) by court order, for an act of infidelity with a groom. Whether the woman was the *walad nās*′s wife and the groom was bound to his service, al-Ṣayrafī did not specify. Yet he did note that the perpetrator went openly out to the street brandishing his blood-spattered dagger with no attempt to conceal his act. No sanction against him was mentioned.[10]

During Qānṣūh al-Ghawrī′s reign, his ambivalent chronicler recounted homicides by amirs to underscore the Sultan′s indifference to their prosecution. Ibn Iyās mentioned the escape of al-ʻĀdil Ṭūmānbāy′s assailant from prison (Ramaḍān 910/February-March 1505), an affair that ended in his pardon and honorable exile.[11] In Muḥarram 913/May-June 1507, al-Ghawrī did preside over a hearing to investigate the fatal beating of a boatman (*nūtī*) by the grand amir Arizmak al-Nāshif. When the boatman refused to pay a debt Arizmak claimed of him, the amir responded violently. The incident was presumably considered at the plea of the mariner′s sons during a *maẓālim* audience. Ibn Iyās stated that al-Ghawrī, preoccupied with other matters, dismissed the case by paying the victim′s sons a (trifling) indemnity.[12]

The remaining cases involved an assault upon the Sultan′s postmaster (*bardadār*) that went unsolved,[13] the killing by a valet in the service of al-Ghawrī′s nephew and successor, al-Ashraf Ṭūmānbāy, of his young apprentice,[14] and the strangling by the Sultan′s second chamberlain of his own executive adjutant (*dawādār*) following a drunken dispute.[15] The notice of the apprentice′s death merits quoting for the Sultan′s adroit deflection of a risky prosecution:

> In Shawwāl 915/January-February 1510, a person named Barakāt, valet (*farrāsh*) to the Amir Ṭūmānbāy al-Dawādār, murdered one of his apprentices, a handsome youth. When this Barakāt and his accusers were summoned before the Sultan, he referred them to the Mālikī chief *qāḍī*. When the latter learned that Barakāt was a valet of Ṭūmānbāy′s, he suspended judgment of the case. He ordered Barakāt incarcerated until evidence of his guilt was found. Soon thereafter, one of Ṭūmānbāy′s couriers (*sāʻī*) also committed homicide—this time against al-Shuqayfātī, an aged shaykh. When the courier was brought before the Sultan, who learned of his

> connection to the *dawādār*, he again referred him to the *sharīʿah* court. The courier's indictment was similarly suspended because no one came forth to testify against him. He had done the deed in broad daylight after noon in the Wakālah of al-Ashraf Barsbāy . . . . Thus, the victim's relatives and children received no satisfaction. Final judgment rests with God.

Al-Ghawrī's placement of these cases in the hands of a judge who owed him his appointment should not be dismissed simply as the craven (or prudent) behavior of a subordinate protecting his job, not to mention the innocuous jurisdiction of the civil court over criminal matters. Al-Ghawrī could not afford to irritate his popular nephew upon whose loyalty he depended. Ṭūmānbāy enjoyed the respect of both officers and troops that al-Ghawrī never managed to inspire. But Ibn Iyās probably brought up these incidents to highlight the consternation of the victims' families over unrequited justice, which he attributed to al-Ghawrī's opportunism.

Eleven homicides, by or upon soldiers, were reported. Only one case occurred during Qāytbāy's reign, in which a *sulṭānī mamlūk* was found stabbed to death on the Citadel ramp by worshippers making their way to morning prayer.[16] No further details were noted, except the unknown identity of his attackers. Of the incidents during al-Ghawrī's reign and Ṭūmānbāy's regency, several revealed frustration on the part of recruits awaiting an *iqṭāʿ* assignment. The starkest example occurred in Dhū al-Qaʿdah of 912/March-April 1507.[17]

> A veteran *mamlūk* of advanced age ascended to the Citadel at the hour of morning prayer, on the day in which stipends (*jāmakīyah*s) were distributed. When he reached the ramp, three recruits set upon him, killing him with stab wounds to the belly. He died immediately. They also assassinated his slave who accompanied him bearing his uniform that he donned upon entering the Citadel. The retiree possessed an *iqṭāʿ*. He had been ill and when his condition worsened, the three recruits demanded his allotment. The Sultan replied: "Await his death and then assume it." But the veteran . . . recovered and thus suffered assassination upon his arrival at the Citadel at the hands of these recruits furious over his revival. The upshot of all this was the Sultan's bestowal of the *iqṭāʿ* upon other soldiers.

---

[16]*Badāʾiʿ* 3:217, line 8.

[17]*Badāʾiʿ* 4:107, line 11.

This incident sheds light on tensions that led to draconian means of restoring assets hoarded by retirees to individuals on active duty, and as such may suggest a phenomenon more widespread than a case Ibn Iyās linked to murderous recruits and his sovereign's duplicitous disposal of it.

But Ibn Iyās reserved his most egregious denunciations for homicides resulting from caste arrogance. Two cases illustrate his rancor:

> On Tuesday the seventh (of Muḥarram 919/15 March 1513), Qurqmās al-Muqri' was accused (of connivance) in the murder of a *mamlūk* and his spouse. The cause: the *mamlūk* had been living near the . . . hospital in the Kaḥl Alley. His groom and black slaves had assailed this *mamlūk* and his wife with swords . . . , claiming that they (their victims) were robbers. They struck the woman and her husband, and cut off their daughter's ears to get her earrings. The girl died that night. At dawn, the woman and *mamlūk* were discovered badly wounded. They were said to bear sixteen sword strokes. They were placed on stretchers (*aqfās*) and conveyed to the Sultan. The *mamlūk* and his spouse told him: "We have been wronged by Qurqmās al-Muqri' and his servants." This *mamlūk* was dwelling near Qurqmās's residence in the Kaḥl alley. Upon ascertaining the truth of their account, he cast Qurqmās in irons and put him in the *wālī*'s custody, along with his servants . . . .[18]

But "soon thereafter, the Sultan demurred on this case . . . taking no cognizance of the complaint of the *mamlūk* and his wife . . . . Their daughter had died following her mutilation . . . . Thus do the victims pay for the guilty." Was Ibn Iyās's detailed summary of this flagrancy an accurate example of criminal justice by Qānṣūh al-Ghawrī? We cannot know since his version cannot be checked against a court register.

But despite Ibn Iyās's more positive attitude toward al-Ghawrī's regent, Ṭūmānbāy, he did not ignore an incident of blatant assault on a civilian, albeit the only such case reported:[19]

> During the Sultan's absence, one of his *mamlūk* recruits intended to buy grain from a ship on the Nile shore. . . . He could locate no porter to transport it, so he apprehended a peasant (*fallāḥ*) from Upper Egypt with a donkey and sack. The *mamlūk* seized the donkey and sack but the farmer refused to give them up. The *mamlūk*

[18]*Badā'i'* 4:296, lines 7, 22.

[19]*Badā'i'* 5:50, line 12.

> struck him a violent blow to the head, causing the blood to flow. The farmer fell into the river, fainted and drowned. Thereupon, the populace assaulted the *mamlūk* and conveyed him to the house of the *dawādār*, viceroy of the absence (Ṭūmānbāy). There, he was put in irons and sent to the *wālī* who imprisoned him to await the Sultan's return. When the *mamlūk*'s comrades learned of this, they marched upon the *dawādār*'s house. They found him away repairing the Fayḍ causeway damaged by flood. The comrades were told that this *mamlūk* who had committed murder had been sent by the *dawādār* to the *wālī*. A large number of recruits then descended from the barracks and proceeded to the *wālī*'s residence, released the *mamlūk* . . . and threatened to arson the structure. The *dawādār* thus dropped the charge of homicide and tension subsided.

This case was presented in terms of a recruit's sense of superiority over a civilian of the lowest social level: a Ṣa'īdī peasant. Ṭūmānbāy's dismissal of charges against him occurred only in the prospect of a severe riot on the part of the recruit's fellows, whose class solidarity alone determined their priorities of justice. Although the affair contradicted the *dawādār*'s own scruples, he took a decision that probably headed off more widespread suffering. But was this case representative of settlements in incidents of homicide against civilians by militarists generally? Ibn Iyās would likely have wished to leave this impression, but in the absence of corroborative, and more impartial, archival evidence one is left uncertain.

Many assaults and altercations between militarists appeared in the chronicles, but only four cases involving officers, five involving soldiers, were discussed in the context of behavior that should have warranted at least a reprimand. Two of the incidents implicating amirs were noted by al-Ṣayrafī, his depiction of the intense reprisals for them serving as rationale for disclosure of deceit or greed on the amirs' part. The first occurred on the sixteenth of Ṣafar 875/14 August 1470. The market inspector (*muḥtasib*), a senior officer, brutally flogged a fig seller who was subsequently pilloried above his shop.[20] After honey was daubed on his body, he was left to hang in the sun enveloped by a swarm of stinging insects causing him "torment beyond description." Only when Qāytbāy's esteemed confidential secretary, Ibn Muzhir, noticed the fig seller's appalling state was he released. Al-Ṣayrafī hardly condoned such heinous demeaning of a human being. But he offered an explanation, if not a justification, for the *muḥtasib*'s wrath. This fig seller apparently oversaw a price fixing network, in which vendors of foodstuffs routinely charged customers one *dirham* per *raṭl* above the rate set by the *muḥtasib*.

---

[20] *Inbā'*, 203, line 11.

One wonders whether the inspector was outraged more by the price-fixing or by the possibility that he had not been included in the network′s illegal take. I discovered many similar incidents of price-tampering in the chronicles, but nothing that provoked a reprisal like this. Whether the fig seller′s ghastly fate set an example that effectively curbed future price-fixing ventures cannot be ascertained, but one suspects that they continued.

The second episode took place on the twenty-ninth of Rabīʿ II of the same year/25 October 1470. A *mamlūk* in Qāytbāy′s service was flogged and imprisoned for punching the prefect (*walī*). He was summoned from detention in the house of the majordomo (*ustādār*) in walking shackles and fined 18,000 *dīnār*s, a sum he disclaimed by stating: ″I have nothing but my soul (*rūḥ*) to offer.″[21] Eventually the *kātib al-sirr* Ibn Muzhir interceded for his release, although the matter of his fine was left to the majordomo to recalculate. The severity of the *mamlūk*′s punishment may have stemmed from his audacity at striking a superior in rank, although the Sultan′s propensity to confiscate hoarded assets even from his own soldiers cannot be ruled out.

Assaults on the part of troopers could rapidly degenerate into mob violence, especially if perpetrators went unchastised for their behavior. Sultan Qāytbāy secured his reign by responding quickly to such behavior with public floggings of his own recruits.[22] Following a street brawl during which black slaves attacked civilians in the aftermath of a revolt by recruits in late 872/June-July 1469, the prefect ordered their lashing and dismemberment.[23] Al-Malaṭī noted that when their owners—many of whom were notables—sought their release, most were rebuffed and received their property back only after punishment had been meted out. Confronting endemic hostility from his recruits, Qānṣūh al-Ghawrī was compelled to allow many of their assaults to go unreprimanded. The most unsettling incident occurred in Jumādá I 917/July-August 1511. An eminent *walad nās* who belonged to the family of Qāytbāy′s widow, Fāṭimah al-Khāṣṣbakīyah, was watching a (mock?) battle between street gangs (*zuʿar*) from a rooftop near the Sunqur Bridge.[24] His son and two hundred other observers had crowded onto the roof. A band of *mamlūk*s attacked them and during the fracas, the roof collapsed, killing the structure′s owner within. Seventeen persons perished in the rubble and many more were injured—including the *walad nās* and his son. Despite their rank, Ibn Iyās mentioned no sanction against the soldiers who had leapt up onto the roof. Only after al-Ghawrī′s death in battle at Marj Dābiq did his regent Ṭūmānbāy restore Qāytbāy′s policy of strict reprisals to head off full-scale riots. In Shāʿbān

[24]*Badāʾiʿ* 4:232, line 20.

922/August-September 1517, Ṭūmānbāy admonished the barracks commanders to lock up their recruits following their assaults on Anatolian merchants. The troops had sought revenge against them for their patron′s devastating humiliation in Syria by the Ottomans.[25]

When riots did erupt, they represented a violent intensification of the recruits′ ire over withheld rations (often sold on the black market), unpaid bonuses or orders to prepare for a war abroad. Incidents considered here specified criminal acts committed under the guise of a general melee. Of eleven such cases, the riot of 11 Muḥarram 916/21 April 1510 caused the most damage.[26] Following a delay in meat rations and al-Ghawrī′s refusal to pay a bonus (*nafaqah*) of one hundred *dīnār*s per man, the recruits apprehended several senior amirs and forced them to negotiate their stipends with the Sultan. When he remained adamant, the recruits claimed they would glean their bonuses from the merchants and fell upon Cairo′s markets. Typical in such events, grooms and black slaves exploited the chaos to join in the mass thievery. When irate merchants presented bills for damages to al-Ghawrī′s street-wise *muḥtasib*, al-Zaynī Barakāt ibn Mūsá, the total came to 20,000 *dīnār*s from 570 pilfered shops. The specter of *julbān* rioting loomed over Cairo in the late Sultanate. Although the chroniclers acknowledged the troops′ justification from their perspective, they denounced arson, homicide, injury, and rapine as the criminal legacy of these affairs. Losses in terms of goods or money were not condoned, but were nonetheless expected as the consequence of frustration by those possessing a monopoly of military force.

As noted above, thievery committed by individuals already privileged in Mamluk society revealed patterns of behavior that contrasted with theft by civilians. Motives for seizing property differed because of the contrasting perspectives of the perpetrators. And proclivities for reprisal also differed markedly. Civilians were most likely to be pursued and punished severely if they trespassed upon militarist space by robbing assets held by the ruling caste or its senior members. Militarists, on the other hand, possessed more leverage to adjudicate their way out of reprisal. No cases of individual thievery on the part of amirs emerged in the narrative sources, but one dramatic example of mistaken blame occurred. In Rajab of 915/October-November 1509, the amir Qurqmās al-Muqri', already discussed, was robbed of 1000 *dīnār*s stashed in his house. Rounding up all those who lived in the quarter, he had the prefect question them abusively until they yielded a sum in excess of his loss.[27] Subsequently, the theft was discovered to have been an ″inside job″ committed by one of Qurqmās′s own *mamlūk*s. The shake-down

[25]*Badā'i'* 5:82, line 10.

traumatized several civil notables resident in the district. The thief, arrested in Mecca by the pilgrimage commander some months later, confessed to the crime upon interrogation in Cairo but could make no restitution since he had spent the money. After Qurqmās's neighbors petitioned al-Ghawrī, the Sultan summoned the amir and forced him to pay them back. Ibn Iyās noted that al-Ghawrī was already rankled by Qurqmās's heavy-handed ways and may have exploited this incident to curb his arrogance.

Individual thievery by troops was so seldom reported by the chroniclers that their credibility must be suspected. The cases that did attract the attention of one, Ibn Iyās, pointed to repeat offenders whose acts outweighed their martial utility in the Sultan's eyes. One such recruit so angered Qāytbāy that he ordered both his hands cut off and, annoyed by an amir's intercession, demanded that the soldier's feet be removed as well.[28] Late in his reign, Qānṣūh al-Ghawrī's attention was distracted from preparations for his expedition against the Ottomans by the predation of a recruit named Jānim al-Ifranjī. This individual exploited the security void left by the *sulṭānī mamlūk* guard who had already departed for Syria. The Sultan ordered "district chiefs" (*arbāb al-idrāk*) to arrest the *mamlūk* and execute him on the spot. He was eventually captured near Bilbays where he was hanged from a tree.[29]

The chroniclers were hardly reticent on the ubiquity of pillaging by troops. Incidents of seizure of assets by marauding recruits were the most frequently recounted criminal acts: thirteen cases distinct from troop revolts. Those considered here were chosen for their occurrence apart from troop revolts. The latter should be interpreted as part of the Mamluk political process. Pillaging certainly might be stimulated by political conditions. The assaults against the palace of Amir Qānṣūh Khamsmi'ah during Qāytbāy's declining months were inspired by the troops' perception of his conspiracy to assume the Sultanate.[30] When the recruits ransacked Qānṣūh's home, they were already acting on precedent. Ibn Iyās claimed that pillaging intensified when the soldiers believed their predation could occur with impunity. To his knowledge, the troops tested this kind of defiance against the regime for the first time in 887-88/1482-83. The signal event erupted on the tenth of Jumādá I 888/16 June 1483, when a gang of *julbān* torched the house of Amir Barsbāy Qará.[31] They then stole precious carpets from two *madrasah*s in its vicinity. The *julbān* bore a grudge against Barsbāy because one of their comrades had disputed with a cloth merchant over the purchase of expensive Ba'labakkī

[30]Ibn al-Ḥimṣī, "Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān," Istanbul MS Feizullah 1438, fol. 157a, line 5; 157b, line 10; *Badā'i'* 3:309, line 15.

[31]*Badā'i'* 3:202, line 11.

fabric. When the recruit made off with the cloth without payment, the merchant complained to Barsbāy—who was then captain of the guard. Barsbāy summoned the offender and had him flogged. Upon learning of his punishment, his comrades turned on the *ra's nawbah.* Ibn Iyās stated that the *julbān* ″intended to burn the cloth market and settle the score once and for all with its merchants. The situation was grave and the entire city unsettled. But the Atābak Azbak mediated between Barsbāy Qará and the recruits to arrange a truce. Calm was restored.″

The truce was only temporary, it would seem, since the recruits learned from this precedent and held Qāytbāy′s eventual successor, al-Ghawrī, hostage to the threat of pillage throughout his reign. This incident clearly stood as a criminal act in Ibn Iyās′s judgment. Yet he regarded it as much more significant than an act of simple thievery: a pivotal development that marked the transformation of the Mamluk army from a disciplined service unit to an implacable interest group. Since no documentation of the *julbān*′s views about this incident is available, we are left with the chronicler′s appraisal as a negative indictment of the entire Mamluk system in its later years. The recruits quite probably would have pointed to their own sense of progressive degradation and lapsed support on their patron′s part.

If pillaging was the *julbān*′s crime of choice, and the most profitable to them, acrimony among peers emerged as their superiors′ favored disruption. Circumstances behind the initiation of disputes between senior amirs differed widely. Few were instigated solely by feelings of slighted honor, but often erupted because of covert ambitions that the quarreling parties saw their opponents thwarting. The chroniclers interpreted quarrels as criminal if they became prolonged vendettas that supplanted the amirs′ formal duties and disrupted mundane functions of society. Of the innumerable incidents of acrimony between amirs, I counted thirteen such cases. One of the most interesting occurred in Jumādá II 875/November-December 1470. The inspector (*kāshif*) of Gharbīyah Province, ʻAlā' al-Dīn ibn Zawayn returned from an expedition to curb bedouin raids with the flayed skin of a defeated chief: ʻAbd al-Qādir ibn Ḥamzah.[32] The inspector had it stuffed with cotton and displayed as a mannequin. This ʻAbd al-Qādir apparently had established client ties with another grand amir, Timrāz al-Shamsī, who found his bedouin associate′s display in the procession repugnant. When the inspector′s entourage reached the *dawādār* Yashbak min Mahdī′s house, Timrāz forced entry and assaulted Ibn Zawayn. Al-Ṣayrafī noted that Yashbak may not have been aware of their altercation, that presumably complicated the government′s attempts to quell bedouin brigandage in its rich Delta provinces.

---

[32]*Inbā'*, 232, line 17.

The dispute between officers of the highest rank that boded most ominously for future disruption flared for the first time in late 896/October 1491. The Amir Qānṣūh Khamsmi'ah, then chief fodderer (*amīr akhūr*), and Aqbirdī, who succeeded Yashbak as *dawādār*, clashed because of a perceived protocol slight.[33] This acrimony over a transparently trivial insult obviously triggered latent hostilities between the two ambitious officers, who each recognized that the other harbored designs on Qāytbāy's office. As the Sultan's strength ebbed in his last years, the dispute between these two matured into a bloody vendetta the chroniclers lamented as a revival of strife they had hoped Qāytbāy's reign would have alleviated. That neither amir would succeed in duplicating Qāytbāy's achievement did not diminish the potential for arson, chaos, and pillaging that their confrontation inflicted on the capital over several years. And from Ibn Iyās's jaundiced point of view, an orderly succession that might have secured the succession for Qāytbāy's son, al-Nāṣir Muḥammad, could have prevented the dark horse Qānṣūh al-Ghawrī from attaining the Sultanate. The threat of a personal quarrel between two individuals escalating into a vendetta burdening the lives of thousands therefore constituted for the chroniclers one of the most egregious crimes committed by those duty-bound to uphold order and promote public welfare.

Not all quarrels came across as the harbingers of future trouble. Ibn Iyās related one dispute as darkly humorous, albeit tainted by disclosure of illicit activity. In Dhū al-Ḥijjah 914/March-April 1509, the grand chamberlain Anaṣbāy clashed with Nawrūz, one of the *muqaddamūn.* The chamberlain had intended to shut down a house of prostitution located near Nawrūz's residence.[34] The property had belonged to the former Atābak Azbak. When Anaṣbāy's *dawādār* arrived to disperse the prostitutes he encountered Nawrūz's grooms and black slaves. The *dawādār* and his entourage were severely beaten and driven off. When Anaṣbāy learned of his secretary's mishap, he rode to the house in a rage, thrashed the prostitutes and paraded them through Cairo on donkeys. Nawrūz then complained to al-Ghawrī, who, instead of giving him satisfaction, rebuked him verbally and backed his chamberlain's action. Nawrūz had probably extended his protection to a profitable enterprise in return for a share of profits. Qānṣūh al-Ghawrī wished to show himself a defender of moral probity and took Anaṣbāy's part.

Ranking second in frequency to vendettas, incidents of embezzlement or fraud were reported by the chroniclers as the exclusive preserve of senior amirs and

their civilian adjutants. These affairs indeed appeared consistently as collusive enterprises. Senior officers entered into lucrative arrangements with civilian officials charged with judicial or fiscal responsibilities, the former lending enforcement muscle to their colleagues' designs. These affairs were covert, and reached the chroniclers' notice only when one of the parties became disgruntled or outsiders saw themselves adversely affected and disclosed them. Some cases may seem trivial, as with an incident that occurred in Rabīʿ I 874/October-November 1469. The *wazīr*, Qāsim Shughayṭah, one of the most adroit bureaucrats of Qāytbāy's reign and a confidant to the *dawādār* Yashbak, detected receipt of livestock from Upper Egypt (primarily sheep according to al-Ṣayrafī) by the Sayfī amir Qānṣūh Aḥmad al-Īnālī, on which no impost (*maks*) had been paid.[35] The *wazīr* confiscated the livestock even though the amir accosted him physically. The *wazīr*'s defiance of a powerful officer was risky, but may have stemmed from his connection to an even more influential patron, the *dawādār* himself. Yashbak min Mahdī had staked out virtually absolute proprietorship over fiscal matters relating to Upper Egypt. He was not disposed to tolerate competition from rival amirs. The *wazīr* Qāsim appealed to him after the abuse he received at Qānṣūh's hands. Yashbak stood behind his adjutant and may have appropriated the livestock himself.

A subsequent event, of more widespread notoriety, lends credibility to the preceding hypothesis. Less than a year later, on 1 Muḥarram 875/30 June 1470, a procession composed of senior amirs rode from the Citadel to Yashbak's residence.[36] At its head were two of Qāytbāy's highest-ranking colleagues: the Atābak Azbak and the *ra's nawbah*, Īnāl al-Ashqar. They came bearing a subpoena demanding a full account of Yashbak's finances relative to Upper Egypt. The *dawādār* disdained to receive the delegation, which nonetheless claimed that he owed the *dīwān*s *al-mufrad* and *al-dawlah* no less than 250,000 *dīnār*s, not counting livestock or slaves. Yashbak ultimately insisted that he had reached a personal understanding with Qāytbāy over what he owed to the Special and Privy Bureaus. But al-Ṣayrafī reported that Qāytbāy appointed the *ustādār*, Ibn Gharīb, and the *wazīr*, Qāsim, to inventory the *dawādār*'s receipts from Upper Egypt every month for the indefinite future. Whether Qāsim found this duty hazardous in light of his tie to Yashbak al-Ṣayrafī did not recount.

A decade later, al-Ṣayrafī commented at length on a complicated case in which the sitting Ḥanafī chief *qāḍī* was implicated for accepting bribes from the *ustādār*, Taghrībirdī, who had served as treasurer to the former *dawādār*, Yashbak.[37] The precise circumstances behind the case, initiated as a complaint against the

---

[36]*Inbā'*, 186, line 10.
[37]*Inbā'*, 502, line 15.

ustādār before the *qāḍī* himself, are elusive in al-Ṣayrafī′s summary. But he elaborated on precedents for judges accepting bribes from senior officers in return for dismissals of charges or favorable decisions in court. Al-Ṣayrafī′s remarks listed accusations against the *ustādār* for fiscal malfeasance and neglect of formal duties. The incident disclosed probable collusion between a senior jurist and an officer high placed in the oligarchy. It also revealed active participation in litigation over administrative matters by the *sharī'ah* courts.

Other prominent cases involved a *muḥtasib* condoning price-fixing,[38] a delegation of merchants from Alexandria protesting their governor′s corruption,[39] a guard captain′s impounding and forced sale of waqf properties,[40] and an *ustādār* who collected a special (possibly illegal) ″protection″ tax (*ḥimāyah*) from both wealthy civilians and militarists.[41] The sultans′ efforts to curtail their subordinates′ dealings were marginally effective. Only the *ustādār* who extorted the protection money was actually arrested, most likely because he offended members of his own peer group. Ibn Iyās noted that when the *muḥtasib* was flogged for negligence, he allowed marketeers and grain speculators even more leeway to fix prices. The bribes he received from them in return presumably saw no decrease, especially since no mention was made of his dismissal.

References to crimes committed by civilians on their own rarely involved embezzlement or fraud. All of the preceding cases implicated civilians in tandem with militarists as joint perpetrators. All held positions that gave them opportunities for illicit procedures. For corruption of this kind to succeed, it would seem to have required fiscal expertise and political clout of the respective parties. But the exclusivity of culpability attributed to militarists in these corruption cases by the narrative authors once again raises the issue of source bias. Can we assume that responsibility for such corruption was solely the prerogative of these client-patron teams? Or did the chroniclers select their examples to depict these crimes as a burden inflicted on society by the military overclass and its civilian subordinates? The latter remains a distinct possibility, a distortion so far irremedial for lack of archival documentation.

In marked contrast to the profile of transgressions reported for civilians, very few crimes of turpitude or sexual license were linked to members of the military class. The narrative writers alluded to a mere seven cases in these categories, and with one exception, all implicated recruits rather than officers. They were: two incidents of rape, one allegation of poisoning, two of unsanctioned marriage, and two of public intoxication. The chroniclers described the rapes most vividly, if

[41]*Badā'i'* 4:390, line 13.

succinctly. The first occurred in Dhū al-Qaʻdah 895/September-October 1490. In a brief entry by al-Sakhāwī in his *Dhayl*, he mentioned that a *mamlūk* transferred from Syria (Damascus?) violated a woman to whom he was betrothed but not formally wed.[42] Fleeing Qāytbāy′s arrest warrant, the *mamlūk* attempted to escape to Upper Egypt but was apprehended, flogged and cast into the Maqsharah Prison where he expired the next day. The second incident took place in Rabīʻ II 916/July-August 1510. On the Maqs road three Mamluk soldiers attacked a group of women wearing bridal attire.[43] One woman managed to escape but the others were taken to the soldiers′ stables. When news of the assault reached the *wālī*, he captured the three offenders and brought them before al-Ghawrī, who lashed them to the point of death. Since the soldiers committed this rape on the day when troops drew their monthly pay, al-Ghawrī directed the *kātib al-mamālīk* to turn their stipends over to their victims in compensation for their violation. Each woman received 2000 *dirham*s.

While only a pernicious rumor, the allegation of poisoning was sufficient to cause the individual implicated some discomfiture. In Rajab 884/September-October 1479, the *julbān* became convinced that the *dawādār* Yashbak had murdered his rival, Jānim, in this fashion.[44] To avoid provoking their riot, Yashbak was forced into seclusion away from audiences in the Citadel for several days. The illicit marital affairs were interesting because of the conditions of service they compromised. In Shawwāl 875/March-April 1471, Qāytbāy ordered one of his purchased *mamlūk*s beaten for eloping without his consent.[45] The *mamlūk* had departed his barracks with nothing but his uniform and horse. Al-Ṣayrafī mused about the Sultan′s wrath over this incident. Since the *mamlūk* had been manumitted, he could not be prevented from concluding the marriage. But Qāytbāy stripped him of his rank and privileges, and refused to allow his residence in Cairo as a private subject. The Sultan remanded him to Aleppo under the custody of the merchant who had sold him originally. Qāytbāy′s ire over unapproved marriages flared again fifteen years later when he prohibited judges or witnesses from contracting any weddings for his own *mamlūk*s.[46] Ibn Iyās noted that the soldiers refused to abide by their patron′s decree, and continued to marry against his orders. Marriage of course divided a trooper′s loyalty to his sovereign, particularly if his spouse belonged to the civilian elite. Marriage provided the spouse′s relatives opportunities for influence within the military class. From the Sultan′s point of

[43]*Badāʼiʻ* 4:187, line 21.

[44]*Badāʼiʻ* 3:157, line 22.

[45]*Inbāʼ*, 275, line 6.

[46]*Badāʼiʻ* 3:217, line 5.

view, in-service marriages diminished his *mamlūk*s′ reliability. Whether the chroniclers regarded these elopements as criminal acts is unclear, but the ruler interpreted them as an affront to his authority of ownership. Yet his attempts to prevent such unions proved ineffective, suggesting the troopers′ autonomy in their personal relations whatever their patron′s reaction.

The incidents of intoxication were mentioned in the context of individual waywardness or violated religious proscriptions. The first occurred during Ramaḍān of 895/July-August 1490 when the *wālī* arrested several *mamlūk*s from Anatolia who had been caught drinking wine in broad daylight.[47] They had sullied the fast with a forbidden substance. The prefect had them flogged, paraded through the city, and imprisoned. The second involved the drowning of one member of the Sultan′s elite guard (*khāṣṣakī*s) who had attempted to swim across the main channel of the Nile to the central island while drunk.[48] Ibn Iyās mentioned the case only to note the khāṣṣakī′s reputation, which he claimed merited little praise.

These meagerly recounted incidents do not compare with the copious and lurid details provided for similar transgressions by civilians. The narrative authors were more laconic in their descriptions. And only one amir was implicated, albeit the one on whose insatiable ambition and ruthless persecution of rivals the chroniclers concurred. Yashbak′s involvement with poisoning was never proved. Those actually convicted of immorality or sexual assault belonged to lower ranks of the military elite. They were punished for their acts—severely. The paucity of these cases, and the intensity of reprisals meted out, mutually point to the incidence of prosecution as the motive for the chroniclers mentioning them.

The chroniclers′ silence about officers implicated in such crimes suggests more about their ability to deflect reprisal than their unblemished character. This minuscule sample, in comparison to the multiple references to quarrels, riots, pillaging, embezzlement, and fraud, cannot be taken as more than an indication of reprimands inflicted to set an example. What the contrasts in profiles of crimes committed by civilians and militarists do imply are differences in receptivity on the part of those who recorded their criminal activities. One has no reason to assume that civilians were less prone to embezzlement than militarists, although their opportunities for profit from it may have been more restricted. Nor is there reason to assume that militarists were less susceptible to crimes of passion or deviance than civilians. But the narrative writers seem to have been inclined to dwell on their fiscal or political improprieties rather than on their moral lapses.

Looking at these profiles more broadly, one notes the prominence of indenture as a motive for acts of individual violence, while unrest among *mamlūk* trainees chafing under their patrons′ dominance seems to have spurred their most devastating

[47]*Badā'i'* 3:273, line 22.

[48]*Badā'i'* 4:133, line 2.

disruptions. Slaves and bonded persons appeared as the most salient class of murderers, although references to mobs of black slaves seizing the chance offered by their superiors' riots to engage in mob plunder figured significantly in the chroniclers' depictions of crime. The patterns of crime that emerged implied that perceptions of poverty cut across class lines, with *mamlūk* trainees equally apt to regard themselves in penury as were civilian street gangs.

The lens through which a contemporary observer can glimpse these acts powerfully influences the impression he or she may discern of crime in urban society under Mamluk rule. The contrasts between patterns of criminal activity discussed here cannot be interpreted as credible indicators of what actually was happening, by whom or how frequently. Yet these contrasting patterns do reveal the priorities of those who depicted the cases we are allowed to see. What these writers elected to include provides a measure of their own values, ethical and social, and their scale of criticisms heaped on a regime that oppressed their society. Were the guardians disposed to police themselves? Ann Lambton did not think so with respect to her reading of treatises on government in medieval Persia. Chroniclers of the Mamluk Sultanate in its final decades acknowledged self-discipline on the militarists' part when it occurred. Yet the impression one takes away from their choice of crimes and perpetrators is of vulnerability by the civilian majority compelled to abide the indiscipline of those who sapped their assets. And when the ruling elite chose to rein in its wayward members, it did so primarily when its own hegemony was perceived as compromised, or its honor sullied. This is the enduring message that the narrative sources of the late Mamluk period convey most convincingly.

Mamluk Art and Architectural History: A Review Article*

Introduction

With the publication of a splendid full color luxury book by the noted team of Henri Stierlin and Anne Stierlin, the study of Mamluk art and architecture has finally made it into the Big Time.[1] The Stierlins, who have previously brought us books on Islamic architecture, Mughal architecture, Ottoman architecture, and the Alhambra, have now brought us the first affordable ($59.50) coffee-table book on Mamluk art and architecture. Dramatic long shots compete with exquisite details for the viewer′s attention which, in the tradition of architectural photography, is rarely, if ever, distracted by the presence of people, apart from the picturesque natives populating reproductions of David Roberts′s nineteenth-century lithographs. The stunning photographs of Mamluk buildings and objects will explain to even the most sceptical audiences why Mamluk art has had its devotees for over a century; the text, infelicitously translated from the French, is mercifully brief and appears oblivious of the content (although not the titles) of recent scholarship on the subject.

Now that Mamluk architecture has its picture book, it seems an especially appropriate time to undertake the daunting invitation by the Mamluk Studies Workshop to review recent work on Mamluk art and architectural history. Unlike most contributors to this learned journal, I do not consider myself a specialist in Mamluk anything; I have, however, over the last fifteen years written on, edited, and reviewed general and specific aspects of Mamluk art and architecture.[2] I have therefore approached this invitation not from the perspective of Mamluk studies but from that of a historian of Islamic art and architecture, with a particular—but

My first published article was on Mamluk architecture: ″The Mosque of Baybars al-Bunduqdārī in Cairo,″ *Annales islamologiques* 18 (1982): 45-78; see also my ″A Mamluk Basin in the L. A. Mayer Memorial Institute,″ *Islamic Art* 2 (1987): 15-26.

by no means exclusive—interest in the art of the Mediterranean Islamic world. While specialists in Mamluk art may find something of interest in the following remarks, I have intended them as an introduction, guide, and survey for the broader audience of this journal's readers. The increased interest in all aspects of Islamic art over the last two decades has led to an explosion of articles and books on the subject. It is therefore impossible to address all the literature on Mamluk art, and this survey makes no pretense to completeness. Searches in the on-line Mamluk bibliography maintained by the University of Chicago Library, for example, produced nearly one thousand "hits" for the subjects "architecture" and "arts," and the list is admittedly incomplete.

The arts of the Mamluks encompass architecture and the "decorative arts" (for want of a better term) produced between 1250 and 1517 in Egypt, as well as in parts of Syria and Arabia. The evidence comprises hundreds, if not thousands, of buildings surviving *in situ*, as well as thousands of examples of Mamluk manuscripts, metalwares, glasswares, textiles, and ceramics scattered throughout European, American, and Middle Eastern museums and private collections. For the historian of Islamic art, Mamluk art can either be understood diachronically as one phase in the development of Islamic art in the region (usually restricted to Egypt) or compared synchronically with contemporary artistic traditions in the Islamic lands. These include Iraq, Iran, Afghanistan, and Transoxiana under the Ilkhanid and Timurid dynasties; northern India under the Sultanate dynasties—some of which were also "Mamluk"; Anatolia under the late Saljuqs, Beyliks, and Ottomans; and the Islamic West, including the Nasrids in Spain and the Hafsids and Marinids in North Africa. For the historian of medieval art in general, the relationship of Mamluk architecture and art to that of contemporary Europe remains largely unexplored, except in the special field of Crusader studies. For better or—as I believe—for worse, the diachronic approach has dominated scholarship on Mamluk art.

Among all types of Islamic art—with the exception of the Nasrid art of Granada and the Ottoman art of Istanbul—Mamluk art has been unusually accessible to Europeans, who were the first to study it, and until very recently the study of Mamluk art, like all Islamic art, has remained a speciality of European and North American scholars. From almost the moment Mamluk objects of metal and glass were made, they entered European ecclesiastical and private collections, and indeed some, such as the brass basin in the Louvre made for Hugh of Lusignan, king of Cyprus and Jerusalem from 1324 to 1359, were made specifically for Europeans.[3]

---

[3]For the brass basin made for Hugh of Lusignan, see D. S. Rice, "Arabic Inscriptions on a Brass Basin Made for Hugh IV de Lusignan," in *Studi orientalistici in onore di Giorgio Levi Della Vida* (Rome, 1956), 2:390-402; see also the two Mamluk glass vessels in the Dom- und Dioszesan-Museum,

Mamluk buildings—which could not of course be collected—were among the first Islamic buildings to become known to European audiences. The artist from the school of Bellini responsible for the huge sixteenth-century painting in the Louvre, *The Reception of a Venetian Embassy*, for example, was familiar with the Mamluk buildings of Damascus.[4] Far more important for European knowledge of Mamluk architecture were the plates published in the *Déscription de l'Égypte* (Paris, 1802-28), the record of Napoleon's expedition to Egypt in 1798-1801, which was followed by a steady stream of publications such as Pascal Coste's *Architecture arabe* (Paris, 1839), Jules Bourgoin's *Les arts arabes* (Paris, 1873) and A. C. T. E. Prisse d'Avennes, *L'art arabe d'après les monuments du Kaire* (Paris, 1877). Mamluk settings and objects became familiar to a wide audience through the Orientalist works of such painters as Jean-Leon Gérôme (1824-1904), and Mamluk themes became popular for Oriental interiors and exteriors ranging from smoking rooms to factories. The tradition reached its climax in the popular *Street of Cairo* at the Midway Plaisance for the 1893 Columbian Exposition in Chicago.[5]

British political involvement in nineteenth-century Egypt was—typically—followed by scholarly interest. *The Art of the Saracens in Egypt*, first published in London in 1886, was one of the first serious books devoted exclusively to Islamic art. Written by Stanley Lane-Poole, nephew of the noted Orientalist Edward W. Lane, it largely concerned the Mamluks, as did one of the earliest attempts in English to describe the historical evolution of Islamic architecture, Martin S. Briggs's *Muhammadan Architecture in Egypt and Palestine* (Oxford, 1924).[6] By the time Briggs published his book, K. A. C. Creswell (1879-1974) had begun systematically studying Egyptian Islamic architecture, a task that would continue to occupy him for the rest of his long life and usher in a new era in the study of Islamic architecture.[7]

Vienna, in the catalogue by Arthur Saliger et al., *Dom- und Diozesan-Museum Wien* (Vienna, 1987), 22-24.

[4]For this painting, see Julian Raby, *Venice, Dürer, and the Oriental Mode* (London, 1982).

[5]Zeynep Çelik, *Displaying the Orient: Architecture of Islam at Nineteenth-Century World's Fairs* (Berkeley, 1992).

[6]One should remember that Sir Banister Fletcher (1866-1953), the doyen of British architectural history, had considered "Muhammadan" architecture to be one of the "ahistorical" styles in his influential *History of Architecture on the Comparative Method* (London, 1905).

[7]Creswell's initial idea was to write a history of the Muslim architecture of Egypt. Before doing so, he had to investigate the Muslim architecture of Arabia and Syria on which he felt it depended; thus volume 1 of his *Early Muslim Architecture* (Oxford, 1932) was followed by volume 2 in 1940. Only with the publication of the first volume of *The Muslim Architecture of Egypt* (Oxford, 1952-59), some twenty years after he began, did Creswell begin publishing exclusively on the architecture of Egypt.

Familiarity, of course, is said to breed contempt, and many, if not all, historians of Islamic art would probably confess, albeit somewhat reluctantly, that Mamluk art—with the notable exception of such acknowledged masterpieces as the Mosque of Sultan Ḥasan, the Mausoleum of Qāytbāy, and the Baptistère de Saint-Louis—is rather dull. Although Cairo became the center of Arab-Islamic literary culture following the fall of Baghdad to the Mongols in 1258, in this period the center of Islamic *visual* culture shifted to such Iranian cities as Tabriz and Herat, where Mongol and Timurid patrons set the artistic taste in virtually every medium for most of the Islamic lands until the emergence of the imperial Ottoman and Mughal styles in the sixteenth century. Even Mamluk artists themselves looked to Iranian art for inspiration. Whereas the Ottomans and Mughals looked back on Mongol and Timurid art for inspiration, nobody really important (until the Orientalists came along in nineteenth-century Europe) looked to Mamluk art for anything.[8]

Mamluk art may be aesthetically inferior to Persian art of the same period and it may have been less of an inspiration for later developments, but these are not reasons to consider it any the less worthy of study, particularly since there is so much of it and we are blessed with an unusually rich array of contemporary sources about it. This abundance not only helps the art historian to understand the range of Mamluk art in its own time, but it can also provide us with models for interpreting other less well documented periods of Islamic art. The arts of the Mamluk period, such as buildings, manuscripts, textiles, and metalwares, moreover, are important sources of information about the society that produced them. The evidence they provide can supplement and augment that supplied by texts, which were often produced by segments of society very different from those that produced art. The historian of art and architecture, in interpreting such visual evidence, can play an essential role in contributing to a more nuanced reading of the past.

first) broad review of the state of research on Mamluk art and architecture was on the occasion of the traveling exhibition of Mamluk art organized by Esin Atıl in 1981, which was seen in Washington, Minneapolis, New York, Cincinnati, Detroit, Phoenix, and Hartford.[10] Atıl's catalogue serves as a permanent record of the exhibition, although many pieces did not travel to all venues and other pieces were added, notably by the Metropolitan Museum when the exhibition went to New York. Atıl also organized a symposium on Mamluk art, and many of the papers presented were published in the second volume of the journal *Muqarnas*.[11] In his introduction to the volume, Oleg Grabar raised several provocative but unanswerable questions about the meaning and interpretation of Mamluk art, which he seemed to imply was interesting because of its immutability.[12] In contrast, Ira Lapidus, in his concluding remarks to the symposium, succinctly summarized what was known about Mamluk art, particularly from the perspective of a social historian. By comparing the Mamluks to the Fatimids and Ottomans, he revealed several essential characteristics of Mamluk art, particularly its lack of universal pretension, its attitude towards religion, and the ranges of tastes it served.[13] The initial excitement generated by the Mamluk exhibition, however, evaporated without generating any great surge of interest in the subject, as the attention of many historians of Islamic art turned in the 1980s and 1990s from the Arab world to the

M. Rogers, "Mamluk and Ottoman Decorative Arts"; Hayat Salam-Lieblich, "Patronage in the Building of a New Mamluk City"; and John Woods, "East-West Relations in the Thirteenth-Fifteenth Centuries"; Michael Meinecke's paper was ultimately published as "Mamluk Architecture: Regional Architectural Traditions: Evolution and Interrelations," *Damaszener Mitteilungen* 2 (1985): 163-75.

[12]Oleg Grabar, "Reflections on Mamluk Art," *Muqarnas* 2 (1984): 1-12; Grabar suggested that traditional art historical strategies, such as stylistic analysis and connoisseurship, seemed to have little relevance to the study of Mamluk art, for Mamluk art hardly seemed to change over the centuries. The real concern of Mamluk patrons, he hypothesized, was not the creation of individual works of art or architecture but the cities they ruled and in the lives of the several social classes that inhabited them. Furthermore, he imagined that the defeat of the Crusaders and the Mongols created an equilibrium in the social climate of the urbanites that would remain unchallenged until the early sixteenth century.

arts of Iran, India, and the Ottoman Empire.[14] Nevertheless, the general increase of interest in the study of Islamic art has led a growing number of scholars to investigate the architecture and arts of the Mamluk period.

Architecture

Architecture was the preeminent art of the Mamluk period, and it is no accident that architecture has received more extensive treatment than the other arts. In comparison to contemporary Iran, Central Asia, or Anatolia, where a single building may represent the artistic activity of the period in a given city, literally hundreds of buildings survive from the Mamluk period in such major cities as Cairo, Damascus, Jerusalem, and Aleppo, and the buildings of the Mamluk period can be said to have defined their urban character. Although scholars continue to write about ″the Fatimid city,″ the historic parts of Cairo are much more a creation of the Mamluk period. Not only did the Mamluks pour considerable sums into building, but their architectural patronage can be said to have defined many of the other arts, which were often conceived and used as fittings and furnishings for their charitable foundations. Thus many manuscripts of the Quran were made for presentation to religious foundations, wooden *minbar*s and *kursī*s were presented to mosques, and glass lamps were made to illuminate them.

Creswell′s extraordinary presence dominated the study of Mamluk architecture until 1992, largely through his *Brief Chronology* of 1919 and the second volume of his monumental history *The Muslim Architecture of Egypt* (Oxford, 1959).[15] Creswell′s massive tome begins with the advent of Ayyubid rule in 1171 and gives monographic treatment to every surviving work of Egyptian Islamic architecture in chronological order, breaking off in the middle of the third reign of al-Nāṣir Muḥammad ibn Qalāwūn (r. 1294-1340, with interruptions). Creswell is said to have been working on a third volume at the time of his death, but he had only prepared studies of six monuments (still not published). Thus, some of the best known and most important architectural monuments of the Mamluk period remained virtually unpublished.[16] The most accessible publication of the Mosque

[16]I am not including here such cursory surveys of Egyptian Islamic architecture as Gaston Wiet, *The Mosques of Cairo*, photographs by Albert Shoucair ([s.l.], 1966); Dietrich Brandenburg,

of Sultan Ḥasan, for example, was an illustrated section of Michael Rogers's *Spread of Islam*,[17] and the exquisite complex of Qāytbāy was barely published at all.

All this changed, however, with the publication of Michael Meinecke's *Die Mamlukische Architektur in Ägypten und Syrien*.[18] Meinecke, director of Berlin's Museum of Islamic Art until his sudden and untimely death in early 1994, had worked on the project for over two decades. During this time he had supervised the restoration of the *madrasah* of Amir Mithqāl in Cairo and had been director of the German Archaeological Institute in Damascus. The second volume of his work, compiled largely by his colleague and wife, Viktoria Meinecke-Berg, is a chronological list of 2,279 Mamluk building activities between the advent of Mamluk rule in 1250 and the Ottoman conquest of Syria and Egypt in 1517. Organized by reign (numbered 0 to 48, in vol. 2) and then by project, each entry gives each building activity a unique reference number (e.g., 19B/13 for the Madrasah of Sultan Ḥasan, corresponding to the thirteenth activity in the nineteenth sultan's second reign) along with a capsule description, indication of relevant contemporary sources including endowment deeds, published inscriptions, and general publications about the building (designated Q, I, and B, respectively). These activities, whether new constructions or restorations, extant or destroyed, have been tabulated for some fifty locations in Egypt, Syria, Palestine, Arabia, and Anatolia according to the two main periods of Mamluk history, 1250-1382 and 1382-1517, to give a fascinating graphic representation of the chronological and geographical range of Mamluk architecture. In contrast, a survey of Timurid architecture in all of Iran and Transoxiana discusses a mere 250-odd buildings.[19]

The heart of Meinecke's book is the historical discussion of Mamluk architecture in the first volume, which is based on the data collected in the second. Unlike Creswell, who just discussed one monument after another, or others who followed the stale historical divisions of Baḥrīs and Burjīs or Turks and Circassians, Meinecke saw six periods of Mamluk architecture with different characters. The renaissance of early Islamic architecture under Baybars I (r. 1260-77) was followed by a development of local styles under Qalāwūn and his successors (1279-1310) and a golden age under al-Nāṣir Muḥammad (1310-41). He then followed the

internationalization of Mamluk architecture in the period 1341-82, architecture in Cairo from the accession of Barqūq (1382-1517), and architecture in Syria from the invasion of Timur to the Ottoman conquest (1400-1516). Finally he considered the afterlife of the Cairo, Damascus, and Aleppo traditions following the Ottoman conquest in 1516-17.

No book is perfect, and Meinecke would never have claimed that his was. It was, however, as good as he could make it. One may criticize a certain stuffiness in the presentation, in which every photograph is reduced to 3 by 4.5 inches and every building reduced to a plan. Although there are no sections or elevations, the plans are drawn to a consistent scale, and the reader can see at a glance the relative dimensions of Mamluk buildings. It is quite obvious that the Mosque of Sultan Ḥasan (fig. 78), for example, does not cover nearly as much ground as the Great Mosque of Damascus (fig. 69). Far more important than what Meinecke did, however, is what his book now allows others to do. Meinecke's registers and indices alone provide fertile ground for exploration, as it is now possible to see a particular building in the context of all other acts of patronage by a particular individual, or to extract all the building activities in Mecca or Medina and write the history of Mamluk architectural involvement there.

One can only be glad, however, that Meinecke did not live long enough to see how his work was reviewed by friend and foe alike. Oleg Grabar used the occasion to mourn the passing of an immensely knowledgeable and erudite friend, but he criticized the book for what its author had never intended it to have, notably analytical and judgmental themes.[20] Had Meinecke lived longer, he might have turned his attention to such philosophical questions of why Mamluk architecture did not change or whether the Mosque of Sultan Ḥasan is a great building, but he should not have been faulted for not having done what he did not set out to do. As unfashionable as Meinecke's (or Creswell's) work may be, we return to it constantly for accurate reference, while the myriad interpretative works are like so many leaves in the wind. Doris Behrens-Abouseif's review of Meinecke's book barely acknowledges the enormous scope and erudition of Meinecke's work.[21] She criticized his interpretation of the evolution of Mamluk architecture in terms of foreign workers and regional schools, in which he had tried to demonstrate exactly how workmen might have carried architectural ideas around the eastern Mediterranean region, a theme expanded in his posthumous *Patterns of Stylistic Change*.[22] Instead

[22]Michael Meinecke, *Patterns of Stylistic Change in Islamic Architecture: Local Traditions Versus Migrating Artists* (New York, 1996).

Behrens-Abouseif relied on rather nebulous theories of artistic ″influence″ to explain Mamluk architecture, but such theories, as the noted art historian Michael Baxandall has demonstrated, seriously confuse the roles of agent and patient.[23] Her conclusion that Meinecke′s analytical and synthetic masterpiece does not measure up to Godfrey Goodwin′s entertaining narrative history of Ottoman architecture says more about the reviewer than about the relative values of these two works. In contrast, Yasser Tabbaa′s review of Meinecke′s book in *Ars Orientalis* was more balanced, although he, too, criticized Meinecke for not going ″beyond formal analysis and fine points of influence into a broader investigation of the [Mosque of Sultan Ḥasan′s] unusual form, its highly original plan, and the peculiar circumstances of its patronage.″[24]

Meinecke, the most generous of scholars, would have been the first to admit that his work was based on the labor of others: his bibliography runs to twenty-five closely-set pages, including some thirty citations of his own works. While Creswell and Meinecke attempted to be encyclopedic, other works on particular aspects of Mamluk architecture can be characterized as monographic, topographic, or typological. Monographs on individual Mamluk buildings have been produced for over a century and have ranged from book-length studies to brief articles on specific problems of restoration. A model monograph is the collaborative project on the *madrasah* of Amir Mithqāl directed by the German Archeological Institute in the 1970s.[25] It combines a thorough technical and historical investigation of the building with a study of the urban environment as well as the relevant Arabic documents.

Other monographs have resulted from group or individual efforts and have dealt with a wide range of buildings. A Polish team, for example, published a more modest study of the Mausoleum of Qurqmās in the Northern Cemetery.[26] Saleh Lamei Mostafa has published several monographs on the buildings of Barqūq and his son Faraj,[27] to which J. M. Rogers′s brief but qualitative assessment is an

important addition.[28] Archibald Walls, working under the aegis of the British School in Jerusalem, produced a meticulous study of the largely-destroyed Ashrafīyah *madrasah* in Jerusalem.[29] Careful examination of the remaining structure as well as comparable buildings in better condition allowed him to propose (and draw!) a convincing reconstruction of the original building. Oddly enough, the success of such studies may be inversely proportional to the importance of the building itself, for the great monuments of Mamluk architecture, such as the funerary complex of Sultan Ḥasan, seem to defy or discourage monographic treatment. For example, a recent attempt to elucidate that building's symbolic meaning proposes that it is at once a sign of the rising power of the Mamluks' offspring (*awlād al-nās*), a grand gesture to lift up the spirits of a population depressed by the Black Death, and a symbolic re-creation of the birth canal.[30] Despite R. Stephen Humphreys's bold attempt some twenty-five years ago to assess the "expressive intent" of Mamluk architecture[31] and my own youthful effort,[32] it remains to be proven that Mamluk builders gave a hoot about symbolic meaning.

Cairo was the Mamluk capital and the focus of Creswell's interest, but the buildings of other Mamluk cities have also received scholarly attention. A model of such a topographical study is Michael Burgoyne's publication of the twenty-year investigation by the British School of Archaeology in Jerusalem of the Mamluk monuments of that city. This splendid and massive volume comprises a series of interpretive essays followed by a catalogue of sixty-four buildings.[33] Burgoyne's book is notable for its extensive documentation, which includes photographs, plans, sections, and axonometric (three-dimensional) drawings. It also benefits from extensive historical research by D. S. Richards, and shows, as one might expect, that teamwork can produce splendid results.

The urban development of Damascus, not only in the Mamluk period, has recently been studied by Dorothée Sack,[34] but for many individual buildings one must still consult earlier studies by Watzinger and Wulzinger, Sauvaget, and Herzfeld.[35] Similarly, the urban development of Aleppo has been recently studied by Gaube and Wirth,[36] but the earlier studies of Sauvaget and Herzfeld remain essential reading.[37] Perhaps the most innovative of recent studies on Aleppan architecture is Terry Allen′s electronic publication on the Ayyubid and early Mamluk periods.[38] Allen′s extraordinarily close reading of texts and examination of masonries has led him to see how individual masons worked and how they moved from one project to another. Not only is Allen′s methodology innovative, but so is the electronic form in which he has published his book, although the lack of illustrations (one must read it with copies of Sauvaget and Herzfeld at one′s side) makes it difficult going for the uninitiated. The Mamluk monuments of provincial cities have also been made available: Hayat Salam-Lieblich published the monuments of Tripoli and Mohamed-Moain Sadek published those of Gaza.[39] While such studies have made inaccessible monuments available to a wider public, some are methodologically unsophisticated and fail to discern the forest for the trees.

The large numbers of Mamluk buildings in particular cities have also provided invaluable primary source material for writing nuanced urban history, such as the works of Sack, Gaube, and Wirth already mentioned. Compared to contemporary Islamic cities elsewhere, with the possible exception of Fez, the physical and documentary remains for Mamluk cities are extraordinarily rich. This wealth of

information has allowed scholars to study even the districts of particular cities, such as Ḥusaynīyah, Būlāq, and Azbakīyah in Cairo[40] or Sūq al-Sārūjā in Damascus.[41]

The great number of buildings to survive from the Mamluk period has also inspired studies of types or parts of buildings. Creswell himself seems to have led the pack, for the last twenty plates of the second volume of his *Muslim Architecture of Egypt* comprise sequences of *miḥrāb*s, domes and pendentives, and minarets, as if looking at them alone would explain the development of architecture.[42] His unspoken assumption seems to have been that builders of *miḥrāb*s looked only at other *miḥrāb*s, while builders of domes looked only at other domes, a premise that may represent a rather simplistic view of architectural history, not to mention human nature. Nevertheless, this approach has been continued by many with greater or lesser success. Among the most successful is Christel Kessler's brief but elegant study of the carved masonry domes of medieval Cairo.[43] She documented an increased sophistication among stonemasons in their ability to combine structural and decorative elements, showing that specialized teams were responsible for building this particular type of dome. Other specialized studies concern the evolution of portals in Cairo,[44] the minarets of Cairo,[45] *sabīl*s,[46] and *madrasah*s in Damascus.[47] Leonor Fernandes's studies of the evolution of the institution of the *khānqāh* are notable for combining architectural with institutional history.[48]

The history of Islamic architecture is normally studied as the history of religious architecture, because—apart from a few notable exceptions—later generations saw little need to maintain the secular buildings of their predecessors. They concentrated their efforts on maintaining mosques, *madrasah*s, and the like, and so houses and palaces quickly fell into ruin. An unusually large number of domestic buildings from the Mamluk and Ottoman periods has, however, been preserved in Cairo. Creswell published them when they fit into his chronological scheme, but as most surviving buildings postdate the 1330s he never got around to them. Most other scholars consider domestic architecture to be an entirely separate field from the history of religious or monumental architecture, although the patrons of these religious buildings had to live somewhere and builders could construct one as well as the other. Indeed, there seems to have been a distinct convergence in the late Mamluk period between domestic and religious architecture.

The surviving houses of Cairo have been studied, surveyed, and published under the auspices of the Institut français d′archéologie orientale (IFAO), the Egyptian government, and the French Centre nationale de la recherche scientifique (CNRS), which has sponsored research on domestic architecture throughout the north of Africa. Jacques Revault and Bernard Maury, eventually joined by Mona Zakariya, published architectural studies of the remaining mansions; they were joined by Jean-Claude Garcin in a more interpretative and synthetic study using *waqf* documents and other sources to present a more nuanced history of habitation in Cairo.[49] Middle-class housing has been a speciality of Laila Ali Ibrahim, the doyenne of Mamluk architecture in Cairo,[50] and Hazem Sayed has followed her in combining monumental and textual sources in several studies concerning the *rab‘*, or multi-family housing, and the evolution of the distinctive *qā‘ah*, or central reception hall, in Cairene architecture of the Mamluk period.[51] Some middle-class housing units were combined with *wakālah*s, or urban caravanserais, which Scharabi has studied.[52]

The abundance of information for Mamluk architecture may lead us to forget that what remains was not necessarily all that was. Important buildings and works of art have been destroyed and lost, or changed so significantly that it takes an archaeologist to disentangle their original aspect. Mecca and Medina, for example, were major foci of Mamluk architectural patronage, but there are virtually no monumental remains, and texts provide the sole means of recreating these activities. Apart from the classic studies, such as Sauvaget′s book on the Mosque of the Prophet in Medina,[53] some recent studies begin to explore the possibilities of this material.[54] But there is much more that can be done, as it is now possible, thanks to Meinecke′s work, to write the history of Mamluk architectural involvement in these cities. A more archaeological approach has been taken by Nasser Rabbat in his dissertation and book on the Cairo citadel, which judiciously combines textual, architectural and archaeological evidence to reconstruct the center of Mamluk power in the thirteenth century.[55]

In addition to the architectural evidence and texts, inscriptions, *waqf* documents, and court records are other important sources for architectural history of the Mamluk period. For inscriptions, the work of Max van Berchem and Gaston Wiet on the *Corpus Inscriptionum Arabicarum* remains essential,[56] although Bernard O′Kane has announced a project to update the portions of the *Corpus* dealing with Egypt. Over one thousand documents in the Cairo archives survive from the period of the Mamluk sultans,[57] and almost nine hundred fourteenth-century legal

records and endowment deeds survive in Jerusalem.[58] These sources are being used increasingly for architectural history. For example, Amīn and Ibrahim used the Cairo documents to create a glossary of architectural terms, but the usefulness of the brief English translation is diminished by the arrangement of terms following the order of the Arabic alphabet. Thus the first column in the English glossary contains such words as *abzin*, *utruja*, *izār*, *isṭabl*, and *a'yun*. Their order makes perfect sense only to people who know enough Arabic not to need the English translation.

Decorative Arts

As with architecture, the abundance of surviving works of decorative art from the Mamluk period makes easy categorization difficult. For an introduction to the subject, there can be no better place to start than Atıl's 1981 exhibition catalogue, which is readable, generally accurate, well-illustrated, and has an extensive bibliography.[59]

Manuscripts

As elsewhere in the Islamic lands, the arts of the book were of primary importance in Mamluk times. The Quran, as in all other times and places in the Islamic lands, was *the* book, and lavish manuscripts of the Quran were produced throughout much of the period. The most important study of early Mamluk Quran manuscripts, that is, those manuscripts produced during the fourteenth century up to the reign of Sha'bān (r. 1363-76), was done by David James, once curator at the Chester Beatty Library in Dublin.[60] Scholars had also supposed that the presence in Cairo of a magnificent manuscript of the Quran made for the Mongol ruler Uljāytū had inspired the florescence of Mamluk manuscript production, but James suggested that Cairene production had already begun its distinctive course with the seven-part Quran manuscript commissioned in the early fourteenth century from the calligrapher Ibn al-Waḥīd by Baybars al-Jashnakīr for his *khānqāh*. As Ibn al-Waḥīd had trained in Baghdad with the great calligrapher Yāqūt al-Musta'ṣimī, James argued that he and his illuminator colleagues were responsible for introducing the new styles of calligraphy and illumination to Cairo.

What is most surprising is that James attributes a group of large-format manuscripts to the patronage of sultan Ḥasan's wife Khawand Barakah and their

son, the sultan al-Ashraf Shaʿbān II (r. 1363-76), for most of them were given to their charitable foundations, the Umm al-Sulṭān (Mother of the Sultan) and the Ashrafīyah *madrasah*s in Cairo. Their fine quality and immense scale suggest instead that the manuscripts might have been conceived for Ḥasan's colossal complex in Cairo, but his untimely death and the abandonment of the project may have led other patrons to take over the original commission and take credit for them.

While there can be no doubt of the importance of Iraqi and Iranian models and calligraphers for the development of early Mamluk calligraphy, it is unreasonable to imagine that there was no indigenous tradition of calligraphy in Egypt, even though no manuscripts have survived (or been identified) to represent this tradition. The religious foundations of such Mamluk rulers as Baybars and Qalāwūn, quite apart from those of their Fatimid and Ayyubid predecessors, would have required manuscripts, and local calligraphers must have continued to produce despite changes in government and patronage. A complete and more nuanced history of the development of Mamluk calligraphy awaits the publication of more manuscripts in public and private collections.[61] The relatively large number of Quran manuscripts to survive in Egypt's dry climate, however, has allowed scholars to begin the study of Mamluk bookbinding, largely on the basis of collections in Chicago's Oriental Institute[62] and London's Victoria and Albert Museum.[63]

Mamluk manuscripts of the Quran often rival those produced in the eastern lands, but there can be no question that the arts of the illustrated book were less important and of lower quality in Mamluk lands than they were in Iran. The relatively few illustrated books that exist are not up to the aesthetic or programmatic levels of Iranian illustrated books. Only about sixty illustrated manuscripts can be ascribed to the entire Mamluk period, and Duncan Haldane has prepared a convenient introduction to them.[64] Most of them were produced in the late thirteenth century and first half of the fourteenth, although a few point to a revival at the very end of the Mamluk period.[65] In contrast to Iran, where Mongol and Timurid sultans are known to have ordered illustrated copies of a wide range of Persian classic texts including the "Shāhnāmah," Niẓāmī's "Khamsah," Saʿdī's "Gulistān" and the fables

[61]Vlad Atanasiu has announced that he is working, under the direction of François Déroche at the École Pratique des Hautes Etudes IV, on a dissertation on Mamluk calligraphy.

[65]For example, *Kitāb al-Zardaq*, a veterinary manual with eleven paintings or diagrams (Istanbul, University Library, A.4689) was produced for Yalbāy, a *mamlūk* of Qanibāy al-Ḥamzāwī (d. 1458), probably in Damascus, ca. 1435. Yalbāy was Keeper of the Horse for the Commander-in-Chief of Damascus during the reign of Barsbāy (r. 1422-37).

in ″Kalīlah wa-Dimnah,″ the only illustrated manuscript known to have been commissioned by a Mamluk sultan is a two-volume Turkish translation of the ″Shāhnāmah″ with sixty-two paintings copied by Ḥusayn ibn Ḥasan ibn Muḥammad al-Ḥusaynī al-Ḥanafī for Qānsūḥ al-Ghawrī at the very end of the Mamluk period.[66] Most illustrated Mamluk manuscripts are scientific treatises and works of belles-lettres popular in earlier periods, such as al-Jazarī′s ″Automata,″ al-Ḥarīrī′s ″Maqāmāt″ (″Assemblies″), and ″Kalīlah wa-Dimnah.″[67]

Scholars have not yet established where these manuscripts were produced, although it is commonly assumed that they were made in Cairo. None of them, however, is known to have been made for a member of the Mamluk elite, and only two fourteenth-century manuscripts contain dedications linking them to high-ranking Mamluk amirs.[68] The most probable patrons seem to have been members of the Arabic-speaking bourgeoisie, such as Aḥmad ibn Jullāb al-Mawṣilī, the inspector of alms in Damascus, who acquired a copy of the ″Maqāmāt″ in 1375 which had been made a half-century earlier.[69] Indeed, Damascus seems a more likely center of manuscript production, for another copy of the ″Maqāmāt″ in the British Library (Or. 9718) was written and illustrated by the well-known Damascene calligrapher, Ghazī ibn ʻAbd al-Raḥmān, and the Escorial ″Manāfiʻ al-Ḥayawān″ was compiled by ʻAlī ibn Muḥammad ibn ʻAbd al-ʻAzīz ibn ʻAbd al-Fatḥ ibn al-Durayhim (d. 1360), a prominent member of the Damascene *ʻulamā*ʼ who taught at the Umayyad Mosque in Damascus.[70] Other illustrated books, such as manuals on horsemanship (Arab. *furūsīyah*) illustrated from the 1360s onward, may have been owned by Mamluks. They depict the equestrian exercises that

[67]One exceptional manuscript is a dispersed copy of *Sulwān al-Muṭaʻ*, for which see *Muhammad ibn Zafar al-Siqilli′s Sulwān al-Muṭaʻ* [*Prescription for Pleasure*], commentary by A. S. Melikian-Chirvani, translated by M. Amari (Kuwait, 1985).

[68]Two manuscripts can be associated with the sons of Mamluk officials. The first is a copy (Oxford, Bodleian Lib., Marsh 458) of the ″Maqāmāt″ made in 1337 for Nāṣir al-Dīn Muḥammad, the free-born son of Ṭurunṭāy (d. 1290), who served as viceroy of Egypt under Qalāwūn. A copy of Ismāʻīl ibn al-Razzāz al-Jazarī′s ″Kitāb fī Maʻrifat al-Ḥiyāl al-Handasīyah″ [Treatise on Automata] was transcribed in 1354 by Muḥammad ibn Aḥmad al-Izmīrī for the amir Naṣr al-Dīn Muḥammad, the son of Tūlak al-Ḥarrānī, a military judge in the service of sultans al-Ṣāliḥ Ṣāliḥ (r. 1351-54) and his brother al-Nāṣir Ḥasan (r. 1347-51, 1354-61). Most of the manuscript is in Istanbul, Süleymaniye 3606. Both of these patrons were therefore members of the *awlād al-nās*, who presumably could have read Arabic fluently and would have enjoyed doing it. See *The Arts of Islam*, exhibition catalogue, Hayward Gallery ([London], 1976), no. 535; Haldane, *Mamluk Painting*, 55.

[70]Haldane, *Mamluk Painting*, 50.

formed a regular part of the Mamluks′ training. They contain only simple artless illustrations in which clarity is the dominant consideration.[71] Unlike Mongol Iran, where the richest and most powerful patrons had great interest in having books illustrated,[72] the Mamluks were not, perhaps because they did not participate in the Arabic literary culture of the people they ruled.

Textiles

As in most other parts of the medieval Islamic world, textiles were the mainstay of the Mamluk (and Egyptian) economy, but their inherent fragility has meant that relatively few have survived, either in the relative safety of European treasuries or in the dry Egyptian ground. Mamluk textiles have generally received less attention than those of earlier periods in Egypt (e.g., Abbasid and Fatimid *ṭirāz*) or other regions (e.g., Iranian drawloom silks), although under the Mamluks Syrian and Egyptian looms continued to produce fine fabrics and carpets. Over the course of the Mamluk period, however, the Egyptian textile industry, like the paper industry, faced increasing competition from European exports. It is said that, of the 14,000 looms operating in Alexandria in 1388, only 800 were still in use a half-century later.[73]

Surviving fragments of Mamluk textiles acquired on the antiquities market have traditionally been published as private or public collections,[74] although Louise Mackie has looked at Mamluk silks in the broader international context.[75] Only recently have several scholars attempted to present Mamluk textiles in the archaeological contexts from which most have been taken, but a review of this literature is more properly the purview of the archaeologist. The role of international trade in the textile industry has led to studies of Mamluk drawloom silks as shown in Italian paintings or Indian block-printed cottons discovered in Mamluk Egypt.[76] Apart from the late Yedida Stillman′s work on dress as portrayed in the Geniza

documents (which are largely earlier than the Mamluk period), L. A. Mayer′s seminal work on Mamluk dress has never been continued.[77] In any event, costume has been woefully underutilized as a tool for dating other aspects of Mamluk art and culture.

Perhaps most attention has been accorded the distinctive group of Mamluk carpets that survives from the very end of the Mamluk period. Texts mention woven and knotted floor coverings earlier in the Mamluk period, but these carpets are the first to survive and seem to have some relationship to those produced in Aqquyunlu Iran and Anatolia.[78] A special issue of the journal *Halı* (4/1 [1981]) was devoted to the subject, and in subsequent years these carpets have been the focus of some wild speculation.[79] Increased interest has led collectors and scholars to explore dusty attics and storerooms. In the 1980s, for example, three previously-unknown Mamluk carpets of great importance were discovered in Italy, and recently many more fragments of an important large carpet were discovered there.[80]

METALWARES

Metalwares are among the most familiar of Mamluk decorative arts and the best studied, having a solid foundation in catalogues by Wiet and articles on individual pieces and groups by such noted scholars as D. S. Rice.[81] James Allan has produced some of the most important recent work on Mamluk metalwares, such as his article on the decline of the metalwork industry in the late fourteenth century.[82] It is an art historical fact that the absolute quality of metalwork declines in this period; Allan convincingly argues that the decline can be attributed to inflation, civil wars, Timur′s conquest of Damascus, the plague and the resulting scarcity of workers, as well as a shortage of metal, particularly silver and copper. Allan has

also published a volume on the Nuhad es-Said collection, which contains several important objects made for Qalāwūn, al-Nāṣir Muḥammad, and other sultans.[83] One may, however, be somewhat sceptical of Allan′s argument that the radiating inscription on an incense-burner made for al-Nāṣir Muḥammad should be interpreted as solar imagery which suggests that the ruler was the [metaphoric] source of light for the earth. Lapidus, in his 1984 article, reasonably suggested that such interpretations are quite foreign to the Mamluks′ view of themselves.[84]

Rachel Ward has approached the study of Mamluk metalwork in a new way by looking at objects from the Nuhad es-Said collection produced by a single workshop over a period of six decades.[85] She was able to show the transition from earlier styles of engraving to the inlaid decoration typical of Mamluk work. Her careful study is a necessary prelude to distinguishing regional centers, particularly Cairo and Damascus. James Allan has similarly approached the work of a particular metalworker, Muḥammad ibn al-Zayn, with extraordinary care and sensitivity.[86] By meticulously studying the nature and placement of Ibn al-Zayn′s signatures on his famous vessels, Allan ingeniously proposed that this craftsman must also have been a maker of thrones and ironwork.

As in many fields of art history, technical analysis holds great promise for explaining much about Mamluk art, but there has been a remarkable reluctance to apply these techniques to metalwork. It is simply unacceptable, for example, not to differentiate brass (primarily an alloy of copper and zinc) from bronze (primarily copper and tin), for they have different working properties, and the presence (or absence) of imported (and expensive) tin can tell us something about the economic circumstances in which a particular piece was made. It is therefore surprising that the author of a recent book on metal lamps writes that it is ″not possible within the scope of this study to indicate precisely the material.″[87]

CERAMICS

Ceramics is one of the fields in which scientific analysis is playing a major role in revising received opinion. Considering that Egypt was a major center of ceramic

production in the Fatimid period, when magnificent luster-painted earthenwares were among the most important ceramics made anywhere in the Islamic lands, the apparent decline of ceramic production in Egypt under Ayyubid and Mamluk rule comes as something of a shock. The center of ceramic innovation shifted from Egypt to Syria and Iran in the twelfth century, as potters began to make finer and harder ceramics from an artificial body (known as fritware or stonepaste) which was then painted and glazed. The majority of glazed ceramics produced in Egypt were rather coarse scratched and slip-painted earthenwares. At the same time, fine quality Chinese ceramics were being imported into the Mamluk realm by way of the Persian Gulf and the Red Sea, and large quantities of blue-and-white porcelain have been excavated at Hama in Syria and at Fustat in Egypt.[88]

The chronology of Mamluk period ceramics has yet to be established with certainty, not only because they are less beautiful and hence less ″collectible,″ but also because the Fustat excavations—the major key to dating Egyptian ceramics from the earlier periods—provide less information about the Mamluk period. On the one hand, most sealed contexts predate the Mamluk period; on the other, the overlying rubbish mounds which presumably contain Mamluk material are not sufficiently stratified to provide dates, although by excavating a cesspit Scanlon has had some success with characterizing the range of wares available in Mamluk Cairo.[89] Approaches other than archaeology and stylistic analysis have been necessary, and these include neutron-activation analysis,[90] which can show chemical similarities between different ceramics, and petrography, which analyzes and identifies the specific clays and minerals from which ceramics are made.[91]

Perhaps the most innovative work on Mamluk-period ceramics has been at the Royal Ontario Museum, where a group of scholars has used petrography, for example, to suggest that all Syrian glazed ceramics of the Mamluk period—whether underglaze-painted in blue and white or overglaze painted in luster—were made from the same body, and they concluded that they were made in one location,

presumably Damascus.[92] Furthermore, they suggested that Timur forcibly took Damascene potters, along with Chinese porcelains that had been imported into the Mamluk realm and Syrian copies of them, to his capital at Samarqand, where the potters established workshops using particularly Syrian techniques to produce Central Asian imitations of Syrian imitations of Chinese porcelains.[93] As provocative as these hypotheses may be, to believe that all glazed ceramics of the Mamluk period were produced in one Syrian center seems to fly in the face of common sense, for economic or historical explanations for such a concentration of industry are lacking.

OTHER ARTS

In contrast to Mamluk-period ceramics, Mamluk glass is magnificent: nearly-colorless blown-glass vessels decorated with brilliant enamels and gold. Nevertheless, Mamluk glass had not attracted much scholarly attention after the publication of Wiet′s catalogues of the Cairo museum′s Mamluk lamps, although recently there has been a revival of interest in the subject. A careful study of glass coin-weights led to a proposed chronology of Egyptian glass,[94] and the excavation of several glass bracelets at the Mamluk-period site of Quseir al-Qadim led Carboni to reattribute several bracelets in the Metropolitan Museum from Coptic to Mamluk.[95] The results of an international conference devoted to the subject in London in 1994 are just about to appear.[96] The art of woodwork, which enjoyed extraordinary importance in Mamluk times, when it was used for doors, shutters, *minbar*s, *kursī*s, and chests, has not received the attention it deserves, apart from a few specialized studies.[97] One of the most distinctive features of Mamluk art is the presence of emblems, which have often been likened, incorrectly, to the blazons

of medieval heraldry.[98] Recent work on the subject includes an investigation of its origins by the late Estelle Whelan and overviews by Meinecke and Rabbat.[99]

SPECIFIC TOPICS

While Mamluk art has normally been studied in terms of architecture and the decorative arts, several scholars have addressed topics that transcend these traditional categories. As we have seen, the traditional art historical investigation of ″influence″ confuses the agent with the patient, for the question should not be, for example, what is the ″influence″ of Iranian—or Chinese—art on that of the Mamluks but what was it that Mamluk artists saw in the arts of Iran—or China—that they felt was worth borrowing. Nevertheless, the question of foreign ″influence″ has interested such scholars as J. M. Rogers, who investigated the relationships between Mamluk art and that of Saljuq Anatolia and Ilkhanid Iran.[100] While Rogers rarely specified exactly how these architectural ideas might have been brought to Cairo, Meinecke approached the subject from the perspective of the movement of artists and workshops in his study of a group of tile makers who came to Cairo from Tabriz.[101] More recently, Rachel Ward has investigated the presence or absence of chinoiserie decoration on Mamluk metalwork in terms of Mamluk-Mongol political relations.[102]

Meinecke also turned around the question of ″influence″ and explored the relationship of Mamluk architecture to that of other traditions in his studies on the dispersal of the workshops assembled to build Sultan Ḥasan′s funerary complex to Damascus, Aleppo, Anatolia, and ultimately via Timur, to Turkestan,[103] as well as the legacy of Mamluk marble decoration in Ottoman Turkey.[104] He also explored the relationships between the art of the capital and that of the provinces,[105] and

between provincial capitals and local centers.[106] As buildings do not move about, these relationships are fairly easy to study, but it is much more difficult for the decorative arts. In the absence of any specific information to the contrary, historians have tended to attribute most Mamluk art to the capital, but studies have shown, or tended to suggest, that significant numbers of manuscripts, metalwares, glasswares, ceramics, and carpets were made elsewhere, particularly in Damascus.

It is easy for a specialist to distinguish the art of Baybars I from that of al-Ghawrī some 250 years later, but to the non-specialist most Mamluk art looks remarkably alike. Conservatism was an important attribute of Mamluk art, particularly in comparison to the arts of contemporary Iran where styles changed markedly from the Mongols to the Timurids and Safavids. While this conservatism in Mamluk art has not been the focus of particular study, several scholars have investigated the strong dependence of Mamluk art on the past. The mosque of Baybars I in Cairo, for example, has been shown to recreate not only the Fatimid mosque of al-Ḥākim but also that of Ibn Ṭūlūn,[107] and Baybars′s *madrasah* in Damascus is decorated with recreations of the Umayyad mosaics in the Great Mosque nearby.[108] It has long been recognized that the tomb of Qalāwūn is a free quotation of the equally Umayyad Dome of the Rock in Jerusalem,[109] and even contemporaries knew that the monumental vault in the funerary complex of Sultan Ḥasan surpassed the dimensions of the Sasanian Ṭāq-i Kisrā at Ctesiphon in Iraq.[110]

Because of the Mamluks′ peculiar system of succession, their art lacks the dynastic emphasis of contemporary Islamic art, particularly in Iran, where the Chingizid/Mongol-Timurid ideology was particularly important. The subject of Mamluk patronage remains oddly underexplored, although recently it has begun to attract more attention.[111] Amy W. Newhall′s study of the patronage of Qāytbāy is unusual because it combines architecture and decorative arts.[112] In contrast,

[112]Newhall, ″The Patronage of the Mamluk Sultan Qa'it Bay, 872-901/1468;″ Khaled Ahmad Alhamzeh, ″Late Mamluk Patronage: Qansuh al-Ghuri′s Waqf and His Foundations in Cairo,″ Ph.D. diss., Ohio State University, 1993, appears to concern only the sultan′s patronage of

most studies of patronage have been restricted to architecture, such as that of the amirs of al-Nāṣir Muḥammad[113] or al-Ghawrī.[114] Al-Harithy has investigated the architectural patronage of women, showing that it was not very different from that of men in Mamluk Egypt.[115] She concludes that members of the Mamluk ruling class erected the buildings and that members of the indigenous population used them. Her study would have been more convincing had she attempted to further identify these female patrons and explain whether this was an Egyptian or a Mamluk phenomenon. As in many other fields, Mamluk patronage in Egypt and Syria might profitably be compared with that of contemporary Mongol and Timurid Iran.[116] The abundance of evidence makes it possible to explore the patronage of many rulers, including Baybars, Qalāwūn, and al-Nāṣir Muḥammad, and one hopes that more scholars will turn their attention in this direction.

Conclusion

The great range of work already mentioned in this overly long survey makes it clear that no one scholar or approach dominates the field, and that there is a healthy range of opinion. I do believe, however, that the study of Mamluk art and architecture suffers from several general problems, and I would like to conclude by discussing three.

The first problem is a failure by some art historians to be also good historians. While good historians have learned to treat their written sources with caution, understanding that each document or text represents one particular view of a situation, art historians tend to be more gullible and believe that all written documents are true. At the same time, art historians have failed to convince the larger scholarly community that visual evidence is as valid, if not more valid, than written evidence. These issues are particularly important in view of the textual basis of much scholarship on Mamluk art, which treats al-Maqrīzī's *Khiṭaṭ* as a revealed text rather than as a rich and important selection of earlier works by one fifteenth-century scholar. In my study of Baybars's mosque, for example, I found (much to my surprise) that al-Maqrīzī was not a completely reliable source, probably because

of his own bias against Baybars.[117] In studying the complex of Sultan Sha'bān on al-Tabbānah street, Howyda al-Harithy noted that the foundation inscription on the main portal reads: ". . . Our lord the sultan al-Malik al-Ashraf Sha'bān ordered the building of this blessed *madrasah* for his mother . . . in the year 770/1368," and this statement is repeated at least eight other times in the complex. Nevertheless, Mamluk chroniclers unanimously attribute the construction of this building to the sultan's mother, Khawand Barakah. What should we then conclude about the relative value of texts and inscriptions? Al-Harithy, believing that later texts were more accurate than the building itself, concluded that the building was funded by and intended for Khawand Barakah and her husband, although her son was buried there as well.[118]

The second problem is the Egyptocentrism of Mamluk studies and the consequent reluctance or failure of scholars to look beyond the confines of Egypt. If Mamluk Egypt was indeed unique, as so many studies conclude, then there is no point in studying it, for it has no lessons to teach us. This is clearly not true, as three examples show. Nasser Rabbat's recent study of the Cairo citadel concluded that it was a unique response to a unique situation.[119] The Cairo citadel may have had no parallel in the eastern Mediterranean, yet the features that Rabbat reconstructed so deftly find striking parallels in the Islamic architecture of contemporary Andalusia. The Alhambra in Granada, just like the Citadel, was built from the thirteenth century on the remains of an earlier mountain-top fortress linked to the city's system of defensive walls, dominating the city from above. The Alhambra, too, originally had several enclosures arranged hierarchically, with barracks and defensive works separated from mosques and areas for reception and residence. Although the Alhambra is also considered unique, a comparison of these two "unique" fortresses should reveal important points about urbanism and architecture in the medieval period.

Another example of Egyptocentrism concerns the funerary complex of Sultan Ḥasan (1357-1361), perhaps the most famous of Mamluk structures. Scholars have long noted that it was the first *madrasah* in Cairo to combine a congregational mosque with a *madrasah*, and al-Harithy has suggested that the incorporation of a congregational mosque "reinforces the symbolic reference to society."[120] While this may or may not be true, the presence of a congregational mosque was not

---

[119]Rabbat, *Citadel of Cairo.*

[120]Al-Harithy, "Complex of Sultan Hasan."

unique. The largest *madrasah* in Fez, the Bū ʿInānīyah, which was built in 1355, also incorporates a congregational mosque for the first time. One wonders whether there might be any relationship between the two structures.

A third example of Egyptocentrism concerns the interpretation of the bulbous profile of several domes erected in Cairo in the middle of the fourteenth century, with ribs rising from a *muqarnas* cornice around a high drum. The best examples in Cairo are found in an anonymous mausoleum in the southern cemetery known as the Sulṭānīyah, which probably dates to the 1350s. It consists of two ribbed bulbous domes on high drums flanking a vaulted *īwān*. Some scholars have claimed this to be an Egyptian invention, but the structural system attempts to translate the structural requirements of a brick dome into limestone and clearly shows that this was a foreign type of construction imported to Egypt from the Iranian world. Although the earliest examples there, such as the Gūr-i Mīr in Samarqand, date from the early fifteenth century and postdate the Egyptian examples by some fifty years, the Iranian tradition of brick double domes can be traced back as far as the eleventh century.[121] Clearly all that remains is not all that was.

The final problem I see with the study of Mamluk art and architecture is the failure to exploit art historical techniques. Art history as a discipline is now well over a century old, as is the more specialized study of Islamic art, and scholars have developed varied and sophisticated techniques for studying works of art. The interpretation of the so-called Baptistère de Saint-Louis, the most celebrated example of Mamluk metalwork, illustrates this problem well. A large basin of bronze inlaid with silver, the Baptistère belongs to a well-known type with incurving sides and flaring rim used for the ceremonial washing of hands and made in a set with a matching ewer. It differs from most other pieces of Mamluk metalwork in the absence of epigraphic decoration and the total reliance on the extraordinarily detailed and superbly executed figural compositions which cover most of the exterior and interior surfaces. The maker was justly proud of his work, for the master (Arab. *muʿallim*) Muḥammad ibn al-Zayn signed it six times: one formal signature is located under the rim and five informal signatures are found on representations of metal objects and thrones within the scenes. The Baptistère bears no date or identification of a specific patron, yet the brilliance of the conception, quality of the execution, and specificity of the detail make it impossible to believe that it was made to be sold on the open market.

D. S. Rice was the first to propose that the scenes were specific representations and identified the bearded figure wearing a short-sleeved tunic and carrying a

---

[121]Blair and Bloom, *Art and Architecture of Islam*, 84.

mace as the amir Sālār (d. 1310), thereby dating the basin to the period 1290-1310.[122] Other scholars, while accepting that the scenes depicted real events, proposed different identifications which would put the basin at least thirty years earlier than the date proposed by Rice.[123] While none of Muḥammad ibn al-Zayn′s other work is dated,[124] these ″historical″ attributions disregard the stylistic evidence Rice and others have adduced so carefully. There is no question that figural scenes were increasingly used on metalwork throughout the second half of the thirteenth century and then abandoned during the long reign of al-Nāṣir Muḥammad.[125] Other scholars, working from the appearance of chinoiserie motifs in the decoration, have suggested that the basin might date as late as the mid-fourteenth century, nearly a century after the earliest date proposed![126] I myself have joined the fray, proposing that Rice′s date was right for the wrong reasons: despite their apparent specificity, the images are not narratives but emblems corresponding to the inscriptions that normally appear on early fourteenth-century metalwork.[127] In sum, it seems inconceivable that such a seminal piece could engender such wildly varied opinions, and it shows why historians have often been reluctant to take the work of art historians seriously.

To conclude where I began, now that Mamluk art has finally entered the coffeetable book Big Time, the gate of innovation has been opened. The new generation of scholars, whose work has focused so assiduously on the minutiae of Mamluk art and architecture, should use their considerable expertise to speak not only to each other but to make this attractive and potentially interesting subject more accessible and relevant to a wider audience of historians of culture as well as the reading public in Egypt and elsewhere.

SAVING MUSLIM SOULS: THE *KHĀNQĀH* AND THE SUFI DUTY IN MAMLUK LANDS

I

Elements of community and ritual are embedded in the Persian term *khānqāh* with its etymology of ″place of the table″ or ″place of recitation.″ Whatever these pre-Islamic origins, the Muslim *khānqāh* seems to have first appeared in Khurasan in northeastern Iran. There, it sometimes served as a *madrasah*, or law school and, increasingly, as a meeting place for the mystically inclined.[1] In this latter function, the *khānqāh* is linked to Abū Sa'īd ibn Abī al-Khayr (357-440/967-1049), who is believed to have established a rule for Muslim men seeking to live a communal life devoted to the worship of God. According to the *Asrār al-Tawḥīd*, a late sixth/twelfth century hagiography of the mystic, Abū Sa'īd founded or visited hundreds of *khānqāh*s in this region. Abū Sa'īd would travel from one *khānqāh* to the next, lecturing and teaching, and he authorized chosen disciples to establish *khānqāh*s to spread his rule.[2]

The *khānqāh*s mentioned in the *Asrār* were usually named for their location or for a shaykh who resided and taught there. Several large establishments accommodating as many as forty dervishes were endowed by members of the ruling elite, but most of these early *khānqāh*s appear to have consisted of a house with a common gathering room for mystics, a room serving as a mosque, and a

For a brief survey of the *khānqāh* and early Sufi communities, see J. Spencer Trimingham, *The Sufi Orders of Islam* (Oxford, 1971), esp. 5-11, 17-23, 168-72; also see Bruce B. Lawrence, ″Khānagāh,″ *Encyclopedia of Religion* (New York, 1987), 8:278-79, and Marcia K. Hermansen, ″Khānqāh,″ *The Oxford Encyclopedia of the Modern Islamic World* (Oxford, 1995), 2:415-17.

[2]For a study and translation of the *Asrār*, see John O′Kane, *The Secrets of God′s Mystical Oneness* (New York, 1992). For more on Abū Sa'īd and his rule see R. A. Nicholson, *Studies in Islamic Mysticism* (1921; reprint, Cambridge, 1967), 1-76, esp. 46, and Kiyānī, *Īrān*, 187-93. Also see H. Ritter, ″Abū Sa'īd,″ *EI*[2] 1:145-47, and Fritz Meier, *Abū Sa'īd-i-Abī l-Hayr (357-440/967-1049): Wirklichkeit und Legende* (Leiden, 1976).

few rooms for residents and guests.[3] The *Asrār*, unfortunately, does not give us a detailed account of the living arrangements in any specific *khānqāh*. A Sufi master probably resided there in most cases, perhaps with some of his students and disciples, but we have little information regarding the average size of such communities, whether or not they were strictly celibate, or the extent of family members and lay affiliates attached to them.[4] The *Asrār*, however, explicitly describes these early Sufi *khānqāh*s as centers for study, spiritual contemplation, and communal worship; frequently they were gathering places for Quranic recitations and, in at least one instance, a *khānqāh* also contained a holy relic. Abū Sa'īd had given his green woolen jacket to a disciple to serve as a ″banner″ in a new *khānqāh*, and, over time, people came to pay their respects to this garment which they believed protected them from pestilence and other impending disasters.[5]

Nevertheless, as the *Asrār* attests, not all *khānqāh*s at this time revolved around mysticism; some legal scholars and theologians, too, had their own *khānqāh*s.[6] Further, parallel institutions known as *khān*s were constructed in this period near mosques where important teachers held their classes, to serve as hostels and places of residence for out of town students. These structures were gradually incorporated into separate *madrasah* complexes focusing on legal studies, and into the *khānqāh*s, with their increasing emphasis on Sufism.[7] But whatever their size and major focus, the *khānqāh*s were to accommodate travellers, though some guests did not receive the gracious hospitality given to Abū Sa'īd. The celebrated Persian Sufi 'Alī al-Hujwīrī (d. ca. 465/1072) had a rather different experience in Khurasan, and he reminds us that not everyone residing in a *khānqāh* was a pious Sufi:

> One night I arrived in a village in the country where there was a convent (*khānqāh*) inhabited by a number of aspirants to Ṣûfism. I was wearing a dark-blue frock . . . such as is prescribed by the Sunna, but I had with me nothing of the Ṣûfî′s regular equipment . . . except a staff and a leathern water-bottle. . . . I appeared very contemptible in the eyes of these Ṣûfîs, who did not know me.

> They regarded only my external habit and said to one another, ″This fellow is not one of us.″ And so in truth it was: I was not one of them, but I had to pass the night in that place. They lodged me on the roof, while they themselves went up to a roof above mine, and set before me dry bread which had turned green, while I was drawing into my nostrils the savour of the viands with which they regaled themselves. All the time they were addressing derisive remarks to me from the roof. When they finished the food, they began to pelt me with the skins of melons which they had eaten, by way of showing how pleased they were with themselves and how lightly they thought of me. I said in my heart: ″O Lord God, were it not that they are wearing the dress of Thy friends, I would not have borne this from them.″[8]

During the fifth-sixth/eleventh-twelfth centuries, the *khānqāh* spread throughout Iran and westward to Baghdad where, designated by the Arabic term *ribāṭ*, it became a prominent institution under the Saljuq sultans.[9] The Saljuqs vigorously promoted Sunni interpretations of Islam, and the ruling elite created *waqf*s, or pious endowments, for Quran and *ḥadīth* schools, *madrasah*s, and *ribāṭ*s. These institutions were undoubtedly intended to curb politico-religious movements, including Ismāʻīlī Shiʻism and the Karrāmīyah, which might threaten Sunni Islam, its caliphate, and the Saljuq sultanate.[10] But the *madrasah*s and *ribāṭ*s, in particular, also served the Saljuqs as sources for patronage in their continual struggle with the Abbasid caliphs for political supremacy. Since the caliphs controlled the congregational mosques of Baghdad, the Saljuqs turned to the newer institutions of the *madrasah* and *ribāṭ* to support members of the religious establishment who espoused and legitimized their cause as the caliph′s ″protector,″ and, so, de facto ruler.[11]

Not surprisingly, then, the three earliest *ribāṭ*s in Baghdad were founded for popular pro-Saljuq preachers arriving from Khurasan, and, subsequently, *ribāṭ*s

[11]Pedersen and Makdisi, ″Madrasa,″ 1128; Makdisi, *Colleges*, 10-14, 27-34; and Chabbi, ″Fonction,″ 107-9. Also see Trimingham, *Orders*, 7-8, and Carl W. Ernst, *Eternal Garden* (Albany, 1992), 14-15.

were often directed by Sufi shaykhs who backed the Saljuq cause.[12] While many of these *ribāṭ*s had been established specifically for Sufis and their rituals, the directors and focuses of other *ribāṭ*s were not primarily mystical in orientation, and so during the mid-sixth/twelfth century, the *ribāṭ* was still not exclusively for Sufis. This stemmed from the fact that the *ribāṭ*s could be used to reward not only mystics, but preachers and other men of religion who were not scholars of law or jurisprudence and so not qualified for a lucrative *madrasah* position. Therefore, even as Saljuq central control and dominance declined late in the century, the *ribāṭ*s continued to be supported. Similar to other endowed institutions, the *ribāṭ*s sheltered the wealth of the ruling elite and so preserved a source of patronage, of whatever cause, especially in times of political instability.[13]

Reasserting control in Baghdad, the Abbasid caliphs became major patrons of these institutions, as did the Zangids and, subsequently, the Ayyubids. Successors to the Saljuqs in Syria and Palestine, the Zangids and Ayyubids continued to champion Sunni Islam, especially in the face of Crusader attempts to reclaim Jerusalem and the Holy Land for Christianity. This underscores another compelling motive for supporting the *ribāṭ*s in addition to acquiring political legitimation and preserving personal wealth and patronage, namely, access to spiritual power. Tales abound of saintly Muslims miraculously defeating infidel foes, and while this became the stuff of legend, Muslim ascetics, mystics, and saints were often sought out for spiritual aid in times of crisis. According to one historian, advisors to the Zangid sultan Nūr al-Dīn Maḥmūd (r. 541-69/1146-74) once urged him to appropriate funds set aside for ascetics, Sufis, and other men of religion in order to bolster his badly depleted Muslim forces prior to a battle with the Crusaders. But Nūr al-Dīn rebuked his aides, declaring:

> By God, I can′t hope for victory save by means of them, for they sustain and assist the weak among you. How can I cut off the pensions of a folk who, while I′m asleep in my bed, fight for me with arrows that never miss, and then turn around and spend their money on someone whose arrows are hit or miss?[14]

[12]Chabbi, ″Fonction,″ 101-12. Likewise, the Ash'arī theologian and major ideologue for the Saljuq sultanate, Abū Ḥāmid al-Ghazālī (d. 505/1111), was rewarded with a major position at the Niẓāmīyah *madrasah*; see Bosworth, ″Saldjūḳids,″ 950, and Ernst, *Garden*, 15.

[13]Chabbi, ″Fonction,″ 112-16. Also see Jacqueline Chabbi, ″Ribāṭ,″ *EI*², 8:493-506, and Pedersen and Makdisi, ″Madrasa,″ 1128.

[14]Muḥammad Ibn Wāṣil, *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb*, ed. Jamāl al-Dīn al-Shayyāl (Cairo, 1957), 1:136. For more on Nūr al-Dīn′s patronage of the religious classes, including the Sufis and their *khānqāh*s, see ibid., 263-86, esp. 281-84, and 'Alī ibn Muḥammad Ibn Kathīr, *al-Kāmil fī al-Ta'rīkh* (Beirut, 1979), 11:404-5. Also see 'Abd al-Laṭīf Ḥamzah, *al-Ḥarakah*

Nūr al-Dīn and other rulers may well have regarded the Sufis as spiritual reinforcements, a kind of mystical cohort in their holy war efforts. From this perspective, the term *ribāṭ* in the sense of a ″guard against danger″ or a ″frontier garrison″ seems appropriate for a Sufi residence, though there is no evidence that these *ribāṭ*s were ever convents for Sufi soldiers.[15] In fact, the Zangid and Ayyubid *ribāṭ*s were generally located in urban areas, and, far from Spartan quarters, they could be grand affairs, as noted by the traveller Ibn Jubayr (539-613/1144-1217) when he passed through Damascus in 580/1184:

> As for the *ribāṭ*s, which are called *khānqāh*s [here in Damascus], they are many and intended for the Sufis. They are lavish palaces with water flowing through them all, a most lovely sight to behold. The Sufis associated with these institutions are the kings of this country, for God has provided for their worldly needs and more, thus freeing their minds from the worries of making a living so that they can worship Him; He has lodged them in palaces that remind them of the palaces of Paradise! So by God′s favor these fortunate and favored Sufis receive the grace of both this world and the next.[16]

Ibn Jubayr added that the most sumptuous *khānqāh* that he had personally seen had, in fact, been a former palace with an attached garden, bequeathed by Nūr al-Dīn to the Sufis. In such *khānqāh*s the Sufis would hold stirring audition sessions (*samā'*) in which sensitive souls would achieve mystical ecstasy. Ibn Jubayr further described these Sufis as following a noble path and an admirable way of life dedicated to religious service.[17]

Though Ibn Jubayr thought highly of the Sufis and their *khānqāh*s, other, more conservative Muslims took a dim view of such opulent quarters and the happenings that went on there. A contemporary of Ibn Jubayr, the Ḥanbalī scholar Ibn al-Jawzī (d. 597/1200) denounced the *ribāṭ* as a harmful innovation encouraging celibacy, which aped the Christians and ran counter to prophetic custom in favor of marriage. But this was not all:

[16]Muḥammad Ibn Jubayr, *Riḥlat Ibn Jubayr* (Beirut, 1979), 256-57. Also see Trimingham, *Orders*, 9-10.

[17]Ibn Jubayr, *Riḥlah*, 257. Also see Trimingham, *Orders*, 169, for a description of another *khānqāh* established by Nūr al-Dīn, this one in Aleppo, founded in 543/1148.

> We have seen a horde of more recent Sufis lounging around in the *ribāṭ*s so as to avoid working for a living, occupied by eating and drinking, song and dance; they seek the things of the world from any tyrant, not hesitating to accept the gift of even the tax-collector! Most of their *ribāṭ*s have been built by despots who have endowed them with illegal properties. . . . The Sufis′ concern revolves around the kitchen, food, and ice water . . . while they spend most of their time in amusing conversation and visiting the nobility. . . . [18]

Despite an obvious difference of opinion regarding the reputation of the *ribāṭ*s and their residents, both Ibn al-Jawzī and Ibn Jubayr linked this institution almost exclusively to Sufism in the late sixth/twelfth century. This had resulted in part from the determined efforts of the Abbasid caliph al-Nāṣir li-Dīn Allāh (r. 575-622/1180-1225), who sponsored chivalric associations (*futūwah*) and Sufi brotherhoods (*ṭuruq*) to legitimate and extend the power of a weakened caliphate. Attempting to re-unify Sunni and Shi‘i Muslims under a single ruler, al-Nāṣir invoked mystical concepts and analogies to project himself as a divinely appointed ″mediator″ (*wāsiṭah*) between God and humanity. A major proponent and propagandist of these doctrines was al-Nāṣir′s advisor and envoy, the renowned Sufi ‘Umar al-Suhrawardī (539-632/1145-1234).[19]

‘Umar′s family had long been involved with Sufism, particularly in its institutional aspects; a great uncle had been the director of an early *ribāṭ* in Baghdad, while his uncle and spiritual guide Abū Najīb (ca. 490-563/1097-1168) had founded his own *ribāṭ* and enjoyed Saljuq patronage in exchange for his support. By contrast, during the Saljuq decline ‘Umar pledged his loyalty to his caliphal patron al-Nāṣir, who rewarded him with a *ribāṭ*, complete with a garden and bath-house. ‘Umar′s extensive experience with *khānqāh* life made him keenly aware of the need for regulating the Sufi communities in order to enhance mystical training and worship while, at the same time, curbing abuses such as those noted by al-Hujwīrī and Ibn al-Jawzī.[20]

Building, then, on his uncle′s brief ″Rules for Novices,″ ʿUmar composed his famous Sufi manual, *ʿAwārif al-Maʿārif*, which specifically addressed issues relating to Sufi communal life, including *ribāṭ* residence. Drawing an analogy to the Muslim holy warriors of the frontiers, ʿUmar praised the pious Sufis of the *ribāṭ*s for using their prayers and obedience to God as weapons in the fight against strife and affliction on behalf of all believers; by means of their exemplary behavior and good works, the *ribāṭ* Sufis had brought spiritual blessings (*barakah*) to Muslim lands once again.[21]

However, in the *ʿAwārif*, ʿUmar does not dwell on these benefits despite his belief in the efficacy of the *ribāṭ* Sufis for fending off the enemies of Islam, something which clearly attracted rulers including the Zangid Nūr al-Dīn. Rather, ʿUmar turns instead to a foundational tenet of Islamic mysticism: the Sufi′s interior holy war against his own selfish nature. With this struggle in mind, ʿUmar instructs his followers on a variety of essential matters, including the spiritual guide′s qualifications, various mystical states and stages, and the practice of mystical audition (*samāʿ*) and invocations (*dhikr*). But throughout his discussion of these and other topics, ʿUmar never loses sight of the centrality of the community for nurturing Muslim spirituality, and advancing the mystical life.[22]

ʿUmar al-Suhrawardī′s attentiveness to the Sufi path and community is evident in the success of his brotherhood, which spread and flourished throughout the Islamic world, especially eastward in Iran and the Indian sub-continent. There, based in large part on the *ʿAwārif*′s guidelines and instructions, *khānqāh*s were founded and organized usually to advance the teachings of a specific Sufi brotherhood, often ʿUmar′s own Suhrawardīyah, but other brotherhoods too, such as the Chishtīyah. While the brotherhoods often differed on the legality of accepting a regime′s support, nearly all of them established *khānqāh*s based on their own rules and under the leadership of their senior members.[23] Yet, the *khānqāh* in Mamluk lands would take a different path, one sponsored almost exclusively by sultans and powerful amirs who, in turn, set the criteria for *khānqāh* life.

II

The Mamluks followed the precedent of *khānqāh* patronage set by their former Ayyubid masters, and a model of particular importance was Cairo′s Dār Saʿīd

al-Su'adā', or al-Ṣalāḥīyah. Established in 569/1174 by Ṣalāḥ al-Dīn (Saladin), the founder of the Ayyubid dynasty, this lavish *khānqāh* was Egypt's first, being designated as a hostel for as many as three hundred Sufis, with preference given to those arriving from foreign lands.[24] Ṣalāḥ al-Dīn likewise founded several *madrasah*s to support Cairo's Sunni religious establishment and its legal scholars, though here too he favored non-Egyptians to fill the highest posts.[25] This preference for foreign Sunni scholars may have fostered a religious elite loyal to Ṣalāḥ al-Dīn and his Ayyubid successors. Further, their support of *khānqāh*s and *madrasah*s nurtured a Sunni ideology free of Shī'ī and Christian elements, so prevalent in sixth/twelfth century Egypt and Syria. For the *madrasah*s aimed to re-establish Sunni law and doctrine, while the *khānqāh*s functioned as devotional centers for the dissemination of correct beliefs, rituals, and spiritual exercises.[26]

As conscious heirs to the Ayyubids, the early Mamluk sultans Baybars I (r. 658-76/1260-77) and Qalāwūn (r. 678-89/1279-90) actively supported the existing *khānqāh-madrasah* system, and they appointed the Shaykh al-Shuyūkh, or "Shaykh of Shaykhs," who was in charge of the prestigious Dār Sa'īd al-Su'adā'. These shaykhs were usually learned men of some distinction, including the Persian Sufi and legal scholar, Shams al-Dīn al-Aykī (631-97/1234-98), and the chief judge and vizier to Qalāwūn, 'Abd al-Raḥmān Ibn Bint al-A'azz (d. 695/1296), who succeeded al-Aykī in 687/1288. As Shaykh al-Shuyūkh, they were to appoint "upright and knowledgeable" Sufis to be in residence there, lead the weekly processions of Sufis to perform the Friday prayer, and oversee the prayers, Quran readings, and *dhikr* ritual, which formed a large part of their daily routine.[27]

For Qāytbāy's decree appointing al-Aykī as Shaykh al-Shuyūkh of the Dār Sa'īd al-Su'adā' in 684/1285, see Muḥammad Ibn al-Furāt, *Tārīkh Ibn al-Furāt*, ed. Qusṭanṭīn Zurayq and Najlā' 'Izz al-Dīn (Beirut, 1939), 8:29-32.

Further, Baybars I, Qalāwūn, and their amirs established additional *madrasah*s, *ribāṭ*s, and *zāwiyah*s. The *zāwiyah*s were generally of more modest size and endowments than the *ribāṭ*s, and they often served as a meeting place for students and a teacher in residence. Several *zāwiyah*s were attached to saints′ shrines, where novices and more experienced Sufis might study, practice seclusion, and participate in communal rituals such as *dhikr* and *samā‘*. The *zāwiyah*s were frequently named for a specific resident saint or Sufi master, such as Khiḍr al-Mihrānī (d. 676/1277), Baybars I′s spiritual advisor. However, just as Sufi masters taught in mosques and *madrasah*s, *zāwiyah*s were also residences for Sunni scholars of jurisprudence, *ḥadīth*, and other subjects, which were also studied there.[28]

A number of *zāwiyah*s from the Mamluk period functioned primarily as hospices for the needy, in one case for Abyssinian eunuchs, but more often for foreign Sufis and ascetics and, increasingly, the *zāwiyah*s became centers for specific Sufi brotherhoods. Similarly, the early Mamluk *ribāṭ*s were often larger hostels accommodating both resident and itinerant Sufis with provisions and individual cells adjoining space for communal worship. At least eight *ribāṭ*s in Egypt were specifically endowed to provide for elderly women and pious widows, and two of them, including one founded by a daughter of Baybars I, were established for women shaykhs who were charged with preaching, and teaching women of good character regarding religious matters.[29] The early Mamluk *ribāṭ*s and *khānqāh*s, then, like their Zangid and Ayyubid predecessors, were primarily Sufi institutions, which along with the *madrasah*s, and *zāwiyah*s, were intended to support Sunni Islam in its spiritual, doctrinal, and ritual aspects.[30]

However, the term *ribāṭ* as used in Mamluk documents soon came to denote a residence for the destitute and elderly, whereas the larger establishments housing Sufis would generally be termed *khānqāh*s.[31] This increasing specificity in terminology is apparent in the endowment deed of Baybars II (r. 708-9/1309-10), who briefly usurped the sultanate from Qalāwūn′s son al-Nāṣir Muḥammad. Baybars II donated funds to establish a *ribāṭ* for one hundred needy people, with special preference given to retired Mamluk soldiers formerly in his service. As for the *khānqāh*, which was among the first founded by the Mamluks, Baybars II modeled it on Ṣalāḥ al-Dīn′s Dār Sa'īd al-Su'adā', providing for up to four hundred Sufis, of whom one hundred were to be unmarried men in residence. Though foreigners were again preferred, Egyptians were also eligible provided they, too, were in accord with Sunni Islam and conformed to the Sufi rules of conduct and the brotherhoods (*ṭuruq*).[32]

Baybars II′s *khānqāh*, however, differed from that of Ṣalāḥ al-Dīn in one very fundamental feature: the *khānqāh* enclosed the mausoleum of its founder. Earlier during the Ayyubid period, a founder′s grave was sometimes placed in or near his endowed religious institution, whether a *khānqāh*, *ribāṭ*, *madrasah*, or a school teaching *ḥadīth* or Quran.[33] Similarly, a number of the Mamluk ruling elite bequeathed funds to their tombs to support a *madrasah*, Quran school or, more modestly, Quran readers, so that pious acts performed on the site would bring divine favor upon the deceased.[34] For this reason, too, burial on the premises likewise became a regular and defining feature of the Mamluk *khānqāh*, where

[34]Humphreys, ″Expressive Intent,″ 112-19; John Alden Williams, ″Urbanization and Monument Construction in Mamluk Cairo,″ *Muqarnas* 2 (1984): 33-46, esp. 38-40; Berkey, *Knowledge*, 143-46; Chamberlain, *Knowledge*, 55-56; and al-Nu'aymī, *al-Dāris*, 2:223 (no. 234), 240 (no. 254), 258 (nos. 278-79), 260-61 (nos. 282, 284), 274-75 (no. 294), 287-88 (nos. 298-99), 291-92 (no. 304).

the founder often placed his tomb together with the graves of his relatives; by generously funding Sufis and their religious activities near the graves, the *khānqāh* founders hoped to secure blessings and spiritual power (*barakah*) for themselves and their loved ones. As a result, over the next two hundred years, the Mamluk elite established more than thirty-five *khānqāh*s in or near their capitals of Cairo and Damascus, and though not all of them were operating at the same time, the *khānqāh*s must have supported hundreds of Sufis during the thirteenth through sixteenth centuries.[35]

According to endowment deeds, the Sufis′ terms of employment could be quite generous, with Sufis in residence earning lodging and food, including ample portions of bread and meat daily.[36] Along with the non-resident Sufis affiliated with the institution, resident Sufis normally received monthly money stipends and, on holidays and special occasions, gifts of food, cash, and clothes. The Sufis residing in the *khānqāh* could earn additional money by assuming specific religious duties at the *khānqāh*, including reciting the Quran and leading prayers, or by performing more worldly tasks such as cooking or cleaning. Employment as a Sufi could certainly earn a man enough to support a family, which might even have lived nearby, if rarely in the *khānqāh* proper.[37]

Further, a number of Mamluk *khānqāh*s, such as that of al-Nāṣir Muḥammad (r. 693-741/1293-1341, with interruptions) at Siryāqūs, and those of the sultans Barqūq (r. 784-801/1382-99), Barsbāy (r. 824-41/1421-37), and Qāytbāy (r. 872-901/1468-96) north of Cairo, were part of larger complexes often containing a mosque, *madrasah*, Quran school, *ribāṭ*, and/or a *zāwiyah*. So in addition to creating hundreds of religious positions, these foundations also employed a

Several Mamluk *ribāṭ*s also contained their founder′s tomb; for Cairo see al-Maqrīzī, *al-Khiṭaṭ*, 2:428 (Ribāṭ al-Khāzin) and 430 (Ribāṭ al-ʿAlāʾī); for Jerusalem see Mujīr al-Dīn al-Ḥanbalī, *al-Uns*, 2:42 (Ribāṭ ʿAlāʾ al-Dīn), and for Damascus see al-Nuʿaymī, *al-Dāris*, 2:193 (no. 187).

[36]For published partial texts of some of these endowments see Muḥammad Muḥammad Amīn, *Wathāʾiq Waqf al-Sultān al-Nāṣir Muḥammad ibn Qalāwūn* (Cairo, 1982), esp. 58-120 for Siryāqūs; Amīn, *al-Awqāf*, 210-16 (with excerpts from Baybars al-Jāshankīr, Qāytbāy, al-Ghawrī, and others); Fernandes, *Khanqah*, 168-72 (Mughultāy al-Jamālī), 173-85 (Jamāl al-Dīn al-Ustādār), 186-91 (Barsbāy); her ″Baybars al-Jashankir,″ 39-40; and Felicitas Jaritz, ″Auszüge aus der Stiftungsurkunde des Sultans Barqūq,″ *Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe* 4 (1982): 117-29.

[37]Fernandes, *Khanqah*, 20-68, and Amīn, *al-Awqāf*, 204-8, 216. Al-Nāṣir Muḥammad′s *waqf* for Siryāqūs made accommodations for the Shaykh al-Shuyūkh′s family to live on the premises, as well as provided for the needs of married Sufis; see Amīn, *Wathāʾiq*, 75, 78, and John Alden Williams, ″The Khanqah of Siryāqūs: A Mamluk Royal Religious Foundation,″ in *In Quest of an Islamic Humanism*, ed. Arnold H. Green (Cairo, 1984), 111-14. Also see Ibn Baṭṭūṭah, *Riḥlat Ibn Baṭṭūṭah* (Beirut, 1987), 56.

significant number of support personnel, including engineers, laborers, physicians, water-carriers, grocers, and butchers, who worked to meet the physical needs of the complex, which then became the center of a thriving population both inside and outside of the *khānqāh*'s walls.[38]

The endowments of even modest *khānqāh*s could be quite substantial, and so the top administrative position of endowment supervisor (*nāẓir*) often went to a relative or close friend of the founder; similarly, the lucrative senior positions of Shaykh and Shaykh al-Shuyūkh were often assigned to a patron's favorites. These coveted positions became objects of competition among members of the religious elite who vied with one another in supporting their patrons. The Mamluks were praised for their defense and support of sound religion, thereby giving religious legitimacy to their right to rule, and the sultans, in turn, held receptions and banquets at their *khānqāh*s to honor their religious officials. Thus, Mamluk patronage of the *khānqāh*s clearly had political dimensions as sultans and amirs sought to win influence among the Sufis and other members of the religious establishment who might profit from the endowments.[39] In addition, sultans sometimes retreated to their *khānqāh*s during times of revolt or strife among the Mamluk factions. Since the residents and personnel of the larger *ribāṭ*s and *khānqāh*s could be several hundred strong, they were a large contingent for a show of support on their founder's behalf.[40]

Despite such political and economic motives, however, the Mamluk elite frequently attended the *khānqāh*s for spiritual and aesthetic reasons as well, praying with the congregation, listening to readings of the Quran and *ḥadīth*, and participating in Sufi rituals of chant and dance. In times of plague, sultans and amirs also sought out the *khānqāh*s as places of spiritual power and refuge, particularly those *khānqāh*s outside of Cairo in the desert.[41] The Mamluks certainly intended these imposing desert *khānqāh*s to serve as architectural witnesses to Islam's power and their own authority, yet the deadly plague epidemics probably provided another

incentive for Mamluk construction in the desert outside of Cairo. The sultan Barsbāy, for example, began his desert *khānqāh* complex following an outbreak of plague in 832/1429 although he already possessed a *khānqāh* in central Cairo.[42]

These many *khānqāh* functions, however, were subordinate to the major task assigned by the endowment deeds to the Sufis: the *waẓīfat al-taṣawwuf*. This ″Sufi duty″ or ″Sufi office″ was the *ḥuḍūr*, the daily gathering of Sufis to perform communal prayers and readings from the Quran. This task was so central that teaching and other activities supported by the endowments were to be scheduled around the *ḥuḍūr* session, which each Sufi was required to attend, with absences duly recorded.[43] The *ḥuḍūr*′s importance was directly linked to the founder′s desire to earn divine favor by supporting religious institutions and activities. But in addition to the blessings derived from these endowments, in general, the author received, in a focused and regularized fashion, benefits from the *ḥuḍūr*. In fact, many *khānqāh* endowment deeds not only stipulate *ḥuḍūr* performance, but they also set its appointed time, as well as some of the prayers and Quranic passages to be recited.

Almost invariably, the sessions began after one of the five daily canonical prayers. Quranic passages required for recitation included the ″Sūrat al-Fātiḥah″ (1), the beginning and end of ″al-Baqarah″ (2) along with its ″Āyat al-Kursī,″ or ″Throne Verse″ (2:256), ″al-Ikhlāṣ″ (112), and the final two *sūrah*s known as the ″al-Muʿawwidhatān″ (113 and 114), i.e., the two requests for refuge with God. The prayers were repetitions, called *dhikr*, combining praise of God (*tamḥīd*) with declarations of His greatness (*takbīr*), glory (*tasbīḥ*), and oneness (*tahlīl*), followed by prayers for the Prophet Muḥammad, and petitions for God′s forgiveness (*istighfār*). These prayers and the Quran readings were to be recited on behalf of the donor and his family, whether living or dead, who were named as major beneficiaries of the religious merits and divine blessings accruing from each session.[44]

[42]Humphreys, ″Expressive Intent,″ 83, 90-91, 117-19, esp. 91, n. 2. Leonor Fernandes has suggested that Barsbāy′s desert *khānqāh* was part of a conscious policy to relieve urban congestion (Fernandes, ″Three Ṣūfī Foundations,″ 144-45). It should be noted, however, that Cairo′s population had dramatically declined a century earlier following the Black Death, which presumably alleviated some of the city′s crowded conditions since the population did not recover until the tenth/sixteenth century; see Williams, ″Urbanization,″ 40-42, and Dols, *Black Death*, esp. 183-85.

[43]Amīn, *al-Awqāf*, 208-10; Fernandes, *Khanqah*, 18, 54-58, 119 n. 37; Little, *″Khānqāhs*,″ 101-2; and Berkey, *Knowledge*, 59-60, 79-81, 84-85. While these and other scholars have mentioned the *ḥuḍūr* as ″the Sufis′ duty,″ the *ḥuḍūr*′s function and relevance to Mamluk religious life have, to my knowledge, never been explored beyond several brief descriptions of the ceremonies.

[44]For descriptions of the *ḥuḍūr* in Arabic *waqf* texts, see n. 36, especially Amīn, *al-Awqāf*, 211-16, and idem, *Wathāʾiq*, 75, 78-79, 110-11. Also see Ibn Baṭṭūṭah, *Riḥlah*, 56-57; Fernandes, *Khanqah*, 54-58; Little, *″Khānqāhs*,″ 98; and Berkey, *Knowledge*, 60, n. 37. Concerning some of

The careful attention given by the endowment deeds to the *ḥuḍūr* session, and the consistency of its ritual, indicate that these recitations and prayers were not random selections, but established supererogatory invocations and appeals (*du'ā'*).[45] This is confirmed by several manuals on dying, death, and the afterlife popular in the Mamluk period, as they cite the exact Quranic passages and prayers specified in the endowment deeds as being the most efficacious for assisting the dead. These prayers and Quranic recitations, when said on behalf of the dead, were believed to ease their agony in the grave, and to atone for past misdeeds, so that the deceased would arise on the Judgment Day ready for Paradise.[46]

But the *ḥuḍūr* was not only for the dead; the living, too, shared in the blessings. The *ḥuḍūr* was to benefit its founding sponsor and his relatives both in this life and the next, while a portion of the blessings was also dedicated daily to all Muslims, whether living or dead. Further, in addition to the *khānqāh* mausoleums, the *ḥuḍūr* was held in other religious establishments, as were similar sessions for the recitation of the Quran, *ḥadīth*, and prayers, whose merits were likewise offered, first, to the founder, then his relatives, and, finally, to all Muslims. These latter types of ritual performance were to be carried out by professional reciters of the Quran and *ḥadīth*, who need not be Sufis, and it should also be emphasized that neither the contents nor the ritual of the *ḥuḍūr*, itself, were of a particularly mystical character requiring Sufi involvement.[47] Nevertheless, the *ḥuḍūr* was closely linked to Sufism, for it was an explicit duty of the *khānqāh* Sufis, who were widely considered to be channels for God's blessings due to their piety and mystical practices, which included training in recitations and prayers.[48]

---

these prayers and recitations composing the *ḥuḍūr*, and their significance to Muslim worship in general, see Constance E. Padwick, *Muslim Devotions* (London, 1961), esp. xxiv-xxvii, 12-22, 33-36, 65-93, 108-17, 126-36, 198-207.

[45]Further evidence that these *ḥuḍūr* recitations, prayers, and related activities were standard may be found in Muḥammad al-Asyūṭī's (b. 813/1410) notarial manual *Jawāhir al-'Uqūd*, ed. Muḥammad Ḥāmid al-Fiqqī (Cairo, 1955), 1:356-59, where he cites them in his formulary for *khānqāh* endowment deeds for both men and women; also see Little, "*Khānqāhs*," 98-102. For more on *du'ā'* see Padwick, *Devotions*, esp. 12-13, and Louis Gardet, "Du'ā'," *EI*[2], 2:617-18.

[46]Muḥammad al-Qurṭubī (d. 681/1273), *al-Tadhkirah fī Aḥwāl al-Mawtá wa-Umūr al-Ākhirah* (Cairo, 1986), 1:118-31; Jalāl al-Dīn al-Suyūṭī (839-911/1445-1505), *Sharḥ al-Ṣudūr bi-Sharḥ Ḥāl al-Mawtá wa-al-Qubūr*, ed. Muḥammad Ḥasan al-Ḥimṣī (Beirut, 1986), 406, 409, 411-12, 416-21, 424.

[47]Al-Asyūṭī mentions such daily sessions involving the Quran, *ḥadīth*, and prayers as being a standard part of a variety of endowments; *Jawāhir*, 1:330-31, 335 (congregational mosques), 1:348 (Quran schools), 1:367 (endowed Quran readings at mosques), 1:367-68 (endowed Quran readings for the Prophet's birthday), 1:370 (endowed *ḥadīth* readings); also see Rizq, *Khānqāwāt*, 2:587.

[48]Al-Asyūṭī, *Jawāhir*, 1:357-61, 365-66. Also see Berkey, *Knowledge*, 59-60, and al-Maqrīzī, *al-Khiṭaṭ*, 2:426 (Ṭaybars) for instances of the *ḥuḍūr* ritual in *madrasah*s, and Amīn, *Wathā'iq*, for

Moreover, in addition to their daily *ḥuḍūr*, the Sufis also gathered outside of their *khānqāh*s with other members of the religious establishment to hold special services and prayers in trying times including those of famine and plague, disasters which help to account for the demise of a number of *khānqāh*s.[49] First the Black Death of 749/1348-49, then successive waves of plague and famine over the next two centuries, ravaged the population and economy of Egypt and Syria. Sultans were forced to levy heavy taxes in efforts to replenish their supply of slave soldiers killed by the plagues, and to ward off the increasing threat of foreign invasion, particularly to the north in Syria and Anatolia where the Ottomans were consolidating and expanding their empire.[50] As a result, salaries for the religious occupations were sometimes cut or in arrears, and many religious establishments fell to ruin. Still, several Mamluk sultans founded new and architecturally impressive *khānqāh* complexes in the ninth/fifteenth century, occasionally at the expense of earlier *khānqāh*s, whose endowments had been appropriated to finance the new projects. While many of the older *khānqāh*s continued in operation, they were substantially reduced in size and services, or combined with *madrasah*s. Of course, the religiously essential *ḥuḍūr* continued to be performed throughout the empire, whether in the *madrasah-khānqāh*s, mosques, or other religious institutions established by the later Mamluks. Often Sufis were paid for this service, but they did not necessarily receive room and board.[51] This may also help to account for an apparent increase at this time in the *zāwiyah*s with their specific brotherhood and ethnic affiliations, as Sufis sought a mystical communal life and residence elsewhere than in the diminished *khānqāh*s.[52]

---

its performance in a mosque; Sufis were participants on many of these occasions as well.

III

During the Crusades, the Arab poet and holy warrior Usāmah ibn Munqidh (488-584/1095-1188) chanced upon a group of Christian monks. Their piety and dedication to Christianity unsettled him, but later he was relieved to find a similar Muslim devotion among the Sufis of a *khānqāh*. Usāmah's brief record of these two encounters contains one of the earliest comparisons made between the Christian monastery and Sufi *khānqāh*.[53] Both communities were often organized around a founding saintly figure or his disciples, and they enabled individuals to participate in a common religious life away from worldly affairs. The monasteries and *khānqāh*s also encouraged prayer, meditation, and study which contributed to the larger society in the forms of education, and prayers for all believers. As a result, many monasteries and *khānqāh*s received the generous favor of the ruling class who sought spiritual support and political influence in exchange. Nevertheless, the monks and Sufis generally set the rules and, accordingly, administered their establishments.[54]

Yet the Mamluk *khānqāh*s did not conform to this model, for the founding sultan or amir set the rule for his *khānqāh* within the rather broad legal parameters established for pious endowments. The foundation deeds specified not only the architectural and financial details of the *khānqāh*, but also such important religious matters as the appointment of shaykhs, the number of Sufis to be employed, their assigned religious and non-religious tasks, required attendance and permissible leaves, and other restrictions involving marital status, place of origin, and prohibitions against employment outside of the *khānqāh*. Further, these rules were not those of a specific brotherhood, though the endowment deeds explicitly state that qualified Sufis must adhere to traditional Sufi rules (*ādāb*), and belong to one of the four major Sunni law schools.[55]

[55]Amīn, *al-Awqāf*, 210-18, and Fernandes, "Baybars al-Jashankir," 39. Also see al-Asyūṭī, *Jawāhir*, 1:357; Little, "*Khānqāhs*," 98; and Fernandes, *Khanqah*, 170. Exceptions may have been made on occasion regarding law school affiliation, for the Damascus *khānqāh* of the amir Yūnus, Dawādār of the Sultan Barqūq, apparently required that the Sufis and their shaykh there be Ḥanafīs (al-Nu'aymī, *al-Dāris*, 2:189-90 [no. 184]).

The Mamluks obviously desired to control their *khānqāh*s from which they expected to benefit financially, politically, and religiously, and so several scholars have regarded the Mamluk *khānqāh* as an embodiment of an ″official″ or ″institutional″ Sufism. From this perspective, Leonor Fernandes, a pioneer in her studies of the *khānqāh*, has suggested that the Mamluks intended their *khānqāh*s as a means to monitor, if not control, Sufi doctrine and activities, and she has drawn attention to the fact that Sunni affiliation was a stated criteria for *khānqāh* residency. But Fernandes and others go too far in their view of the *khānqāh* as a state-sponsored bastion of ″orthodox Sufism″ standing against a ″popular″ religion of the *zāwiyah*s.[56]

The Mamluks certainly founded their *khānqāh*s with an eye to the endowment′s influence on the religious elite, but this was no different than other religious institutions supported by the Mamluks. Further, there is little evidence that these endowments were made with any overall state policy in mind, and the fact that the *khānqāh*s were usually named for and ordered by their Mamluk founders suggests a more individual or personal aim.[57] By contrast, most *zāwiyah*s were under the control of a shaykh or a brotherhood, which initiated and trained new members, and set the rituals and rules to be followed.[58] Still, the historian al-Maqrīzī (769-845/1367-1441) frequently notes in his account of Cairo′s *zāwiyah*s that many of these establishments had, likewise, been founded by the Mamluks, who had dedicated them to respectable Sunnis, most of whom were Sufis.[59] Al-Maqrīzī′s two major exceptions were the *zāwiyah* of the Qalandārs, charged with violating prophetic custom, and the *zāwiyah* of the Yūnusīyah order, suspected of Shi‘i affiliation. This underscores the crucial fact that the Sunni Islam of this period did not define itself in opposition to some type of popular or ″heretical″ Sufism, so much as to Shi‘ism, and militant Christianity.[60]

[60]See John E. Woods, review of *Mongols and Mamluks: The Mamluk-Īlkhānid War, 1260-1281,* by Reuven Amitai-Preiss, *Mamluk Studies Review* 1 (1997): 133; and al-Maqrīzī, *al-Khiṭaṭ*, 2:432-35, who notes that in 761/1359 Sultan Ḥasan forbade the Qalandārs from shaving their beards and wearing foreign, Persian dress, as both practices were counter to well established prophetic custom;

Of course, the sultans rarely tolerated abnormal religious practices in the *zāwiyah*s, *khānqāh*s, or anywhere else, since this could lead to public and political unrest.[61] Perhaps for this reason, some Mamluk religious officials advocated the careful scrutiny of *khānqāh* residents. The Sufis in residence were not expected to be distinguished scholars or celebrated spiritual masters, with the possible exception of their shaykhs.[62] In fact, the conservative Ḥanbalī scholar Ibn Taymīyah (661-728/1262-1328) stated that the great Sufi masters rarely had need of a *khānqāh*, which was normally the place for "funded Sufis" (*ṣūfīyat al-arzāq*). These professional Sufis should obey sacred law, adhere to the Sufi rules of conduct (*ādāb*), fulfill their religious obligations, and avoid greed and other selfish behavior.[63]

Similarly, the Shāfiʻī judge Tāj al-Dīn al-Subkī (727-71/1327-70) was particularly concerned that the resident Sufis lead ascetic lives, for he believed a number of individuals stayed in the *khānqāh*s only for an easy life; they were lazy drones who should be thrown out together with the frauds who posed as mystics to conceal their filthy lives dedicated to smoking hashish and other illicit acts.[64] Al-Subkī's criticisms, however, and those by other Mamluk religious authorities should not be read as attacks on Sufism, for while they might criticize individual Sufis or practices of a specific order, they seldom contested Sufism's positive contributions to religious life or the important roles of the *zāwiyah* and *khānqāh* within Muslim society.[65]

As for the differences between the *khānqāh*, *zāwiyah*, and, for that matter, the *madrasah*, they resulted largely from differences in size and focus, not their underlying Sunni mission. There was a considerable amount of overlap between these institutions, particularly with the joining of the *madrasah* and *khānqāh* in the Mamluk period. But for the most part, the *madrasah*'s curriculum was law, while the shaykhs of the *zāwiyah*s instructed students in the foundational beliefs and rituals of Islamic mysticism. Senior Sufi shaykhs in the *khānqāh*s also advised younger protégés on mystical matters, while the endowments sometimes established stipends for further non-mystical religious studies in jurisprudence, *ḥadīth*, and,

occasionally, in other subjects, including Quranic commentary and dialectical theology.[66] Yet references to specific Sufi orders, doctrines, or rituals, such as seclusion (*khalwah*), are almost never found in *khānqāh* endowment deeds, which stipulate that the residents of the *khānqāh* were to be initiated Sunni Sufis, not untutored novices. Sufi instruction and private mystical devotions were certainly a part of *khānqāh* life, but they were not its only mission.[67] Rather, as spelled out in the deeds of endowment, the primary ″Sufi duty″ of the *khānqāh*s was the daily communal performance of the *ḥuḍūr*.

In terms of function, then, the Mamluk *zāwiyah*s resembled the Christian monasteries, while the *khānqāh*s had a closer parallel in the chantries of medieval England. Founded around this same time by a wealthy nobility, the chantries were to say mass on behalf of Christians, living and dead, so as to free them from purgatory. Like the Mamluk *khānqāh*s, these chantries were endowed in perpetuity to secure blessings for the founder, his or her relatives, and finally, all Christians. In comparison to the *khānqāh*s, most of the chantries were rather modest, supporting several priests who said mass daily in accord with the founder′s will. But the endowments often paid for the erection and care of a free standing chapel, along with maintaining a residence for the priests; some endowments also provided alms for the poor, support for primary schooling, or stipends for student priests at college.[68]

The English chantries, too, were funded by private donations, usually of properties. The founder designated the endowment′s supervisor, who was often a relative or close friend, as was frequently the case with the priests appointed to say mass. In addition, the founder determined such matters as the particular liturgy to be said, its time and place, and the priests′ terms of employment, including room and board, religious and non-religious duties, required attendance and excused leaves, restrictions pertaining to other forms of employment, and the priests′ permissible interactions with women and possible concubinage.[69]

Like the Mamluk *khānqāh*s, the English chantries attested to the nobility′s power in both secular and religious affairs, serving their founders as an important source of patronage and support. But endowing a chantry for such selfish motives did not pass unnoticed, and the religious reformer John Wycliffe (ca. 1320-84) denounced the chantry as yet another example of the spiritual pride of the rich, who parted with their wealth solely to buy a plot in Paradise. Ecclesiastic officials, too, occasionally criticized the chantries, with their undistinguished priests prone to lax behavior. Echoing the moral indignation voiced by his Muslim contemporary al-Subkī against charlatan Sufis in the Mamluk *khānqāh*s, the Archbishop Islip in 1362 accused some chantry priests of being ″pampered with exorbitant salaries, and discharging their intemperance in vomit and lust, becoming delirious with licentiousness and finally drowning themselves in the abyss of vice.″[70] Yet, these criticisms aside, few medieval Christians prior to the Reformation questioned the importance of the chantry per se, and for one very good reason: purgatory. For whatever the economic, political, or philanthropic aims of the founders, the prime motive for founding a chantry was the soul′s release from the pains of purgatory.[71]

Christian purgatory derived a scriptural basis from 1 Cor. 3:13 in which Paul declared ″the fire shall test what sort of work each one has done.″ As elaborated by the early Church fathers, this purgatorial fire was different from that of hell, as it would punish and, perhaps, purify sinners after their death and prior to the Judgment Day. For Origen (ca. 185-254 C.E.), this assured eventual salvation for all, but others such as Augustine (354-430 C.E.) disagreed. Augustine divided humanity into four groups with their respective fates after death. First, there were the godless who went straight to hell, and their blessed counterparts, the martyrs, saints, and the righteous who would quickly enter Paradise. Between the two were those sinners who did some good, but not enough and so were bound for a less intense hell, and, finally, there were those sinners who might yet enter Paradise after the purgatorial fire, but who could use some help to attain salvation.[72]

Based in part on Augustine′s categories, Christian doctrines of purgation and intercession continued to develop, eventually coalescing by the late twelfth century in the notion of a distinct, spatial purgatory. There, many of the dead would be punished for their past sins in preparation for eternal life, but their stay in purgatory could be made more amenable and even curtailed by the pious efforts of the living. Suffrages such as prayers, fasting, and alms performed by the living for the dead were believed to help the deceased, especially if offered by devoted loved

ones.[73] Further, as early as the third century, the eucharist was given as solace for the souls of dead Christians, and subsequently, Pope Gregory the Great (590-604 C.E.) permitted the saying of mass as a way to deliver sinners from the purgatorial fires. Naturally, right doctrine and good deeds were essential for salvation, but many Christians came to believe that priestly intercession in the form of prayers and masses said on their behalf were even more effective for assuaging the horrors of purgatory and securing eternal life. As a result, the laity gave alms and offerings to churches and monasteries which, by the ninth century, annually performed services for the dead.[74]

Donors, however, had little control over monasteries or churches, whose routines and rituals had long been established by either a religious order or ecclesiastic authorities. Further, their masses and prayers were often said collectively for the good of all Christian souls while, increasingly, the quantitative equation took hold that the more masses said for the fewer beneficiaries, the greater their effectiveness. So beginning in the tenth or eleventh century, the chantry arose as an attractive individual alternative, for those who could afford it. Of course, as Wycliffe had sharply noted, the chantry founders were largely concerned with their own souls and those of their relatives; while chantry foundation deeds invariably stipulated that the spiritual benefits must be shared, the distribution was not equal, for the order of those blessed was believed to be directly proportional to the amount of blessings received.[75]

Still, the larger society apparently felt blessed by these somewhat diluted prayers, as well as by the considerable alms and activities supported by the many chantry endowments, when they were in operation. At the beginning of the sixteenth century, there were an estimated two thousand active chantries, employing priests and members of the laity essential to the daily life and work of these institutions. But by this time, too, other chantries had fallen into ruin or been dissolved. For like the Mamluk *khānqāh*s, many chantries were eventually closed due to a decline in revenues as a consequence of plague and other natural catastrophes, mismanagement, or from outright confiscation of the endowments.[76]

Then, in 1545, Henry VIII closed all of the chantries and pensioned off their priests. Henry was strapped for cash in his war with France, and the extensive lands and revenues held by monasteries, chantries, and other Catholic institutions were easy targets for this recently converted king. Not surprisingly, he justified his actions based on the Protestant denial of purgatory. Luther and other Protestants

had denounced belief in purgatory as lacking a firm scriptural foundation and being premised on the false belief that one could enter heaven by way of others′ good works. By annulling purgatory, they undercut the intercessory role of the Catholic Church, and cleared the way for Henry to dissolve the chantries.[77]

In comparison to the English chantry, the Mamluk *khānqāh* had a far less dramatic decline, yet this institution likewise underwent transformation in the ninth/fifteenth century, often resulting from economic stress, as noted above, though politics, too, continued to play a part. In 923/1517, the empire fell to the Ottomans who, as Sunni Muslims, continued to support pious endowments in the former Mamluk domains. But few Ottoman governors or amirs appear to have been willing to commit the substantial funds necessary to establish a *khānqāh* there, perhaps reserving such investments and their graves for the imperial capital at Istanbul.[78] Whatever the case, the *khānqāh*′s decline cannot be traced to a major upheaval in religious belief, as happened with the chantries. Yet, despite this significant difference, the English chantry and the Mamluk *khānqāh* bear striking similarities in terms of their foundation, administration, and economic affairs.

As important, they also shared an analogous intercessory function within their respective religions, and this underscores the centrality of purgatory not only to the chantry, but to the Mamluk *khānqāh* as well. Similar in spirit to portions of the New Testament, the Quran warns of a judgment day when each person will learn his eternal fate. On a number of occasions, Muslims have feared that this day was fast approaching, and at least twice during the Mamluk period, some warned that the final hour would soon arrive with the Mongols or the plague.[79] But, normally, this day has not been considered imminent, and Muslims have wondered about the state of their dead prior to the resurrection, and the possibility of a purgatory.[80]

Some Muslim exegetes found allusions to a type of purgatorial process in several verses of the Quran, especially 9:101: ″. . . We will punish them twice, then they will be thrown back into a terrible punishment!″ For the most part, however, Muslim notions of a purgatorial existence derive from traditions ascribed to the Prophet Muḥammad (*ḥadīth*), and often grouped together as *ʻadhāb al-qabr*,

"the punishment of the grave."[81] Beginning as early as the second/eighth century, Muslim creeds asserted that the recently deceased must undergo a trial in the grave. If the dead person can bear witness to his belief in the one God and Muḥammad as His Prophet, then he will eventually enter Paradise, but if he is unable to do this, he will be tortured in the grave before being cast into hell on the Judgment Day. Yet punishment for past transgressions also awaits many of the Muslims destined for heaven, though opinions varied to what extent this punishment took place in the grave or in hell itself.[82]

In a manner reminiscent of Augustine, the theologian Abū Ḥāmid al-Ghazālī (450-505/1058-1111) divided humanity into four groups: the damned, the punished, the saved, and the victorious. The damned are the godless infidels engrossed with the world who will be destroyed in hell, whereas the victorious include the martyrs and great gnostics who love only God and so will dwell in the highest reaches of Paradise. On lower levels, and of less stature, will be the saved, who lead a devout life to acquire the pleasures of Paradise and who repent of their sins before death. As for the punished (*mu'adhdhabūn*), they believe in God, but they have committed major or minor sins in pursuit of selfish passions, and these unrepented acts have contaminated their faith. As a result, these individuals are punished after death and prior to the Judgment Day, with their afflictions in hell being commensurate to their misdeeds. Al-Ghazālī adds that of this last group, the majority have oppressed other people, and so after death they will be made to bear the sins of those they had oppressed who, in exchange, will reap the rewards for the good deeds done by their oppressors.[83]

In a similar fashion, al-Ghazālī and a number of Muslim scholars throughout the Mamluk period, including al-Qurṭubī (d. 681/1273) and al-Suyūṭī (839-911/1445-1505), discussed the tortures in the grave, which afflict the dead proportionally to their past sins. A primary aim of these authors was to exhort the living to mend their ways while time remains and so avoid an anguish far exceeding any earthly pain. But their doctrine of a purgatory also resolved theological issues regarding divine justice and punishment short of eternal damnation, and, more important still, this purgatory offered many sinners a second chance. For even the most sinful believer would eventually be released when the Prophet Muḥammad

intercedes for all believing Muslims on the Judgment Day.[84] Further, prior to this final all-encompassing intercession, God allows the prophets, the pious, the religious elite (*'ulamā'*), and anyone else whom He chooses, to intercede on behalf of relatives, friends, and acquaintances. The prayers, alms, and other pious acts performed by these individuals on behalf of the deceased could substantially reduce both the severity and length of the dead's purgatorial punishment. These suffrages also gave hope to the living that they could intercede on behalf of their dead loved ones, and, in turn, be aided by others when their time came.[85]

Among the acts of intercession, the chanting of the Quran has long been considered most efficacious, with *sūrah*s 1, 112-114, and the beginning of chapter 2 held to be especially powerful.[86] As we have seen, these passages were a central part of the *ḥuḍūr* ritual conducted in the *khānqāh*s and other Mamluk religious establishments. Although Islam does not have an equivalent to the saying of mass by an ordained clergy, Quranic recitation and prayers chanted by the Sufis offers an intriguing parallel. In addition, the daily performance of the *ḥuḍūr*, and the naming of its beneficiaries beginning with the founding sponsor and ending with all Muslims, suggest that medieval Muslims, like medieval Christians, thought quantitatively about the spiritual power and effectiveness of these suffrages. This may also account for the large numbers of Sufis employed by the *khānqāh*s, though there may be a more sociological reason as well.

Collectively, the English chantries and the Mamluk *khānqāh*s could support several thousand persons, despite differences in the size of their respective establishments. There were at least two thousand small chantries by the sixteenth century, each with a priest or two and widely distributed throughout England and Scotland. Reflecting the family and gentry life of the nobility, the chantries frequently employed the founder's relatives or friends as priests, while building the chapel on the family estates. By contrast, the Mamluks concentrated their buildings in major urban areas such as Cairo and Damascus, and though they probably built fewer than seventy *khānqāh*s, many of them could support up to a hundred resident Sufis. These large groups of often foreign, unmarried Sufis, and their barracks-like residence halls mirrored the life of their Mamluk patrons, who had been imported

to Egypt as young slaves without family, to be raised and trained together as a cohort.

Further, just as aspiring Mamluk amirs recruited their personal corps of Mamluk soldiers, so too, did a sultan or powerful amir endow a *khānqāh* in his own name to be manned by a contingent of Sufis to pray on his behalf. With these prayers and other rituals, the Sufis could aid their patron while alive, and then, after his death, strive to free him and his loved ones from the agonies of the grave and hellfire. Given this important religious mission, it is not surprising to learn that a reigning sultan would suppress a rival's *khānqāh*. While sultans often appropriated endowments of existing religious establishments to finance their own projects, there may have been other, less material motives for tampering with a *khānqāh*.

When al-Nāṣir Muḥammad ibn Qalāwūn returned to power as sultan in 709/1310, he not only had the usurper Baybars II strangled, but he closed the latter's *khānqāh* and gouged out his titles from the *khānqāh's* building inscription. Fifteen years later, after completing his own massive *khānqāh* complex at Siryāqūs, al-Nāṣir allowed the *khānqāh* of Baybars II to reopen in 725/1325.[87] Nevertheless, by closing this *khānqāh* for such an extended period, the sultan had denied his foe the prayers and blessings believed to help the recently deceased, and so al-Nāṣir may have intended to torture Baybars II both in this world and the next.[88]

As this incident indicates, the *khānqāh*s were a vital concern of the Mamluk sultans, but not as outposts of some state-sponsored "orthodox Sufism." For, as we have seen, the inculcation of mystical doctrine and practice was not the major function of the *khānqāh*s; this was going on elsewhere, increasingly within the *zāwiyah*s of specific Sufi orders, likewise supported by the Mamluks. Instead, the *khānqāh*s primarily served the Mamluks as chantries, where pious Sufis could undertake the essential task of intercession. For, like Egypt's early pharaohs who raised pyramids in search of immortality, the Mamluk sultans built their *khānqāh*s to secure eternal life.

Academic Rivalry and the Patronage System in Fifteenth-Century Egypt: al-ʻAynī, al-Maqrīzī, and Ibn Ḥajar al-ʻAsqalānī

Introduction

In fifteenth-century Mamluk Cairo the *ʻulamāʼ* and the military elite were interdependent. The elite provided financial and material patronage to the learned in return for legitimation and integration into Cairo's dominant Islamic cultural environment. In *Knowledge and Social Practice in Medieval Damascus, 1190-1350*, Michael Chamberlain suggests that the "natural" environment for the *ʻulamāʼ* was one of constant competition, in which scholars jockeyed both for proximity to powerful members of the military elite, and for the salaried positions (*manṣib*, pl. *manāṣib*)[1] they could attain through such proximity. Indeed, for the *ʻulamāʼ* it was often within an intimate web of simultaneously personal and professional ties that the road to material and financial success lay. Nevertheless the long-held Islamic societal ideal of intellectual success—that is, the scholar untainted by the corrupting hand of government—still held firm both in Chamberlain's Damascus and in Cairo throughout the Mamluk period. As Chamberlain is quick to point out, the sources provide us with plenty of references to the notion of the polluting aspect of the *manṣib*, as well as to those who refused such positions and consequently earned praise from other scholars for it.

In this paper I will examine the lives of three fifteenth-century historians, al-Maqrīzī, al-ʻAynī, and Ibn Ḥajar al-ʻAsqalānī. The story of these men offers us a case study of the dynamics of Chamberlain's arena of scholarly competition for access to the military elite, as well as the workings of Mamluk patronage practices. We may also investigate the ways in which the manipulation—or lack thereof—of patronage opportunities affected not only the careers of all three historians, but also their relationships to and with each other and, ultimately, their writing of history, the ramifications of which are perhaps most significant for scholars today.

---

[1] I use *manṣib* rather than *manṣab*, the form used by Chamberlain in his *Knowledge and Social Practice* (Cambridge, 1994), for the same concept—a salaried position or stipendiary post; for a discussion of the differences between the readings, see Li Guo, "Mamluk Historiographic Studies: The State of the Art," *Mamlūk Studies Review* 1 (1997): 24-25, esp. note 46.

The Early Years

Aḥmad ibn ʻAlī al-Maqrīzī was born into a scholarly family in Cairo in 766/1364. As a youth he studied *ḥadīth*, *fiqh*, grammar, and *qirā'āt*, in addition to history and *adab*; soon he was competent enough to practice jurisprudence in the Ḥanafī tradition. In his early twenties, however, al-Maqrīzī renounced his affiliation with the Ḥanafīs and became a Shāfiʻī like his father. The reasons for this change are unclear, although they may be related to his father's death in 786/1384. Ayman Fu'ād Sayyid suggests that al-Maqrīzī became aware of the strategic preeminence of the Shāfiʻī school in Cairene intellectual and political circles and changed his *madhhab* accordingly.[2] Sayyid's source for this information, however, is not made clear; nor does this explain the lifelong bias that al-Maqrīzī maintained against Ḥanafīs, which was strong enough to prompt Ibn Taghrībirdī to point out its presence in al-Maqrīzī's writing.[3]

The Ḥanafī scholar who was to become one of al-Maqrīzī's rivals and academic foes, Maḥmūd al-ʻAyntābī or al-ʻAynī, was born in ʻAyntāb (modern Gaziantep) in 762/1360, also into a scholarly family. Like al-Maqrīzī, al-ʻAynī studied history, *adab*, and the Islamic religious sciences; in addition, he was fluent in Turkish and knew a degree of Persian.[4] Al-ʻAynī's knowledge of several languages was to make a significant difference to his later career.

The youngest of the three scholars, Aḥmad ibn Ḥajar al-ʻAsqalānī was born in 773/1372 in Egypt, the only son of one of the Kārimī merchants, Nūr al-Dīn ʻAlī. Ibn Ḥajar and his younger sister Sitt al-Rakb were left orphans by the time Ibn Ḥajar was four years old. Consequently, they were brought up and educated by a guardian, al-Zakī al-Khurūbī. Ibn Ḥajar began studies at an early age and was a precocious student; as a child he went to Mecca with his guardian, and in his twenties embarked on a study tour in Egypt, followed by another in Yemen and the Hijaz. Ibn Ḥajar also visited Syria more than once; indeed, on one of his trips to the Syrian cities in 802-3/1400 he was forced to make a hurried retreat to Cairo

[2]Al-Maqrīzī, *al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār*, ed. Ayman Fu'ād Sayyid (London, 1995), 39.

[3]Ibn Taghrībirdī, *al-Manhal al-Ṣāfī fī-al-Mustawfá baʻda al-Wāfī,* ed. Muḥammad Muḥammad Amīn (Cairo, 1984), 1:417.

[4]Al-ʻAynī, *al-Sayf al-Muhannad fī Sīrat al-Malik al-Mu'ayyad*, ed. Fahīm Muḥammad Shaltūt (Cairo, 1967). Several pieces of circumstantial evidence in the text suggest that al-ʻAynī knew some Persian: he was familiar with Firdawsī's "Shāhnāmah" (109) and the work of Bayhaqī (127); he also included a long list of Persian royal titles in the text (5). Also see his analysis of the name "Jārkas" as a Persian phrase ("four people" *chahār kas*) in Ibn Taghrībirdī, *al-Manhal al-Ṣāfī*, 4:207.

for fear of the approaching armies of Timur.[5] He later visited Yemen and the Hijaz several more times.

While Ibn Ḥajar was travelling in search of knowledge, so was al-ʻAynī, whose itinerary led him south from his home city of ʻAyntāb. It was in Jerusalem in 788/1386 that al-ʻAynī made the first contact that gained him an entrée into Cairene academic circles. This was the Ḥanafī shaykh al-Sayrāmī, then visiting Jerusalem, who was head of the Ẓāhirīyah *madrasah* and *khānqāh* complex in Cairo, which had just been established by al-Ẓāhir Barqūq. Al-Sayrāmī had emigrated from Central Asia to eastern Anatolia, where he settled in Maridin before Barqūq invited him to Cairo. Thus he may have shared linguistic and cultural ties with al-ʻAynī, although the sources are not explicit. As the spiritual leader of an institution with ties to the highest level of the ruling elite, al-Sayrāmī was a good contact for promising young members of the *ʻulamā'*. Al-ʻAynī must have made a favorable impression on the older scholar, for al-Sayrāmī invited the twenty-six year old to accompany him to Cairo. There al-ʻAynī became one of the Sufis of the Ẓāhirīyah; he also took classes and became better known in Cairene circles.[6]

The third of these historians, al-Maqrīzī, was also embarking upon his career in 788/1386. He began as a scribe in the chancellery, as had his father, and was subsequently designated deputy *qāḍī*. Following this he became the *imām* at the mosque of al-Ḥākim and the *khaṭīb* at the mosque of ʻAmr ibn al-ʻĀṣ and at the *madrasah* of Sultan Ḥasan. We may assume that it was prior to and during this period that al-Maqrīzī was making some of those personal contacts necessary to the achievement of financial and material success within the parameters of the Mamluk patronage system. However it is difficult to identify the exact channels through which al-Maqrīzī may have gained access to the higher levels of patrons, or to the sultan himself, although we may set forth some suggestions.

One possibility is Ibn Khaldūn, who arrived in Cairo in 784/1382 and whom Barqūq made Chief Mālikī *qāḍī* in 786/1384. Competition soon caused Ibn Khaldūn to lose the position—his enemies succeeded in ousting him in 787/1385, and he was only reappointed years later in 801/1399. Nevertheless, he managed to remain an instructor at several institutions in Cairo, and was appointed the head of the Baybars *khānqāh*, which was arguably the most important Sufi establishment in Egypt.[7] An important player on the academic and intellectual scene, Ibn Khaldūn

[5] Muḥammad Kamāl al-Dīn ʻIzz al-Dīn, *al-Tārīkh wa-al-Manhaj al-Ta'rīkhī li-Ibn Ḥajar al-ʻAsqalānī* (Beirut, 1404/1984), 129.

[6] Ibn Taghrībirdī, *al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Beirut, 1992), 15:287.

[7] M. Talbi makes this claim, although the reasons for it are not specified. Was it merely because of the *khānqāh*'s link to the illustrious al-Ẓāhir Baybars? Was it the relative age of the *khānqāh*, established at the beginning of Mamluk patronage of Sufi institutions? See M. Talbi, "Ibn Khaldun,"

was not only acquainted with the sultan, but also had other patrons from among the amirs, including the amir Altunbughā al-Jubānī or al-Jawbānī, who had first introduced him to Barqūq.[8] It is difficult to determine the exact degree of closeness between al-Maqrīzī and Ibn Khaldūn; we do know, however, that al-Maqrīzī studied history with the Mālikī scholar and learned the use of different instruments for measuring time from him. He later repaid his teacher by writing a lengthy biography of him.[9]

Al-Maqrīzī may also have reached the higher levels of the royal court through his contact with Yashbak al-Sha'bānī, the *dawādār* and tutor to Barqūq's son Faraj. Al-Maqrīzī seems to have known Yashbak fairly well, although it is unclear how they met.[10] At any rate, in some way al-Maqrīzī gained access to the very pinnacle of the patronage hierarchy. Al-Sakhāwī reports that al-Maqrīzī was on good terms with Sultan Barqūq, while Ibn Taghrībirdī goes so far as to describe al-Maqrīzī as one of Barqūq's boon companions (*nadīm*, pl. *nudamā'*).[11] Thus far, al-Maqrīzī's story is one of successful advancement within the framework of patronage practices, and achievement of not only a respectable amount of professional success, but also direct access to the sultan himself.

Ibn Ḥajar, meanwhile, was still involved in his travels. As for al-'Aynī, despite al-Sayrāmī's initial favor, the young 'Ayntabī ran into trouble after the shaykh's death in 790/1388 when Barqūq's *amīr akhūr*, Jārkas al-Khalīlī, attempted to run the scholar out of Cairo.[12] It seems that the two personalities clashed, for al-'Aynī characterized Jārkas as proud, arrogant, and tyrannical—a man pleased by his own opinion.[13] Al-'Aynī had managed to make enough contacts among the *'ulamā'* to be saved from physical expulsion from the city through the intervention of one of his teachers, the well-known Sirāj al-Dīn al-Bulqīnī, but nevertheless decided to leave for a short time.[14] After a brief stint teaching in Damascus, where he was appointed *muḥtasib* through the auspices of the amir Baṭā',[15] al-'Aynī returned to

Cairo, presumably older and wiser. There he lost no time in establishing ties with four amirs: Qalamtāy al-ʻUthmānī, Taghrībirdī al-Qurdamī or al-Quramī, Jakm min ʻAwḍ and Tamarbughā al-Mashṭūb; al-ʻAynī went on the pilgrimage with this last amir. Of these four men only one—Jakm min ʻAwḍ—seems to have attained any significant station.[16] Jakm was one of Barqūq's *khāṣṣakīyah,* and was eventually promoted to the position of *dawādār*. Following Barqūq's death in 801/1399, he rebelled against Barqūq's son and successor al-Nāṣir Faraj (801-15/1399-1412) and set himself up as an independent ruler in Northern Syria and Southern Anatolia in 809/1406-7; shortly thereafter, however, all his promise went for naught when he was killed in battle by the Ak Kuyunlu Turkmen. Despite his ultimate defeat and death, however, it was clear during Barqūq's reign that Jakm was a powerful man, and as such a desirable patron for a talented and ambitious scholar like al-ʻAynī.[17]

THE *MUḤTASIB* INCIDENT

Al-ʻAynī and al-Maqrīzī came into direct competition during the two years of the famous *muḥtasib* incident. In Rajab 801/March 1399, Barqūq appointed al-Maqrīzī *muḥtasib* of Cairo, an important and prestigious *manṣib*, the duties of which included the regulation of weights, money, prices, public morals, and the cleanliness of public places, as well as the supervision of schools, instruction, teachers and students, and attention to public baths, general public safety and the circulation of traffic. In addition to being prestigious, the position of *muḥtasib* offered direct contact with the sultan.[18] Like many such *manṣib*s, however, it was not a particularly stable position; *muḥtasib*s could be and frequently were appointed, dismissed, reappointed, and redismissed several times in a short period.

Indeed, this is what happened to al-Maqrīzī. His acquaintance with Barqūq had suggested a promising career; he must, presumably, have been troubled on both personal and professional levels by the death of his patron in Shawwāl 801/June 1399. Within the Mamluk system, the death of a sultan provoked shifts in the power relations within the military elite and, by extension, could alter the patronage relations between the elite and the *ʻulamā'*. Barqūq's death, therefore,

(Cairo, 1985), 2:18.

[16]Qalamtāy al-ʻUthmānī, Taghrībirdī al-Qurdamī or al-Quramī and Tamarbughā al-Mashṭūb were all amirs of ten under Barqūq. See Ibn Taghrībirdī, *al-Manhal al-Ṣāfī*, 4:54 (Taghrībirdī al-Quramī); 4:100 (Tamarbughā al-Mashṭūb). For Qalamtāy al-ʻUthmānī, see Taqī al-Dīn Aḥmad al-Maqrīzī, *Kitāb al-Sulūk li-Maʻrifat Duwal al-Mulūk*, ed. Saʻīd ʻĀshūr, 3:2:740. For Jakm min ʻAwḍ, see Ibn Taghrībirdī, *al-Manhal al-Ṣāfī*, 4:313-22.

[17]Al-Sakhāwī, *al-Ḍaw'*, 10:132.

[18]Al-Qalqashandī, *Ṣubḥ al-Aʻshá fī Ṣināʻat al-Inshā'* (Beirut, 1407/1987), 4:38.

meant that the position of *muḥtasib* lay open to the immediate ambitions of other scholars and their patrons.

It was at this moment that al-ʻAynī's cultivation of the ruling elite began to show fruit. In Dhū al-Ḥijjah 801/August 1399 al-ʻAynī replaced al-Maqrīzī in the post of *muḥtasib* through the intervention of none other than the amir Jakm.[19] Historians, both contemporary and modern, view this moment as the starting point for the antipathy between the two scholars. Ibn Taghrībirdī states, "From that day on, there was hostility between the two men until they both died."[20] Al-ʻAynī did not enjoy the post for long, for one month after his appointment he was dismissed (Muḥarram 802/September 1399) and reappointed two months later in Rabīʻ I/November. He managed to remain *muḥtasib* until Jumādá I 802/February 1400, when al-Maqrīzī succeeded in replacing him for almost a year. Then, again by the intervention of the amir Jakm, al-ʻAynī resumed the post in Rabīʻ I 803/October 1400, which marked the end of al-Maqrīzī's brief *muḥtasib* career. Al-ʻAynī himself did not remain *muḥtasib* for long, for he was dismissed once again four months later in Rajab 803/February 1401.

It was also during this period that the struggle for power between Jakm, al-ʻAynī's patron, and Yashbak al-Shaʻbānī, al-Maqrīzī's second patron after the late Sultan Barqūq, was approaching its height. In brief, this struggle included the imprisonment of Yashbak in 803/1401, while Jakm took his position as *dawādār*, then Yashbak's release and the imprisonment in turn of Jakm in 805/1402, and culminated in a pact that included both amirs, the amir and future sultan Shaykh, and Kara Yūsuf of the Kara Kuyunlu Turkmen, all of whom attempted but ultimately failed to overthrow al-Nāṣir Faraj in 807/1405.[21] If we assume that this rivalry extended to the protégés of the respective amirs, this would help account in part for the rapidity with which the two scholars replaced each other as *muḥtasib*. Certainly the hostility that generated from the *muḥtasib* incident was to have discernible repercussions in the later works of both al-ʻAynī and al-Maqrīzī, particularly in their treatment of each other.

Meanwhile Ibn Ḥajar, who was travelling during al-ʻAynī's and al-Maqrīzī's *muḥtasib* struggles, returned to Cairo in 806/1403-4. He seems to have spent the next ten years establishing himself in Cairene intellectual society under the new order of Barqūq's son and successor, al-Nāṣir Faraj. This he did through a number

---

[19]His appointment was through Jakm alone, according to al-Maqrīzī in *Kitāb al-Sulūk* (Cairo, 1973), 3:3:1038. According to Ibn Taghrībirdī in *al-Nujūm*, 15:287, it was through all three amirs: Jakm min ʻAwḍ, Qalamtāy al-ʻUthmānī, and Taghrībirdī al-Qurdamī.

[20]Ibn Taghrībirdī, *al-Nujūm*, 15:287.

[21]See Ibn Taghrībirdī, *al-Manhal al-Ṣāfī,* 4:313-19.

of different positions, including *muftī* of Dār al-ʻAdl in 811/1408-9, a post he held until his death.[22]

After the *muḥtasib* incident, al-ʻAynī's career remained relatively stable, and even included a brief stint in the lucrative and prestigious position of *nāẓir al-aḥbās* (overseer of pious endowments) in 804/1401. Al-ʻAynī spent the next several years teaching in various *madrasah*s in Cairo, then succeeded in being appointed again, briefly, as *muḥtasib* and *nāẓir al-aḥbās* near the end of Faraj's reign.[23] He was appointed and dismissed from the latter post several more times during his long career, which is reflected in the wealth of economic detail he includes in his chronicle.

As for al-Maqrīzī, despite his failure to remain in the position of *muḥtasib*, he should be given full credit for the success of his interactions with patrons during this period. Throughout the reign of Faraj, al-Maqrīzī managed to maintain some degree of intimacy with the new sultan, if not as close as that which he had enjoyed with Barqūq and in spite of the rebellious career of Yashbak al-Shaʻbānī. In 810/1408 al-Maqrīzī accompanied Faraj to Damascus. There the sultan appointed the scholar instructor of *ḥadīth* in the Ashrafīyah and the Iqbālīyah *madrasah*s, and also made him the supervisor of *waqf* at the Nūrī hospital. At the same time Faraj offered al-Maqrīzī the position of Chief Shāfiʻī *qāḍī* in Damascus, but he refused it.[24] The reasons for this are unclear. Perhaps al-Maqrīzī had grown disillusioned with competition, the "corruptive" influence of government, and the patronage system in general, although we must wonder why, since he was doing well according to the norms of the day. Or he may have been reluctant to take on an office that throughout the course of Islamic history had been associated with corruption and hypocrisy. It is possible that he was attracted by the cultural ideal of the historian who abandons political involvement and worldly obsessions in order to produce untainted history, and thus was seeking a more scholarly form of success, uncorrupted by political ties. Al-Sakhāwī suggests in his biography: "Then he relinquished [all] that (i.e., his teaching posts) and abided (*aqāma*) in his home city, obsessed by the occupation of history."[25]

In 810/1408 al-Maqrīzī returned to Cairo, and appears to have devoted himself to fulfilling the academic ideal of the scholar.[26] Muḥammad Muṣṭafá Ziyādah

[23]Al-Sakhāwī, *al-Ḍaw'*, 10:132. Also al-ʻAynī, *al-Sayf al-Muhannad*, editor's introduction, page h.

[24]Al-Sakhāwī in *al-Ḍaw'* reports that al-Nāṣir Faraj offered al-Maqrīzī the *qāḍī*ship several times (2:22); Ibn Taghrībirdī in *al-Manhal al-Ṣāfī* claims only once (1:417).

[25]Al-Sakhāwī, *al-Ḍaw'*, 2:22.

[26]Ibid.

suggests generously that the time-consuming demands of both a professional academic and an administrative career were a significant factor in al-Maqrīzī's eventual decision to turn away from the exigencies of the competitive arena.[27] While a desire for more leisure time in which to write history may have been a factor in al-Maqrīzī's withdrawal from the fifteenth-century academic rat race, additional evidence suggests otherwise, particularly after the death of Faraj in 815/1412, and the accession, first of the caliph al-Musta'īn (815/1412), then of al-Mu'ayyad Shaykh (815-24/1412-21).

Al-Sakhāwī presents two interesting pieces of information. The first is that al-Maqrīzī versified a *sīrah* of Shaykh written by Ibn Nāhid (d. 841/1438). Al-Sakhāwī says nothing about its reception at court, however—if indeed it was received at all.[28] That al-Maqrīzī would take such a step, however, casts doubt upon the image of his voluntary withdrawal from court. Al-Sakhāwī also credits al-Maqrīzī with attaining a teaching position in *ḥadīth* at the Mu'ayyadīyah. This refers, presumably, to the Mu'ayyadī mosque complex, which also included a *madrasah*, mausoleum, and *khānqāh*. Al-Maqrīzī mentions the complex frequently in *Kitāb al-Sulūk*, although not at all in the *Khiṭaṭ*. Nevertheless in no place does al-Maqrīzī declare that he received a teaching appointment there, although he does take care to identify those scholars who did, among them Ibn Ḥajar. Nor does Ibn Taghrībirdī state that al-Maqrīzī taught at the Mu'ayyadīyah in his biography of his mentor.

We are left, therefore, with a question. What did al-Maqrīzī do after his refusal of the position of *qāḍī* in Damascus? Did he indeed voluntarily withdraw from the world? Perhaps, although the testament of Ibn Taghrībirdī, reporting years later for 841/1437, suggests otherwise:

> . . . Shaikh Taqī ad-Dīn (God have mercy on him) had certain aberrations for which he was well known, though he is to be forgiven for this; for he was one of those whom we have met who were perfect in their calling; he was the historian of his time whom no one could come near; I say this despite my knowledge of the learned historians who were his contemporaries. But with all this is the fact that he was far removed from government circles; the Sultan did not bring him near to himself, although he was an interesting conversationalist and a pleasant intimate companion; in fact al-Malik al-Ẓāhir Barqūq had brought him near, made him a boon companion

[27]Muḥammad Muṣṭafá Ziyādah, "Ta'rīkh Ḥayāt al-Maqrīzī," in *Dirāsāt 'an al-Maqrīzī* (Cairo, 1971), 16.
[28]Al-Sakhāwī, *al-Ḍaw'*, 2:23.

> and appointed him market inspector of Cairo in the latter days of his rule. But when al-Malik al-Ẓāhir died, he (al-Maqrīzī) had no success with the rulers who came after him; they kept him away without showing him any favor, so he on his part took to registering their iniquities and infamies—"and one who does evil cannot take offense."[29]

This suggests that al-Maqrīzī's isolation from royal circles may not have been due to an active desire for solitude on his part, but rather to a degree of failure in his attempt to compete for the patronage of powerful men. This later manifested itself in bitter remarks, noticeable biases in his work, and other behavior of the "sour grapes" variety. Of the trio of Cairene historians writing in the first half of the fifteenth-century—al-Maqrīzī, Ibn Ḥajar and al-'Aynī—al-Maqrīzī is decidedly the most critical of Shaykh and, later, al-Ashraf Barsbāy (r. 825-41/1422-38), neither of whom favored him. Al-Maqrīzī called Shaykh:

> . . . avaricious, parsimonious, and niggardly, even in eating; opinionated, irascible, harsh, envious, evil-eyed, addicted openly to various abominations, using obscenity and curses . . . the greatest cause of the ruin of Egypt and Syria . . .[30]

Writing later, Ibn Taghrībirdī disagreed with al-Maqrīzī's assessment and responded with, "I could with justice refute all that he says, but there is no call for me to do so; and I refrain from blackening paper and wasting time."[31]

Al-Maqrīzī was hardly any more complimentary to Barsbāy:

> His days were [of] calm and tranquillity, except that there were tales about him; [tales] of avarice, stinginess and greed, cowardice, tyranny, distrust and aversion to the people, as well as . . . capriciousness of events and a lack of stability, of the likes of which we had never heard. Ruin prevailed in Egypt and Syria, as well as a scarcity of money; people became poor, and the behavior of rulers and governors worsened, despite the attainment of

Gaston Wiet has already pointed out the usefulness of Ibn Taghrībirdī's habit of commenting on the opinions of al-Maqrīzī, his teacher and mentor in the historical field. See Gaston Wiet, "L'historien Abul-Maḥāsin," *Bulletin de l'Institut d'Égypte* 10 (1930): 102-3.

[30]Ibn Taghrībirdī, *History of Egypt*, trans. Popper, 17:87.

[31]Ibid.

> [Barsbāy′s] hopes and goals, and the subjugation of his enemies and their death at the hands of others, [therefore] know that God has mastery of all things.″[32]

Ibn Taghrībirdī again took his teacher to task for his criticism, saying:

> As for the faults ascribed to him (Barsbāy) by Shaikh Taqī ad-Dīn al-Maqrīzī in his history, I shall not say he was biassed in this, but I would quote somebody′s words:
>
> > And who is the man of whom every trait meets approval?
> > It is glory enough that the faults of a man can be counted.
>
> It would be more fitting from various standpoints to have withheld these shameful remarks about him.[33]

While an increasingly frustrated al-Maqrīzī was building up bile and bitterness against Shaykh and later Barsbāy, al-ʻAynī′s career also took an active downward plunge when he was ″tested″ (*umtuḥina*) at the beginning of Shaykh′s reign. It was not long, however, before he was later restored to favor.[34] Unfortunately, both the reason for and nature of this ″test″ remain unclear, as does the way in which al-ʻAynī regained royal approval. Nevertheless, al-ʻAynī managed to overcome his awkward beginning with Shaykh, and within a short span of time had become one of the sultan′s boon companions. It was during al-Mu'ayyad′s reign that al-ʻAynī was again made *nāẓir al-aḥbās*, a post he was to hold—except for a few brief periods—until 853/1449.[35] Al-ʻAynī′s fluency in Turkish was a distinct asset, which he used to his advantage, for in addition to academic and financial appointments, al-Mu'ayyad made the ʻAyntābī native his ambassador to the Qaramanids at Konya in 823/1420.[36]

By this time, al-ʻAynī seems to have acquired a degree of nimbleness in maneuvering within the patronage system, as well as an awareness of the importance of remaining in royal favor. One time-honored method for solidifying one′s position was direct praise, which al-ʻAynī employed in his biography of al-Mu'ayyad,

al-Sayf al-Muhannad fī Sīrat al-Malik al-Mu'ayyad.[37] In this one-volume prose work, al-'Aynī legitimized Shaykh by situating him within the context of universal history, Islamic history, and ancient Arab lineage, respectively.

Physical evidence of al-'Aynī's successful competition for patronage also exists in the form of the *madrasah* he commissioned to be built next to his house, which was near al-Azhar. The majority of endowed religious buildings constructed during the Mamluk period were sponsored either by the sultan and his family, or other high-ranking and wealthy members of the military elite. Some civilian officials in the administration also funded the construction and maintenance of smaller projects. As Chamberlain has pointed out, however, the '*ulamā*', by contrast, tended to be the beneficiaries of building projects, usually by obtaining a *manṣib* in the form of a teaching, financial or administrative post within a religious institution. Relatively fewer members of the '*ulamā*' endowed buildings. The exact date of construction of al-'Aynī's *madrasah* is unknown, but must have been during al-Mu'ayyad's reign, since, in a clear indication of his favor for al-'Aynī, the sultan himself had it restored and a dome added before his own death in 824/1421.[38]

At the same time Ibn Ḥajar was also increasingly coming to Shaykh's attention. Ibn Ḥajar had been appointed *khaṭīb* at al-Azhar by 819/1416, and in 820/1417 was reading notices of the sultan's campaign in Anatolia to the populace at that mosque. In 822/1419 Shaykh asked Ibn Ḥajar as *muftī* of Dār al-'Adl to judge in the case of the Chief Shāfi'ī *qāḍī* al-Harawī, who had been accused of embezzlement. After Ibn Ḥajar's successful resolution of the case, he was appointed instructor of Shāfi'ī *fiqh* at the Mu'ayyadī mosque, which, unsurprisingly, was one of the two most important mosques of Shaykh's reign in terms of patronage (the other was al-Azhar).

After Shaykh's death in 824/1421 both al-'Aynī and Ibn Ḥajar remained in favor; al-Maqrīzī's career seems to have been going nowhere, as demonstrated by his apparent failure in the competitive arena. Al-'Aynī's professional life in particular only improved during the brief reign of al-Mu'ayyad's successor, al-Ẓāhir Ṭaṭar (824/1421), and reached its height during the reign of Barsbāy. It was under Barsbāy's rule that al-'Aynī's personal relationship with a Mamluk ruler became most developed, and it is this reign more than any other that contemporary historians cite when describing his closeness to the sultans in general. Continuing in what seems to have been a profitable exercise in praise, al-'Aynī wrote biographies of both Ṭaṭar and Barsbāy. Again his command of Turkish proved useful, for he translated a legal treatise of al-Qudīrī into Turkish for Ṭaṭar, and would read

[37]See footnote 4.

[38]Layla Ali Ibrahim and Bernard O'Kane, "The Madrasa of Badr ad-Dīn Al-'Aynī and Its Tiled Mihrāb," *Annales islamologiques* 24 (1988): 267.

history aloud to Barsbāy in Arabic and then explain it in Turkish.[39] Later al-Sakhāwī wrote:

> Our teacher Badr ad-Dīn al-ʻAynī used to lecture on history and related subjects before al-Ashraf Barsbāy and others. (His lectures impressed) al-Ashraf so much that he made something like the following statement: ″Islam is known only through him.″ Al-ʻAynī and others, such as Ibn Nāhid and others, compiled biographies of the kings . . . since they knew that they liked to have it done.″[40]

The relationship between al-ʻAynī and Barsbāy was not merely that of sovereign and entertaining historian, however, for it was to al-ʻAynī that Barsbāy turned for advice on religious matters, to the extent that he reportedly said on more than one occasion, ″If not for al-ʻAyntābī there would be something suspect in our Islam″ (*law lā al-ʻayntābī la-kāna fī islāminā shay*').[41] Nor was this the extent of al-ʻAynī′s success within the outlines of established patronage practices, for he was made Chief Ḥanafī *qāḍī* in 829/1426. It was also during Barsbāy′s reign that al-ʻAynī became the first to hold the offices of *muḥtasib*, *nāẓir al-aḥbās*, and Chief Ḥanafī *qāḍī* at the same time in 835/1431.[42]

In addition to engaging the sultan with anecdotes and instructing him on his religious rights and obligations, al-ʻAynī advised Barsbāy on delicate legal matters.[43] Barsbāy also relied at least once on al-ʻAynī to substitute for him in greeting foreign dignitaries, perhaps in part because of his competence in several languages.[44] Ibn Taghrībirdī provides an interesting image of al-ʻAynī′s didactic role when he writes:

> . . . frequently he [al-ʻAynī] would read in his [Barsbāy′s] presence the histories of earlier rulers and their good deeds, recounting to him their wars, troubles, expeditions and trials; he would explain this to him in Turkish and elaborate on it eloquently, then began to make him desire to do good deeds and look into the welfare of the

[44] Al-ʻAynī,*ʻIqd al-Jumān*, 2:21.

> Mohammedans; he deterred him many times from acts of injustice. . . . And because of what he heard through al-ʿAinī′s reading of history to him, al-Ashraf could dispense with the council of the amirs in regard to important matters, for he became expert through listening to the experiences of past rulers.
>
> . . . al-Ashraf when he became Sultan was uneducated and young in comparison with the rulers among the Turks who had been trained in slavery; for at that time he was something over forty years old, inexperienced in affairs, and had not been put to the test. Al-ʿAinī by reading history to him educated him and taught him matters which he had been incapable of settling previously.
>
> . . . For this reason al-ʿAinī was his greatest boon companion and the one nearest to him, despite the fact that he never mixed in government affairs; on the contrary, his sittings with him were devoted only to the reading of history, annals and the like. . . .[45]

Ibn Ḥajar′s relationship with Barsbāy does not seem to have been of the same personal quality. Ibn Ḥajar possessed an enormous amount of what Chamberlain has referred to as ″cultural capital″; he was, by all reports, extraordinarily learned in a wide variety of subjects, highly intelligent, and extremely prolific.[46] He acquired significant *manṣib*s in the reigns of five successive sultans, and spent years in the highest and most prestigeous *manṣib* in Mamluk realms, that of Chief Shāfiʿī *qāḍī* in Egypt. Nevertheless, although it was Barsbāy who appointed Ibn Ḥajar to the position in 827/1424, the scholar does not appear to have been one of the sultan′s close personal friends. Certainly Ibn Ḥajar was hampered by a linguistic barrier, for unlike al-ʿAynī he did not know Turkish, and at times went so far as to rebuke those who spoke Turkish to him.[47] Chamberlain has also pointed out that many *ʿulamāʾ* lived in a certain ″moral middle ground.″[48] Muḥammad Kamāl ʿIzz al-Dīn depicts Ibn Ḥajar as a man conflicted about his employment as a *qāḍī*, troubled by the demands of being simultaneously just and politic.[49] Certainly this tension emerged in periodic conflicts with more than one sultan.[50]

Rivalries

The relationship between Ibn Ḥajar and al-ʻAynī, both major figures for over twenty years, both successful competitors for patronage, was a changeable one. The two scholars kept up a certain amount of poetic competition, and used the occasion of the collapse of a minaret from the Muʻayyadī mosque in 821/1418-19 to make fun of one another in verse. This poetic rivalry goes unmentioned by either scholar or by al-Maqrīzī, although it emerges both in Ibn Taghrībirdī's *Nujūm* and in works as far removed from Cairo as the *Ṣidq al-Akhbār* of Ibn Sabāṭ (d. 926/1520), who lived on the northern Syrian coast.[51] This was only the forerunner of a later, more serious rivalry between Ibn Ḥajar and al-ʻAynī over their differing interpretations of the *Ṣaḥīḥ* of al-Bukhārī. Although both scholars had their supporters, Ibn Ḥajar can be viewed as the ultimate victor with his *Fatḥ al-Bārī fī Sharḥ al-Bukhārī,* as well as his *Intiqāḍ al-Iʻtirāḍ*, a critique of al-ʻAynī's critique of *Fatḥ al-Bārī.* Relations between the two sometimes deteriorated significantly, most notably in the period directly preceding 26 Ṣafar 833/24 November 1429, on which date both men were simultaneously removed from their posts as *qāḍī*s. Ibn Ḥajar provides no explanation, but al-ʻAynī is anxious to point out that the dismissal not only was not his fault, but did not actually impair his association with Barsbāy; in doing so, he inadvertently indicates the tense relationship he had with Ibn Ḥajar:

> On Thursday, 26th Ṣafar, the *qāḍī* ʻAlam al-Dīn Ṣāliḥ al-Bulqīnī was granted a robe, and he became the Chief Shāfiʻī *qāḍī* in Egypt, replacing the *qāḍī* Shihāb al-Dīn Ibn Ḥajar, by virtue of his dismissal (*ʻazlih*), and likewise ʻAbd al-Raḥmān al-Tafahnī was granted a robe, and he became the Chief [Ḥanafī] *qāḍī*, replacing the author [of this book, *musaṭṭirih*, i.e., al-ʻAynī] by virtue of his dismissal. The reason for that was the effort of some enemies with (*ʻinda*) al-Malik al-Ashraf, [saying] that these two *qāḍī*s would not cease fighting, nor agree, such that the interests of the Muslims were lost between them. They [these ill-wishers] found no way [to achieve] the dismissal of the author [except by] this calumny; thus the dismissal happened because of this.[52] The Sultan spoke to me about

[51]Ibn Taghrībirdī, *al-Nujūm*, 13:225; also see Ibn Sabāt, *Ṣidq al-Akhbār* (Tripoli, Lebanon, 1993), 2:775-76.

[52]The text seems to be corrupt: *lam yajidū ṭarīqan fī ʻazli musaṭṭirihi ilá hādhā al-iftirā*ʼ.

> that and said: ″I did not dismiss you for a matter that required dismissal, nor because of a legitimate accusation, but the situation is thus.″[53]

So, too, both men were not loath to point out weaknesses or physical infirmities in one another. When in that same year al-ʻAynī fell off his donkey and broke his leg, Ibn Ḥajar took care to mention it in his chronicle.[54] Later al-ʻAynī replied in kind by referring to the fatigue Ibn Ḥajar felt when visiting the prince Muḥammad ibn Jaqmaq. Such visits forced the elderly scholar to climb up not only the steps to the citadel but also additional steps within it to Muḥammad′s elevated apartments.[55] Nevertheless relations between the two scholars at other times seem to have been good, so much so that, when both men accompanied Barsbāy during his campaign to Āmid in 836/1433, al-ʻAynī invited Ibn Ḥajar to be his houseguest in ʻAyntāb for the ʻĪd al-Fiṭr.[56]

Nor was sporadic petty griping merely a private matter between these two men. The outsider, al-Maqrīzī, was similarly prone to such tendencies—with one exception. Al-Maqrīzī′s opinion of Ibn Ḥajar seems to have been very high; in no place does he utter a word against him, and when possible al-Maqrīzī takes the time to praise Ibn Ḥajar′s remarkable learning.[57] Unfortunately for al-Maqrīzī, this high regard may not have been fully returned; rather, al-Sakhāwī reports that Ibn Ḥajar considered al-Maqrīzī to be a plagiarist, and condemned him for stealing the bulk of his *Khiṭaṭ* work from a neighbor, al-Awḥadī.[58] But it is unclear how much of this accusation was al-Sakhāwī′s opinion and how much Ibn Ḥajar′s own view.

At any rate, although he remained deferential to Ibn Ḥajar, al-Maqrīzī′s opinion of al-ʻAynī seems to have been poor. This can be glimpsed in al-Maqrīzī′s treatment of al-ʻAynī in *Kitāb al-Sulūk*, as well as in his lack of treatment of the ʻAyntābī in the *Khiṭaṭ*. Nowhere in the *Khiṭaṭ* is al-ʻAynī′s *madrasah* mentioned, although its location near al-Azhar, the addition to it of its dome by al-Mu'ayyad, and its unusual Anatolian-influenced *mihrab* seem to make it worthy at least of mention. In his introduction to the work al-Maqrīzī states his intention of depicting the glories of past ages, that of the Fatimids in particular. Ayman Fu'ād Sayyid points

[56]Ibid., 431.

[57]See al-Maqrīzī, *Kitab al-Suluk*, 4:2:992.

[58]Al-Sakhāwī, "al-Iʻlān,″ ed. and trans. Rosenthal, *Historiography*, 402.

out, however, that al-Maqrīzī departed noticeably from his own plan in later sections of the work—the text includes dates as late as 843/1439-40. Sayyid also reminds us that the *Khiṭaṭ* was compiled gradually throughout al-Maqrīzī's lifetime, with a definitive edition composed near the end of his life after the completion of most of his other works.[59] It seems impossible that al-Maqrīzī would have been ignorant of the existence of al-ʻAynī's *madrasah*.

Nor, since composition of the *Khiṭaṭ* spanned decades, does it seem plausible that he left these structures out because he had already completed the work. This cannot but prompt the question: What other buildings have been left out of the book? Did al-Maqrīzī's personal opinion of their founders play any role in his selection of material? Or, if their omission were indeed a function of al-Maqrīzī's preoccupation with the Fatimids, we must wonder what prompted that preoccupation. Was it al-Maqrīzī's alleged descent from the Fatimids? Did he himself accept this lineage? Or did his status as a reclusive outsider in his own time have any influence on his preoccupation with a vanished historical age?

It is not my purpose to address these issues here, however, as they do not pertain directly to the subject at hand, namely al-Maqrīzī's literary treatment of al-ʻAynī. Certainly the case seems clearer in *Kitāb al-Sulūk*. There, although most of al-Maqrīzī's references to al-ʻAynī are circumspect notices of promotions or dismissals, hints of al-Maqrīzī's dislike of al-ʻAynī emerge where issues of *ḥisbah* are concerned. In one reference to al-ʻAynī as *muḥtasib*, al-Maqrīzī states:

> On Friday, Dhu'l-Ḥijja 7, there was a disgraceful occurrence. Bread was scarce in the markets; and when Badr ad-Dīn Maḥmūd al-ʻAinī, market inspector of Cairo, left his house to go to the citadel, the populace shouted at him, implored the amirs to come to their relief, and complained to them against the market inspector. In fear lest the people would stone him, he turned from the Boulevard and went up to the Citadel; he complained about them to the Sultan [Barsbāy], of whom he was a favorite, and to whom he used at night to read the histories of kings and translate them into Turkish for him. The Sultan was enraged and sent a party of amirs to Zuwaila Gate; they took possession of the entrances into the streets in order to seize the people. One of the slaves threw at an amir a stone which struck him; he was captured and beaten. Then a large number of people were seized and brought before the Sultan, who

[59]Ayman Fu'ād Sayyid, "Remarques sur la compositions des Ḫitat de Maqrīzī d'après un manuscrit autographe," *Hommages à la memoire de Serge Sauneron, 1927-1976, II: Égypte post-pharaonique*, 231-58, Bibliothèque d'étude, 81:2 (Cairo, 1979), 240.

> ordered them to be cut in two at the waist; but then he handed them over to the governor of the city who beat them, cut off their noses and ears, and imprisoned them on the eve of Saturday. In the morning they were reviewed before the Sultan, who set them free; they numbered twenty-two respected men, *sharifs* and merchants. Men's hearts were alienated by this, and tongues were loosed with imprecations and the like.[60]

This passage is not directly critical of al-'Aynī, or at least, not at first glance. Indeed, Ibn Ḥajar seems much more critical in his description of the same incident when he writes:

> On Dhū al-Ḥijjah 7, 828 [10 October], a group rose up against the *muḥtasib*, who was the *qāḍī* Badr al-Dīn al-'Aynī, because of [his] negligence of the matter of the vendors, and the excessiveness of bread [prices] despite the cheapness of wheat.[61]

Al-'Aynī may indeed have been an inept *muḥtasib*; his skill or lack thereof, however, is not the point here. Rather it is the opinions of his peers that are interesting, especially that of al-Maqrīzī, and especially when we note that in *al-Nujūm al-Zāhirah* Ibn Taghrībirdī provides a different perspective on the incident. After quoting al-Maqrīzī's entry, Ibn Taghrībirdī confirms that the information supplied is true, but then adds that al-Maqrīzī neglected to report that the mob did in fact stone al-'Aynī, thus justifying his complaint to the Sultan. Ibn Taghrībirdī goes on to explain that al-Maqrīzī omitted this detail because "He wished thereby to increase the vilification of him [al-'Aynī], for there was long-standing hostility between the two."[62]

In another passage al-Maqrīzī's criticism is simultaneously more long-winded and more pronounced:

> In the middle of this month (Ṣafar 829/December-January 1425-26), the price of wheat rose and one *irdabb* exceeded 300 *dirham*s; flour became scarce at the mills and [so did] bread in the markets. The matter became atrocious on the twenty-ninth [of the month] and people crowded to the bakeries asking for bread; and they

---

[60]Ibn Taghrībirdī, *History of Egypt*, trans. Popper, 18:29; idem, *al-Nujūm*, 14:117-18; al-Maqrīzī, *Kitāb al-Sulūk*, 4:2:698.

[61]Ibn Ḥajar, *Inbā'*, 8:77-78.

[62]Ibn Taghrībirdī, *al-Nujūm*, 14:118; also idem, *History of Egypt*, trans. Popper, 18:29.

clamored to buy bread. Through this the souls of the bakers became miserly, and a *qadaḥ* of *fūl* was offered for sale at four *dirham*s. For this there were many reasons: One of them is that al-Badr Maḥmūd al-ʻAyntābī tended to be lenient on the vendors, to the extent that it was as if there were no limitation on them in what they did, nor on the prices by which they sold their goods. So when al-Shashmānī[63] was appointed [*muḥtasib*], he terrorized the vendors and curbed them with severe blow[s] . . . .[64]

And it happened in those days that there was destruction of a great many water buffalos and cattle, to the extent that [there was] a man who had 150 water buffaloes and all of them died. There remained no more than four water buffaloes, and we don′t know what happened to them. Milk, cheese, and butter [also] became scarce. Then in the middle of this month [?] winds blew,[65] [which] continued (*tawālat*) for more than ten days. The boats could not travel in the Nile, and the coast was laid bare of crops. News arrived of high prices in Gaza, Ramla, Jerusalem, Nablus and the coast, Damascus, Hārrān, and Hamāh, until the price of an Egyptian *ardab* [of grain] among them would exceed 1000 *dirham*s′ worth of copper (*alf dirham fulūsan*) if it were counted. News arrived of high prices in Upper Egypt; in the whole area wheat and wheat bread were scarcely to be found. Despite these disasters, the notables became greedy. Indeed when wheat reached 250 *dirham*s per *irdabb* some of the Amirs of One Thousand said: ″I will only sell my wheat at 300 *dirham*s per *ardab*.″ The Sultan forbade that any wheat be sold from his granaries because of the scarcity of what he had. People thought bad thoughts, and became agitated and angry. Cautiousness became strong, and greed increased. The wheat vendors kept what wheat they had, hoarding it, and hoped to sell earth (i.e., wheat) for pearls. All this, and the one in charge of the *ḥisbah* was far from [any] knowledge of it. And the long and short of it was what is said: ″Tribulation piled up on one person.″[66]

[63]The amir Ināl al-Shashmānī was appointed *muḥtasib* in mid-Ṣafar 829, at the end of the period of inflation, Dhū al-Qaʻdah 828- Ṣafar 829; perhaps in an effort to stabilize the situation?

[64]In this sentence the text seems to be corrupt: *fa-kādūhu* (??) *wa-taraka ʻiddatun minhum mā kāna yuʻānīhi* (??) *min al-bayʻ*.

[65]I could not make sense of this word: *muraysīyah*? *marīsīyah*? *murīsīyah*?

[66]Al-Maqrīzī, *Kitāb al-Sulūk,* 4:2:710-11.

That prices rose dramatically during those few months seems to be generally acknowledged, for Ibn Ḥajar, Ibn Taghrībirdī and al-ʻAynī himself also mention it. For each historian, however, the possible causes seem to differ: for al-Maqrīzī, as seen above, it is a combination of al-ʻAynī's inefficiency and a number of natural disasters; for Ibn Ḥajar it is a similar combination of al-ʻAynī's negligence and a plague of vermin in Syria.[67] Al-ʻAynī himself mentions both the inflation and the vermin but neglects to expand on his own actions,[68] while Ibn Taghrībirdī's later contribution is little more than the transmission and critique of al-Maqrīzī's opinion.[69]

Nor did al-ʻAynī refrain from returning such favors to his peers. Although al-ʻAynī managed to achieve a high level of financial and material success through competition for *manṣib*s, access to powerful people and generally an adroit manipulation of patronage opportunities during his lifetime, this did not automatically result in success on the more idealized level of scholarship. In the field of history Ibn Ḥajar and al-Maqrīzī could be counted among al-ʻAynī's competitors. In addition, al-ʻAynī was involved in the above-mentioned heated debate with Ibn Ḥajar about the *Ṣaḥīḥ* of al-Bukhārī.

Matters came to a head in 833/1428, when an ambassador arrived in Cairo from the court of Shāh Rukh, the son of Tīmūr and ruler of Herat, requesting copies of two books: al-Maqrīzī's *Kitāb al-Sulūk* and Ibn Ḥajar's *Fatḥ al-Bārī bi-Sharḥ al-Bukhārī.* The royal commission of works from authors who had achieved a level of renown was one specific patronage practice at that time. Al-Maqrīzī records the titles of both books in *Kitāb al-Sulūk*, mentioning Ibn Ḥajar's first.[70] Ibn Ḥajar neglects to mention al-Maqrīzī's book, although he informs us that he immediately set about having a copy of his own work prepared; nor does he mention, as does Ibn Taghrībirdī, that Barsbāy in fact turned down Shāh Rukh's request.[71] If we take al-Sakhāwī's portrayal of al-Maqrīzī's desire for detachment from court life at face value, we might infer here that Shāh Rukh's request did not impress the historian. However, Ibn Taghrībirdī's image of him as a man disappointed by his own failure within the competitive arena might instead lead us to conclude that he viewed this specific request of his scholarly work by a foreign ruler—and the son of Timūr at that—as an honor.

We may also infer that Shāh Rukh's desire for works by two of al-ʻAynī's major rivals was quite a professional blow to the ʻAyntābī historian. In his own

entry for the event, al-ʿAynī curiously fails to refer in any way to the two works requested, although he goes into some detail about the foreign gifts presented to Sultan Barsbāy:

> On Tuesday 21 Muḥarram [833], a messenger came from Shāh Rukh ibn Tīmūrlank, sultan of the lands of the Iranians and the Turks; he had a letter to al-Malik al-Ashraf containing much information, and he had some gifts from their country. Likewise he had the letter of the son of Shāh Rukh, who is Ibrāhīm Shāh, ruler of the lands of Fārs, whose capital is the city of Shīrāz. He also sent gifts, among them: a bezoar stone,[72] eleven *mithqāl*s, and a letter from him written in gold in Arabic letters, and a letter from the Shāfiʿī *qāḍī* Shams al-Dīn Muḥammad ibn al-Jazarī, chief *qāḍī* in Shīrāz. The date of their letters was from the beginning of [8]32.[73]

In his biography of al-ʿAynī and despite his high opinion of him as an historian, al-Sakhāwī critiques the ʿAyntābī scholar because his books were not the stuff of requests made by foreign kings:

> . . . al-ʿAynī's *Sharḥ* [of al-Bukhārī] is also copious but it did not become as widespread as that of our shaykh [Ibn Ḥajar], nor did rulers of the outlying areas [*mulūk al-aṭrāf*] request it from the ruler of Egypt.[74]

---

[72]Bezoar stone, from Arabic *bazhar*, from Persian *pādzahr* (*pād*, protecting against, and *zahr*, poison); refers to stone-like concentrations of resinous organic matter considered to have medicinal qualities.

[73]Al-ʿAynī, *ʿIqd al-Jumān,* 2:370-71.

[74]Al-Sakhāwī, *al-Ḍaw'*, 10:134. It may be, however, that al-ʿAynī took his revenge on Shāh Rukh in the only way possible, that is, by using his own education against the Timurid. Throughout Barsbāy's reign one controversial strategic, ideological and legal issue was Shāh Rukh's attempt to provide the *kiswah* or covering for the *ka'bah,* traditionally maintained by the Mamluks. Barsbāy's repeated refusal of Shāh Rukh's requests to provide the *kiswah* was generally unpopular among the amirs. In 838/1434, therefore, when Shāh Rukh once again wrote demanding this privilege, explaining that he was bound by an oath he had made after a dream, Barsbāy met with the four chief *qāḍī*s to discuss the legal ramifications of denying the request of such an individual. It comes as little surprise to discover that it was al-ʿAynī, spurned academically six years earlier, who stated that Shāh Rukh's vow was null and void, thereby giving Barsbāy the legal grounds on which to refuse the request; see al-Maqrīzī, *Kitāb al-Sulūk*, 4:2:928.

Al-ʻAynī′s contempt for al-Maqrīzī even survived the latter′s death in 845/1442. The first to go, the seventy-nine year-old al-Maqrīzī died on 16 Ramaḍān/28 January after a long illness.[75] By nature isolated, by professional circumstance removed from the circles of power and wealth, al-Maqrīzī did not even have the comfort of his children in his final days, for the last of his offspring, his daughter Fāṭimah, had predeceased him in 826/1423.[76] In terms of the competitive arena and Mamluk patronage practices, al-Maqrīzī seems to have died a failure; in terms of academic endeavor, a resounding although not unqualified success with at least his followers, although not his detractors.[77] Nor could mortality soften al-ʻAynī′s antagonism for al-Maqrīzī; Ibn Taghrībirdī points out that al-ʻAynī incorrectly noted al-Maqrīzī′s death date as 29 Shaʻbān/12 January.[78] Al-ʻAynī′s death notice for al-Maqrīzī is a mere five lines long. In it al-ʻAynī makes no mention of al-Maqrīzī′s works, nor of the achievements of his earlier career, but rather accuses him of geomancy, then attempts to ″clarify″ the *ḥisbah* incident of 801-3/1398-1401:

> [In this year died] the shaykh Taqī al-Dīn Aḥmad ibn al-Maqrīzī; he died Friday, 29 Shaʻbān; he was occupied with writing history and with geomancy (*ḍarb al-raml*); he was appointed to the *ḥisbah* of Cairo at the end of the days of al-Malik al-Ẓāhir [Barqūq], then was dismissed for the author (*musaṭṭirih*; i.e., al-ʻAynī) [of this book]; then was appointed another time in the days of the amir Sūdūn, al-Ẓāhir′s nephew the great *dawādār*, replacing the author because the author had [already] dismissed himself because of the oppression of the above-mentioned Sūdūn.[79]

Ibn Ḥajar′s death notice for al-Maqrīzī, by contrast, is twenty-five lines long, and the date is 17 Ramaḍān/29 January. In it he refers to al-Maqrīzī′s love of history, then goes on to praise him:

> He was a skillful, outstanding, versatile, precise, pious, superior imām; [he was] fond of the people of the *sunnah*; he inclined

---

[75]Al-Sakhāwī, *al-Ḍaw'*, 2:25.

[76]Al-Maqrīzī, *Kitāb al-Sulūk*, 4:2:651.

[77]These include al-Sakhāwī, who accused al-Maqrīzī of plagiarizing the manuscript for his *Khiṭaṭ*, and possibly Ibn Ḥajar as well. See above; also al-Sakhāwī, *al-Daw'*, 1:358-59; 2:22; and ″al-Iʻlān,″ ed. and trans. Rosenthal, *Historiography*, 285, 402.

[78]Ibn Taghrībirdī, *al-Nujūm*, 15:226.

[79]Al-ʻAynī, *ʻIqd al-Jumān*, 2:574.

> towards *ḥadīth* . . . [he was] pleasant company [and] entertaining; he went on the pilgrimage often and lived [and studied in Mecca] many times.

Ibn Ḥajar spends the rest of the notice musing about al-Maqrīzī's alleged link to the Fatimids.[80] This notice tempers al-Sakhāwī's version of Ibn Ḥajar's dislike of al-Maqrīzī because of the alleged plagiarism of the *Khiṭaṭ*. Al-Maqrīzī was buried at Maqābir al-Ṣūfīyah.[81]

A few years later, in Dhū al-Qa'dah 852/January 1449, Ibn Ḥajar sickened. This prompted streams of visitors to pay their respects, as could be expected for one of his intellectual stature and reputation, before he passed away at the end of the month. His funeral was extremely well-attended; the Sultan Jaqmaq was there, as was the Abbasid caliph, who led the prayers. (Ibn Taghrībirdī reports 50,000 mourners in the cortège.)[82] Ibn Ḥajar was buried near the tomb of the Imām al-Shāfi'ī, and, appropriately enough for such a well-known and revered figure, prayers were said for him in Damascus, Jerusalem, Mecca, Hebron and Aleppo.[83]

One year after Ibn Ḥajar, it was al-'Aynī's turn as the last of the trio. He suffered from failing memory at the end of his life, which may have been part of the reason for his dismissal from the post of *nāẓir al-aḥbās* in 853/1449 by Jaqmaq "because of his advanced age."[84] Another reason may have been the machinations of a younger scholar, 'Ala' al-Dīn ibn Aqbars. But the waning of al-'Aynī's career had begun earlier. The scholar who had managed to befriend three sultans in a row did not seem to make as successful a transition to the new era of al-'Azīz Jaqmaq. Ibn Taghrībirdī tells us that after Barsbāy's death in 841/1438 al-'Aynī was replaced as chief Ḥanafī *qāḍī* and kept to his house. Al-Sakhāwī adds that he focused on his writing during this period, and managed financially on his income as *nāẓir al-aḥbās* until he lost that position, after which he sold his property and his books, with the exception of those items he had left as *waqf* in his *madrasah*, a testament to the uncertain nature of even his substantial material success.[85] Like al-Maqrīzī, al-'Aynī had outlived all his children. In 855/1451 at the age of ninety-three al-'Aynī died, and was buried in his own *madrasah.*

CONCLUSION

In conclusion we see that the lives of Ibn Ḥajar, al-ʻAynī, and al-Maqrīzī, as well as the numerous rivalries among and between the men, provide a case study of some types of interaction both among the *ʻulamā'* and between the *ʻulamā'* and members of the military elite. The lives of many scholars during the Mamluk period were caught up with those of the sultan and the amirs in a kind of interdependence, which expressed itself through elite financial and material patronage of the *ʻulamā'* in exchange for legitimation and involvement in the dominant Islamic cultural environment. As Chamberlain has pointed out, for the *ʻulamā'* the road to material and financial success could lie within the realm of social and academic competition, itself delineated by the parameters of Mamluk patronage practices. Thus hostility, partisanship, and rivalry inevitably arose as scholars maneuvered for proximity to patrons and favorable material and financial rewards within the competitive arena. In the case of al-ʻAynī and al-Maqrīzī, rivalry sprang up between them after the *muḥtasib* incident of 801-3/1399-1401. For al-ʻAynī and Ibn Ḥajar, their rivalries were multi-faceted and ongoing. So, too, the lives of the three scholars provide a case study not only of the types and manifestations of rivalries common among scholars at that time, but also the multiple and often conflicting definitions of success.

University of Arkansas at Fayetteville

Environmental Hazards, Natural Disasters, Economic Loss, and Mortality in Mamluk Syria[1]

The role of natural disasters and environmental disruptions has received considerable attention among historians of various cultures and regions over the past twenty-five years. Beginning with J. D. F. Shrewsbury's *A History of Bubonic Plague in the British Isles* and William McNeill's *Plagues and Peoples* and continuing most recently with William Jordan's study, *The Great Famine: Northern Europe in the Early Fourteenth Century* and Carol Benedict's *Bubonic Plague in Nineteenth-Century China*, scholars have examined the historical significance of such phenomena as severe weather, droughts, pest influxes, epizootics and, more importantly, famines, epidemics, earthquakes, and fires.[2] In addition to studies of this type, the examination of such phenomena in an historical context reflects the influence of a body of literature devoted to the classification, description, and assessment of catastrophes in recent times, perhaps best exemplified in the work of Gilbert White, R. W. Kates, and John Whittow, and also presented systematically in the journal *Disasters*.[3]

Aside from the plague studies of Michael Dols and Lawrence Conrad and the books and articles of Charles Melville, scholars of Near Eastern and Islamic history have paid little attention to environmental catastrophes.[4] In a study published

[1]The present study is derived from a paper delivered at the 1997 annual meeting of the Middle East Studies Association in San Francisco. My special thanks go to Bruce D. Craig, Winslow W. Clifford and the Middle East Documentation Center for the invitation to participate in the panel.

more than fifteen years ago, I tried to address this issue, albeit in a limited fashion.[5] The present essay constitutes an attempt to extend this research to a different locale and to provide a somewhat broader perspective on the issue. The methodology to be employed is adopted from my own 1981 article (cited in note 5) and the study of metereological hazards by Melville referred to in note 4.

I have chosen to examine the nature and impact of disasters in Mamluk Syria with a view to providing greater insight into the various ways they affected public health, economic life, and population levels. The thesis of this study, simply stated, is that natural hazards or disasters played a significant role directly and indirectly in the livelihood and health of Syrian society as a whole, that is, not just Mamluk military or *'ulamā'* elites but within the entire social spectrum. Although certain disasters, as we shall see, were particularly destructive or deadly, for example, earthquakes and epidemics, a variety of natural dysfunctions or catastrophes visited health and financial damage upon the population. In order to understand this process, furthermore, it is imperative to examine each type of disaster with a view to determining the particular nature of the harm inflicted. Most of these phenomena have their own direct effects, but in some cases they generate other destructive events or create serious loss in an indirect, long-term fashion. Also, disaster studies, including those cited above (note 3), suggest that it is more valid to proceed inductively, analyzing the events as classes or groups in a diachronic framework so as to suggest relationships rather than simply concentrating upon one, however spectacular, event. Such a mode of analysis can also indicate the relative destructiveness of an incident. It shows clearly, for instance, the pronounced lethality of plague epidemics, famines, and severe earthquakes. On the other hand, it demonstrates that weather events can generate food crisis or famine, or even spawn mortality themselves.

The source materials utilized in this study are mainly chronicles emanating from both Syria-Palestine and Egypt. Most of these works are arranged annalistically, which has both advantages and disadvantages. From the positive side, this method of organization seems to foster an interest in recording the important ″events″ or

Chronologies and Treatises: Social and Historical Factors in the Formation of a Literary Genre,″ *Studia Islamica* 54 (1981): 51-93; idem, ″Ṭā'ūn and Wabā': Conceptions of Plague and Pestilence in Early Islam,″ *Journal of the Economic and Social History of the Orient* 25, pt. 3 (1982): 268-307; N. N. Ambraseys and Charles P. Melville, *A History of Persian Earthquakes* (Cambridge, 1982); N. N. Ambraseys, Charles P. Melville, and Robin D. Adams, *The Seismicity of Egypt, Arabia, and the Red Sea: A Historical Review* (Cambridge, 1994); Charles P. Melville, ″Earthquakes in the History of Nishapur,″ *Iran* 18 (1980): 103-122; idem, ″Metereological Hazards and Disasters in Iran: A Preliminary Survey to 1950,″ *Iran* 22 (1984): 113-150. This latter essay is one of the finest examples of the utilization of disaster research in the study of Near Eastern history.

[5]William Tucker, ″Natural Disasters and the Peasantry in Mamlūk Egypt,″ *JESHO* 24, pt. 2 (1981): 215-224.

″curiosities″ of a given year and thereby encourages the inclusion of more than simple military and political affairs. On the other hand, it also results frequently in extremely terse and summary descriptions of phenomena with little detailed information about immediate effects other than the sort of ″much destruction″ or ″many people perished″ reportage. The nature of the problems in working with such material can be readily seen in the excellent remarks of Charles Melville in his *Arabic and Persian Source Material on the Historical Seismicity of Iran from the 7th to the 17th Centuries A.D.*[6] One might expect the necrologies in the chronicles to afford useful information with regard to disaster-caused mortality, but that does not seem to have been the case except with the plague pandemic and other instances of exceptionally lethal plague events.[7] Plague material, in fact, constitutes a notable exception to the problems with the volume and coverage of catastrophes; however, in view of Professor Dols′s masterful contribution, I touch upon this issue only briefly in this study. Other than the chronicles and the voluminous material on plague, there are useful treatises on certain disasters, such as al-Maqrīzī′s *Ighāthat al-Ummah bi-Kashf al-Ghummah* (on famines) and al-Suyūṭī′s *Kashf al-Salsalah ʻan Waṣf al-Zalzalah* (earthquakes), but these kinds of texts are unfortunately not numerous and, in the case of al-Maqrīzī′s work, the emphasis is almost entirely upon Egypt.[8] Presumably documents and *waqf* materials would yield information about loss through disasters, but unfortunately I have been unable to locate such materials for Syria, and regrettably the materials I have seen or analyzed (confined to data from Palestine or Egypt) have yielded much less than one would expect or hope.[9] Similarly, biographical dictionaries have proved to be far less helpful than might be anticipated. In the first place, they

[7]Dols, *Black Death*, 220-222.

[8]For al-Maqrīzī, we have now the excellent study and translation of Adel Allouche, *Mamluk Economics: A Study and Translation of al-Maqrīzī′s* Ighāthah (Salt Lake City, 1994); al-Suyūṭī *Kashf al-Salsalah ʻan Waṣf al-Zalzalah* (Fez, 1971); idem, ″Soyuti′s Work on Earthquakes called Kashf al-Salsalah ʻan Waṣf Az-Zalzalah, i.e., Removing the Noise from the Description of the Earthquakes . . .,″ trans. A. Sprenger, *Journal of the Royal Asiatic Society of Bengal* 141 (n.s. 57) (1843): 741-749.

[9]The important document studies of Professor Donald Little are noteworthy here, e.g., ″The Significance of the *Haram* Documents for the Study of Medieval Islamic History,″ *Der Islam* 57 (1980): 189-217; and more recently, his ″Documents Related to the Estates of a Merchant and His Wife in Late Fourteenth Century Jerusalem,″ *Mamlūk Studies Review* 2 (1998): 93-193. See also Huda Lutfi, *al-Quds al-Mamlūkiyya: A History of Mamlūk Jerusalem Based on the Ḥaram Documents* (Berlin, 1985), esp. 220, 223, 225, 231. For Egypt, see Carl F. Petry, ″A Geniza for Mamluk Studies? Charitable Trust (*Waqf*) Documents as a Source for Economic and Social History,″ *MSR* 2 (1998): 51-60.

focus upon social elites and therefore afford little insight into the lives of common people, urban or rural, but also they yield minimal information about economic issues related to disaster and also contain negligible data about mortality causes except plague. Even in the case of plague, the situation is not nearly as clear-cut as one might expect, as Michael Dols′s treatment of the issue showed many years ago.[10]

If one must rely largely upon chronicles in the study of catastrophes and natural hazards, it is at least useful to examine the evidence through comparison with details and techniques gleaned from studies of populations and areas outside the Middle East which may be blessed with more copious information. While the present investigation is technically not a work of comparative history, it does utilize where possible materials from other cultures and periods. In particular, I have found the research of scholars in East Asian history and in Early Modern European history to be invaluable. In the latter case, information based upon medical, climatic, and seismological studies have provided much greater insight into how these events unfold and what their effects, especially indirect or covert results, are.

Warfare and military operations constituted, potentially, a source of disaster in themselves. Obviously, the Mongol-Mamluk wars resulted in a number of calamitous incursions into Syria. Reuven Amitai-Preiss refers to some half dozen invasions and goes on to examine carefully the military and political aspects of these struggles.[11] Referring to the same sorts of events, Eliyahu Ashtor years earlier spoke of what he termed ″mass flights″ of people from Syria into Egypt and suggested that these migrations played a role in the slower population growth of Syria than that of Egypt in the Baḥrī Mamluk period (late 1250s to 1381).[12] Such military action and occupation of towns or cities could produce noncombatant casualties, destruction of property (looting or burning), or the spread of epidemics (although there seems to be no evidence of plague spread in this fashion in Syria).

---

[10]Dols, *Black Death*, 222, note 73. I have found no indication of Professor Dols′s expectations being realized in later research. A number of years ago Carl Petry kindly shared with me mortality information gleaned from the biographical works consulted in his study of the Cairene *ʻulamā*ʼ, and I was unable to find any correlation between this material and the disaster data afforded by the chronicles; in a number of cases, in fact, the cause of death was unidentifiable. For the use of Mamluk biographical materials, one must consult Professor Petry′s *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981).

[11]Reuven Amitai-Preiss, *Mongols and Mamluks: The Mamluk-Ilkhanid War, 1261-1281* (Cambridge, 1995), 1; see also chapter 8 on the second battle of Homs.

[12]Eliyahu Ashtor, *A Social and Economic History of the Near East in the Middle Ages* (Berkeley, 1976), 290.

Plague epidemics seem to have been spread most often by religious pilgrims or by merchants, especially maritime traders.[13] In point of fact, epidemics seem to have negatively affected Mamluk military strength through decreased revenues and lowered *iqṭāʿ* values and through the disruption of military campaigns.[14] In any case, these issues have been discussed more fully by Professors Ashtor and Dols, and one may consult their respective works for further details.

The role of what William McNeill has referred to as ″macro-parasites,″ that is, tribal raiders, predatory government officials, or unruly urban groups, will not be discussed here except insofar as they intensified or prolonged environmental dysfunctions.[15] Furthermore, one should recall the admonitions of Emmanuel Le Roy Ladurie years ago, when he cautioned against relating political change and environmental disturbance.[16] The concatenation of dynastic change and disasters, for instance, may work very well in an analysis of Imperial Chinese history, but any such linkage is not evident in any of the data from the medieval Near East.

Given Mamluk political and familial rivalries, I question Mounira Chapoutot-Remadi′s inclusion of political factors in her otherwise excellent study of the terrible famine-epidemic cycle of 1294-1295 in Egypt.[17] Having examined the evidence concerning this catastrophe, it seems to me that environmental disturbance and popular response to it played a far greater role than Mamluk political concerns or factional disputes. Governmental responses to disasters appear to have been *ad hoc* and, if anything, somewhat haphazard. As will be seen in the case of famine, official aid to affected populations was indirect and variable. While Professor Boaz Shoshan′s concept of the ″moral economy″ may be applicable in Egypt and, by extension, in Syria, the Mamluk government apparently did not see a need to establish a regular, rationalized organizational structure to address food crises or, for that matter, other hazards (see the discussion of famine relief below).[18]

In his *The European Miracle; Environment, Economic and Geopolitical History of Europe and Asia*, E. L. Jones divides disasters into four groups: (1) geophysical (earthquakes, volcanic eruptions, etc.); (2) climatic (floods, droughts, hurricanes, etc.); (3) biological (epidemics, epizootics, locusts); (4) social (warfare, fires,

etc.).[19] In the present study, emphasis will be placed upon the first three of these categories in the most common order: climatic, biological, or social (depending upon one′s classification of famine), biological (epidemics), and geophysical (earthquakes). Having established a general framework for the following analysis, it is time to examine generically the various disasters which affected Mamluk Syria and in the process to contrast these where feasible with similar phenomena in Egypt, which was, after all, the locus of power in the Mamluk realm.

Although different from Egypt in climate and topography, Syria too suffered from a number of the same weather problems that plagued Egypt. Damaging wind storms, sometimes accompanied by sand, wrought destruction at various times between 1260 and 1516. In 1315 houses and goods in Tripoli were damaged by severe winds, which were followed by rain and cold.[20] Three years later the Tripoli area was hit again by wind, waterspouts, and hail.[21] In the next year, 1319-1320, violent wind destroyed many houses in Damascus, uprooting trees and burying many people in their houses. The same storm system apparently hit Aleppo with wind and sand.[22] Damascus experienced substantial damage and injury or death in later wind storms also; 1382 or 1383 saw severe damage to trees and houses.[23] In 1441-1442 the city was buffeted by strong winds for four days with the destruction of houses and trees, and damage to the Umayyad Mosque. The same storm ravaged crops and trees at Tripoli, Latakia, Hamah, Aleppo, and Homs.[24] Again, in 1490, violent winds devastated trees and houses in Damascus.[25] Aleppo also suffered from wind storms in 1317-1318. In the account preserved in al-Mufaḍḍal′s chronicle, the terrifying storm is described as having been accompanied by dust, hail, thunder, and lightning. Just to the west of the city, wind destroyed hundreds of oaks, olive trees, and vines. People, domestic and wild animals, as well as birds, were killed. The people, we are told, prayed for God′s mercy.[26] Obviously, one sees in these events substantial economic loss in terms of homes and livelihood (crops and animals). Rural dwellers were hurt by loss of animals and valuable trees, while urban residents who escaped collapsed

dwellings incurred substantial property loss as well as increased prices for scarce commodities or goods. Clearly, these storms were most devastating to the infrastructure and to the agricultural macroeconomy (this latter term used here in the sense of economic sectors). Also, one sees in the report of the Aleppo event of 1317-1318 one of the rare glimpses of psychological response to catastrophe in Syria, not surprisingly, a religiously based reaction. Disasters may well have stimulated heightened religious consciousness, but the references are too sparse to warrant any confident statements in this respect.

Hail, snow, and severe cold also caused hardship for producers and/or merchants of crops and commodities. In 1274, for example, severe rain and hail hit Damascus, and al-Birzālī reports that the apricot crop in the Ghūṭah suffered major loss.[27] In 1292-1293 Syria experienced severe cold and wet weather. Baalbak was hit by rain and snow, and it is reported that the Syrian pilgrimage caravan lost pilgrims to the terrible cold and rains. The intense cold of this time also made itself felt at Damascus, where rain and snow compounded the suffering.[28] Six years later (1298-1299) Damascus was hit by a snow storm which left the ground covered for fifteen days.[29] Snow and cold then destroyed fruit crops in 1307-1308.[30] Syria was famous for its fruit crops and exported these to other areas, for example, Iraq.[31] Damage of the sort mentioned above would thus be expected to disrupt regional trade and, thereby, adversely affect the Syrian mercantile economy at least in the short run.

The fourteenth century saw a number of episodes of cold, ice, or snow. In 1377 there were hail and ice storms throughout the region, in which olive trees were damaged or destroyed and in which people and animals perished. Villages were buried under a cover of snow.[32] Snow in 1345 blocked roads, killing travellers, and domestic and wild animals perished also. Damascus was hard hit in the storm, and it was said that people had not seen the like of it before.[33] Aleppo experienced

considerable snowfall in 1348, and bad crops were the result.[34] Syria again was the scene of snow and ice in 1352, 1363, 1399, and 1400. The freeze of 1363 was noteworthy because the Euphrates and other rivers froze, allowing travellers to walk across them.[35] The 1399 event consisted largely of frost, which spread in most parts of the area and destroyed walnuts, almonds, and apricots.[36] The very next year, the Biqāʿ valley and the mountains north of Damascus received snow, an unusual occurrence according to Ibn Qāḍī Shuhbah.[37] The fifteenth century seems to have been easier, although Syria had significant snow in 1496, and Palestine was very hard hit with snow accumulations in 1499. In the latter case, paths and streets were blocked in Jerusalem, the snow becoming hard frozen and lasting for almost three weeks.[38]

The episodes of freezing cold and precipitation were severe blows to the affected populations. Agricultural commodities were damaged or destroyed, and commercial travel was disrupted by the snow storms. People were stranded and, at times, killed by the weather. Although there seems to be no way to prove it, one may also conjecture that some losses resulted from hypothermia, or what John Post has called "accident hypothermia." As Post points out, sharp temperature changes are also known to occasion deaths from pneumonia, bronchitis, and arteriosclerotic heart disease.[39] It is interesting to note here that the 1496 storm in Damascus was associated not only with broken or damaged trees but also with the increased costliness of badly needed firewood.[40] Sickness or death stemming from these episodes clearly reduced affected populations in the short term and probably contributed to the population decline evident throughout the Burjī period (1382-1517).[41]

Heavy rains and floods appear to have been far more common and more destructive in Mamluk Syria. Damaging rains and/or floods hit Syria some two dozen times in the period between 1269 and 1477. Damascus experienced the greatest number of these, but that may represent the geographical bias of the chroniclers. In 1269 Damascus was hit by a great flood which carried away

houses, animals, and goods. Trees were uprooted, bridges were destroyed, and many horses and camels drowned. The loss of human life was also said to have been severe.[42] The city faced virtually the same ordeal in 1282, 1317, 1319, 1326, 1377, 1382, and on still other occasions. The flood of 1317 is reported to have destroyed 895 houses, eleven mills, seventeen ovens, forty gardens, twenty-one mosques, and five *madrasah*s. A large number of men, women, and children drowned, particularly in the baths and the mosque. Also, many markets were ruined by the flood waters.[43] The flood of 1326 resulted from rains in the Euphrates region and is reported to have triggered an epidemic which sickened many Damascenes.[44] Here again one sees economic loss, destruction, and increased morbidity (susceptibility to disease), indeed, outright mortality, associated with weather fluctuations. One can also see here with respect to the flood-caused epidemic a case of one disaster generating another.

The reverse side of the coin was, of course, the occurrence of damaging or severe drought. Drought perhaps worked more slowly in its destructiveness, but it too served to bring on crises not only in economic life, but also, and of greater import, in food consumption and public health. In 1294 Syria endured a severe drought, and eventually prices rose and famine ensued. This crisis situation intensified in the next two years, and Syria was the scene of serious famine and epidemic mortality.[45] During 1295 things reached such a pass that the *qāḍī al-quḍāh* in Damascus recited the *Ṣaḥīḥ* of al-Bukhārī from the pulpit of the Umayyad Mosque.[46] Drought losses, then, more often than not created shortages or full-blown famine conditions and, thus, touched health issues directly. Here again, one sees a causal relationship between one catastrophe and another.

Locust infestations and epizootics also adversely affected food supplies and economic activity. Locust invasions struck Syria on a number of occasions in the fourteenth century. Destruction of crops, plants, and trees occurred during the

infestation of 1301.[47] Al-Maqrīzī reports that the locust attack of 1365 led to high prices and, eventually, an epidemic.[48] Other episodes occurred in 1370 and 1402. Epizootics, while not as common, played their own negative role in Syria; for example, many horses died in an epidemic in 1431.[49] Not surprisingly, of course, the great plague pandemic of 1347-1349 devastated the animal population as well as the human one. As Michael Dols pointed out in his classic study of the great plague, the loss of animals hurt agricultural production badly.[50] Epizootics, as noted in my *JESHO* study, were a serious matter because animals were an important form of fixed capital and especially significant as analogues to machines and power sources in modern societies.[51]

Serious fires were another scourge for the population of late medieval Syria, particularly urban dwellers. In 1281 fire damaged mosques in Damascus, destroying in the process a number of markets, for example, those of the feltmakers and booksellers.[52] Merchants lost much property in a fire which hit Ḥamāh in 1335.[53] Two hundred and fifty shops burned in the same city.[54] These instances could be multiplied, but the information is invariably the same: merchants incurred severe loss of goods, while the *'ulamā'* and the poor were hard hit by the destruction of mosques and *waqf* properties. The ordinary citizens also lost their houses in some of these conflagrations, for example, in that of 1459.[55]

In the final analysis, of course, the three most devastating types of catastrophes in the medieval Islamic world were famine, epidemic disease, and destructive earthquakes. The remainder of this paper will be devoted to an examination of the morphology and effects of these major disasters. In view of the societal dislocation, stress, and mortality created by famine, it is surprising to note how little has been published about such subsistence crises in the medieval Near East. Some years

ago, I undertook a brief, theoretical study of this subject, and this work, supplemented by considerably more recent examination of famines in other cultures, will serve as the basis of this discussion.[56]

Mamluk Syria appears to have been much more fortunate than Egypt when it came to food shortage and hunger. In the first place, the Syrians did not have to rely upon the vagaries of the Nile. Syrian agriculture benefitted from a more regular water regime based upon annual rain and snow. In spite of this, Syria itself suffered from around twenty-five famine or food crises during the Mamluk era.[57] Such crises had a variety of causes, although they usually began with a drastic rise of cereal prices and quickly escalated to the inability of people to afford or even to find basic foodstuffs. As noted above, the great famine-epidemic crisis of 1294-1296 began with a severe drought within Syria. Hot winds and drought also provoked famine conditions in Syria in 1317 and 1397.[58] A locust invasion in 1323 led to high prices and shortages, although in this case grain was imported through Beirut and Tripoli in order to offset the crisis.[59] Crops in the Ḥawrān were ″ruined″ in 1347 resulting in famine in that region.[60] From other sources, one may surmise that snow and cold were the culprits. Food shortages and/or famines were at times generated or exacerbated by hoarding on the part of merchants or even the Mamluks themselves.[61] It was also possible, as in the year 1372-1373, that migration of people into an area might stimulate food crises.[62] Migration was dangerous on another count, since it could lead to disease epidemics in the migrants′ destinations.[63]

Once the famine or dearth had begun, mortality due to starvation was the most obvious result. In the great crisis of 1295, people died of starvation along the

roads.[64] In 1375, famine initially killed ″the frail,″ but eventually the mortality became more generalized.[65] Needless to say, such occurrences seriously disrupted all forms of economic life, especially commerce and agriculture. Sustained hunger at the very least impairs work and productivity. As Sara Millman and Robert Kates have pointed out in their essay ″Toward Understanding Hunger,″ manual work is hampered, and the ability to sustain physical effort is lessened.[66] Labor productivity was in all probability adversely affected by famine but, unfortunately, it is not possible to measure this or the economic loss related to it.

Famine and severe food deprivation affect populations in another direct and often lethal fashion. Starving populations at times resort to eating whatever is to hand, regardless of its repulsiveness or toxicity. In 1372-1373, for instance, Ibn Ṭūlūn reports that people in Aleppo were reduced to eating dogs and even carcasses.[67] Similar reports are available for the year 1375.[68] Similar reports are numerous for corresponding events in other societies. Desperate measures were resorted to in a Chinese famine of 1641.[69] The same situation was to be found in the terrible Russian famine of 1230, where people are reported to have eaten leaves, cats, and dogs.[70] Diets of this sort obviously gave ample cause for death from any number of toxic organisms.

Clearly the most macabre and intense reaction to famine was resort to cannibalism. Although it appears that instances of this may not have been as common in Syria as in Egypt, we do have evidence of such behavior. The terrible crisis of 1374-1375 in Aleppo gave rise to acts of cannibalism, and the same thing is said to have happened again the next year.[71] Similar reports come from the earlier famine-epidemic cycle of 1294-1296.[72] Ironically, comparable accounts

exist for the terrible Syrian famine of 1915-1918.[73] Numerous descriptions of such behavior come from other parts of the world at various times. Cannibalism is reported to have occurred in terrible famines in medieval Poland and Italy.[74] Dunstan points to instances of the same sort occurring during the Chinese famine of 1641.[75] In his recent book on early fourteenth-century European famines, William Jordan has cited allegations of cannibalism being practiced in England and Eastern Europe during the years 1315 to 1317. He goes on to say that most recent historians have tended to regard such reports as a literary topos, while some have suggested that these accounts are a signal to the reader of the emotional stress of famine conditions.[76] My own research indicates to me that neither of these explanations is satisfactory. It is hard to sustain the thesis that events reported in such strikingly similar fashions from different cultures at different times are mere literary devices. Even allowing for exaggeration, it is perfectly plausible to think that horrible stress and desperation drove people to commit the unthinkable.

Such behavorial deviation was bound to have an impact upon the society experiencing it. As I have written elsewhere, ″Medieval Islamic society placed great value upon familial relationships, community solidarity, and hallowed and predictable modes of behavior or interaction.″[77] Such activities as cannibalism can only have undermined social and community cohesiveness and identity.

Famines had other more indirect but equally damaging effects upon public health and demography. For some years now a debate about the relationship between subsistence crises and epidemic disease have divided the scholarly community. Scholars such as Ann Carmichael (Indiana University), Roger Schofield (Cambridge University), and the Italian demographer Massimo Livi-Bacci have questioned the ″synergism″ concept linking disease and the nutritional profile of a given ″host.″[78]

On the other side, investigators ranging from health professionals such as Carl E. Taylor (Johns Hopkins University) to such medical historians as Thomas McKeown (University of Birmingham) support the proposition that nutritional levels are directly related to susceptibility to epidemic disease.[79] The evidence forthcoming from medieval Near Eastern authors would seem to support the latter argument. The data show that while epidemics could and did occur without preceding famines, nearly one-third of the famines recorded were followed by epidemics of some severity. In virtually all cases, the chroniclers make explicit linkages between the two phenomena. Famines were followed by epidemics in Mamluk Syria during the years 1294-1295, 1341-1342, 1347, 1369, 1373-1374, 1375, 1421, and 1468 in Palestine.[80]

Parenthetically, it should be noted that famine may have been allowed to worsen in some cases due to hoarding or manipulation of whatever existing stocks there were.[81] In fact, one may argue that it is here that we see one of the few plausible linkages between catastrophes and political life in Mamluk Syria. Although Lapidus and Allouche speak of Mamluk sultans providing grain relief in bad times, in point of fact the evidence does not show that there was a regular institutional or rationalized mechanism for food relief. In this sense, one may argue that this factor, combined with the food hoarding by Mamluk amirs and, at times, by the sultan himself, intensified or even brought on food crises.[82] In this case, politics can be seen as stimulating a crisis. In China, in contrast, by the eighteenth century the imperial government had taken proactive measures to deal with famine. Central and local granaries were maintained in order to combat famine. Furthermore, in times of crisis the imperial administration used state funds to purchase foodstuffs outside the stricken area and then to transport the grain to local distribution areas. On other occasions, money was distributed directly to the affected population, and in the case of the desperate, officials were authorized to give food or money on the spot.[83]

Famine and subsistence crises can affect demography in important ways, and one may conjecture that they did so in the medieval Near East, including Mamluk

Syria. Modern research indicates that nutritional deficiency and stress play a major role in male and female infertility. As Rose Frisch (Dept. of Population Sciences and Center for Population Studies, Harvard University) pointed out years ago, undernourished females have a high frequency of irregular and anovulatory cycles, and ″menstruation stops completely if undernutrition is severe.″ Furthermore during pregnancy undernourished women have a higher probability of miscarriage or stillbirth, and even if they deliver successfully, their lactation amenorrhea is longer, thus leading to a longer birth interval.[84]

In the case of adult males, sperm count is reduced, and ″such children as are born tend to be underweight and of reduced viability.″[85] Research also shows that stress conditions trigger pituitary hormonal changes in both men and women, leading to at least temporary infertility.[86] Were these conditions present in Mamluk Syria? Presumably, if Syrians were of the same biological makeup as other populations, the response would have to be in the affirmative.

The greatest killer among all the disasters in Mamluk Syria as elsewhere was epidemic disease. The area was hard hit by epidemics at least forty-one times just in the period after the pandemic of 1347-1348.[87] Of greater import, perhaps, is the tremendous loss incurred during the pandemic of 1347-1348. Michael Dols has provided the definitive study of this catastrophe, and there is neither time nor need to recount fully the macabre results. Suffice it to say that in Damascus alone one to two thousand people are said to have died daily during the peak period. Dols suggests that the Damascene population decline amounted to more than thirty percent.[88] Elsewhere, after looking at figures for other Syrian cities, he estimates that the Syrian population as a whole was reduced by one-third.[89] One must also note that Dols and that Shoshan in his table both indicate that plague recurrences were sufficiently numerous and frequent that the general Middle Eastern population was unable to recover successfully from the Black Death.[90]

Unfortunately, most of Dols′s research centers upon Egypt, so it is difficult to determine the range of Syrian economic loss from the pandemic. Presumably, the

loss of people and animals in Syria badly hampered commercial exchange, labor, and production just as happened in neighboring Egypt. It must also be remembered that non-plague epidemics generated significant population loss. For instance, an epidemic of something other than plague killed many in Aleppo in 1422—supposedly as many as seventy thousand.[91] What this and other non-plague diseases were is virtually impossible to say; Lawrence Conrad has indicated some of the issues surrounding the Arabic terms *wabā'* and *ṭā'ūn*, generally used to designate epidemic and plague, respectively.[92] The information afforded in the chronicles seems much less precise than, for instance, terms for epidemic diseases in early modern Japan.[93] Clearly, however, plague was not the only epidemic disease that troubled Mamluk Syria. As indicated previously, disease could be sparked by severe or changeable weather or by malnutrition.

Whatever the nature of the epidemic, the results were largely the same. Civic life was disrupted. The Mamluk elite and army were hard hit,[94] and continuation of public security and order became problematic. Normal family and community life were disrupted by the frequently overwhelming mortality. Mass burials and similar departures from the norm placed great strain upon medieval Islamic societies, including that of Mamluk Syria (especially the terrible plague of 1429).[95]

If famine and epidemics were lethal events in the medieval Islamic world, earthquakes were at times also lethal and always terrifying phenomena. The damage and destruction were immediately apparent and, therefore, probably a much greater stressor. In 1293 there were severe earthquakes in Palestine at such places as al-Ramlah and al-Ludd. Fortifications in al-Karak were damaged, and three villages in the vicinity were destroyed.[96] A terrible earthquake struck both Syria and Egypt in 1302-1303, destroying houses and killing many.[97] In January of 1343 the town

of al-Manbij in northwest Syria was ruined and 5,700 people killed there.[98] Information on other severe earthquakes in Syria during this period can be gleaned from the pages of what is probably the definitive catalogue, the Paris dissertation of Mustapha Anwar Taher.[99] The results were frequently the same: numerous buildings ruined, fortifications leveled, and people dead in the rubble. Here, again, although architects and builders may have benefited, economic losses were severe for property owners, *'ulamā'* and those associated with mosques and *waqf* properties, and for commercial interests losing shops or goods. Furthermore, one can surmise that governments needing to repair fortifications, walls, and other similar structures, had to expend extra revenues which were probably passed on to taxpayers.

The earthquake risk for Syria (including the Lebanon-Palestine areas) can be said to place this region within a category which might be termed ″disaster influenced.″[100] As the important article by Poirier, Romanowicz, and Taher shows, the Dead Sea and Syrian faults render the region vulnerable to serious seismic activity. Their work demonstrates the frequency of serious earthquake activity, indicating the probability of earthquakes over seven points on the Richter scale every 350 to 400 years and, rather more seriously, events of from five to seven points every *fifty* to one hundred years.[101] My colleague Dr. Walter Manger points out the devastation caused by anything in the range from six to seven plus.[102] The data from the Mamluk period seem to confirm this estimate and, more importantly in this context, to illustrate the damage sustained by structures and lives.

Published and manuscript materials provide considerable information about the nature and frequency of disasters or naturally induced crises for both Egypt and Syria in the Mamluk era. Such phenomena were capable of causing economic loss or disruption and mortality directly and in a combination of ways. Severe weather generated famine which in turn often led to disease epidemics. Also, in the case of famine, birth rates and patterns could be influenced indirectly. In this respect, one must also factor in an element which is impossible to measure and yet necessary in any ultimate assessment of the role of catastrophe in any society: the element of stress.

As I indicated years ago in my *JESHO* study and in my paper on famines, modern disaster studies have shown the stress reactions to various types of

catastrophic events.[103] Medical researchers have demonstrated that stress reactions affect human immunity and susceptibility to disease. In the case of serious food crises, this is compounded by reduced efficiency of ″cell and humoral defence mechanisms.″[104] Adrenalin changes associated with the brain can disturb tissue and immunological defenses leaving the affected organism open to disease onset.[105]

The evidence indicates that stress reactions in the form of intense fear and anxiety were, as one would indeed expect, present in a number of Mamluk Syria′s crises. Ibn Qāḍī Shuhbah reports that people in Damascus were terrified by a violent wind and storm in 1381.[106] The Damascenes were said to have been ″dejected″ by the great famine of 1294-1295.[107] On any number of occasions furthermore, the general fear and distress were evidenced by people imploring God′s mercy and holding communal prayers, recitations from the Quran and/or the *Ṣaḥīḥ* of al-Bukhārī.[108] Michael Dols, in an important article on comparative European-Muslim responses to plague, and I, in my *JESHO* essay, have addressed the issue of religious and magical responses to disasters.[109] The focus of the present study excludes a sustained examination of religious-supernatural responses, but their presence indicates the sort of emotional trauma and strain accompanying these frightening events.

Given the nature of this stress, one may hypothesize that public health and patterns of illness were altered from the ″norm″ by these destructive phenomena. Short of resorting to the macabre skills of paleopathologists, it seems unlikely that proof for this hypothesis will be forthcoming. However, research suggests that such considerations have to be recalled when making any serious statements about public health, disease incidence, or mortality over periods following or intervening between recurring disasters. What, finally, can one say about the role of catastrophic events in Mamluk Syria? Given the frequency of one disastrous episode or another, the direct, indirect, and cumulative results of these events

negatively affected Mamluk Syria. Politically, to be sure, with the exception of the plague pandemic and recurring epidemics, many of these incidents seem to have had no direct bearing. The structure of Mamluk political life as such, factionalism, and power struggles among Mamluk amirs all seem to have shaped politics much more significantly than any environmental dysfunction.[110] Disasters probably did erode the economic base and in damaging infrastructure and commerce undercut the material base of the Mamluk system. But in the absence of statistics and hard information from the sources, one may only conjecture this. Furthermore, it should be noted that Mamluk rule persisted for more than 150 years after the greatest of these catastrophes, the 1347-1348 pandemic.

In a similar vein, one may not point to any perceptible revolution in Mamluk Syrian social structure resulting from disastrous phenomena. None of the available information suggests that catastrophes changed the class system or vaulted the peasantry, for example, into the elite. The information we do have does not even indicate a major transformation in the makeup of Mamluk period commercial elites or *ʻulamā*ʼ.

Does this mean that disasters had a negligible impact upon the population of Mamluk Syria? By no means. Although we shall never have the sort of data, follow-up interviews, or economic statistics generated from modern U.S. disasters by such agencies as the International Red Cross, Federal Emergency Management Agency (FEMA), or the U.S. Department of Agriculture, we can nevertheless see from the data presented in this study that Syrians incurred loss of property, disrupted lives and, most regrettably, loss of life as a result of many of these phenomena. Clear evidence of this can be seen in the already noted demographic decline of the region by the mid-fourteenth century. Syrian society and government, to be sure, did not collapse. Life went on for survivors and for those suffering economic loss, but there is no doubt that these lives and Syrian society generally would have been healthier and more prosperous had such events not occurred.

In this respect, one must note again that disaster study treats society holistically. The phenomena themselves, after all, do not observe social distinctions or class differences. The well-to-do may be insulated for a time against famine, but earthquakes, plague, and most meteorological disasters do not discriminate socially. If we are to understand the role of these events, we must look carefully at each type and its recorded consequences. Speculation and analogy can be fruitful in assessing probable physiological or micro-organic repercussions, but behavioral responses, including political actions or psychological reactions, are too variable

---

[110]One may readily see the nature of Mamluk-era political activity in Lapidus, *Muslim Cities*, 165-191; and P. M. Holt, *The Age of the Crusades: The Near East from the Eleventh Century to 1517* (London, 1986), 107-129, 178-202.

to allow us to stray far from the explicit information of the sources. On both of the latter counts, unfortunately, these sources in fact do not offer us much, certainly not as much as given for Egypt in the comparable period. The sorts of psycho-religious reactions I noted in my study of the Egyptian peasantry of the Mamluk period were not nearly as evident in the research conducted for this essay. Such information as can be gathered offers some insight into trauma or stress reactions, as noted previously, but does not allow one to draw any meaningful conclusions about significant religious change associated with disasters.

With respect, indeed, to any comparison with Mamluk Egypt, Syria seems to have been a much more fortunate region. A rough tabulation, for instance, would yield the following comparative figures: about fifty-five epidemics in Egypt compared to thirty in Syria; twenty-eight earthquakes in Egypt versus fifteen in Syria; and forty-seven famines in Egypt as opposed to twenty-five in Syria.[111] The differences may reflect the quantitative and, perhaps, qualitative differences between the historiography of the two areas during the relevant period. More likely, Egypt really did endure more disasters than Syria. Syria, after all, was not dependent upon the Nile and its uncertainty with the attendant effects upon food supplies. Also while Syria, as indicated above, could be confronted with serious earthquake activity, the fact is that Egypt had its own problems with a Red Sea fault line that could be, if not frequently, certainly upon occasion, a source of damaging shocks.[112] Compared to ″disaster-prone″ Egypt, ″disaster-influenced″ Mamluk Syria was a more fortunate place with regard to natural and environmental disasters, if not with respect to foreign invasion or domestic socio-political crises.

[111]Concerning the epidemics, especially those of plague, see Dols, *Black Death*, 305-334; idem, ″Second Plague Pandemic,″ 168-169, esp. notes 11-12; Shoshan, ″Epidemics,″ 395-403. Concerning earthquakes, see text above and Ambraseys et al., *Seismicity of Egypt*, 41-55; Taher, ″Corpus des textes arabes,″ 2:166-210. For famines see Tucker, ″Famines,″ 18-25.

Qāytbāy's *Madrasah*s in the Holy Cities and the Evolution of Ḥaram Architecture

Qāytbāy was renowned for being a great traveler, who in spite of his advanced age spent a great part of his time traveling and sight-seeing both within and outside of Egypt. Among his travels were a visit to Jerusalem and the pilgrimage to Mecca and Medina. As he was also a great builder and sponsor of religious and philanthropic foundations, Qāytbāy used his tours to inspect construction works everywhere and to articulate his own ideas about architecture. In the following pages the design of Qāytbāy's *madrasah* in Medina will be discussed, with reference to his *madrasah*s in Jerusalem and Mecca, in order to demonstrate the Sultan's role in the articulation of what may be understood as the concept of *ḥaram* architecture.

The *waqf* descriptions of Qāytbāy's *madrasah*s in Jerusalem and in Medina document the innovations that the monuments themselves can no longer demonstrate.[1] The original appearance of the Ashrafīyah in Jerusalem has not been preserved, and the *madrasah*s of Mecca and Medina are no longer extant. The innovations at the *madrasah* of Medina were considered at that time bold enough to provoke a discussion among the *'ulamā'*, as Ibn Iyās and al-Samhūdī report.[2] In his reconstruction of the Ashrafīyah in Jerusalem, Archibald Walls has reconstructed architectural features that occurred there for the first time.[3]

Although this was not usual for Mamluk architecture outside Cairo, both Qāytbāy's *madrasah*s in Jerusalem and Medina were erected by Cairene craftsmen.[4] The Ashrafīyah of Jerusalem was rebuilt by order of the Sultan who, displeased with its original layout, ordered its remodeling by craftsmen sent from Cairo. As

*This article is a revised version of a lecture given on April 24, 1998 at the Mamluk Studies Workshop convened by the Center for Middle Eastern Studies at The University of Chicago.

for the *madrasah* in Medina, it was erected by a team of Egyptian craftsmen who were working at the time on the restoration of the Prophet's Mosque.

Prior to his pilgrimage in 884/1480, Qāytbāy undertook the restoration of the Prophet's Mosque, which lasted with interruption from 879/1474-75 to 881/1477. In the following year, 886/1481, a fire devastated the sanctuary so that new radical restorations had to be made which were completed in 889/1484. The construction of the Sultan's *madrasah* began in Rabī' I 883/June 1478, that is, after the first restoration of the Prophet's Mosque was resumed, and it was completed in Ramaḍān 887/October 1482, prior to the completion of the second restoration.[5] The reason for the relatively long time span between the beginning and completion dates of the *madrasah* was probably the second restoration of the Prophet's Mosque, which required the involvement of the craftsmen working at the *madrasah.* The simultaneous occurrence of the *madrasah* construction and the restoration of the mosque gave the master-craftsmen the opportunity to make adjustments to both buildings in order to achieve a unity of design between the two.

The Medina *madrasah* abutted the Prophet's Mosque south of Bāb al-Salām and north of Bāb al-Raḥmah. It was part of a complex that occupied the block between two east-west oriented streets leading to these gates. Both gates, piercing the western wall of the mosque, led directly into the prayer hall. The *madrasah*'s facade was striped with black and white masonry, and a two-storied minaret stood above the entrance on the street leading to Bāb al-Salām. It was built on the Egyptian *qā'ah* plan with a northern and a southern *īwān* separated by a *dūrqā'ah.* It had seven windows *(shabābīk*) opening directly onto the Prophet's Mosque; five others overlooked the street (fig. 1).

The *waqfīyah* mentions that on the *madrasah*'s northern side there was a two-storied building called a *majma'*, which is an assembly hall.[6] Its lower floor had three windows *(shabābīk*) opening onto the Prophet's Mosque and the upper floor overlooked the mosque's roof. On the northern side of the *majma'* was a *sabīl* with one window opening onto the mosque and another onto the street. The window on the mosque's side must have served to give the worshipers inside the mosque access to water from the *sabīl* (fig. 2).

Adjacent to the *madrasah* on its western side was a *ribāṭ,* a complex of thirty-eight cells built around a courtyard, in the middle of which was an octagonal domed fountain. It is not clear whether this *ribāṭ* had one or two stories.[7] No cells

---

[5]Ibn Iyās, *Badā'i' al-Zuhūr*, 3:145, 196.

[6]van Berchem, *Matériaux pour un Corpus Inscriptionum Arabicarum, Syrie du sud, I: Jerusalem ville* (Cairo, 1922), 89; in Mujīr al-Dīn's terminology, *majma'* is another word for a mall mosque.

[7]The precise location of this *ribāṭ* is not indicated in the document, neither in relation to the *madrasah* nor to the street.

overlooking the mosque or the street are mentioned, which suggests that they opened onto the courtyard. Another forty-two cells were beneath the *madrasah* and the *majma'*, some of them with windows overlooking the Prophet's Mosque; others were integrated into the *madrasah* itself, overlooking its interior and connected with the Prophet's Mosque by a staircase. This makes for a total of eighty cells. The document does not specify how many cells overlooked the mosque. Al-Samhūdī writes that Qāytbāy's complex had a total of thirty openings *(fataḥāt)* pierced on three levels and overlooking the mosque[8] (figs. 3 and 4).

From the reconstruction of the plan of the Prophet's Mosque as it was in the fifteenth century, it appears that between Bāb al-Salām and Bāb al-Raḥmah ten naves run parallel to the *qiblah* wall,[9] six of which were part of the sanctuary, the other four belonging to the lateral western *riwāq*. Since the complex was located between Bāb al-Raḥmah and Bāb al-Salām, only its southern part, probably the *madrasah*, was juxtaposed to the prayer hall itself; the northern part, or *majma'*, was juxtaposed to the lateral western *riwāq*.

If thirty openings overlooked ten naves, one is tempted to imagine that three windows arranged vertically opened onto each nave but, according to al-Samhūdī, there were also three doors leading through the *madrasah* into the mosque.[10] The *waqfīyah* uses the word *shabābīk* for windows, a term which usually does not include the arched bays with stucco grills filled with colored glass, which are called *qamarīyah*, nor does it include the oculi. Al-Samhūdī uses the general term for openings *(fataḥāt)*, which can refer to any type of openings, including doors.[11] When the sanctuary was rebuilt by the Ottoman sultan 'Abd al-Majīd, the number of naves between the two gates was only nine.[12] The reconstruction showing how Qāytbāy's *madrasah* abutted to the Medina mosque, as shown in figures 1 and 2, can therefore be only schematic and conjectural.

On both streets adjacent to the Qāytbāy complex were apartment houses and shops. Other buildings, including the public kitchen, a *ḥammām*, a mill, a bakery, and a *wakālah*, were built opposite the *madrasah*'s entrance, partly on the *qiblah* side of the mosque. Based on the *waqf* document, this description suggests that, in order to erect this *madrasah* with the living units and the *sabīl* communicating with the mosque through windows, it must have been necessary to make important

modifications in the mosque's western wall, in fact eliminating it entirely in this section and replacing it by the *madrasah*'s facade.[13] It seems very likely that these restorations and the planning of the *madrasah* were coordinated so as to produce a *madrasah* with a facade inside the mosque.

The *madrasah* did not stand directly on the street level, but was built above a row of shops on the street side, and above living units on the inner side overlooking the Prophet's Mosque. Its floor must have been, therefore, on a level higher than the mosque's, and the living units beneath must have had their windows close to their ceiling in order to leave enough vertical space for the *madrasah*'s facade with its windows.

The innovation at the *madrasah* of Medina consisted of its juxtaposition to the sanctuary in an intimate way, with its facade forming the lateral wall of the prayer hall. Ibn Iyās and al-Samhūdī refer to the windows as a characteristic feature of the *madrasah* complex; they report that some *'ulamā'* objected to their presence, arguing that the windows constituted an intrusion into the Prophet's Ḥaram. But, as might be expected, the Sultan found other scholars to override them. Whereas Ibn Iyās mentions only the *fatwá* authorizing the windows, al-Samhūdī, who also refers to this *fatwá*, writes that God made the Sultan change his mind, so that the windows were ultimately walled up. Unlike Ibn Iyās, al-Samhūdī was an eyewitness in Medina, so that his version is more trustworthy. It is difficult to imagine, however, how so many windows could be done without.

Due to the lack of a *waqf* document, we are less informed about the Ashrafīyah of Mecca, which was built prior to that of Medina. It was completed just in time to host the Sultan during his pilgrimage in 884/1480. Located on the left hand side of Bāb al-Salām on the eastern wall of the Ḥaram, it included also a *majma'* overlooking the Ḥaram. Its curriculum included the teaching of the four rites of Islamic law with four teachers and forty students, as well as Sufi services. Its premises comprised seventy-two living units, a primary school (*maktab*) for forty pupils, a *ribāṭ*, a *majma'* for the four chief *qāḍī*s, and a library. Both the *madrasah* of Mecca and that of Medina were built by the same contractor-architect, Ibn al-Zamin.[14]

---

[13]al-Samhūdī, *Wafā' al-Wafā'*, 2:640 f.

[14]Shams al-Dīn Ibn al-Zamin was a merchant who had been working as a commercial agent for Qāytbāy already prior to the latter's sultanate. Qāytbāy sent him to Mecca on business and at the same time to build for him a religious complex next to the Holy Mosque, and another in Medina next to the Prophet's mosque. He moreover executed infrastructural works, such as the conduction of source water to the holy cities and for pilgrims' use. When a fire broke out in the Prophet's mosque, he was in charge of the reconstruction as well as of building the Sultan's *madrasah*. From all historical accounts it appears that Ibn al-Zamin was a contractor who designed the buildings as well. Quṭb al-Dīn Muḥammad ibn Aḥmad al-Nahrawālī, *Kitāb al-I'lām bi-A'lām Bayt Allāh*

Whether in Medina or Mecca, Qāytbāy′s constructions provoked a controversy. In Mecca, the contractor and architect Ibn al-Zamin laid the foundations of the complex in such a way as to make them encroach upon the *mas'á*, thus disturbing the *ḥajj* ritual. This infuriated the *'ulamā'*, but the petitions they sent to the Sultan were not of much help; Qāytbāy confirmed Ibn al-Zamin′s appointment and dismissed the *qāḍī* who had tried to stop the construction. Quṭb al-Dīn comments by expressing his mixed feelings about Qāytbāy who, although one of the most pious and charitable rulers was, nevertheless, able to act in such a ruthless manner.[15]

For both of his constructions in Mecca and Medina, Qāytbāy did not hesitate to demolish his predecessors′ buildings in order to replace them with his own or to remove them simply for aesthetic purposes; in Mecca an old *sabīl* was demolished because it obstructed the view of his new *madrasah* and an ablution fountain of al-Ashraf Sha'bān was razed because its space was needed. In Medina a *ribāṭ*, parts of the Madrasah Jūbānīyah, the Dār al-Shubbāk, as well as houses had to make place for the Sultan′s new religious complex. Ibn Iyās reports how the acquisition of the houses had raised a controversy which led one of the house owners to kill the *qāḍī* involved in the transactions. This did not, however, stop the Sultan′s scheme.[16] In fact, the demolition of parts of the Jūbānīyah, a pious foundation, could not have been fully correct.

Quṭb al-Dīn, who also criticized Sultan al-Ghawrī′s encroachments upon the Holy Mosque in Mecca, commented with resignation that the Sultan would not have listened to the jurists anyway; they were too dependent on the rulers to be capable of true opposition.[17] This, in fact, conforms with what Mamluk sources regularly report about the *'ulamā'*′s opposition being easily overruled; alternative jurists could always be found to issue more convenient opinions.

The idea of establishing visual contact between a building and an adjoining mosque or shrine was obviously not a matter of mere architectural design, but rather of religious significance. As Christel Kessler has demonstrated in the case of Mamluk funerary architecture, sultans and amirs tried to place their mausoleums in a location adjacent to the prayer hall of their mosques, both connected by windows, so that the soul of the dead would benefit from the *barakah*, or blessing,

emanating from the mosque's prayers.[18] In the recess of a window overlooking the street, a *shaykh shubbāk*, regularly mentioned in *waqfīyah*s of religious foundations, would sit reciting the Quran for the soul of the dead, thus extending this *barakah* to the passersby, and soliciting at the same time their prayerful response.

The practice of attaching a mausoleum to a religious building started under the Saljuqs, when Sultan Sanjar (d. 1157) built his mausoleum next to a mosque in Marw, connecting them with a window.[19] A few decades later the Zanjid vizier Jamāl al-Dīn Jawād al-Iṣfahānī erected a *ribāṭ* for Persian visitors and a mausoleum for himself on the eastern side of the Prophet's Mosque. The complex was built across the street, facing the mosque's door, Bāb ʻUthmān, also called Bāb Jibrīl. The mausoleum, where the vizier was buried in 1193, was pierced with a window facing yet another window in the mosque, allowing the passersby to see the Prophet's tomb within the sanctuary. The two windows established a visual connection between the tombs of Jawād and the Prophet.[20] Jawād had been a great benefactor of the Holy Cities, where he ordered important improvements at his own expense, such as the reconstruction of the walls of Medina. To the south of this *ribāṭ*, there was another funerary structure purchased by Shīrkūh, Ṣalāḥ al-Dīn's uncle, in which he and his brother, Ṣalāḥ al-Dīn's father, were to be buried.

Also in Medina, the funerary *madrasah* called al-Jūbānīyah, erected in 1324 by Jūbān, the *atābak* of the Ilkhanid sultan Abū Saʻīd, was connected with the Prophet's Mosque through a window pierced in the wall of the mausoleum. After his death the remains of Jūbān were sent from Baghdad to Medina for his burial there. This, however, was prevented by the Mamluk sultan al-Nāṣir Muḥammad who gave orders to bury him at the cemetery of Baqīʻ. Al-Samhūdī mentions that the reason for this opposition was the location of the mausoleum: in order to be buried facing the *qiblah*, Jūbān's feet would have had to point at the Prophet's grave.[21] Part of this *madrasah* was later demolished by Qāytbāy in order to build his own *madrasah* at this place.

In Ayyubid Syria, when al-Malik al-Kāmil (d. 1238) built his mausoleum near the great mosque of Damascus, he pierced the mosque's northern wall with a window, ignoring the general opposition against his initiative. A similar conflict occurred in Cairo, at the Azhar mosque, when the amir Jawhar al-Qanqabāʼī built his funerary *madrasah* (1440) adjacent to the sanctuary's northern wall and wanted to pierce a window in the prayer hall to connect it with his mausoleum. He

requested, therefore, a *fatwá* from the jurists authorizing him to do so. The jurist and historian al-ʻAynī, who was involved in this case, refused to sign this *fatwá* and accused the others who had signed it of corruption. This episode was recorded by al-Sakhāwī in his biography of Jawhar and by al-ʻAynī himself. None of them, however, discusses the arguments presented by the two parties.[22]

The earlier *madrasah*s of Āqbughā (1340) and Ṭaybars (1309-10), which were erected in the northwestern *ziyādah* of al-Azhar, are not mentioned to have provoked any opposition from the *ʻulamā'*. In Jerusalem several religious foundations built along the portico of the Ḥaram included funerary chambers with windows opening onto the Masjid al-Aqṣá.

To understand the *ʻulamā'*'s opposition to Qāytbāy's windows at his *madrasah* in Medina, it is necessary to understand the layout of the Ḥaram complex prior to Qāytbāy's constructions and the physical relationship between the adjoining buildings and the mosque. In his description of the Prophet's Mosque, al-Samhūdī mentions that dwellings, *madrasah*s, and *ribāṭ*s surrounded the mosque with their walls facing its doors. This description indicates that there was a street between the mosque and the surrounding quarters.

Only on the *qiblah* and western sides did buildings abut the mosque. Between Bāb al-Salām and Bāb al-Raḥmah, there were two buildings adjacent to, and overlooking, the prayer hall; one was a house called Dār al-Shubbāk because it had a window onto the mosque. It was built by Kāfūr al-Muẓaffarī (d. 1311-12), known as al-Ḥarīrī, one of the eunuchs who attended the mosque. It was the only house with a window overlooking the mosque; al-Samhūdī does not indicate, however, the reason for this exception, which could have been related to Kāfūr's task of policing the precinct. The other building was Jūbān's funerary *madrasah* mentioned above, whose window by that time had been walled up. It was there, on the site of the Dār al-Shubbāk and parts of the Jūbānīyah, that Qāytbāy built his *madrasah*. A bakery, a mill, a *wakālah*, and a public kitchen were erected on the *qiblah* side of the mosque on the site of houses whose demolition he also ordered.

Burton's map, which was drawn during the reign of ʻAbd al-Majīd, shows streets next to the Prophet's Mosque, except on the *qiblah* side and along the western side between Bāb al-Salām and Bāb al-Raḥmah. This means that buildings touched the mosque to the south and west of the prayer hall. Burton himself writes of the Medina mosque: "Like that at Meccah, the approach is chocked by ignoble buildings, some actually touching the holy 'enceinte,' others separated by a lane compared with which the road round St. Paul's is a Vatican Square."[23]

[22]al-Sakhāwī, *al-Ḍaw' al-Lāmiʻ*, 3:82f.; al-ʻAynī, *ʻIqd al-Jumān* (Cairo, 1989), 566.

[23]Richard Francis Burton, *Personal Narrative of a Pilgrimage to al-Madinah and Mecca*, 2 vols.

The layout of the Meccan shrine was a different matter. Originally, in pre-Islamic times, the sanctuary was the roofless unwalled space around the Kaʿbah. Houses surrounded this central space with streets between them converging from all sides towards the open space. With the expansion of the sanctuary in the Islamic period at the expense of the surrounding quarters, walls and porticoes were added around the central space. The legitimacy of the surrounding pre-existing dwellings could not be questioned. Gradually, the houses around the sanctuary which served as guest-houses during the pilgrimage season were replaced by philanthropic foundations of the *ribāṭ* and *madrasah* type, including a hospital, to provide lodging and teaching and care for sojourners and pilgrims. The earliest *ribāṭ* was founded in 400/1009-10. It was followed by several others to house the poor and the Sufis. As for *madrasah*s, they began to appear slightly later and multiplied in the following centuries so that by the end of the fifteenth century almost the entire wall of the holy mosque was hidden behind buildings.[24] This made it necessary for Qāytbāy to demolish two *ribāṭ*s in order to establish his own religious complex along the mosque's wall.

The sources do not mention windows between the satellite structures and the mosque; these dwellings overlooked the mosque at the level of the roof, and not below. Windows are mentioned only in the case of the Dār al-Nadwah, formerly an adjacent guest-house that the caliph al-Muʿtaḍiḍ (r. 892-902) had turned into a prayer hall. It thus became an extension of the mosque, at which point large windows were pierced in the wall between it and the sanctuary.[25]

The construction of windows in the Medina mosque was protested by the *ʿulamāʾ* with the argument that this was an indiscretion against the Prophet, whose tomb lay within the mosque. Such an argument could not have been used in Mecca, where from the outset the sanctuary had been exposed to its neighbors, or in Jerusalem, where the Ḥaram with its large open space was surrounded by religious and residential buildings built above porticoes, creating a zone of transition between the city and the sanctuary.

Qāytbāy's *madrasah* in Medina had an interesting feature in common with the Ashrafīyah of Jerusalem: a visual opening onto the adjoining sanctuary. The *madrasah* in Jerusalem was completed in 887/1482, slightly after that of Medina. The building was devastated by an earthquake in 1545.[26] Later restorations did not

[25]Quṭb al-Dīn, *Kitāb al-Iʿlām*, 133 ff.

[26]ʿAbd al-Laṭīf Ibrāhīm, "Wathīqat al-Sulṭān Qāytbāy: Dirāsah wa-Taḥlīl al-Madrasah bi-al-Quds wa-al-Jāmiʿ bi-Ghazzah," *Dirāsāt fī al-Āthār al-Islāmīyah* (Cairo, 1979), 483-538, 509 ff.; Mujīr al-Dīn, *al-Uns al-Jalīl*, 2:325 ff.; Walls, *Geometry and Architecture*, 198, n. 1, 199.

replicate the original shape. The unusually detailed description in the *waqf* deed, and a comprehensive description by the contemporary historian Mujīr al-Dīn, in addition to the vestiges of the *madrasah* itself, allowed Archibald Walls to produce a reconstruction of this remarkable building, erected within the complex of the Masjid al-Aqṣá.

The *madrasah* acquired its final configuration after Qāytbāy visited Jerusalem and expressed his dislike for the first building, the reconstruction of which he ordered to be executed by Egyptian craftsmen. Like the *madrasah* of Medina, it was designed with an Egyptian *qā'ah* plan, on a north-south axis. It was constructed on two floors; the *waqfīyah* refers to lower and upper *madrasah*s. Mujīr al-Din calls the lower *madrasah* a *majma'*,[27] which consisted merely of a hall reached from the Masjid al-Aqṣá by an entrance on its eastern side.[28]

The *madrasah* projected onto the Ḥaram of the Masjid al-Aqṣá with three facades pierced by large windows (fig. 5). The *qiblah*-side *īwān* had ten large rectangular windows (*shabābīk*) in its lower part, and six arched windows (*qamarīyāt)* in its upper part. The northern *īwān* had six large rectangular windows surmounted by eight arched windows and a bull's eye in its upper part.

The *madrasah* was built in place of a section of the western portico, which was partly integrated into the *majma'* on the lower floor. When Qāytbāy's Egyptian master-mason inspected the first *madrasah*, he disliked in particular the way it abutted the portico.[29] The new design was bold. It needed the authority of a sultan to encroach upon the adjacent Madrasah Baladīyah, to block the window of the *madrasah*'s tomb-chamber, to demolish parts of the Ḥaram's portico and, moreover, to make the *madrasah* project beyond the portico onto the Ḥaram in such an unprecedented manner.

The plan of the Jerusalem *madrasah* differs from the commonly known *qā'ah* applied in religious architecture, however, in that, instead of a lateral recess, it has on one side a *maq'ad* (fig. 6) or loggia that commanded the Ḥaram panorama through three large arches. The *maq'ad* is a feature of Cairene residential architecture, where it is connected with a reception hall (*qā'ah)*, while it overlooks at the same time the inner courtyard of a house. Although it is the only *maq'ad* in the Cairene style known so far to have been used in religious architecture, the idea of a loggia overlooking the Ḥaram was not new in Jerusalem. Smaller loggias with a double-arch

---

[27]Mujīr al-Dīn, *al-Uns al-Jalīl*, 2:328. This term is not used in the *waqf* description of this building, but it was used in the earlier document describing the *madrasah* that Qāytbāy replaced with this one.

[28]Michael H. Burgoyne, *Mamluk Jerusalem* (London, 1987), 589-605.

[29]Mujīr al-Dīn, *al-Uns al-Jalīl*, 2:509, n. 1; 'Abd al-Laṭīf Ibrāhīm, "Wathīqat al-Sulṭān Qāytbāy," 499f.

window existed already in several Mamluk satellite buildings around the Ḥaram. They had double arched windows overlooking the Ḥaram,[30] such as the one at the Manjakīyah (762/1361), the pair of lateral chambers at the Isʻardīyah (1340s), and the one at the ʻUthmānīyah (840/1437). These were sometimes surmounted by domes, as at the Manjakīyah and the Isʻardīyah. There is also a kind of forerunner to this device in Fatimid architecture at the Azhar mosque where the caliph al-ʻAzīz built a *manẓarah*, or loggia, where he used to sit on festive occasions with his family.[31]

The *madrasah*s of Qāytbāy in both Medina and Jerusalem were built in order to have a maximum number of bays overlook the adjoining sanctuary. Both had their *majma*ʻs built so as to give their residents visual access to the sanctuary, creating a permanent interaction between the community of the sojourners (*mujāwirūn*) and the shrine.[32]

In Jerusalem, the Masjid al-Aqṣá had been able to integrate additional structures into its premises apparently without legal conflicts because of the open character of its architecture and the natural separation of the platform from the walls. Mujīr al-Dīn defines the Masjid al-Aqṣá as the entire enclosed complex, and not only the Umayyad mosque known as al-Jāmiʻ al-Aqṣá, which is a *jāmi*ʻ within the *masjid*.[33] By means of this definition, he included the surrounding buildings within the sanctuary. This idea is essential for understanding Qāytbāy′s windows in Medina. In the Ḥaram of Jerusalem the surrounding *madrasah*s and hostels were not viewed as ″outdoor″ structures; their windows and doors, as well as Qāytbāy′s *maqʻad*, were not considered an intrusion into the sanctuary, but rather were considered part of it. Already in the eleventh century, oratories were built along the walls of the Ḥaram in Jerusalem, and Nāṣir-i Khusraw mentions a handsome mosque along the eastern wall, within the portico, between Bāb al-Raḥmah and Bāb al-Tawbah (the Golden Gate).[34] This could have been the building used by the Shāfiʻī scholar, Shaykh Naṣr ibn Ibrāhīm ibn Dāwūd, who is reported to have

founded in about 1058 an oratory described as a *madrasah*, and also as a *zāwiyah*, above Bāb al-Raḥmah.[35] It was during the Mamluk period, however, that religious monuments with funerary chambers began to cluster along the northern and western porticoes of the Ḥaram,[36] whose street walls faced the busiest quarters of the city. In all these *madrasah*s and *khānqāh*s the main hall (*majma‘*) was built so as to have windows overlooking the Ḥaram. Some of these satellite buildings had their entrances within the portico, while others had two entrances. These were reached from both the street and the portico, or they might be reached only from the street. Several of them, such as the Awḥadīyah (697/1298), the Amīnīyah (730/1329), the Arghūnīyah (759/1358), the Khātūnīyah (completed 782/1380), and the Baladīyah (782/1383), included funerary chambers with a window open to the Ḥaram. The living units were either on the street side, or on the upper floor with a view of the Ḥaram.

Here it is interesting to add a note about the use of the term *majma‘* in the sources and in the *waqf* deeds in connection with the Ḥaram structures. *Majma‘* means literally ″place of assembly″ and it refers in these texts to the main hall in a residential institution that includes the *miḥrāb*. The term *majma‘* is never used in *waqf* descriptions of Cairene religious architecture. This cannot be explained by local scribal traditions, for the terminology used in Qāytbāy′s *waqfīyah*s is otherwise the same for foundations in or outside of Egypt. Also, Mujīr al-Dīn uses this term when speaking of the ″prayer halls″ of the *madrasah*s and *khānqāh*s in Jerusalem. The choice of the term *majma‘* instead of *masjid* seems to be of particular significance. It may involve a premeditated avoidance of the term *masjid* in the context of these boarding institutions since they were part of the Masjid al-Aqṣá. The *madrasah*s, *ribāṭ*s, and *khānqāh*s in the Masjid al-Aqṣá were seen as dependencies to lodge pilgrims and provide religious education, rather than autonomous mosques. Another example for this complementary relationship between the shrine and the adjoining structures is the absence of a *miḥrāb* at the *madrasah*s of Ālmalik and Sanjar al-Jawlī, both situated along the northern portico.[37] Instead, their *qiblah* walls are pierced by three windows each, the central one, which replaces the *miḥrāb*, being the largest; its view of the Ḥaram to the south is oriented to Mecca. The view of the Ḥaram thus replaces the *miḥrāb*: the Dome of the Rock and the Jāmi‘ Aqṣá, both on the same axis signal the more remote Ka‘bah which is in the same cardinal direction. It should be recalled in this context that the *madrasah* of Qāytbāy at Medina had neither an *imām* nor a

khaṭīb. This means that the community prayed in the Prophet's Mosque and gathered for teaching and Sufi rituals in the adjoining boarding structures.

While the satellite foundations created a zone of transition between the city and the shrine, the Mamluk market of Sūq al-Qaṭṭānīn, is connected with the Ḥaram through a gate, Bāb al-Qaṭṭānīn, located along the western portico. This magnificent gate, built by al-Nāṣir Muḥammad and Amir Tankiz for the benefit of the Masjid al-Aqṣá and the Tankizīyah,[38] signals the market-street to the visitor of the Ḥaram, thus emphasizing the intersection between the urban-commercial zone and the religious precinct. It fulfills an equivalent function from the street's perspective where its market side, which was once also decorated, signals the Ḥaram to the market visitor.

Although it did not stretch along the entire enclosure, the portico built along the northern and eastern walls of the Ḥaram contributed to the creation of a parallel to the layout of a classical mosque. Mujīr al-Dīn's reading of the Masjid al-Aqṣá as a mosque built around a courtyard, within which is the Dome of the Rock, having porticoes and minarets and encompassing educational and boarding structures, is of particular interest because it established a formal parallel between the Masjid al-Aqṣá and the mosques of Mecca and Medina. It is interesting to note here that the Mamluk minarets at the Jerusalem Ḥaram were placed so as to be attached to the Ḥaram rather than to the individual *madrasah*s. The minaret of Bāb al-Silsilah, built at the same time as the Tankizīyah, and most likely also by Tankiz, stands above an entrance to the Ḥaram, and not at the *madrasah*. With the Meccan shrine the Jerusalem Masjid shares the central structure, a common feature that the Muslim theologians were aware of as they made the parallel between the Rock in Jerusalem and the Black Stone in Mecca.[39] It shares with Medina the classical mosque plan of porticoes around a courtyard.

By the late Mamluk period the three holiest mosques of Islam in Mecca, Medina, and Jerusalem were encircled by hospices and religious institutions devoted to lodging communities of pilgrims and sojourners from various parts of the Muslim world. These buildings, which had expanded gradually and spontaneously from the eleventh century onward, added a new dimension to the shrines, creating an architectural and functional intermediary between them and the city. The intensive building activity of the Mamluks adjacent to the Ḥaram in Jerusalem was the most articulate manifestation of this phenomenon. It was Qāytbāy, however, who made a concept out of this phenomenon, as the bold layout of his *madrasah*s in Medina and Jerusalem demonstrate. The Sultan's visit to Jerusalem in 880/1475, prior to

his pilgrimage to Medina in 884/1480, seems to have been decisive for the architecture of his buildings in both cities. It inspired him to reshape the first and to emulate in Medina the Ḥaram pattern he had witnessed at the Masjid al-Aqṣá. The boldness of this design was due to the Sultan´s personal involvement with architecture and to his power of taking radical measures when necessary.

Shams al-Dīn Muḥammad ibn Makkī "al-Shahīd al-Awwal" (d. 1384) and the Shi'ah of Syria

THE "FIRST MARTYR"

Muḥammad ibn Makkī was not the first martyr of Shi'ism, nor indeed the first individual to be killed as a heretic in Mamluk Syria. It is rather the literary heritage of Shi'i legal thought, a discipline Ibn Makkī helped to shape decisively during his life, that cast him as its "Felicitous Martyr" (*al-shahīd al-sa'īd*), "the Martyr," and subsequently "the First Martyr." He is an historic representative both of the high intellectual tradition of Shi'i scholarship and of an important confessional community in the Mamluk Empire. The aim of this essay is to explore the career of Ibn Makkī and, through him, the position of the Twelver Shi'is in medieval Syrian society.

While alive, Muḥammad ibn Makkī's fame as a legal expert spread as far as Khorasan, where the reigning monarch invited him to instruct his court in Imāmī Shi'ism. Ibn Makkī's considerable literary production, in large part extant and widely commented upon by other Imāmī *faqīh*s (jurisprudents), makes him one of the most influential figures in the history of Shi'i thought.[1] His contribution to, and reception in, Shi'i jurisprudence has been examined in some detail by Norman Calder, while his scholarly career as recorded through *ijāzah*s (reading diplomas) has been studied in outline by Devin Stewart.[2] The Shi'i tradition has preserved the memory of Ibn Makkī's erudition and martyrdom through successive biographical dictionaries (*rijāl*, *ṭabaqāt*). The most prominent of these are products of the seventeenth to twentieth centuries, and draw in large part on a single

contemporary account of Ibn Makkī's death with emendations either from family archives or from imagination.[3]

The significance of Ibn Makkī extends beyond the endogenous scholarly heritage of Shiʻism. He is noted in several Sunni sources, particularly the local history of the Damascene cleric Ibn Qāḍī Shuhbah.[4] Ibn Makkī was but the most prominent of several Imāmīs executed in fourteenth-century Damascus for *rafḍ*, an ill-defined notion of heresy frequently invoked by Sunni authorities to justify persecuting individuals of the Shiʻi sects. The picture Ibn Kathīr paints of ubiquitous religious persecution in Egypt and Syria has led some historians to surmise a highly organized, government-run ″inquisition in the Mamluk state.″[5] Michael Chamberlain's excellent analysis in *Knowledge and Social Practice in Medieval Damascus*, however, presents heretication as one strategy of the *ʻulamā'* (clerics) to exercise or defend their social power.[6] This essay will begin by examining official Mamuk attitudes toward Shiʻism, and turn later to individual cases of persecution in Damascus. The author hopes that a discussion of Ibn Makkī's career and execution, set in this wider framework of Shiʻism under the Mamluks, may serve also to illustrate medieval Syrian society's perceptions of deviance and orthodoxy.

The Shiʻah of Qalawunid Syria

Any discussion of Shiʻism in fourteenth-century Syria must begin of necessity with the Kisrawān campaigns. Between 1292 and 1305, the Mamluks carried out a series of three punitive expeditions against the predominantly Shiʻi populations of the Kisrawān (and Jird) region in the Lebanese mountains immediately east of Beirut. The circumstances are well known and need not detain us for long.[7] The final, devastating campaign in the summer of 1305 was attended by the famous Ḥanbalī evangelist Aḥmad ibn Taymīyah, and succeeded, in the course of two

weeks of plunder and bloodshed, in wiping out the Shi'i communities of the region.

Many modern historians, both western and Arab, have sought to explain the Kisrawān campaigns as part of the fledgling Mamluk regime's intolerant drive to stamp out religious heterodoxy.[8] Fewer have argued that the raids were connected only to the Kisrawānīs' alleged complicity with the Mongols in 1300 and with the crusaders before that, and that the Mamluks in fact possessed no religious policy of the sort.[9] As far as the victims of the campaigns are concerned, Kamal Salibi has shown that the Maronites were as much the target of the Mamluks' wrath as were the Shi'is. The Maronite communities organized resistance against the state armies, but were also overwhelmed and eradicated in 1305.[10] How permanent the exile was is questionable, and a local dispute between Maronites and Twelver Shi'is in 1671 shows that the Shi'is once again enjoyed a position of primacy in at least a part of the Kisrawān.[11] As for the perpetrators, Salibi's work has also served to underline the role in 1305 of the Buhturids, a local dynasty that ruled the Gharb mountains on behalf of the Mamluk Sultanate. Buhturid amirs were recruited on more than one occasion to quell revolts in the Kisrawān, in return for fief rights and a modest rank in the Syrian provincial *ḥalqah* corps. The Buhturids belonged in fact to the Druze sect.[12]

Nevertheless, some uncertainty remains in the literature over the identity of the Shi'i groups that were being pursued in the Kisrawān. Many contemporary observers believed the expeditions were sent to chastise the Druze. Also, Ibn Taymīyah's notorious *fatwá* calling for violence against the Nuṣayrīs, or 'Alawīs, has frequently been cited in association with the campaigns, but it seems actually to be of a slightly later date and has no bearing on the Kisrawān.[13]

13*Majmū' Fatāwá Shaykh al-Islām Aḥmad ibn Taymīyah* (Riyadh, 1961-66), 5:149-60; Laoust, "Remarques," 108.

Ibn Taymīyah was certainly aware at this time of the variety of Shiʻi denominations, clearly differentiating between the Twelvers and the antinomian "Ismāʻīlīyah, Nuṣayrīyah, Ḥākimīyah, and Bāṭinīyah, who are worse infidels than the Jews and Christians."[14] Nonetheless, in a lengthy letter to Sultan al-Nāṣir Muḥammad, in which he sought to justify the carnage after the fact, Ibn Taymīyah demonstrates beyond any doubt that the final Kisrawān campaign was directed against Imāmī or Twelver Shiʻis. After blaming the entire Mongol scourge from the rise of Jenghiz Khan to the 1300 sack of the town of Ṣāliḥīyah on Shiʻism, he goes on to enumerate their heretical views: they, the Shiʻis, hold anyone who touches the forehead on the ground (rather than on a prayer tablet), who forbids *mutʻah* temporary marriage, or who loves Abū Bakr, ʻUmar, ʻUthmān and all the other Companions, to be apostate.

> And whoever does not believe in their Awaited [Imām] is considered an apostate. This Awaited One is a boy of two or three or five years, and they claim that he went into a subterranean vault in Samarra over four hundred years ago. He knows everything and is God's proof [*ḥujjah*] to mankind. . . . And according to them, whoever believes in the truth of God's names and physical attributes.. is an apostate.
>
> This is the *madhhab* dictated to them by their shaykhs, such as the Banū ʻAwd. They are the shaykhs of the people of this mountain, and they were the ones who ordered them by a *fatwá* to fight the [fleeing Mamluk] Muslims. A number of their books, written by Ibn al-ʻAwd and others, fell into the Muslims' hands, and they contain all of the above and worse.[15]

Such a pronouncement creates the impression that the Kisrawān campaigns were part of an official policy against Shiʻism in Syria *per se*, which is exactly what Ibn Taymīyah was urging Sultan al-Nāṣir to adopt. However, the campaigns were not Ibn Taymīyah's private initiative. As stated, the 1300 expedition was launched in direct reaction to the Mongol occupation of Damascus, while that of 1305 seems to have been precipitated by a revolt of the Shiʻis against their Buhturid overlords.[16] Furthermore, in Dhū al-Ḥijjah 704/June 1305 the Mamluk

governor of Damascus, Aqqūsh al-Afram, sent a mediator to the Kisrawān in an effort to resolve the dispute and to ″return them to obedience″ to the legitimate authority.[17] The mediator was Zayn al-Dīn Muḥammad ibn ʻAdnān al-Ḥusaynī (d. 1308), the *naqīb al-ashrāf*—and thus the lay official representing the Twelver Shiʻis—of Damascus.[18]

The confessional identity of the *ashrāf*, the descendants of the Prophet Muḥammad through the Imāms Ḥasan and Ḥusayn, has not yet received its due share of scholarly attention. The *ashrāf* as a corporation enjoyed certain fiscal privileges within Islamic society, which the *naqīb* or syndic was in charge of administrating. In Mamluk Cairo, the *naqīb* was likely to be of the Shāfiʻī legal school;[19] the Zuhrid family of Aleppo, which monopolized the post there for many years, was unmistakably Twelver Shiʻi. Recent work by Richard Mortel has shown that the Sharifs of Mecca, the guardians of Islam′s holiest shrine, remained committed to the politically quietist Zaydī branch of Shiʻism until the latter fourteenth century.[20]

The community of *ashrāf* in Damascus was rather small and primarily associated with the prestigious Husaynid shrines at the Bāb al-Ṣaghīr cemetery, and as such enjoyed an excellent reputation within Damascene society.[21] There are some indications that the Banū ʻAdnān, who held the post of *naqīb* for much of the fourteenth century, tended toward Twelver Shiʻism, but the question demands further research. At the very least, their ideal devotion to the line of Imāms can be construed as a ″mild″ Shiʻism, inasmuch as it did not openly contest the validity of the Sunni caliphate and was perfectly compatible with loyalty to the Mamluk state. When Aqqūsh al-Afram issued a call to arms to the citizens of Damascus to defend against a renewed Mongol threat in 1300, the corporation of *ashrāf* also presented itself for review.[22] Already in Fatimid times, with Shiʻism finding few converts in staunchly conservative Damascus, the rulers had made a policy of appointing ʻAlid *qāḍī*s as an acceptable medium between the needs of Ismāʻīlī ideology and of the Sunni populace.[23] Sending the *naqīb al-ashrāf* to negotiate

with the Shiʻis of the Kisrawān was, both in substance and in style, an honest effort on Aqqūsh al-Afram′s part to find a mutually salutary way to subject the Shiʻis to Mamluk sovereignty. It is only after Zayn al-Dīn′s failure that the course of relations with the Kisrawān was left over to the adepts of intolerance.

Ibn Taymīyah would not have had trouble finding piety-minded fanatics for his crusade against the heterodox. Already the twelfth-century traveler Ibn Jubayr (d. 1217) writes of a sort of *futuwwah* youth organization in Damascus that ″kills these *rāfiḍī*s, wherever they find them,″ and Ibn Taymīyah′s biographer ʻAbd al-Hādī (d. 1344) claims that there was wide public support for the endeavour.[24] However, the seminal interpretations of the Kisrawān campaigns as an anti-heresy drive are above all the products of historians of the piety-minded *ʻulamā*ʼ class. A quick survey of Donald Little′s *Introduction to Mamlūk Historiography* shows clearly that the important Muslim historians who cite revenge for the Kisrawānīs′ political sedition as the grounds for the campaigns (Baybars al-Manṣūrī, al-Nuwayrī) belonged to the Mamluk military and bureaucratic apparatus, while those who cite their ″foul beliefs″ (al-Birzālī, Ibn Kathīr, and especially al-Maqrīzī) were *ʻulamā*ʼ.[25] As is equally true for medievalism in the European context, it is the historiography of the clerical class that ultimately gained the wider currency. The moralist prejudice of an al-Maqrīzī, however, did not necessarily coincide with the day-to-day concerns of the actual Mamluk administration in Damascus. (Aqqūsh al-Afram, incidentally, later defected to Persia and ended his career as governor of Hamadān for the Shiʻi Ilkhanid monarch Öljeitü.[26])

The Buhturids certainly continued to flourish as vassals of the Syrian Mamluk governate, their degree of leverage in Damascus illustrated by the amendment in their favor of the 1313 sultanic land cadastre (*rawk*) for Syria.[27] The Syrian Ismāʻīlīs, though incriminated for their political role during the crusades, were given tax reprieves and were relied upon by the Mamluk Sultanate to carry out covert missions in Mongol Persia.[28] There is little cause to think that the Twelver Shiʻis of middle Syria, on whom we shall concentrate here, fared any worse. In his seminal *Taʼrīkh Jabal ʻĀmil,* the old-guard *zaʻīm*-class author Muḥammad Jābir

Āl Ṣafā (d. 1945) argues that ″the land had lived in peace and security″ under the Mamluk regime. The context of this assessment is an impassioned apologia, much in the spirit of the pre-Aḥmad Pasha al-Jazzār (d. 1804) ″Golden Age″ Shiʻi historiography described by Fouad Ajami, for the justice and merit of the feudal system in the virtually autonomous medieval Jabal.[29]

The Sultanate in Cairo never adopted a uniform policy on Shiʻism in the empire. Ibn Faḍl Allāh al-ʻUmarī (d. 1349), head of the Mamluk chancery in Cairo and author of an important manual of government, differentiated very well between the various Shiʻi sects and accepted the Twelvers as part of the community of the Muslim faithful with only minor reservations.[30] Al-Qalqashandī′s famous chancery manual contains a copy of a decree issued in 1317, ordering the Nuṣayrīs of the province of Tripoli to build and maintain mosques in their villages and prohibiting their shaykhs from speaking in public.[31] Only the year before, Mamluk troops had had to put down a rebellion inspired by a self-proclaimed Nuṣayrī prophet in the region. Yet the order against the Nuṣayrīs is buried in a general rescript on taxation matters for Tripoli, and is relatively indifferent in tone to the actual existence of the community so long as they begin behaving outwardly like Muslims. Ibn Baṭṭūṭah′s well-known anecdote about the utilization of mosques as stables in the region suggests that neither the Sultanate nor the provincial authorities seriously pursued such matters.

A second sultanic rescript from 1363 is directed unequivocally against the ″*rāfiḍī*s and Shiʻis″ of Sidon, Beirut and surroundings.[32] Written in a remarkable, rhyming chancery style (*inshā*ʼ), the rescript harangues the Shiʻis at length for having distorted Islamic faith and tradition, and for subscribing to abominable practises such as permitting simultaneous marriage with two sisters and cursing the Companions of the Prophet that are dear to the Sunnis. It goes on to threaten military action should the Shiʻis not abjure and return to the fold of Sunnism. It is not clear what occasioned the rescript′s promulgation. Urbain Vermeulen has suggested that the Cypriot incursions frequent in those years stoked fears of the Shiʻis′ complicity,[33] yet the rescript concerns only religious deviancy and is conspicuously devoid of any of the standard references to the external enemies of

Islam. There is evidence, as will be discussed below, that the rescript provided the context for oppressing Shi'is in the region for a number of years. Yet its geographical scope is limited to two *wilāyah*s of the province of Damascus, and can therefore not stand in for a general imperial protocol.

Where the Mamluks did pursue the formal suppression of the Shi'i faith itself was in Mecca. Ever since the Hijaz had passed under Mamluk control in the 1260s, the pre-eminence of the Sharifs′ Zaydī Shi'ism around the prestigious shrine had been an embarassment to the Sultanate.[34] Over the course of the second half of the fourteenth century, the Mamluks succeeded through a variety of means in pressuring the Sharifs to renounce Zaydism. However, this served the purely political purpose of consolidating the Mamluk regime′s symbolically vital suzerainty over the Holy Places, and never resulted in the persecution of Zaydīs for heresy.

A cursory glance at the careers of later Mamluk governors of Damascus presents the full range of attitudes toward Shi'ism, from burning a *qāḍī* alive for his *″rāfiḍī″* beliefs, to official protection of Shi'i *'Āshūrā'* festivities in the capital.[35] The treatment of Shi'is both as compact communities in the hinterland or as individuals in the Syrian capital was not dictated, from the very rise of the Qipchak Mamluk regime, by a universal policy on Islamic heterodoxy. The career of Muḥammad ibn Makkī may be illustrative of *tashayyu'* under the Mamluks.

Between Jizzīn and Ḥillah

The town of Jizzīn, at the time of Muḥammad ibn Makkī′s birth in 1333, was already developing into a modest haven of Shi'i learning. Situated a mere 15 km. east of Sidon but at an altitude of 1,700 m. in the northernmost part of the Jabal 'Āmil, Jizzīn was attacked only once by the crusaders, in 1217, and not taken.[36] It seems already to have been populated by Shi'is then, before their numbers were swelled by the influx of refugees from the Kisrawān in 1305.[37] Both Ibn Makkī′s father and grandfather are described as *'ulamā'*. His great-uncle (and father-in-law) Asad al-Dīn al-Ṣā'igh al-Jizzīnī, probably his first teacher, was known more for his pious devotion than as a legist.[38] Little is reported of Ibn Makkī′s early life,

other than that he left the Jabal ʿĀmil at the age of sixteen or seventeen to study in Ḥillah, Iraq.

Jizzīn already had connections with the *ʿulamāʾ* of Ḥillah through the likes of Najīb al-Dīn Ibn al-ʿAwd al-Asadī al-Ḥillī. A scholar of some repute, Ibn al-ʿAwd had begun to make his career in Aleppo. However, he was abused and driven from town after making an unfavourable remark about the Prophet′s Companions to the local *naqīb al-ashrāf,* and moved to Jizzīn where he died in 1280.[39] Yet another scion of the Banu ʿAwd, Shihāb al-Dīn Ismāʿīl ibn al-Ḥusayn al-ʿAwdī al-Jizzīnī (d. ca. 1184) had been among the first natives of the area to travel to Ḥillah for religious studies.[40] Finally, Najm al-Dīn Ṭumān ibn Aḥmad al-ʿĀmilī al-Manārī (d. ca. 1327) taught *fiqh* in Ḥillah before returning to the Jabal, where one of his students was Muḥammad ibn Makkī′s father.[41]

Ḥillah, in the early fourteenth century, had taken the place of Baghdad and Qom as the foremost center of religious scholarship in the Shiʿi world. Under the aegis of the Ilkhanid Sultanate, a distinctive school of theological and legal thought was forming in Ḥillah that emphasized the authority not of accumulated tradition, but of the living scholar′s independent reasoning in jurisprudence. With his writings on *ijtihād* and *taqlīd*, al-ʿAllāmah al-Ḥillī Ḥasan ibn Yūsuf al-Muṭahhar (d. 1325) provided the first theoretical basis for the social and political role of the later Shiʿi clerical hierarchy.[42]

Ibn Makkī spent his entire learned career on the articulation of this school, and he wrote numerous commentaries on the works of al-ʿAllāmah al-Ḥillī and his students. Ibn Makkī′s first and most influential teacher in Ḥillah was Fakhr al-Muḥaqqiqīn Muḥammad (d. 1370), son of al-ʿAllāmah al-Ḥillī and a major scholar in his own right. Fakhr al-Muḥaqqiqīn certified, in an *ijāzah*, that Ibn Makkī had studied all of his father′s works as well as many others, and reportedly praised his young pupil saying that ″I benefitted more from him than he from me.″ Ibn Makkī also studied under Tāj al-Dīn Muḥammad ibn al-Qāsim (Ibn Muʿayyah) al-Dibājī al-Ḥillī, himself a former student of both al-ʿAllāmah al-Ḥillī and Fakhr al-Muḥaqqiqīn. Ibn Muʿayyah seems to have become a lifelong friend, for he wrote Ibn Makkī and his two sons *ijāzah*s shortly before dying, in Ḥillah, in 1374.[43] Ibn Makkī′s other mentors included ʿAmīd al-Dīn and Ḍiyāʾ al-Dīn al-

Ḥusaynī al-Ḥillī, nephews of al-ʻAllāmah al-Ḥillī and also commentators on his works.

From Ḥillah, Ibn Makkī traveled to Kerbala and, in 1353-54, to Mecca and Medina. On the way it seems that he also stopped in Jerusalem and al-Khalīl (Hebron), earning *ijāzah*s from other scholars in each of these places.[44] Before quitting the Iraq definitively, Ibn Makkī sojourned in Baghdad and studied at the two famous Sunni *madrasah*s al-Niẓāmīyah and al-Mustanṣirīyah. By his own reckoning he read under ″some forty Sunni shaykhs,″ including Ḥanbalīs as well as some noted Egyptian scholars whom he most likely met in Iraq and Mecca. Contemporary Shiʻi writers have made much of his expertise in Sunni *ḥadīth* and *fiqh*, seeing in it his desire for a rapprochement between Sunnism and Shiʻism along the lines of the modern ″five *madhhab*s″ formula.[45] Ibn Makkī was in fact rebuked by later traditionalist Shiʻi scholars precisely for his pioneer role in the adoption of rationalist Sunni legal principles.[46]

Ibn Makkī began teaching other students while still in Iraq and seems also to have had followers in Medina.[47] However it is after his return to Syria, around 1357, that he began to make his mark in the development of Shiʻi scholarship. Already an accomplished *faqīh* at the age of twenty-four, he took on students in Jizzīn and is universally celebrated today as the founder of the Shiʻi scholastic tradition in the Jabal ʻĀmil.[48] It is indeed from this point onward that a significant number of ʻĀmilī scholars are recorded in the biographical dictionaries. Ibn Makkī′s many students included his eldest son Abū Ṭālib Muḥammad ibn Muḥammad, a prolific writer of *fiqh* works,[49] and al-Miqdād ibn ʻAbd Allāh al-Suyūrī al-Ḥillī (d.

1423), whose unique account of Ibn Makkī′s trial and execution has been handed down through successive Shi'i *ṭabaqāt*.[50]

Perhaps his most illustrious student, however, was his daughter, Fāṭimah.[51] She received an *ijāzah* from Ibn Mu'ayyah just like her brothers, and in time came to be known as ″Sitt al-Mashā'ikh,″ matron of the *shaykh*s, for her knowledge. A deed from Ramaḍān 823/1420 discloses that she ceded her entire share of her father′s bequest, ″in Jizzīn and elsewhere,″ to her two brothers as a pious act, in exchange for several books including a copy of the Shi'i *ḥadīth* canon ″Man Lā Yaḥḍuruhu al-Faqīh″ and a Quran said to have been a gift from 'Alī Mu'ayyad, ruler of Khorasan. Seventy *mujtahid*s from around the Jabal 'Āmil are said to have attended her funeral. Ibn Makkī himself held her up as a model of piety and scholarship, and told the women of the area to refer to her or to his wife, another ″*faqīhah*,″ on legal questions pertaining to menses and prayer.

IBN MAKKĪ′S INTELLECTUAL PRODUCTION

Muḥammad ibn Makkī was one of the most influential scholars of the long middle age of Shi'i history, between the fall of the Buyids in 1055 and the rise of the Safavids in the early sixteenth century. Beyond this, however, there exists no consensus as to the importance of his contribution to Shi'i legal thought, and little work has been undertaken toward a comprehensive evaluation. Part of the difficulty lies in the incremental nature of developments in Shi'i jurisprudence throughout this period, which makes it difficult to identify precise watersheds or delineate schools of thought historically. More importantly, scholarship in the last twenty years has focused almost exclusively on one aspect of Shi'i intellectual history; the authority of the *faqīh* to act as the Hidden Imām′s deputy.

Chronologically and conceptually, Ibn Makkī is located somewhere between al-'Allāmah al-Ḥillī (d. 1325) and Zayn al-Dīn ibn 'Alī (d. 1558). The former is credited with having introduced rigourous *ḥadīth* criticism into Shi'i jurisprudence, thus laying the groundwork for the emergence of a specifically Shi'i legal methodology on a par with that of the four classical Sunni schools. At the other end of the spectrum, Zayn al-Dīn ibn 'Alī is largely responsible for originating, in his ten-volume commentary on Ibn Makkī′s *al-Lum'ah al-Dimashqīyah*, the theory of the *faqīh*′s comprehensive deputyship to act as temporal leader of the Islamic

community. To what degree the Shiʿi jurist′s political authority is germinal in Ibn Makkī′s thought is debatable; one recent enthusiast has made him to be the very source of Ayatollah Khomeini′s *wilāyat al-faqīh* theory of state.[52]

Ibn Makkī was first and foremost a *ḥadīth* scholar, pursuing the system of scientific classification devised by the Ḥillah school. His numerous treatises, particularly on traditions concerning ritual purity (*ṭahārah*) and prayer (*ṣalāt*), are still considered essentials in the field.[53] Besides ritual, his manuals of jurisprudence primarily treat mundane social transactions, from inheritance to sharecropping to conjugal favours. His purported political thought can only be inferred from the rare references to the Imām and *faqīh* in his works.

The most fruitful line of inquiry in this respect concerns the collection of *zakāt*, the alms tax incumbent on all Muslims. The early Shiʿi jurisprudents had suggested that, during the absence of the Imām, the faithful distribute the alms themselves rather than through an illegitimate state tax collector. By the fourteenth century, the legists were claiming the right to allocate *zakāt*, not as the Imām′s deputy but as the most competent representatives of the community. Ibn Makkī further refined this view by making the *faqīh* the moral equivalent of the Imām. In *al-Bayān*, probably one of his last books, he states that

> The best method of paying is not by agency but, so as to achieve certainty, payment either to the Imām or to the *faqīh*. We consider this to be best, inasmuch as the two are above perfidy: the Imām by virtue of his infallibility; and the *faqīh* by virtue of his probity [ʿ*adālah*] and his knowledge of who receives [*zakāt*] and the manner of its distribution.[54]

In the concisely worded corresponding passage of *al-Lumʿah al-Dimashqīyah*, Ibn Makkī implies that payment of the *zakāt* to the jurisprudent can also be considered as incumbent. It is this wilfully ambiguous passage which Zayn al-Dīn ibn ʿAlī, writing one and a half centuries later, interprets as signifying unequivocally the *faqīh*′s general deputyship on behalf of the Imām.[55] Ibn Makkī is similarly vague on the *khums*, a surtax on war spoils and mineral resources of which half is paid to ″the Imām, when he is present, or to his deputies, when he is absent.″ It is in Zayn al-Dīn ibn ʿAlī′s commentary that we are told explicitly that these deputies ″are the righteous Imāmī *faqīh*s . . . as they are his agents and must perform that

which their *madhhab* demands."[56] Ibn Makkī's references to the Imām's representative at Friday communal prayers and in *jihād* (holy war) are utilized to make the same argument.[57]

One of Ibn Makkī's own rare direct references to the executive authority of the *faqīh* occurs in the context of the fundamental Islamic precept of "enjoining the good and prohibiting the evil":

> During the Imām's occultation, the *faqīh*s may administer the penalties (*ḥudūd*) among the people in full legality and security, by virtue of their qualities of jurisconsult (*muftī*) which are correct faith, righteousness, and versedness in law. . . . It is obligatory to take recourse to the *faqīh*s and, whoever does not, sins.[58]

It is clear from the above statements that Ibn Makkī was advocating the social responsibility of the legal scholar. But to deduce a precocious political theory therein would be ill-considered. Not only are the references to the *faqīh*s' role too few, but they are also never invested with functions that the Sunni *'ulamā'*, for instance, did not already have. In the chapter on judicature (*qaḍā'*), we read that "During the occultation, the *faqīh* possessed of the qualities of jurisconsult administers justice. Whoever foregoes him in favor of tyrannical [i.e. non-*sharī'ah*] judicature is a rebel." Elsewhere the judge (*ḥākim*) is identified as the guardian of the legally incompetent.[59]

As a Shi'i, Ibn Makkī naturally expressed some of the legists' prerogatives in terms of an ideal authority inherited from the Imām. In substance, however, he was simply claiming the same social leadership that the primates of the Sunni *madhhab*s had long enjoyed in their communities, and no more. This view is also more in line with Devin Stewart's argument that Ibn Makkī and the Ḥillah school, in championing the adoption of rationalist legal principles (*uṣūl al-fiqh*), were endeavouring to bring Shi'i legal thought into the mainstream of Islamic jurisprudence at this time. For the Shi'i community of Mamluk Syria, certainly, the question of a jurist's comprehensive authority did not arise. The notion that

the ″worldview of the faithful in Imāmī Shiʿism is dominated by the question of the leadership of the Muslim community—the Imamate″[60] is ahistorical and ageographic.

Ibn Makkī′s struggle to assert the primacy of law in Shiʿi society was perhaps not directed against obscurantist traditional scholars or a hostile secular authority. There is evidence to suggest that his greatest adversaries were the wandering Sufi mystics, who traditionally exerted a great influence over the rural populations of the Lebanese mountains. In a long poem, Ibn Makkī celebrates mystical experience but decries the modern dervishes′ duplicity and corruption:

> Sufism is not simply a staff and a rosary.
> Poverty does not mean the dream of exaltedness
> And that you go about in tatters,
> Hiding the sin of vainglory and ostentation underneath;
> And that you affect to renounce the worldly,
> But are addicted to it like a dog is to bones.[61]

In another instance, it is reported that Ibn Makkī fought a certain ″charlatan″ named Muḥammad al-Yālūshī, from the obscure Tower of Yālūsh near the village Brayqaʿ. Apparently, he had been Ibn Makkī′s student but then turned his interests to the magical arts and went about the Jabal ʿĀmil claiming to be a prophet.[62] The tale of Ibn Makkī′s clash with the sorcerer of the tower appears in the southern Lebanese folk tradition in several forms and must be treated with caution.[63] Nevertheless, the common belief that Ibn Makkī had enemies among the followers of popular religion in the Jabal, and that these contributed to his downfall in the end, should not be entirely discounted.

The point that has fascinated Shiʿi historians of Ibn Makkī most is that he was called upon by the Shiʿi ruler of Khorasan, the Sarbadār ʿAlī Mu'ayyad, to come serve at his court. In the fourteenth century, the provinces of Iran were under the increasingly autonomous control of local potentates, while the Ilkhanid empire deteriorated. The Sarbadārs, who first took power in Sabzavār around 1337, were an uneasy alliance of the local petty nobility and the popular following of a vaguely Shiʿi Sufism. In 1362, ʿAlī Mu'ayyad seized power with the support of

the dervish faction, proclaiming Imāmī Shi'ism as an ideology acceptable to all. However, the radicalism of his dervish partners soon proved to be inopportune, and 'Alī Mu'ayyad took to repressing the movement with force, until they succeeded in ousting him in 1376-77 with the help of the province's Sunnis.[64] It is in the context of 'Alī Mu'ayyad's quest to institutionalize a staid Twelver Shi'ism in this period that his invitation to Ibn Makkī must be placed.

Ibn Makkī declined, penning a concise, comprehensive guide to Shi'i law, *al-Lum'ah al-Dimashqīyah fī Fiqh al-Imāmiyya* (*The Gleam of Light from Damascus: Imāmī Jurisprudence*) to send to him instead. Popular tradition holds that he composed the work in just seven days while he was confined in the Damascus citadel, but already some of the early *ṭabaqāt* biographers have pointed out that it must have been written earlier.[65] The invitation was conveyed by the scholar Shams al-Dīn Muḥammad al-Āwī, an intimate of the Sarbadār who had known Ibn Makkī since his days in Iraq.[66] The text of the letter, in which the sultan beseeches Ibn Makkī to come and quench their thirst for religious instruction, fearing "the wrath of God on this land for its loss of integrity and its need of guidance," is preserved in some popular biographies.[67] However, it is contained neither in Zayn al-Dīn ibn 'Alī's commentary nor in the more serious *rijāl* works, and is probably another instance of the imaginative embellishment of al-Shahīd al-Awwal's story.

Neither *al-Lum'ah al-Dimashqīyah* nor any other of Ibn Makkī's works was examined at his trial. Muḥammad al-Āwī is said to have prevented copies from being made, while Ibn Makkī apparently expressed relief that no one saw the book while he was writing it, despite the fact "that his sessions in Damascus at the time were usually frequented by scholars from the general public, due to his association and companionship with them."[68] An early eighteenth-century biographer supplies the claim that Ibn Makkī taught comparative Sunni law (*mukhālifīn*) by day and Shi'i law by night "in a special house which he had built underground" out of fear of persecution.[69] The likelihood of this is disputable, but the statement

does underline the fact that Ibn Makkī´s authorship of the work would not have been generally known in Damascus. Despite the many students who studied with Ibn Makkī, *al-Lum'ah al-Dimashqīyah* does not seem to have received particular attention in Shi'i circles in this period either. Before Zayn al-Dīn ibn 'Alī´s commentary from the sixteenth century, *al-Lum'ah al-Dimashqīyah* was simply a legal primer for a marginal religious community, making its first tentative steps, in Syria as in Khorasan, to constitute itself as civil society.

In any event, Ibn Makkī´s scholarly influence in distant Khorasan was to be short-lived. 'Alī Mu'ayyad, after he retook control of Sabzavār in 1380-81, was astute enough not to resist Tīmūr´s onslaught from the East. He entered into vassalage to Tīmūr (and died in his service in 1386), and abjured Shi'ism.

At Damascus

To what extent and under which auspices did Muḥammad ibn Makkī pursue his scholarly career in Damascus? This question is vital to an understanding both of his eventual condemnation and of the position of the Shi'ah in Syria at this time. Ibn Makkī is generally portrayed in the Shi'i literature as a constant visitor and respected participant in the intellectual life of the capital.[70] Certainly the conspicuous reference to *Dimashq* in the title of his law manual suggests a long-standing attachment to that city. Yet there are few textual references to him in the local histories, and even Ibn Qāḍī Shuhbah identifies him mistakenly as an Iraqi who had settled in Jizzīn, or distorts his *nisbah* to read ″al-Juraynī.″[71]

Ibn Makkī was known in at least one circle of Damascene literate society, that of the Quran reciters. He studied with several disciples of Ibn al-Mu'min, the doyen of *qurrā'* of the epoch. One of them, Ibn al-Labbān al-Dimashqī (d. 1374), who rose to become the most acclaimed reciter in Damascus, reported that he taught the erudite Ibn Makkī ″for a long time, and never heard him say anything at variance with (*mā yukhālifu*) Sunnism.″ The statement shows, of course, that Ibn al-Labbān knew very well that Ibn Makkī himself was not a Sunni. The author of the contemporary Quran reciters´ *ṭabaqāt*, Muḥammad ibn al-Jazarī (1350-1429), also knew Ibn Makkī as a ″shaykh of the Shi'is and *mujtahid* in their *madhhab*″ and, mentioning that he was away in Egypt at the time, intimates regret over his execution.[72]

Ibn Makkī also consorted with other Shi'i scholars in Damascus. Muḥammad ibn al-Ḍaḥḥāk al-Shāmī (d. 1389) had been a close friend since their earliest days together in Ḥillah as students of Fakhr al-Muḥaqqiqīn.[73] In Ḥillah he had also studied under Amīn al-Dīn Aḥmad ibn Zuhrah of Aleppo (d. ca. 1394), and it is likely that he maintained contact with him or with other members of the illustrious Zuhra family after their return from Iraq.[74]

Surely his most interesting acquaintance in Damascus was Quṭb al-Dīn Muḥammad (or Maḥmūd) al-Rāzī, whom he met "by chance" and then earned an *ijāzah* from him in 1365.[75] A native of Rayy, al-Rāzī had moved to Damascus a few years previously and lived in the Ẓāhirīyah *madrasah*. He was buried in Ṣāliḥīyah, with the elite of Damascus in attendance, after dying later that year. Ibn Makkī described him as "an inexhaustible ocean of knowledge" and declared that "he was, beyond any doubt, of the Imāmī *madhhab*. He made this clear and I heard so from him, and his devotion to the entire Family of the Prophet is well known."[76] In fact al-Rāzī consistently protested that he was a Shāfi'ī. He was certainly accepted as such, and though he "never got a taste of Arabic linguistics," he has gone down as a great Sunni scholar of rational philosophy (*ḥikmah*) and logic.[77] In addition to his Shāfi'ī credentials, al-Rāzī also held an *ijāzah* from al-'Allamah al-Ḥillī, and may indeed have been a Shi'i practising *taqīyah*. However, one should note that in an age where the line between Sunni and Shi'i religiosity was not yet so clearly drawn, he would not have been the only scholar to be appropriated by the Shi'is by reason of his devotion to the Prophet's Family.[78]

Did Ibn Makkī feel compelled to dissimulate his Shi'ism while in Damascus? An *ijāzah* issued to him by a Sunni shaykh in Baghdad gives his *nisbah* as "al-Dimashqī," perhaps an indication that he was concealing his Shi'i Lebanese origins.[79] Devin Stewart has argued that Ibn Makkī, like other stigmatized Shi'i scholars, usually pretended to be of the Shāfi'ī legal school. Ibn Makkī, as will be

discussed below, did in fact tell the recently inducted Shāfiʻī judge at his trial in 1384, "My *madhhab* is the Shāfiʻī. You now are the chief and judge of this *madhhab*, so rule according to your *madhhab*."[80] The only other indication that Ibn Makkī ever claimed to be a Shāfiʻī is given by the *qurrā'*-biographer al-Jazarī, who received a court summons (*istidʻā'*) signed by Ibn Makkī with the *nisbah* "al-Shāfiʻī."[81] The details are no longer known, but it is not improbable that the summons, and the claim to be a Shāfiʻī made therein, were connected to this very trial, for which Ibn Makkī may have been seeking al-Jazarī as a witness.

There is little to suggest that Ibn Makkī persistently resorted to *taqīyah* in Damascus prior to his capital trial. One might even debate whether affiliation with the Shāfiʻī *madhhab* would have constituted genuine *taqīyah* in the context of Syrian Shiʻism in the Middle Ages. The *tashayyuʻ* of Ibn Makkī and his associates never laid claim to an actual legal "guild" of their own. They were at times described as members of the Shiʻi *madhhab*, but it is interesting to note that the term "Jaʻfarī"—the technical name for the Twelvers' legal school—is never used in this period to denote *madhhab* nor affixed to the name as a *nisbah,* even in Shiʻi biographies. Ibn Makkī of course made significant theoretical advances in the elaboration of a distinctive Shiʻi legal identity, but these were not at issue in his trial. For procedural purposes, he may well have counted as a legal Shāfiʻī in Damascus, regardless of his religious denomination. One indication that Shiʻism and Shāfiʻī law were not mutually exclusive in Syria at this time is the career of Ibn Millī al-Baʻlabakkī (d. 1300), a respected, ostensibly Shāfiʻī *muftī* and scholar well known for his interest in Shiʻism. The chronicler Quṭb al-Dīn Mūsá al-Yūnīnī (d. 1326), a fellow native of Baʻlabakk, reported "He was an *imām* of the Shāfiʻī school, and the Shiʻi school heeded him as well."[82] The situation cannot be compared with that obtaining two centuries later, when the Ottoman regime came to treat Shiʻism as an explicit political threat. When the "Second Martyr" Zayn al-Dīn ibn ʻAlī (d. 1558), who was probably the first *mujtahid* to advance the formula of "the five *madhhabs*," got himself appointed headmaster of an important Ḥanafī college by the Shaykh al-Islām in Istanbul, some *taqīyah* may well have been in play.[83] It is unlikely that the First Martyr saw the need for this during his lifetime.

We have already seen that the mild Imāmī Shiʻism of the Damascene *ashrāf* was held in high esteem. Indeed, even Ibn Taymīyah was capable of carrying on a

respectful, scholarly dispute with al-ʿAllāmah al-Ḥillī.[84] Far from evoking the threat of Shiʿi sedition, the *naqīb al-ashrāf* was very much a part of the religious establishment in Syria and, as in the case of Ibn al-ʿAwd, vigilantly guarded against excessive ʿAlid partisanship within their own ranks that might prejudice their rapport with the Sunni majority. Again, it is not until the Ottoman period that the office of *naqīb* becomes principally assigned to Sunni functionaries. What then caused Muḥammad ibn Makkī and a handful of Shiʿi contemporaries to be persecuted and killed? A look at the narratives of their prosecution may be instructive of the persecuting mentality in fourteenth-century Damascus.

In Jumādá II 744/1343, Ibn Qāḍī Shuhbah writes, "the wayward apostate Ḥasan, son of shaykh Abū Bakr . . . al-Dimashqī al-Sakākīnī, was beheaded in the horse market on account of his Shiʿi heresy (*rafḍ*) that verged on atheism (*zandaqah*)."[85] Ibn Qāḍī Shuhbah seems to have relied on Ibn Kathīr's (d. 1373) *al-Bidāyah wa-al-Nihāyah* for his account, but has added some details on the victim's father borrowed from Ibn Ḥajar al-ʿAsqalānī's (d. 1449) biographical dictionary *al-Durar al-Kāminah*.[86] Other than Ibn Kathīr's slightly more abusive characterization of al-Sakākīnī, the accounts of the charges levied against him are virtually identical:

> The matter was established before the Mālikī *qāḍī* Sharaf al-Dīn, . . . namely, that he declared the two *shaykh*s (the caliphs Abū Bakr and ʿUmar) to have been infidels, and that he slandered their daughters [the Prophet's wives] ʿĀʾishah and Ḥafṣah. And he claimed that Gabriel had made a mistake and revealed himself to Muḥammad, when he had actually been sent to ʿAlī, and other such injuries.

They then proceed to contrast the son's wickedness with the father's integrity. Ibn Qāḍī Shuhbah, elaborating somewhat on Ibn Ḥajar's brief notice, continues:

> His father was a shaykh of the Shiʿis and scholar of the people, known for his non-*ghulūw*, non-cursing Shiʿism, and he held the two *shaykh*s in high honour . . .

[84]Michel Mazzaoui, *The Origins of the Ṣafawids: Šīʿism, Ṣūfism, and the Ġulat* (Wiesbaden, 1972), 28-30.

[85]Ibn Qāḍī Shuhbah, *Taʾrīkh*, 1:358.

[86]Ibn al-Kathīr, *al-Bidāyah wa-al-Nihāyah*, 14:222; Ibn Ḥajar al-ʿAsqalānī, *al-Durar al-Kāminah*, 2:119.

The less charitable Ibn Kathīr is unimpressed even by non-*ghulūw* (i.e., restrained) Shiʻism and prefers rather to emphasize the elder Sakākīnī's inclination towards the Sunnah. After mentioning his correspondance with Ibn Taymīyah (in a passage hopelessly miscopied by Ibn Qāḍī Shuhbah), Ibn Kathīr concludes:

> More than one of the *shaykh*'s [Ibn Taymīyah's?] companions recalled that al-Sakākīnī abjured his *madhhab* just before he died, and went over to Sunni doctrine. And I was informed that his son, this reprehensible Ḥasan, had wanted to kill his father when he proclaimed his Sunnism.

The father, Muḥammad Abū Bakr (d. 1321), was an ex-knifesmith, a pupil of the famous illuminationist mystic al-ʻAfīf al-Tilimsānī (d. 1291), an accomplished *ḥadīth* scholar, and a noted muʻtazilī theologian. He was reportedly even described by Ibn Taymīyah as "one of those where the Shiʻi acts like a Sunni and the Sunni acts like a Shiʻi."[87] Ibn Kathīr's deliberately abstruse report of a deathbed "conversion" is a literary device, serving to underscore the son Ḥasan's depravity. In a literature singularly obsessed with citing its sources, the unsupported claim that Ḥasan had wanted to kill his father (who was, of course, already on his deathbed) is likewise a mere *topos*. The Archangel Gabriel's confusion of Muḥammad and ʻAlī is a commonplace of *ghulūw* or "exaggerated" Shiʻi folk-theology, but is in fact spotlighted most frequently by Sunni heresiographers. Yet the really crucial aspect of Ḥasan al-Sakākīnī's heresy was his alleged cursing of the Prophet's Companions. Instituted as a communal religious rite during the Buyid protectorate of the Abbasid caliphate in Baghdad, cursing the Companions became the most deliberately offensive method of asserting Shiʻi confessional partisanship down into the twentieth century. The case of the Sakākīnīs shows that the concept of heresy in Damascus was very much a question of communal honour, not doctrinal divergence. The muʻtazilī and pantheist proclivities of the father earned praise and acclaim; a base insult against the venerated elders of Sunnism earned his son the death penalty.

Under the title of "strange and bizarre events" for the year 755/1354-55, Ibn Kathīr recounts:

> On Monday, 16 Jumādá I, a *rāfiḍī* from Ḥillah came into the Umayyad Mosque, cursing "the original oppressors of the Prophet's Family."[88] He kept repeating this and would not let up, and prayed

---

[87]al-Amīn, *Aʻyān al-Shīʻah*, 9:61.

[88]The formula recalls the moderate curse instituted by the Buyid Muʻizz al-Dawlah in 962. See ʻAbd al-Raḥmān ibn al-Jawzī (d. 1200), *al-Muntaẓam fī Tawārīkh al-Mulūk wa-al-Umam* (Beirut,

> neither with the other people nor over at the funeral then in progress. Though the people were praying, he continued to repeat this in a loud voice. When we had finished praying, the crowd took notice of him and brought him over to the Shāfiʿī chief *qāḍī* who was with the others at the funeral. They cross-examined him, ″Who oppressed the Prophet′s Family?″ He said ″Abū Bakr al-Ṣiddīq″ and then, openly so that everyone could hear, ″God damn Abū Bakr, ʿUmar, ʿUthmān, Muʿāwiyah and Yazīd!″ He repeated this twice, and the judge sent him off to jail. Then the Mālikī *qāḍī* had him brought before him and flogged him, while he screamed insults and curses and words only villains use. The name of this miscreant was ʿAlī ibn Abī al-Faḍl . . . ibn Kathīr, God rebuke and shame him. The following Thursday a session was convened in the Dār al-Saʿādah court with the four *qāḍī*s. He was brought before them and God ordained that the Mālikī deputy should sentence him to death. He was taken quickly and beheaded beneath the citadel. The crowd burned his body and paraded around with his head, shouting ″This is what happens to those who insult the Prophet′s Companions!″ I myself observed this idiot before the Mālikī *qāḍī*, and his opinions were something like those of the *ghulāt* Shiʿis. He had adopted some elements of apostasy and *zandaqah* from the followers of al-ʿAllāmah al-Ḥillī, God disgrace him and them.[89]

Again, it is cursing the Companions that leads to persecution. The offender′s link to Ḥillah is only tenuously established[90] and it is rather unlikely that he was instructed in *zandaqah* by the school of al-ʿAllāmah al-Ḥillī. His odious behaviour toward the community of the faithful is the basis of the pronouncement of heresy. This particular episode was conspicuous enough to be included, in abridged form, by the Maronite historian Isṭfān al-Duwayhī in his general history *Taʾrīkh al-Azminah*, three centuries later.[91]

Ibn Kathīr makes specific reference to this outstanding case, after describing the third and last execution of a Shiʿi heretic known to him:[92]

1995), 8:309-10; Heribert Busse, *Chalif und Gross könig* (Wiesbaden, 1969), 421.

[89]Ibn Kathīr, *al-Bidāyah wa-al-Nihāyah*, 14:262.

[90]Ibn Ḥajar al-ʿAsqalānī thought him to be from Aleppo. See *al-Durar al-Kāminah*, 3:168-69.

[91]Al-Duwayhī, *Taʾrīkh al-Azminah*, 319.

[92]Ibn Kathīr, *al-Bidāyah wa-al-Nihāyah*, 14:325. In the entry on Ḥasan al-Sakākīnī, Muḥsin al-Amīn states that ″he was accused of the same thing as Aḥmad ibn Yūsuf al-M*qṣātī, which points to a conspiracy against them and plot to kill them, in that age of religious oppression;″ al-Amīn, *Aʿyān al-Shīʿah*, 4:628; I have found no other reference to al-M*qṣātī.

> On the morning of Thursday, 17 Rabī‘ I 763 [January 1362], a man named Maḥmūd ibn Ibrāhīm al-Shīrāzī was found in the Umayyad Mosque, cursing the two shaykhs and declaring them anathema. The matter was submitted to the chief *qāḍī*, the Mālikī Jamāl al-Dīn al-Maslātī, who called on him to repent and had him flogged. With the first lash, he said ″There is no god but God; ‘Alī is the *walī* of God!″ and with the second lash, he cursed Abū Bakr and ‘Umar. The crowd assailed him, beating and striking him until he almost died. The *qāḍī* attempted to restrain them but was unable. The *rāfiḍī* began to curse and insult the Companions, saying ″They were in error.″ With that he was dragged before the governor and his statement attested. Thereupon the *qāḍī* ordered his blood to be shed, and he was taken to the outskirts of town and beheaded, and the crowd burned his body, God shame him. He had been a student in the *madrasah* of Abū ‘Umar before displaying symptoms of *rafḍ*. The Ḥanbalī [*qāḍī*] had jailed him for forty days, but that did not help. He continued to preach in the entire county, calling for the cursing of the Companions, until his day came and he expounded his *madhhab* in the Great Mosque. . . .

This passage is noteworthy for the initial leniency afforded to the victim, first by the Ḥanbalī, and more importantly by the Mālikī *qāḍī*. As we have seen, the Mālikī *qāḍī* usually took the lead role in the condemnation of heretics. The Mālikī school was known to be the most severe of all on heresy. This in fact accounted for the early popularity of the school, and the Abbasid caliphs on occasion relied on Mālikī *qāḍī*s to dispense with politically vexatious freethinkers, such as the famous Sufi mystic al-Ḥallāj, martyred in 922 AD.[93] Under Mālikī law, apostates were given the chance to repent, but *zindīq*s, or those declared to be such, had to be executed forthwith. This is clearly what the crowd was expecting in this instance, and they refused to accept the Mālikī′s judgement when he disappointed them. It is worthwhile to point out the initiative of the crowd, *al-‘āmmah*, in bringing heretics to justice. Maḥmūd al-Shīrāzī′s views were already known in certain branches of the religious establishment, namely at his *madrasah* and by the unnamed Ḥanbalī *qāḍī*. Yet, in contrast to the persecution of heretics in Latin Europe at the same time, it is here the ″clergy″ that had to be pressed into the service of the wrathful crowd.

[93]Nicole Cottart, ″Mālikiyya,″ *Encyclopaedia of Islam*, 2nd. ed., 6:278-83.

In another case reported by Ibn Qāḍī Shuhbah, the Mālikī and Ḥanbalī *qāḍī*s tried a case brought in all the way from Karak. In 1379-80, a sitting was held for Ibn Ḥurayṣ,

> a leading figure of the town and a known *rāfiḍī*. It was attended by those who testified that he cursed and disparaged the Companions, as is prescribed by *zandaqah*. He was imprisoned and the Mālikī was undecided in the matter. Then the Ḥanbalī *qāḍī* sentenced him to death. He was beheaded beneath the citadel, in the presence of the governor and the *qāḍī*s, after he had spoken the profession of faith and stated his approval of the two Shaykhs.[94]

One may conclude that Shiʿism was not subject to a formalized inquisitorial process in fourteenth-century Damascus. The persecution of individual *"rāfiḍī*s*"* followed from spontaneous and essentially populist initiatives. Once accused (whether rightly or wrongly) of having insulted the feelings of the catholic majority, the member of a minority, inherently dissident faith was left defenceless against his detractors. A few spectacular cases of persecution made it into the local chronicles; the ordinary lives of quietist Shiʿis such as the *ashrāf* did not.

One final (though also not unique) example of persecution is striking for some of its similarities to Muḥammad ibn Makkī's case. In 1355, Ibn Kathīr informs us, the Mālikī *qāḍī* al-Maslātī ordered the execution of a man from a town near Baʿlabakk.

> It had been established at a sitting in Baʿlabakk that he acknowledged, as Aḥmad ibn Nūr al-Dīn . . . from the village al-Labwah testified, the foul words with which he had injured the Prophet, and cursed and slandered him in terms that cannot be repeated here. So he was killed, God damn him, on this day after the noontime *adhān* in the horse market, and the people burned his body . . .[95]

The significant difference to Ibn Makkī's case is that the man, Dāwūd ibn Salīm, was a Christian and not a schismatic Muslim.

IBN MAKKĪ'S TRIAL AND EXECUTION

In *The Formation of a Persecuting Society*, R. I. Moore determines that

---

[94]Ibn Qāḍī Shuhbah, *Ta'rīkh*, 3:10.

[95]Ibn Kathīr, *al-Bidāyah wa-al-Nihāyah*, 14:265.

> Heresy . . . can only arise in the context of the assertion of authority, which the heretic resists, and is therefore by definition a political matter. Heterodox belief, however, is not. Variety of religious opinion exists at many times and places, and becomes heresy when authority declares it intolerable.[96]

In the preceding section, we have seen that the Mamluk Sultanate, the Damascene *qāḍī*s, or simply an agitated crowd, *al-ʿāmmah*, were liable to declare certain Shiʿis to be intolerable heretics (*rāfiḍī*s). Yet none of them truly followed a consistent policy with regards to Shiʿism. The Sultanate´s campaigns and edicts were directed against certain Shiʿi communities of the province of Tripoli only, not against the Shiʿi faith *per se*. The rabble of cities such as Damascus or Baʿlabakk could work itself into a persecuting frenzy when it felt its communal honour had been impinged upon, but most of the time it was perfectly capable of coexisting with the heterodox minorities. The religious judges frequently became a party to the persecutions and sentenced *rāfiḍī*s to die, but at other times even Ḥanbalī and Mālikī *qāḍī*s sought to reform heretics rather than to execute them. All three of these social entities were involved in one way or another with the conviction of Muḥammad ibn Makkī. Even if we cannot discover the exact, underlying reasons for his execution as a heretic, a close look at the circumstances of his trial may help demonstrate the ambiguous position of Twelver Shiʿis in Syrian Mamluk society.

The only contemporary, possibly eye-witness report of the trial is that of Abū ʿAbd Allāh al-Miqdād al-Suyūrī, Ibn Makkī´s former pupil. Though no longer extant, versions of it were reproduced, independently from one another, in the Persian Majlisī´s vast compendium of traditions *Biḥār al-Anwār*, in the Lebanese biographical dictionary *Amal al-Āmil*, both from the seventeenth century, and in the broader *rijāl* work, *Lu´lu´at al-Baḥrayn* from the eighteenth. Of these, the last comprises the most extensive version.[97]

Al-Suyūrī´s narrative suggests that Ibn Makkī was first denounced in southern Lebanon by a certain Taqī al-Dīn al-Jabalī, a native of al-Khiyyām (some 10 km. north of the Golan). This seems not to have had any immediate consequence, for the denunciations were perpetuated by another man, Yūsuf ibn Yaḥyá,[98] after the first had died. Both of them were former Imāmī Shiʿis who had abjured.

---

[96] R. I. Moore, *The Formation of a Persecuting Society* (Oxford, 1987), 68-69.

[97] al-ʿAmilī, *Amal al-Āmil*, 1:182-83; Majlisī, *Biḥār al-Anwār*, 107:184-86; al-Baḥrānī, *Lu'lu'at al-Baḥrayn*, 145-48.

[98] The Āl Yaḥyá was a prominent family of al-Khiyyām; see al-Amīn, *Khiṭaṭ*, 231.

Ibn Yaḥyá composed a procès-verbal (*maḥḍar*) detailing Ibn Makkī's "vile doctrines and abominable beliefs." We are not told of what these consisted. In any event, the precise nature of the heresy was not as important as the fact that Ibn Yaḥyá found numerous witnesses to corroborate it. Seventy inhabitants of the mountain, all of them former Shi'is who had abjured, signed the procès-verbal, as did "over a thousand of the outwardly Sunni (*mutasanninūn*) inhabitants of the coastlands." Al-Suyūrī offers no explanation as to why a significant number of Shi'is from the coast should have converted, or affected to convert, to Sunnism. However, a brief and otherwise unrelated passage in Ṣāliḥ ibn Yaḥyá's *History of Beirut* shows that it was the consequence of Sultan al-Nāṣir's 1363 edict against the *rāfiḍī*s of Beirut and Sidon. After Baydamur became governor of Damascus for the second time (July-August 1362), the Druze chronicler relates,

> The Shi'is of Beirut were stirred up. They manifested their adherence to Sunnism, as they had received a sultanic edict, but inwardly they subscribed to the doctrine of the Shi'ah. A campaign of inquisition (*ḥarakah riddīyah)* followed from this in Beirut, which Baydamur exploited . . . to expropriate the fief of [an old political enemy].[99]

Though we are still not informed what occasioned Cairo's promulgation of the edict, we must conclude that religious persecution in the coastal districts, where Shi'is constituted a significant proportion of the population, bore the imprint of official imperial policy. Yet there is little connection between the ideological intent of the edict and the social reality of its consequences. Among the Shi'i community, the effect of the edict was to create a witchhunt in which, eventually, Ibn Makkī was betrayed by his own co-religionists. The Mamluk governor of Damascus, in whose jursidiction the *wilāyah*s of Beirut and Sidon fell, took an interest in the quasi-inquisition issuing in Beirut only in so far as it allowed him to assail his personal enemies. There is nothing in the sources to suggest that Baydamur or the higher judgeship of the Damascus province became involved in local battles fought through the medium of religious correctness in the coast districts.

A further detail in Ibn Ḥajar al-'Asqalānī's *Inbā' al-Ghumr* ties Ibn Makkī to the persecution of Shi'is on the coast: around the time of his execution, "his friend [*rafīq*] 'Arifah, who subscribed to the same [Nusayrī] beliefs as he, was beheaded in Tripoli."[100] Ibn Makkī's detractors, al-Suyūrī's account then continues, proved

---

[99]Ṣāliḥ ibn Yaḥyá, *Ta'rīkh Bayrūt*, 195.

[100]Ibn Ḥajar al-'Asqalānī, *Inbā' al-Ghumr bi-Anbā' al-'Umr* (Damascus, 1979), 1:228.

his guilt ″before the *qāḍī* of Beirut (it is also said the *qāḍī* of Sidon), and went with the procès-verbaux to the [Shāfiʻī] judge in Damascus.″

What was Ibn Makkī′s relationship with the authorities in the provincial capital? The Shāfiʻī judge had Ibn Makkī imprisoned in the citadel of Damascus for one year in order for him to repent. Sometime in the course of that year, he purportedly wrote a versified letter to the aforesaid governor of Damascus, Sayf al-Dīn Baydamur al-Khwārazmī (d. 1387), disclaiming all the charges made against him. The only source for this letter is the Shiʻi biographer al-Khwānsārī, who reports having seen it in a copy made unquestionably by Zayn al-Dīn ibn ʻAlī, the later medieval authority on Ibn Makkī.[101] In it, Ibn Makkī protests his love for ″the Prophet and all who loved him, all the Companions without exception,″ and goes on to name not only Abū Bakr and ʻUmar but also Abū ʻUbaydah, Ṭalḥah, Zubayr, and ʻUthmān, the irreconcilable enemies of the early Shiʻah.

The important part of the letter, however, is where he refers to false accusations made against him in the past. He implores Baydamur to ″be like Manjak″ (Sayf al-Dīn Manjak al-Yūsufī; d. 1375), the great Mamluk amir who served as governor of Damascus twice, in rotation with Baydamur and others, from May 1357 to November 1357 and December 1367 to April 1374.[102]

> Reporters of evil came to him, indeed they lied
> Whereupon he smote them for what they implied.
> The amir, the chamberlain,[103] knows this quite well,
> So ask him about it, that he may tell.
> By God, I received no punishment, nay
> And suffered not as then suffer did they.

Furthermore, Ibn Makkī reminds the governor, he had just gone on pilgrimage to Mecca in the retinue of his own son, Muḥammad Shāh ibn Baydamur. According to Ibn Qāḍī Shuhbah, Muḥammad Shāh (d. 1391) did in fact perform the *ḥajj* in 1382.[104] Baydamur must have remained unmoved by Ibn Makkī′s purported connections with members of the Mamluk military aristocracy, but there is no firm indication that he actively pursued the case against him either.

The picture that emerges of Ibn Makkī′s trial is very much one of collusion among the *sharīʻah*-jurists. Al-Suyūrī claims that the Shāfiʻī judge ordered the

[103]″Amīr Ḥājib Najl al-ʻAskarī″; the amir Ḥasan ibn al-ʻImād (d. Nov./Dec. 1384), known popularly as Ibn al-ʻAskarī, was a chamberlain (*ḥājib*) in Damascus; Ibn Qāḍī Shuhbah, *Taʼrīkh*, 3:142.

[104]Ibn Qāḍī Shuhbah, *Taʼrīkh*, 3:88, 409-10.

Mālikī, ″Judge him according to your *madhhab* or I will fire you!″ This may be an exaggeration for the sake of literary effect, but the co-optation of the Mālikī judge is indeed substantiated by Ibn Qāḍī Shuhbah′s account. Let us consider it in its entirety before returning to the Shi‘i point of view. On 10 Jumādá I 786 (30 June 1384),

> a sitting was held concerning Shams Muḥammad ibn Makkī, an Iraqi in origin [sic] and resident in the town of Jizzīn, after he had spent some time in prison. His guilt was established by a procès-verbal [*maḥḍar*] from the *qāḍī* of Beirut, which indicated that he was a *rāfiḍī* and had called ‘Ā’ishah, her father (Abū Bakr), and ‘Umar terrible things, tantamount to apostasy according to a number of Shāfi‘īs, Ḥanafīs and others. . . . So the *qāḍī*s and *‘ulamā’* assembled in the Dār al-Sa‘ādah [court of Damascus]. He was called before the Mālikī *qāḍī*, and he denied that he had said anything of the sort. The Mālikī hesitated for a long moment, and so it came that they cajoled Ibn Makkī into confessing, thinking that this would help him, and he spoke the Islamic profession of faith. At that point, the Mālikī was asked to rule him an infidel and order his blood to be shed. He responded, ″For that, you all must rule by formal legal opinion, on the basis of what you have just heard, that he is a *zindīq*.″ The Mālikīs and some of the Shāfi‘īs [present] ruled thus. When Ibn Makkī realized the gravity of the situation he retracted [*raja‘a*] and said something to which no one listened or paid attention.
>
> Then the Mālikī *qāḍī*, after beseeching God for guidance, ruled him to be an infidel and ordered his blood to be shed, even if he repented. He made his decision contingent on two things: one, that no one before him had judged Ibn Makkī to be a good Muslim; and two, that the other judges uphold his judgement and that the Ḥanbalī agree as well. The Ḥanbalī also ruled him to be a *zindīq* and ordered his blood to be shed, and the two [other] *qāḍī*s upheld the judgement. He was taken out below the citadel and beheaded, after he had prayed, made the profession of faith and stated his approval of the two Shaykhs and the Companions. Ibn Ḥijjī reported, ″He showed neither anxiety nor fear, God help us. . . . He was known for his *rafḍ*, but he was learned in jurisprudence [*uṣūl*], Quran-recital and more.″[105]

---

[105]Ibn Qāḍī Shuhbah, *Ta'rīkh*, 3:134-35. Aḥmad ibn Ḥijjī (d. 1413) was a historian whose unfinished

A few observations can be made before we turn to al-Suyūrī's account. The trial was presided over by the three *qāḍī*s of the Mālikī, Shāfi'ī and Ḥanafī schools. A Ḥanbalī was also present, but apparently not in the rank of full *qāḍī*. This may reflect the fact that the Ḥanbalī school as a whole was negatively seen and somewhat ostracised in Mamluk Damascus.[106] The Mālikī was called upon to impose the death sentence, as his was the only *madhhab* that does not admit the penitence of a proven heretic. He, however, sought to protect himself by requiring that all the other jurists present also commit themselves, by formal legal opinion, to pronouncing Ibn Makkī to be a *zindīq*: *hattá taftaw bi-zandaqatihi*. This would provide the legal basis, under Mālikī law, for executing the accused. The Mālikīs, the Ḥanbalī representative and some of the Shāfi'īs obliged, which suggests that the Ḥanafīs and some other Shāfi'īs were against the sentence. No one, on the other hand, was prepared to certify Ibn Makkī as a good Muslim, another condition which the Mālikī *qāḍī* had set. The trial appears as much an arena of professional tensions and rivalries among the jurists as the object of a common cause against heresy.

Al-Suyūrī's account essentially corroborates Ibn Qāḍī Shuhbah's. Ibn Makkī, he writes, was killed on the basis of a *fatwá* from the Mālikī and Shāfi'ī *qāḍī*s, Burhān al-Dīn[107] and 'Abbād ibn Jamā'ah,[108] "and a large group of people ganged up on him in this matter." Ibn Makkī vigourously denied espousing the doctrines laid out in the procès-verbal from Beirut, a move al-Suyūrī interprets as "resorting to the required *taqīyah*." But what was this heresy that Ibn Makkī should have dissimulated? Al-Suyūrī never actually discloses the exact contents of the procès-verbal, and assumes like many later writers that Ibn Makkī was prosecuted simply for being a Shi'i.

In fact, the Sunni sources are quite clear on the point that he was tried for *rafḍ*, however equivocal its definition. Ibn Ḥajar al-'Asqalānī reports the charges as "dissoluteness, adherence to Nuṣayrī doctrine, declaring wine to be absolutely lawful, and other such abominations"[109] while Ibn Qāḍī Shuhbah cites his alleged cursing of 'Ā'ishah, Abū Bakr, and 'Umar. Indeed, Ibn Makkī defended himself against nothing more in his poem to the governor Baydamur. To state that denying these charges constituted *taqīyah* would imply, of course, that they were true. It is

unlikely that they were, given Ibn Makkī's stature as a Muslim intellectual, moreover one who had made a career of studying Sunni law. [110] More importantly, it cannot be any Shi'i writer's intention to state that they were true. The characterization of Ibn Makkī's defence as *taqīyah* is a misinterpretation by al-Suyūrī, if not a later transmitter, who was unfamiliar with the accusations listed by the Sunnis and wrongly thought Shi'ism and rafidism to be perfectly synonymous in their vocabulary of persecution.

Nevertheless, al-Suyūrī's account is valuable in that it shows more clearly how the law was manipulated in order to produce a conviction. The denial was not accepted, with the judges claiming, "This has been legally established; a *qāḍī*'s decision cannot be repealed." At this point Ibn Makkī made use of his legal training. The defendant, he argued, has the right to be heard; if the evidence he adduces contradicts the judgement, it must be quashed. "And I confute the testimonies of those who testified to the offences. I have proofs against each one of them." What evidence could Ibn Makkī have tendered? He presumably sought a character reference from Ibn al-Jazarī, the Quran-reciter, who did receive a court summons but was away in Cairo at the time. As mentioned, his colleague Ibn al-Labbān (d. 1374) had been prompted to state that Ibn Makkī never said "anything at variance with Sunnism," most likely when the accusations first surfaced during Manjak's governorship. It was this failed attempt to mount a defence which, in the terse summary of the Sunni cleric Ibn Qāḍī Shuhbah, "no one listened or paid attention to."

Only then did Ibn Makkī, "realiz[ing] the gravity of the situation," change strategy and place his hopes in the clemency afforded to penitent heretics under Shāfi'ī law. He reminded the Shāfi'ī judge, as cited above, that he is of his *madhhab* and wants to be tried as such.

> The judge responded, "In my *madhhab*, you have to be imprisoned for a whole year, then asked to repent. Well, you have been imprisoned. Now ask God for forgiveness, so that I may rule that you are a good Muslim."
> "I have not done anything for which I should ask forgiveness," he said, fearing that if he did repent, it would confirm his having sinned.

Here the versions of the account begin to diverge slightly. Majlisī claims that the Shāfi'ī judge "seized on his mistake" (*istaghlaṭahu*) and said "You repented;

---

[110]On Ibn Makkī's condemnation of wine-drinking, see *al-Lum'ah*, 169; Zayn al-Dīn ibn 'Alī, *Rawḍāt al-Bahīyah*, 9:197-212.

that proves you sinned.″ But this sequence is inconsistent with Ibn Makkī′s denial, and can be explained as the result of a copyist′s error. For the more thorough Baḥrānī reports that the judge

> found him to be obstinate (*istaghlaẓahu*) and was confirmed in this. Ibn Makkī refused to repent. An hour passed. Then he said, ″You repented; that proves you are guilty.″

What happened during this hour? Muḥsin al-Amīn hypothesizes that the Shāfiʻī judge encouraged him to confess in secret so that he could absolve him, but then betrayed him and disclosed his penitence — and therefore his guilt — to the entire assembly.[111] There is no evidence for this but the end result stands: the fact of his heresy was established, albeit dubiously, in Shāfiʻī law (which does not stipulate execution), so that his sentence could be pronounced under Mālikī law (in which confession is ordinarily inadmissible).

Ibn Makkī was thus handed over to the Mālikī *qāḍī* for sentencing. Al-Ḥurr al-ʻĀmilī writes summarily that Mālikī radicalism prevailed over Shāfiʻī leniency owing to the numerous fanatics in the assembly. In fact, Baḥrānī′s and Majlisī′s version suggests that the Shāfiʻī judge, not the Mālikī, was the driving force behind Ibn Makkī′s conviction.

> He told the Mālikī, ″He has repented, so the decision is no longer mine. . . .″ ″Judgement reverts to the Mālikī!″ The Mālikī got up, performed the ablutions and prayed twice (*rakʻatayn*). Then he said, ″I have sentenced you to die.″

Ibn Makkī, the Shiʻi sources agree, was taken to the open square beneath the Damascus citadel and beheaded, his body crucified and later burned.

Conclusion

A short tale from the Shiʻi *ṭabaqāt* proffers an explanation of the Shāfiʻī *qāḍī*′s hatred toward Ibn Makkī. According to Nūr Allāh Shushtarī (d. 1610-11), the two used to participate in the same study circle in their youth. Ibn Jamāʻah ″broke out in a sweat of jealousy and hatred″ when it became clear that Ibn Makkī ″had surpassed his peers and excelled them in merit and perfection,″ a rage which intensified as scholars of the ″five *madhhabs*″ began to seek out his Shiʻi rival to ″learn and benefit from.″ Ibn Jamāʻah arranged for Ibn Makkī to be executed by

---

[111]al-Amīn, *Aʻyān al-Shīʻah*, 10:61.

the governor for *rafḍ*, but was overcome with emotion at the trial as he recalled their erstwhile companionship. Playing on his name, Ibn Makkī denounced him as a ″bastard″ before the entire assembly.[112] In Khwānsārī′s version, the two were one day arguing some scholarly matter when the corpulent and unimaginative Ibn Jamāʻah mocked Ibn Makkī for his slight physique.

> ″I hear a sound from behind that inkwell; what could that be?″ Ibn Makkī responded without missing a beat, ″Yes, a son of only one father (*ibn al-wāḥid*, as opposed to Ibn Jamāʻah, meaning literally ′son of a group′) is no bigger than that!″ Ibn Jamāʻah got extremely angry at this and was so filled with spite and fury that he did to Ibn Makkī what he did.[113]

This sort of dramatization is a *topos* of Shiʻi hagiography.[114] Yet it serves the authors to articulate an important truth about such trials as Ibn Makkī′s: that justice was more a function of personal loyalties and jealousies than of an unyielding codex. Indeed, the trials that we have reviewed undermine the notion of any formal institution charged with inquiring into crimes of heresy. Most glaringly absent are the Mālikī *qāḍī*s who, despite (or because of?) the perceived immutability of their *madhhab*′s stance on heresy, repeatedly shirked the role of grand inquisitor attributed to them by Ashtor. In Ibn Makkī′s case at least, the true advocate of persecution for whatever reasons was the Shāfiʻī judge, the senior religious authority in Damascus at the time, despite the fact that his legal rite was the one most proximate to Shiʻism.

Furthermore, in all the above cases the heretics first had to be called to the attention of the religious authorities. The unspecified crowd was involved from beginning to end, denouncing neighbours for having insulted the venerable Companions, bringing victims into Damascus from Karak, Beirut, and Baʻlabakk, and finally desecrating the bodies after the executions. Al-Suyūrī mentions explicitly that the most barbarous participant in the killing of Ibn Makkī was a merchant and not the religious leaders. When left to their own discretion, *qāḍī*s could ignore or try to reform an individual′s religious idiosycrasies; when presented with a popular petition, they did better to score points by indulging the crowd in its fanaticism. This is a far cry from the inquisitions of Europe, where the bishops were committed

[112]Shushtarī, *Majālis al-Mu'minīn*, 249.

[113]al-Khwānsārī, *Rawḍāt al-Jannāt*, 7:14.

[114]For another usage of the inkwell topos in a dispute between a Sunni and a Shiʻi scholar, see Josef van Ess, ″Anekdoten um ′Adudduddin al-Igi″ in *Die Islamische Welt Zwischen Mittelalter und Neuzeit: Festschrift für Hans Robert Roemer zum 65. Geburtstag*, ed. Ulrich Haarmann and Peter Bachman (Beirut, 1979), 126-31.

by the papacy, beginning in the twelfth century, to search out heretics and uproot their secret networks.[115]

The *'ulamā'* of the Levant rarely made it their business to inquire into other people's religious thoughts. The leading Sunni dignitaries were ready to believe that Ibn Makkī cursed the Companions and had declared wine to be lawful, yet none showed the slightest interest in any of the treatises on Shi'i law he had written. Modern Shi'i historians have tried to explain Ibn Makkī's execution by his political ties to the rising Shi'i state in Khorasan. However, the Mamluk authorities of Damascus declined to portray Ibn Makkī as the archtypical Shi'i collaborator. The Mamluk governor was singularly uninterested in anti-Shi'i campaigns even within his own province; it is not fortuitous that Ibn Makkī turned to him in an appeal to save his life.

This essay has attempted to place Ibn Makkī at the juncture of two autonomous historiographical traditions: one that remembers him as al-Shahīd al-Awwal, the other as a *rāfiḍī.* In the history of Shi'ism, Ibn Makkī's work remains a keystone in the development of Ja'farī law. The commentary of his *al-Lum'ah al-Dimashqīyah* is taught today in religious colleges from Sayyidah Zaynab in Syria to Mashhad in Iran; the growing importance of Shi'i jurisprudence has seen the recent edition of more of his works.[116] Moreover, as the "First Martyr" of medieval Shi'ism, Ibn Makkī has become an essential part of a confessional identity predicated on a seemingly timeless antagonism with the Sunni majority in Islam. Yet the formal Shi'i *rijāl* dictionaries, which articulate this identity, begin to appear only after the foundation of the Safavid empire.

In the context of Mamluk history, the story of Ibn Makkī's life and death serves to illustrate the ambivalent position of the Shi'is in medieval Syrian society. On the one hand, Shi'ism evoked—unlike Ibn Taymīyah's anthropomorphism or the Ḥurūfī sect of the later fourteenth century—a religio-political ideology essentially opposed to the Sunni orthodoxy espoused by the Mamluk Sultanate. Cairo did set the tone in creating an atmosphere hostile to Shi'ism throughout the empire. The fact that the first trials in Damascus, the rescript against the Shi'is of Tripoli, and acts of violence against the Zaydī Sharifs of Mecca all coincided between approximately 1354 and 1363 cannot be dismissed.

However, one should not historicize the persecution of Shi'is too much. Earlier writers explained religious oppression as a function of the Mamluk regime's political and cultural consolidation; recent writers have tended to emphasize the strains placed on society, particularly after the "golden age" of Sultan al-Nāṣir Muḥammad

---

[115]Moore, *Persecuting Society*, 26.

[116]Ibn Makkī, *Kitāb al-Mazār* (Qom, 1990); ibid., *al-Durūs al-Shar'īyah fī Fiqh al-Imāmīyah*, 3 vols. (Qom, 1992).

(r. 1310-41), by foreign invasion, rapid economic growth and the Black Death.[117] Yet if there were any immutable constants throughout Mamluk history, political upheaval was surely one of them. Even a historiographically dramatic event such as the replacement of the Qipchak with the Circassian regime, still in progress when Ibn Makkī was executed in 1384, could have surprisingly little local effect. In Damascus, it did not even occasion the replacement of the governor Baydamur. Moreover, for the nearly three centuries of their reign, the Mamluks faced neither foreign enemies nor domestic rebellions that were militantly Shiʻi. Unlike so many other Islamic dynasties, the Mamluk Sultanate never resorted to an ideology of Sunni vs. Shiʻi conflict in order to express its own religious and political legitimacy.

The unassuming presence of Shiʻism in all regions of Syrian Mamluk society is perhaps another constant of the period. Shiʻism, whether as a personal expression of religious devotion to the Prophet's Family, or as the creed of large communities in northern and western Syria that were remnants of the "Shiʻi centuries" (tenth-eleventh centuries), was not considered as something alien, the historiography of the piety-minded *ʻulamāʼ* notwithstanding. Only in the sixteenth century did Sunnism and Shiʻism become, both in political and personal terms, definitively incompatible; and the *ashrāf* had to choose either loyalty to the state as Sunnis or ostracism as Shiʻis.

Where did Mamluk society fix the boundary between *tashayyuʻ* and *rafḍ*, between heterodoxy and intolerable heresy? Chamberlain has argued convincingly for regarding *ṭabaqāt* as the Mamluk-era equivalent of archives; rosters of prestige and authority that constituted the "useful past" for the learned elite of medieval Syria and Egypt. By "decoding" them further, we may also gain new insights into Syrian society's ambivalent position toward Shiʻism in its midst: not just why some individuals and communities were persecuted as *rāfiḍī*s while others were not, but also what it meant when some *ashrāf* developed a bizarre interest in muʻtazilism[118] and why ordinary scholars sometimes included Shiʻi studies in their curriculum.[119] Nowhere is the ambivalence toward Shiʻism better illustrated than in Ibn Kathīr's strangely disgusted, strangely reverent necrological notice for the great Iraqi Shiʻi scholar al-ʻAllāmah al-Ḥillī.[120] The on-going editing of such local histories as Ibn Qāḍī Shuhbah's *Taʼrīkh* and al-Yūnīnī's *Dhayl Mirʼāt al-Zamān*

will provide further correctives to the picture of an undifferentiated anti-Shiʿism in medieval Damascus. In the Mamluk centuries, *tashayyuʿ* still represented a moral and historical alter-ego to dominant Sunni society, not an ideological threat. Muḥammad ibn Makkī is integral to both Syrian Mamluk and Shiʿi history.

Mamluk Monetary History: A Review Essay

> Surviving specimens of Islamic coinage were once treated merely as a small part of medieval economic or monetary history. Today they constitute an extremely important body of tangible, unintentional relics or traces, or source materials. Once these Islamic numismatic relics become heuristically re-monetized they acquire the status of key sources of information about the economic problems of Near Eastern society in the Middle Ages.[1]

Mamluk money is important. Knowledge of what it was and awareness of how it circulated are crucial to the broader economic history of the sultanate, the medieval Mediterranean world, and the contemporary Indian Ocean basin. And as is well-known, the surviving Mamluk coins—the tangible remains of the Mamluk monetary system—are also important sources for other avenues of historical inquiry. These coins reveal information about epigraphy, heraldry, dynastic claims of legitimation, and political chronology, to list but a few.[2] These other uses of Mamluk coins are not addressed in this essay, however, as I concentrate on the field of monetary history proper: that is to say, the study of the surviving coins and other sources that reveal how money circulated and was valued in the Mamluk domains. This decision needs little defense, since interesting coin legends aside, the primary purposes of coins *qua* money are economic: as a store of value and as a medium of exchange. In what follows, I survey the state of the field of Mamluk monetary history, beginning with a discussion of the surviving numismatic evidence and the issues affecting its use, moving on to comments about the relevant literary and documentary sources concerning Mamluk money, and concluding with an overview of modern scholarship. Throughout the essay, I identify issues facing the field and suggest avenues of continuing inquiry.

MAMLUK MONEY: THE NUMISMATIC EVIDENCE

MAMLUK COINS

The most visible and important source for Mamluk monetary history is the coinage itself. Mamluk coins survive in the thousands. They span the entire 267 years of the regime. The vast majority of these coins were struck in one of six major mints.[3] The Egyptian mint cities were Cairo and Alexandria. Mints in the Syrian provinces were located in Damascus, Hamah, Aleppo, and Tripoli. (A few coins survive from Malatyah and Ladhiqiyah, but these seem to have been occasional issues only.[4]) These Mamluk mints produced coins in gold, silver, and copper, although not every mint produced coins of each metal. Nor is a specimen necessarily known from each year for every mint. Yet as is developed below, the presence of gaps in current collections of Mamluk coins is seldom sufficient evidence upon which to base conclusions about the Mamluk monetary system.[5] Nor should the presence or absence of coins of a particular metal be used to argue about the existence of ″metallic standards″ in Mamluk money. The Mamluk monetary system was trimetallic in the sense that coins of gold, silver and copper circulated together, but their values in relation to one another were interdependent and in frequent flux.[6]

Before embarking on a brief survey of this coinage, two issues must be mentioned. First, it should be noted that coins of foreign origin often circulated within Mamluk domains. Thus it is not uncommon to encounter in the archeological evidence or read in the written sources about Armenian silver trams (some with Mamluk overstrikes), gold and silver coins from the Italian city-states, or coins

---

[3]No Mamluk-era mint manual has been found. Our knowledge of Mamluk mint practices is therefore derived from the Ayyubid period. For a summary of what is known, see Helen W. Brown, ″The Medieval Mint of Cairo: Some Aspects of Mint Organisation and Administration,″ in *Later Medieval Mints: Organization, Administration, and Technique*, ed. N.J. Mayhew and P. Spufford, B.A.R International Series 389 (1988), 30-39.

[4] These specimens are preserved in the collection of the Forschungstelle für islamische Numismatik, Tübingen. It is possible, of course, that other occasional mints will surface. For example, one specimen of a *dirham* minted in al-Marqab in the reign of al-Manṣūr Qalāwūn was recently discovered, and will be published soon by Elisabeth Puin. The phenomenon of coins minted by subject states yet bearing the names of Mamluk rulers is not addressed in this article. See M.R. Broome, ″An Enigmatic ′Mamluk′ Sequin,″ *Spink′s Numismatic Circular* (July-August, 1979): 355.

[5]This is especially so since new coin types appear not infrequently. In a telephone conversation with Stephen Album, specialist in Islamic coins, in September 1997, for example, he revealed to me the existence of the first known Cairene *dirham* for the Sultan al-Ashraf Ṭūmānbāy (922/1516-17). The coin was found in a miscellaneous lot of 20-30 coins he had recently acquired, and is now in the Tübingen collection.

[6]In this approach to Mamluk money I follow the lead of Hennequin, as discussed below.

from the neighboring Muslim dynasties.[7] The existence of such a wide variety of coins in circulation with Mamluk-produced coinage no doubt ensured that Mamluk-era money-changers (*ṣayrafī*, pl. *ṣayārifah*) were kept busy determining the relative values of all these different coins.

The second issue is that of terminology. In the medieval Islamic world the basic vocabulary of money was remarkably similar from place to place and over the passage of time. While local usage of names for specific coins could vary tremendously, the following terms remained essentially constant: a gold coin was usually called a *dīnār* (pl. *danānīr*); a silver coin a *dirham* (pl. *darāhim*); and a base metal coin referred to as a *fals* (pl. *fulūs*). What must be stressed here, however, is that the many coins to which these terms were applied varied tremendously. The failure to address this fact has been the source of many modern misinterpretations of Islamic coinage.[8] In the case of Mamluk coinage, *dīnār*, *dirham*, and *fals* are the usual terms encountered for gold, silver and copper coins, but there are significant differences of appearance, weight, and purity found among the coins bearing these labels. (The variations in purity are especially important. This is an area in which further research is always welcome.[9]) Adding to the possibility of confusion (for the modern observer at least) is the fact that other terms for these coins are frequently found in the sources. Thus *dirham*s were occasionally labeled *nuqrah* or *wariq*, terms whose meanings are not constant, and which have been the subject of modern disagreement.[10] Furthermore, it is

[7]On the Armenian trams in Mamluk contexts, see Paul Bedoukian, ″Some Armenian Coins Overstruck in Arabic,″ in *Armeniaca: Melanges d′Etudes Armeniennes* (Venice, 1969), 138-47. On the presence of Italian coins, see Jere Bacharach, ″The Dinar Versus the Ducat,″ *International Journal of Middle East Studies* 4 (1973): 77-96; idem, ″Foreign Coins, Forgers, and Forgeries in Fifteenth Century Egypt,″ in *Acte du 8[eme] Congrés International de Numismatique* (Paris, 1976), 500-511.

[8]See Ehrenkreutz′s succinct discussion of this in his ″Monetary Aspects of Medieval Near Eastern Economic History,″ in *Studies in the Economic History of the Middle East*, ed. M.A. Cook (London, 1970), 40-41. A similar caveat applies to metrology. Amounts such as the *mithqāl* and *dirham* [as weight unit] were not always and everywhere 4.25 and 2.97 grams as is often assumed.

[9]The following studies have provided a baseline for future research: Jere L. Bacharach and Adon A. Gordus, ″Studies on the Fineness of Silver Coins,″ *Journal of the Economic and Social History of the Orient* 11 (1968): 298-317; Bacharach, ″Monetary Movements in Medieval Egypt, 1171-1517,″ in *Precious Metals in the Later Medieval and Early Modern Worlds*, ed. J.F. Richards (Durham, NC, 1983), 159-81, esp. table 1.

[10]Compare the discussions of these terms in William Popper, *Egypt and Syria Under the Circassian Sultans 1382-1468 AD: Systematic Notes to Ibn Taghri Birdi′s Chronicle of Egypt*, vol. 16 of The University of California Publications in Semitic Philology (1957), 41-79; Christopher Toll, ″Minting Techniques According to Arabic Literary Sources,″ *Orientalia Suecana* 19-20 (1970-71): 125-39; and Andrew S. Ehrenkreutz, ″Extracts from the Technical Manual on the Ayyubid Mint in Cairo,″ *Bulletin of the School of Oriental and African Studies* 15 (1953): 423-47.

common to encounter the generic terms for gold (*dhahab*) and silver (*fiḍḍah*) in contexts where coined money is clearly meant. Finally, it was quite usual in the Mamluk era for coins to be referred to by an adjective based on the issuing ruler's *laqab*; thus a *dīnār* bearing the name of al-Ashraf Barsbāy (825-41/1422-37) was called an *Ashrafī*, to cite perhaps the best known example of this phenomenon. This practice has been adopted by modern numismatists, albeit with occasional imprecision.[11] Since gold and silver coins were seldom withdrawn from circulation in the Mamluk sultanate, it is not unusual to encounter mentions of several such *laqab*-labeled coins in the chronicles. This multiplicity of terms and the ambiguity they engender are two of the major difficulties encountered in the field of Mamluk monetary history.

Coins properly described as Mamluk were first struck in the reign of al-Ẓāhir Baybars (658-76/1260-77). Prior to his reign, the coinage minted in Egypt and Syria was essentially a continuation of Ayyubid monetary practice, with only the names on the coins changed.[12] Only the briefest overview of developments in Mamluk coinage is appropriate here. I will discuss first developments in Mamluk *dīnār*s and *dirham*s, and end with a discussion of the *fulūs*. The characteristics of Mamluk *dīnār*s suggest a threefold periodization. The first period, lasting from Baybars's reign through the second reign of al-Ẓāhir Barqūq (792-801/1390-99), is characterized by gold coins of high purity, but of such highly irregular weights that they clearly were weighed in any transaction.[13] In the third period, stretching from the reign of Barsbay until the end of the sultanate, the *dīnār*s are remarkably consistent in terms of appearance, size and weight, as they all resemble the *Ashrafī dīnār* mentioned above. Their purity began to drop in the final decades, however. Between these two periods is one of transition, spanning the first three decades of the ninth/fifteenth century, during which several short-lived gold issues of varying size, design and weight were minted.[14] These same parameters of periodization and appearance hold true when the silver coinage is examined.[15]

---

[11]The *Ashrafī dīnār* established a design and size imitated by all subsequent Mamluk *dīnār*s. Thus it is common for numismatists to refer to these later coins as *Ashrafī*s, even though a *dīnār* of al-Ẓāhir Jaqmaq (842-957/1438-55), for example, is technically a *Ẓāhirī*, etc.

[12]For an introduction to Ayyubid coins, see Paul Balog, *The Coinage of the Ayyubids* (London, 1980).

[13]Warren C. Schultz, "Mamluk Money from Baybars to Barquq: A Study Based on the Literary and Numismatic Evidence," Ph.D. dissertation, The University of Chicago, 1995; see especially chapter 3, "The Precious Metals: Mamluk Gold and Silver Coinage."

[14]See Bacharach, "The Dinar vs. the Ducat."

[15]For an analysis of *dirham*s in the first period, see Schultz, "Mamluk Money," pp. 103-64; for periods two and three, see Bacharach, "Circassian Monetary Policy: Silver," *Numismatic Chronicle* 7th ser., 11 (1971): 267-81.

Mamluk *dirham*s from the third period are easily distinguishable from those of the first, and are also higher in silver content, at least initially. Both the gold and silver coins of the third period, however, await detailed metrological investigation, which is dependent on the weight and purity of more specimens being made available. Furthermore, these general observations about the precious metal coins hold true for both the Egyptian and Syrian mint issues.[16]

In the case of the copper coins, developments are not nearly as well known as with gold and silver, and much work remains to be done. Mamluk *fulūs* are generally assumed to have been of local currency only. That this is largely so is illustrated when the issues of respective mints are compared. Despite the existence of large gaps in the numismatic record, it is clear that the copper coins of Syria are quite different in appearance and method of issue than those of Egypt. Significant runs of copper are known for Cairo only for the last half of the eighth/ fourteenth century and for the reigns of al-Ashraf Qāytbāy (872-901/1468-96) and al-Ashraf Qānsūh al-Ghawrī (906-22/1501-16). From Baybars up through the third reign of al-Nāṣir Muḥammad (709-41/1309-40), the surviving record is spotty, to say the least.[17] In Alexandria, copper was apparently only struck in the last three decades of the eighth/fourteenth century.[18] Thanks to the work of Lutz Ilisch, curator at the Forschungstelle für islamische Numismatik, Tübingen, the runs of the four major Syrian mints for much of the first 150 years of the sultanate have been established and clarified.[19] Significant gaps exist, however, between the known issues of the

[16]Cf. Irwin, ″The Supply of Money and the Direction of Trade in Thirteenth Century Syria,″ in *Coinage of the Latin East: The Fourth Oxford Symposium on Coinage and Monetary History*, ed. P.W. Edbury and D. M. Metcalf (Oxford, 1980), 73-104, who argues that through the Ayyubid period, Egypt and Syria constituted different money markets. During the Mamluk period, however, it is clear that gold and silver coins were minted and circulated in the same fashion. While periodic differences in value no doubt occurred, it is highly unlikely that widespread and purposeful arbitrage took place to take advantage of such fluctuations. It is safe to assume that the costs and risks of transporting precious metal would be greater than any profit made in arbitrage.

[17]There are many unanswered problems with these early Mamluk *fulūs*. For example, copper coins of Baybars are known, but most lack a mint name. On the basis of style, Lutz Ilisch has attributed most of these coins to Damascus, but the retrieval of some of these coins from the digs at al-Fuṣṭāṭ at least raises the possibility of Egyptian origin. There is a *fals* of Baybars of Fuṣṭāṭ provenance preserved in the Oriental Institute at the University of Chicago, accession number 25444.

[18]This assertion is supported not only by the numismatic evidence, but by the chronicles as well. For developments in fourteenth century Egyptian copper coinage, see Schultz, ″Mahmud b. ‘Ali and the ′New Fulus′: Late Fourteenth Century Egyptian Copper Coinage Reconsidered,″ forthcoming in *The American Journal of Numismatics.*

[19]Unfortunately, his important article on the subject, ″The emission system of copper coins in 8th century H. Mamluk Syria,″ delivered at the Balog memorial symposium, remains unpublished.

ninth/fifteenth century for those mints. The developments in Mamluk copper coinage for the ninth/fifteenth century have attracted significant attention from modern scholars.[20] The copper of this period is intimately linked with the money of account known as *dirham min al-fulūs* found with increasing frequency in the Mamluk chronicles. This term, the subject of much modern disagreement, is best understood as the amount of copper coins necessary to equal the value of a *dirham*′s worth of silver.[21]

BALOG′S *THE COINAGE OF THE MAMLUK SULTANS OF EGYPT AND SYRIA*

When compared to other fields of medieval Islamic numismatics, the coinage of the Mamluk sultans is well studied. At the center of this scholarship is Balog′s corpus, *The Coinage of the Mamluk Sultans of Egypt and Syria* (henceforth *CMSES*).[22] This work, the product of his many years of collection and research, identifies and orders over 900 types of Mamluk coins. (In numismatic terminology, ″type″ signifies a group of coins distinguished and united by their design.[23]) The value and impact of this work cannot be overestimated. In it, Balog made a hitherto confused and often inaccessible body of information available to a wider audience. Since the *CMSES* has become the necessary starting point for research into Mamluk monetary history, it is worth discussing in detail.

In ordering the Mamluk coinage, Balog followed the approach that was the norm for most numismatic publications until relatively recently. He divided the coins first according to sultanic reign. Within each regnal period, the coins are then divided into three groups based on metallic content, and then further according to stylistic features. Thus coins featuring ″heraldic″ devices, for example, were grouped separately from those with designs that were purely epigraphic.[24] Only within these sub-groupings was a chronological ordering followed. The resulting

[20]Bacharach, ″Circassian Monetary Policy: Copper,″ *JESHO* 19 (1976): 32-47; and Shoshan, ″From Silver to Copper: Monetary Change in Fifteenth Century Egypt,″ *Studia Islamica* 56 (1982): 97-116.

[21]Boaz Shoshan′s assertion (in ″From Silver to Copper,″ 113) that this term originally referred to a copper coin of ″about 3 grams″ is not supported by either the passage he cites from Popper′s *Egypt and Syria*, 41, nor by the numismatic evidence.

[22]Paul Balog, *The Coinage of the Mamluk Sultans of Egypt and Syria* (New York, 1964).

[23]For an introduction to numismatic terminology and techniques, see Philip Grierson, *Numismatics* (London, 1975); John Casey, *Understanding Ancient Coins: An Introduction for Archaeologists and Historians* (London, 1986).

[24]For contrasting answers to the question of whether the symbols found on Mamluk coins are heraldic, see J.W. Allan, ″Mamluk Sultanic Heraldry and the Numismatic Evidence: A Reinterpretation,″ *Journal of the Royal Asiatic Society* (1970): 99-112; and Balog, ″New Considerations on Mamluk Heraldry,″ *American Numismatic Society Museum Notes* 22 (1977): 183-212.

coin types were then provided a number. The *CMSES* listed 910 coin types, plus 24 additional types in the first supplement which are given letters and not numbers, and finally 11 more types in a second supplement, labeled SS.1-SS.11. Within this typology, Balog listed the specimens known to him for each type. This information was taken from his own and other private collections, public collections, and the catalogues of collections he did not have the opportunity to visit.

There are, however, two serious drawbacks to Balog′s typology. First of all, this system leaves no room for the inevitable discovery of new coin types. Later scholars are thus forced to come up with labels such as 142A to describe a new coin that is similar to 142, yet not 143.[25] The lack of any oversight in assigning these hybrid numbers, combined with the often solitary nature of numismatic inquiry, frequently results in labels such as 142A being applied to different coins. In some cases, where coins of previously known design but unattested dates show up, the labels can become increasingly cumbersome and difficult to use.

Secondly, to borrow the words of Michael L. Bates, curator of Islamic Coins at the American Numismatic Society, this system is in fact ″classification, not attribution. A scheme like this provides a pigeon-hole for every coin, but in no way does it represent the historical or geographical evolution of the coinage.″[26] The historical and geographical evolution of the coinage is illustrated far better when coins are arranged in what is termed a mint series. In this attribution schema, the coins of all metals produced by one mint are laid out in chronological order. When coins are organized in such a manner, developments that are obscured by the jumble of types found in the *CMSES* are more easily seen. Trends such as debasement, stylistic diffusion, etc.—details that can help determine where undated coins fall in the chronology—become immediately more apparent. When combined with the mint series of preceding and following dynasties even longer term monetary trends may be observed. The value of the mint series format can be seen in the sylloges of Islamic coins published and in preparation by the Forschungstelle für islamische Numismatik in Tübingen.[27] A useful analogy is that of using libraries organized by either the Dewey Decimal or Library of Congress systems. If you know what you are looking for, you can eventually find what you want in the Dewey library, but browsing the shelves is easier in the LOC library and often leads to unexpected discoveries and links.

---

[25]This is what Balog himself had to do in his ″*The Coinage of the Mamluk Sultans of Egypt and Syria*, Additions and Corrections,″ *American Numismatic Society Museum Notes* 16 (1970): 113-72.

[26]Bates was referring in this case to the British Museum catalogues of Arab-Byzantine and Arab-Sassanian coinages, but the observation is also valid for the *CMSES*. See Michael L. Bates, ″The Earliest Arab Coinage of the Maghrib,″ a paper delivered at the 1993 MESA conference.

[27]The series title is *Sylloge Numorum Arabicorum.* To date, volumes have appeared for Palestine (4a) and Eastern Khorasan (14b), with the volume for Hamah expected soon.

Thus a major desiderata for the field of Mamluk monetary history is the creation of a new organizing framework for the numismatic evidence. This system should be organized by mint series, and not be restricted to the coins found in only one collection. It should feature a numbering code that can easily incorporate new types and dates. This numbering system could, perhaps, be modeled on the format of a telephone number, where the different fields of numbers represent different discrete bits of information such as mint, date, sultan, etc. This new framework would be easily adaptable to electronic publication. As the technology for scanning images improves, it may soon be possible to produce an electronic corpus of Mamluk coins. Freed of the restrictions and cost of print, this corpus could be continually updated to reflect additional specimens and new discoveries.

FACTORS AFFECTING RESEARCH ON MAMLUK COINS

Suffice to say, the collection of Mamluk numismatic information did not end with the publication of *CMSES*. At the core of Balog′s corpus was his personal collection.[28] This collection was stronger in Egyptian coins than those minted in Syria, reflecting Balog′s long residence in Egypt. In the more than 30 years since the *CMSES* appeared, it has been added to and corrected by numerous studies.[29] Many of these ″new″ types are from the Syrian mints. There are now more than a thousand known types of Mamluk coins. Some are known only by one specimen, others survive by the hundreds. As a result, the basic parameters of the Mamluk monetary system are known. Yet there remain some important issues affecting the use of this numismatic material that must be raised. These include questions of coin survival and the many factors which affect the assembly and accessibility of coin collections.

An important batch of implications surrounds the issue of coin survival. So many factors affect survival that it is unwise to base elaborate economic arguments solely on the basis of a small number of coins surviving to the present.[30] The factors influencing the preservation of old coins include but are not limited to the number originally produced, the type of metal involved, competing demands for that metal, and pure luck. While Mamluk coins have survived in large numbers, the distribution of those coins across metal, mint of origin, and type is not equal. Mamluk copper coins, for example, survive in large numbers from some mints and years, but are rare or nonexistent from others. In terms of sheer numbers,

[28]The bulk of Balog′s personal collection of Mamluk coins is now preserved at the Israel Museum in Jerusalem.

[29]Most notably by Balog himself in his ″Additions and Corrections.″

[30]This has not stopped some scholars from making this mistake. See, for example, Rabie, *The Financial System of Egypt* (London, 1972), 192, where he argues for a ″return to a gold standard″ in 724 H. based upon one undated *dīnār*.

there may very well be more surviving Mamluk copper coins from the end of the eighth/fourteenth century than total specimens of Mamluk gold and silver coins known.[31] Yet this does not necessarily mean that silver and gold coins were scarce in the Mamluk era. Such modern scarcity could be due to a number of reasons, chief among them that gold and silver coins are always subject to remelt into jewelry, plate, or even new coins. In addition, the location where coins were lost or stored can affect their survival. If lost in a wet environment, the coins might survive only in the form of a congealed lump, adhering to what remains of the container in which they were stored—if they survive at all. On the other hand, coins hoarded in a dry house wall may emerge in perfect condition after hundreds of years or more.

Of course, the mere fact that a coin has survived is of little use if it is not available for examination and study. Coin accessibility usually means that the coin is located in a collection, but not all coins find their way into museum or private holdings, nor are the latter always available for perusal. Moreover, to put it bluntly, the interest of the collector and that of the monetary historian are not always the same. This has major repercussions on the systematic study of coins. Such factors as the idiosyncratic tastes of the collector or curator, the vagaries of donations to public collections, the metal, beauty and uniqueness of the coin, cost or even space limitations have shaped collections, and thus impose limits on numismatic research. For example, the long-held collecting practices of acquiring one example of each coin type produced by a mint, individual or dynasty, as well as the tendency to collect only unique or rare specimens, often means that relatively few coins of any one type are preserved in any one collection. While such collections may provide a nice overview of the typology of numismatic issues, they do not accurately represent the ordinary coinage that was in use, nor do they preserve the large number of coins necessary for large-scale die studies or for statistical research into issues such as metrology and purity. Thus, as Cahen pointed out, a gap in a collection so structured ″does not give us license to deduce systematic conclusions″ about monetary developments.[32]

Finally, the repercussions of modern treasure-trove laws affect the study of Mamluk coins today. Ancient coins are considered national treasures by most of the modern nations found in the lands of the Mamluk sultanate. Trade in such coins is regulated by a variety of antiquities legislation. The selling and exporting of such coins is usually illegal or at least severely restricted. The export of such

---

[31]See Bacharach, ″The Ducat in Fourteenth Century Egypt,″ *Res Orientales* 6 (1994): 99, where he estimates that hundreds of thousands of copper coins entered into circulation at the end of the eighth/fourteenth century.

[32]Cl. Cahen, ″Monetary Circulation in Egypt at the Time of the Crusades and the Reform of al-Kamil,″ in *The Islamic Middle East, 700-1900*, ed. A.L. Udovitch (Princeton, 1981), 319-21.

coins may be considered smuggling, and subject to penalties. Nevertheless, a number of new coins show up in dealers′ lists and auctions every year. Rightly or wrongly, laws are being broken. The situation is further complicated by the fact that some of these coins can be valuable, often fetching prices equivalent to tens, hundreds, and occasionally thousands of dollars. It is naïve to expect that such factors, often considered too sensitive or discomforting to discuss, do not affect those interested in the serious study of these coins. They have a profound impact, for instance, on the study of hoards, those groups of coins deposited on purpose or by accident that the original owners never returned to retrieve.

Coin hoards are particularly valuable sources of monetary information. They are especially useful in determining what coins were circulating at a given time and place. Many hoards of Mamluk coins have been found, but few have been studied in depth. Part of this is due no doubt to the realities of the present-day coin market. Few Mamluk hoards have been found during official archeological digs, with the subsequent result that only rarely has a Mamluk-era hoard been studied *in situ*, with its integrity intact.[33] More hoards show up in the coin trade. Needless to say, the finders of such hoards are often conscious of the presumed illegality of their actions, and are silent about such issues as provenance, perhaps out of the dual desire to protect not only themselves but the area itself, in the hope of finding more coins nearby. As a result, it is rare to have more than a general sense of the location (e.g. upper Egypt, northern Syria) where the hoard was found. Similarly, as a hoard makes its way through the trade, it is always possible that it is subject to culling—the removal of the best specimens—which further compromises its integrity. When such a hoard is finally studied (if ever), it may still reveal a great deal of information, but not nearly as much as if it had been studied in its original state.

Mamluk Money: The Literary and Documentary Evidence

Mamluk-era Literary Sources

The major mint cities of the Mamluk sultanate were centers of learning as well as international marketplaces. As a result, the Mamluk regime is well recorded in many contemporary chronicles, biographical compilations, and other texts. The resulting wealth of literary source material—much of it published in editions of widely varying quality—is unparalleled for most other states of this era in Islamic

---

[33]For brief theoretical overviews of the use of coins as physical remains, see both Donald Whitcomb, ″Mamluk Archeological Studies: A Review,″ *Mamlūk Studies Review* 1 (1997): 97, and Hans Ulrich Vogel, ″Introduction″ to Special Theme Issue: Money in the Orient, *JESHO* 39 (1996): 209-11. The contents of several small hoards found during the Danish-sponsored digs at Hamah are described in *Hama: Fouilles et Recherches 1931-38*, IV$_3$ *Les petits objets médiévaux sauf les verreries et poteries* (Copenhagen, 1969).

history. As students of Mamluk history have long been aware, scattered throughout these works are numerous references to monetary events. These range in length from a brief sentence to entire chapters and works. They occur in the form of price quotations, exchange rate citations, discussions of confiscations, gifts or inheritances, the mention of a new coinage, and even the criticism of monetary policy. They are often precisely dated. These passages have provided the raw material for most treatments of Mamluk monetary history.[34]

The discussions of money found in the Mamluk-era literary texts may be grouped into six categories. The first is that of treatises devoted specifically to money and economic matters. The best known examples of this type are certainly the two screeds composed by al-Maqrīzī, the *Ighāthat al-Ummah* and the *Shudhūr al-ʻUqūd*.[35] To this short list should be added the near-contemporary work of al-Asadī, *al-Taysīr wa-al-Iʻtibār*.[36] A sub-category of this group are those treatises that address money from within the *fiqh* tradition. While of a normative bent, there are occasional observations about contemporary monetary developments. An example of this category is the "Nuzhat al-Nufūs" of Ibn al-Hāyim.[37] In general, material of this last type has not been fully exploited for the Mamluk period.[38]
The second category contains the extended discussions of money found in the encyclopedic works of authors such as al-ʻUmarī or al-Qalqashandī. These are often longer than a page in length and discuss both Islamic money in general and

---

[34]The importance of these literary passages for economic data was established and exploited by Sauvaire in the previous century. His pioneering work in culling the contemporary texts for references to money identified many of the basic passages still cited today. H. Sauvaire, "Materiaux pour servir à l'histoire de la numismatique et de la metrologie musulmanes," *Journal asiatique* 14 (1879): 455-533; 15 (1880): 228-77, 421-77; 18 (1881): 499-516; 19 (1882): 23-77, 97-163, 281-327. The first systematic exploitation of this material for the Mamluk period is found in William Popper, *Egypt and Syria,* 41-79. For a discussion of the relative value of specific Mamluk era historians, see Bacharach, "Circassian Mamluk Historians and Their Economic Data," *Journal of the American Research Center in Egypt* 12 (1975): 75-87.

[35]Al-Maqrīzī, *Ighāthat al-Ummah bi-Kashf al-Ghummah*, ed. Muḥammad Muṣṭafá Ziyādah and Jamāl al-Dīn al-Shayyāl (Cairo, 1359/1940); cf. the translation by Adel Allouche, *Mamluk Economics: A Study and Translation of al-Maqrizi's* Ighathah (Salt Lake City, 1994). There have been numerous editions of the *Shudhūr* prepared. The latest is *Shudhūr al-ʻUqūd fī Dhikr al-Nuqūd*, ed. Muḥammad ʻUthmān (Cairo, 1990).

[37]Aḥmad ibn Muḥammad Ibn al-Hāyim, *Nuzhat al-Nufūs fī Bayān Ḥukm al-Taʻāmil bi-al-fulūs*, Dār al-Kutub al-Miṣrīyah, ms. no. 1073 (*fiqh shāfiʻī*). Ibn al-Hāyim died in 815/1412.

[38]For examples of the use of *fiqh* materials for earlier periods, see Brunschvig, "Conceptions monétaires chez les juristes musulmans (VIII[e] -XIII[e] siecles)," *Arabica* 14 (1967): 113-43; and A. L. Udovitch, *Partnership and Profit in Medieval Islam* (Princeton, 1970).

developments in Mamluk money in particular.[39] The third group are those specific citations of monetary information such as new coinage, exchange rates, or prices. Such observations are quite common in the chronicles. They usually are just one or two sentences in length, although occasionally some are much longer. They are much more common for developments in Egypt than they are for those in the Syrian provinces. Tables of these prices and exchange rates in particular are found appended to many modern studies of Mamluk economic history. Given the overlapping and repetitive nature of such tables, this type of information seems a good candidate for a web-based database, readily searched and easily updated.[40]

The fourth category consists of anecdotal mention of money, as when an entourage is rewarded with coins, money is mulcted from someone out of favor, or troops are paid.[41] Monetary information of this type—encountered as corroborating detail or casual aside to a bigger story—is both abundant (at least for Egypt) and valuable. Both specific and anecdotal monetary information are encountered in the fifth category, which consists of the observations and accounts of foreign travelers.[42] Included in this grouping are the pilgrimage narratives of European travelers to the Holy Land, which, to my knowledge, have not been examined systematically for the monetary information they sometimes contain.[43] Last but not least, monetary terminology is found in Mamluk-era *belles lettres*, especially poetry, although the usual lack of chronological setting means care must be taken when material of this sort is utilized.[44]

In fact, using all categories of the literary sources is not without risks. In some cases, for example, it is clear that the Mamluk-era author is simply wrong about events that occurred before his lifetime.[45] Other problems include incidents of

[45]De Bouard, for example, pointed out the unreliability of al-Maqrīzī for certain monetary developments before his lifetime. See ″Sur l′evolution monétaire de l′Égypte médiévale,″ *L′Égypte*

scribal errors and the inconsistent use of terminology. These contemporary obstacles are in turn occasionally exacerbated by poor editorial decisions, as the following illustrates. In a discussion of the events of Muḥarram 699/October 1299, al-Maqrīzī wrote that a charge of one *kharrūbah* was leveled on every measure of wheat purchased in Cairo.[46] The word *kharrūbah* is glossed by the editor as a small piece of a copper coin, worth *one-tenth of a* dirham (emphasis added), citing Dozy′s nineteenth-century Arabic/French dictionary. There are at least two problems with this assertion. First, while this meaning is indeed found in the dictionary, the source for the monetary value of the term is a history of the Almohades.[47] It is worth noting that there are significant differences between the coinage of the twelfth-century Maghrib and thirteenth-century Egypt. Secondly, one need only look at the exchange rates cited by al-Maqrīzī himself to see that such a value would be ludicrously high for the end of the thirteenth century. In his entry for 695/1295, for example, al-Maqrīzī wrote that the exchange rate of copper to silver was three ″pounds″ (*raṭl*s) of copper coins per two silver *dirham*s. Regardless of how much any individual copper coin weighed at the time (the numismatic record for copper coins for this period is sketchy), it is safe to assume that it took a good many to equal the one and a half ″pounds″ of coins necessary to exchange for a *dirham*′s worth of silver. A *kharrūbah* may have been a piece of a copper coin, but given the previously known exchange rates, it is inconceivable that it could have been worth one-tenth of a *dirham*. While this is just one episode, it is not atypical of the problems encountered in some editions.

Mamluk-era Documents

In addition to the various literary sources mentioned above, there exist many contemporary documents, of both indigenous and foreign origin, that contain monetary data.[48] Perhaps the best known group of these documents are the Geniza materials produced by the Jewish community of medieval Cairo. While most Geniza texts date from Fatimid and Ayyubid times, a few specimens survive from the Mamluk era.[49] These contain frequent references to money, often revealing

---

contemporaine 30 (1939): 427-59. As Cahen has pointed out, this observation is the only merit of this article; ″Monetary Circulation in Egypt,″ 331, note 14.

[49]S. D. Goitein, ″The Exchange Rate of Gold and Silver Money in Fatimid and Ayyubid Times. A Preliminary Study of the Relevant Geniza Material,″ *JESHO* 8 (1965): 1-46. Despite this title, nine

precisely dated information on the circulation and exchange of the many coinages found in the marketplace. Similar to the Geniza, a collection of around 200 letters concerning the Red Sea and Indian Ocean trade was found during excavations of the port of Quseir. While these were first thought to date from the Mamluk period, subsequent examination by Li Guo has established that most date from the late Ayyubid era. Nevertheless,the possibility remains that a few are of Mamluk provenance. Whatever the case, dynastic boundaries aside, since preliminary surveys revealed the existence of much monetary information in this material, the publication of these letters is eagerly awaited.[50]

Another promising documentary source of monetary information are *waqf* deeds. Several caches of these endowments are known, and while their systematic examination is in its infancy, they are clearly fertile ground for those interested in monetary matters.[51] (The same observations hold for the Ḥaram al-Sharīf collection, which includes not only endowment deeds but wills, inventories and other documents[52]). Coinage and monetary values are frequently mentioned in these documents, revealing important aspects of the workings of Mamluk money. For example, the existence of several different coins circulating simultaneously is confirmed by the *waqf*-administrators′ struggles to keep track of exchange rates and differing monies of account.[53]

Finally, there are contemporary documents of foreign origin, usually preserved in European archives, that contain useful information. Copies of treaties between the Mamluks and their Italian trading partners survive, for example. While few in number, these treaties occasionally yield the odd bit of monetary data.[54] A much larger corpus of materials are the commercial records of the merchants from the Italian city-states. These archives have been exploited to good effect by Ashtor and others, but are by no means exhausted. These documents include not only

---

of the documents discussed date from the Mamluk period.

[54]Cf. J. Wansbrough, ″Venice and Florence in the Mamluk Commercial Privileges,″ *BSOAS* 28 (1965): 483-523.

price lists and exchange rates, but also information about the metrology and purity of coins which circulated in the Mamluk market places. In one case, for example, evidence found in Venetian trading records reveals that some Venetian merchants knew that the purity of the Armenian trams mentioned above was approximately two-thirds silver content. As this fineness matched that of the contemporary Mamluk *dirham*s, it helps explain why these trams are so often found mixed with Mamluk *dirham*s in hoards which date from the eighth/fourteenth century.[55]

Taken *in toto*, this non-numismatic material has proven to be a mine of information for Mamluk monetary history. This mine is far from being exhausted, thanks in part to the regular appearance of new editions. Admittedly, the classification of texts offered above is somewhat arbitrary. Be that as it may, it should be emphasized that none of these works were written for the express purpose of providing monetary and economic data for modern historians, and therefore the monetary information found in them must be evaluated carefully. Specifically, this information should, whenever possible, be meshed with the data derived from the surviving coins. This is especially so since these sources are often completely silent about developments that are suggested by the numismatic record. Any study of Mamluk money that aims for thoroughness should make use of both the written and the numismatic evidence. Unfortunately, this has rarely been done in most studies undertaken to date.

THE SCHOLARSHIP

Modern scholars have not ignored Mamluk monetary history as a field of inquiry. The more than 135 entries in the ″Numismatics: Including Metrology and Monetary History″ section of the electronic Mamluk Bibliography project are testament to that.[56] An examination of each of these works is beyond the scope of this article. I will instead restrict my comments to the following observation: scholarship on Mamluk money is marked by two major divides. The first has to do with theoretical assumptions of how pre-modern money circulated. Significant differences of interpretation exist in the studies. The second has to do with usage of sources. The scholarship may be divided into works based primarily on the coins, those based primarily on the literary and documentary data, and those which made use of both. While these divisions may strike some as crude, they hold up under scrutiny.

[56]The URL of the Mamluk Bibliography is: http://www.lib.uchicago.edu/LibInfo/SourcesBySubject /MiddleEast/MamBib.html. This does not include the many works that touch upon monetary issues but which are listed within the broader ″Economics″ section of the bibliography.

THE THEORETICAL DIVIDE

In order to describe this divide, it is necessary to begin with some basic definitions. Minor details may vary, but most definitions of money define it in terms of function: money serves as a store of value, a measure of value, and a means of exchange. A coin, of course, is just one of many possible objects that fulfill the roles of store of value and means of exchange.[57] Before the widespread acceptance of fiat money in the last half century, a coin's value is usually held to have been determined by three elements. The first was the value of its raw material (usually bullion), or what is usually called its *intrinsic* value. The remaining two elements are said to be determined by the actual production of the coins. They are the cost of minting and the profit to the coin maker. Together, the intrinsic value of the bullion combined with the cost and profit of minting make up the coin's *extrinsic* (or par) value. Few would disagree that for coins struck in the precious metals of gold and silver, their bullion content was the major factor of their extrinsic value. Once coins entered the market place, and assuming that that marketplace was well-regulated, it is assumed that coins would circulate at their extrinsic value.

Invariably, however, once any coin entered circulation, it would encounter both coins of its own type and possibly other types of coins as well. How these coins circulated together is usually said to be governed by the principle known as Gresham's Law. This law states that when a coin of low intrinsic value circulates with a coin of equal extrinsic but higher intrinsic value, the first coin will drive the second coin out of circulation. Or as it is sometimes stated, "bad money" (coins of low intrinsic value) drives out "good money" (coins of higher intrinsic value). Thus if two gold coins are said to be worth the same (have the same extrinsic value), but one has more gold in it—i.e. it is either heavier or of a higher purity—the holder of the coins will spend the one with less gold and hoard the one with more gold.

Gresham's law appeals to common sense. It is important to note, however, that this model rests upon the assumption that the declared extrinsic value of a coin can be maintained (or guaranteed or enforced) after the coin enters circulation. A substantial body of literature now argues that it is doubtful that any medieval government (or other issuing authority) had the ability to do so.[58] In the absence

---

[57]The system of valuation role of money is fulfilled by what is often called the "money of account." For the role of "monies of account" in pre-modern monetary systems, see Peter Spufford, *Money and Its Use in Medieval Europe* (Cambridge, 1988), 411-14. For the money of account known as the *dīnār jayshī*, used to calculate the value of *iqṭā*'s in medieval Egypt, see Richard Cooper, "A Note on the *dinar jayshi*." *JESHO* 16 (1973): 317-18.

[58]Among the important exponents of this theoretical approach for the medieval Islamic world in general, and the Mamluks in particular, is Gilles Hennequin. A good introduction to his approach

of this ability, the ″official extrinsic value″ of a coin would become meaningless, as once it entered circulation it would find its own value in relation to the other coins present. This value would be determined by a number of factors, such as bullion content, supply of and non-monetary demand for bullion, whether a coin was acceptable for payment of taxes and dues, consumer preference (which for Muslims might show itself in a reluctance to accept coins with overt Christian images), etc. In such a monetary marketplace, ″dinars and dirhams, even when issued by the same mint at the same time, were as much two separate currencies as are pounds and dollars today. The operation of Gresham′s law takes on a different character in such a situation, and such terms as ′gold-standard′ or bi-metallism′ become virtually meaningless.″[59]

The implications of this revision of how medieval money circulated for our understanding of the Mamluk monetary system are wide-ranging. If this interpretation is accepted then the conclusions reached in much of the earlier research must be revisited, and the evidence cited therein must be reexamined. I find the evidence marshaled in support of this approach convincing. First of all, there is little in the Mamluk-era sources to suggest that the Mamluk government was ever able to guarantee the extrinsic value of the coins it issued. Certainly attempts were occasionally made to enforce exchange rates, but there is no evidence of their long-term success. Secondly, there is ample numismatic evidence, primarily in the form of hoards, to show that gold and especially silver coins of widely varying weight, purity, and date and mint of origin circulated simultaneously.[60] Nor is there anything to suggest that this plethora of coinages caused any difficulty in the marketplace. Rather it was a known factor taken into account in business transactions.[61] There is thus ″no observable trend of bad coins driving good ones from circulation; rather good and bad coin coexisted peacefully at their respective values.″[62]

Furthermore, the assertions that Mamluk money was based on a series of ″metallic standards″ must be reevaluated. Balog, for example, wrote that the

---

is ″Problèms théoriques et pratiques de la monnaie antique et médiévale,″ *Annales islamologiques* 10 (1972): 1-57.

[59]Michael L. Bates, ″Islamic Numismatics (pt. 3),″ *MESA Bulletin* 13 no. 1 (1979): 14.

[60]Mamluk silver hoards, in particular, often include *dirham*s worn completely smooth from their extended time in circulation. The commonplace nature of this phenomenon argues against the view that such hoards are only the bullion accumulations of jewelers.

[61]Rabie′s assertion regarding the ″problem of many types of coins circulating together″ is not supported by literary evidence (*Financial System of Egypt*, 187-88).

[62]R. Lopez, H. Miskimin, A. Udovitch, ″England to Egypt, 1350-1500: Long-term Trends and Long-distance Trade,″ in *Studies in the Economic History of the Middle East*, ed. M. A. Cook (London, 1970), 124.

Mamluks first adhered to a gold-silver bi-metallic system, in which the silver ″supported″ the gold, and then a silver-copper system, with the copper supporting the value of the silver.[63] This view has percolated widely, yet is no longer tenable.[64] Three observations are usually cited to support the existence of these standards. The first involves the exchange rates mentioned in the Mamluk sources, in which the first coin listed has been interpreted as representing the standard coinage. For example, an exchange rate stating that one *dīnār* was worth twenty *dirham*s, as it was in 699/1299-1300, has been used to argue that Mamluk money was based on a gold standard in that year.[65] Such a conclusion ignores a fundamental aspect of these exchange rates; they are statements of relative value between two different currencies, and are therefore reversible. Not only is a *dīnār* worth twenty *dirham*s, but twenty *dirham*s are worth one *dīnār*. Neither coin is based on the other, rather their respective values are being defined in terms of the other. Secondly, the quoting of prices in coins of one metal rather than those of another is often cited as evidence of metallic standards. Such price listings more accurately reflect what was the appropriate coinage for the transaction being discussed, or perhaps what coin was most commonly available, but do not by themselves prove that coins of that type formed a monetary standard. Thirdly, the absence of known coins of specific metals in specific years is often cited as evidence of the abandonment of a standard. The problems of arguing from a lack of coins have already been alluded to, but in this case, the numismatic record itself disproves any such assertion. A survey of the coin production of the Cairo mint reveals that precious metal coins were minted with almost yearly regularity throughout the entire period of Mamluk rule. Specimens of such coins are known from the reigns of all but the most ephemeral puppet sultans. Any suspensions of mint activity in gold or silver are best explained as temporary or short-term disruptions brought on by such factors as acute bullion shortage, hoarding, political uncertainty, etc. There seems little doubt, therefore, that assertions of metallic standards are little more than the anachronistic application of nineteenth century assumptions of monetary behavior to the Mamluk context.

The Use of Sources

Even the most cursory examination of the scholarship devoted to Mamluk monetary history reveals the existence of three approaches to the available source material.

---

[63]Balog, *CMSES*, 39-41.

[64]Cf. its use by Archibald Lewis to dismiss some of the conclusions reached by Janet Abu-Lughod, in his review of her *Before European Hegemony: The World System, A.D. 1250-1350* (New York, 1989), in *Speculum* 66 (1991): 605-6.

[65]This example, along with others, is found in Rabie, *The Financial System of Egypt*, 184-97. The exchange rate is from al-Maqrīzī, *Sulūk*, 1:900.

There are those works based primarily on the numismatic evidence, those which rely largely on the literary and documentary sources, and those in which both sets of information are utilized. Of course the borders between these categories are sometimes blurred, and the value of any respective work within this tripartite division is dependent on a number of factors which any critical reader is capable of evaluating. But while significant contributions have been made by works that fall in the first two categories, the most important advancements of our knowledge of Mamluk money history have emerged from the third.

There exist many articles about Mamluk money that may be labeled purely numismatic in content. These are based primarily on observations about a specific coin or group of coins. Examples of this type of work are announcements of new coin types, additions and corrections to existing coins or series, studies of dies, hoard announcements, analysis of peculiar coin legends, and the like. The information found within these works has provided some of the basic building blocks of our knowledge of Mamluk money, yet it is often left to someone else to do the building.[66] What this material frequently lacks is the application of the numismatic evidence to a wider context, to explain why a numismatic discovery is of significance to the non-numismatist. This shortcoming is often caused by a failure to consult the relevant written evidence. This may be due to simple lack of awareness or due to the existence of a language barrier. Balog himself is an example of the latter case. A close examination of his work reveals that, coin legends excepted, Balog did not read Arabic (an observation that makes his accomplishments all the more impressive). Some chroniclers, such as al-Maqrīzī, were available to him in French translation, but the bulk of his output was based on the numismatic evidence. As a result, and not surprisingly, there were certain problems in the numismatic record that he could not resolve. One such problem concerned the large copper objects struck in Cairo in 783 H. during the reign of al-Ṣāliḥ Ḥājjī: were they coins or weights? Another problem area involved the large Cairo copper coins of Qāytbāy and Qānsūh al-Ghawrī: there were several questions about these *fulūs*, among them the chronology of minting, which Balog was unable to solve. In both cases these problems were later resolved (at least partially) by scholars who had access to the chronicle evidence.[67]

At the other end of this source-usage divide are those works that depend primarily upon the contemporary literary and documentary evidence. Much has

---

[66]Unfortunately, this information is sometimes buried in publications off the radar screen of many academics, and thus is not always incorporated into the wider field, but this is certainly not the fault of the authors.

[67]For the 783 H. event, see Balog′s comments in ″Additions and Corrections,″ 146. In the case of the late Circassian coppers, see John L. Meloy, ″The Copper Coinage of Late Mamluk Cairo, 1468-1517″ American Numismatic Society 1992 Graduate Seminar unpublished paper.

been achieved in this category, but the failure to make use of all the available evidence renders many of the conclusions about Mamluk money found therein incomplete, incorrect, or in need of modification. This grouping includes works such as the economic histories of Labib and Ashtor that range wider than monetary history proper, but which of necessity contain discussions of money.[68] It also includes the studies by Popper and Ayalon, path-breaking when they appeared, but which also made little use of numismatic material (perhaps in part due to their publication before the arrival of the *CMSES*).[69] Unfortunately, there are many studies that have appeared since the *CMSES* was published that have continued to neglect the numismatic data. In these works, it is common to encounter only token acknowledgments that the coinage exists, or limited attempts at the incorporation of numismatic material which are imprecise at best, careless and misleading at worst.

An example of the former practice is the recent work by Ḥammūd al-Najīdī, which briefly acknowledges the existence of the *CMSES*, but then presents an overview of Mamluk money based entirely on the written evidence.[70] Examples of numismatic imprecision detract from the valuable work of Boaz Shoshan. In his dissertation and the three important articles which arose from it, Shoshan made major contributions to our knowledge of ninth/fifteenth century Mamluk monetary history.[71] In general, his work is marked by a careful reading and thorough knowledge of the written sources, a sophisticated use of economic theory, and most especially an emphasis on the wider geographical context in which Mamluk monetary developments are to be understood. Yet his use of the numismatic evidence is frustratingly irregular and inconsistent. For example, in his analysis of Egyptian copper at the end of the eighth/fourteenth century, he asserts that the ″numismatic evidence corroborates″ literary accounts that this coinage was increasingly lighter in weight. As proof of this, he cites that coins struck in the first decades of the

---

[68]Subhi Labib, *Handelsgeschichte Ägyptens im Spätmittelalter (1170-1517)* (Wiesbaden, 1965). (Abu-Lughod′s utter dismissal of the work of Labib for this shortcoming is extreme and unwarranted: *Before European Hegemony*, 222, note 9); Eliyahu Ashtor, *A Social and Economic History of the Near East in the Middle Ages* (Berkeley, 1976). Ashtor also authored an article on the Circassian monetary system that makes little use of numismatic evidence: ″Études sur le systeme monetaire des mamlouks circassiens,″ *Israel Oriental Studies* 6 (1976): 264-87.

[71]Boaz Shoshan, ″Money, Prices and Population in Mamluk Egypt, 1382-1517,″ Ph.D. dissertation, Princeton University, 1978; idem, ″From Silver to Copper″; idem, ″Money Supply and Grain Prices in Fifteenth Century Egypt,″ *Economic History Review*, second series, 36 (1983): 47-67; idem, ″Exchange Rate Policies in Fifteenth Century Egypt,″ *JESHO* 29 (1986): 28-51.

ninth/fifteenth were lighter than those from the second half of the previous century, an observation gleaned from his "survey" of copper coins preserved at the American Numismatic Society.[72] There are indeed lighter coins from the early fifteenth century, but their existence does not prove that lighter coins were struck in the last decade of the fourteenth century (which is what some of the Mamluk chroniclers assert). Only the numismatic evidence from that period can shed light on that. Shoshan's failure to specify what coins he surveyed, from what years, and from what mints, renders his "survey" of the *fulūs* so vague as to be meaningless.

Shoshan also occasionally ignores the numismatic evidence in situations where it could shed light on a thorny issue. For example, al-Maqrīzī wrote that a *"Kāmilī" dirham* was circulating in Egypt at the beginning of the ninth/fifteenth century.[73] In his analysis of the developments in Mamluk silver in this period, Shoshan points out that these are troublesome citations, due mainly to the fact that it is not clear what kind of silver coin al-Maqrīzī was referring to.[74] Relying exclusively on literary evidence, Shoshan argues that this coin must be the *dirham* of the Ayyubid al-Malik al-Kāmil (615-35/1218-38). This is a creative explanation to a difficult problem, and Shoshan is correct in stating that the Ayyubid *Kāmilī dirham* was a low purity silver coin. But it is a problematic assertion for a number of reasons. First of all, the dynamics of how large numbers of an old coin suddenly resurface after more than 150 years are left unexplored: Why then and not earlier? If it did happen, why is it not mentioned by other observers? Moreover, such a development is not supported by the numismatic evidence. I am not aware of a single Mamluk hoard from this era which contains Ayyubid silver.[75] In each of these examples and in others, Shoshan's lack of familiarity with the numismatic evidence undermines important aspects of his overall conclusions.

Finally, there are those few studies which follow good historical method and attempt to incorporate all the evidence available. Topping this list are the articles on Circassian monetary developments authored by Jere Bacharach, in which he was the first to carefully and systematically compare coin to chronicle, and chronicle to coin.[76] The result was deeper awareness and more nuanced knowledge of the

---

[75]See the list of silver hoards in Schultz, "Mamluk Money," 152-55. Ayyubid silver is found in hoards dating from the beginning of the Mamluk sultanate, but these *dirham*s usually bear the names of later Ayyubid princes only.

[76]Jere L. Bacharach, "Circassian Monetary Policy: Silver"; idem, "The Dinar versus the Ducat"; idem, "Circassian Monetary Policy: Copper." Cf. his Ph.D. dissertation, "A Study of the Correlation Between Textual Sources and Numismatic Evidence for Mamluk Egypt and Syria, A.H. 784-872/A.D. 1382-1468," University of Michigan, 1967.

parameters of the Mamluk monetary system than was present before. While some of his conclusions have been questioned, his approach cannot be. It remains the model to be followed. It is discouraging that it spawned few imitators.

On a smaller scale, this is the approach followed by Lutz Ilisch. In a series of articles buried in the *Münstersche Numismatische Zeitung*, Ilisch in particular made significant additions and corrections to the series issued by the Syrian mints.[77] His work is thorough in its attention to both literary and numismatic material. Attention should also be directed to two studies in Arabic that, when combined, offer the reader what is essentially an updated version of the CMSES (albeit only for Egypt), but with new specimens added and frequent incorporation of pertinent chronicle information. These are Sāmiḥ ʻAbd al-Raḥmān Fahmī′s *al-Wiḥdah al-Naqdīyah al-Mamlūkīyah* for the Bahri period, and Ra'fat al-Nabarāwī′s *al-Sikkah al-Islāmīyah fī Miṣr: ʻAṣr al-Mamālīk al-Jarākisah* for the Circassian period.[78] It should be stressed, however, that the traditional Bahri-Kipchaq/Burji-Circassian division has little significance in the context of Mamluk monetary developments.

Conclusion

I conclude this essay with a plea for those who do not consider themselves numismatists to familiarize themselves with the Mamluk coinage and the approaches and concepts that govern its study. This information is accessible. While there is no substitute for hands-on examination of Mamluk coins—and this is not always easy to do—the general learning curve for the historian′s use of monetary information is not that steep. Numismatics was once a respected ancillary field of history, and numismatic inquiry deserves more than a cursory acknowledgment or outright dismissal as insignificant. Mamluk numismatic information is important and full of surprises. It also cannot be ignored if our understanding of the role of money in the Mamluk economy and society is to be increased. I introduced this essay with a passage from an article entitled ″Numismatics Re-Monetized.″ In this short but significant piece, Andrew Ehrenkreutz reminded those interested in medieval

Book Reviews

SATO TSUGITAKA, *State and Rural Society in Medieval Islam: Sultans, Muqta‘s, and Fallahun* (Leiden: E. J. Brill, 1997). Pp. 337.

REVIEWED BY AMALIA LEVANONI, University of Haifa

This is a study of the *iqṭā‘* system in Iraq, Syria, and Egypt from its inception in Iraq in the mid-tenth century to the mid-fourteenth century. The author argues that the *iqṭā‘*, despite seemingly common features, differed in each region because of both historical and regional peculiarities.

Sato develops his argument in nine chapters (the first and the ninth being the introduction and conclusion). The introductory chapter, through a wide-ranging survey of the research to date, reveals the origins of the *iqṭā‘* and its development up to the Ayyubid system in Syria and Egypt. Chapter 2 examines the *iqṭā‘* system in Iraq and its influence on the evolution of Iraqi society. The Buwayhids were the first to introduce a hierarchical military *iqṭā‘* into the Islamic world, specifically the Sawād region of Iraq (334/946). In the course of time, the position of fief holder (*muqṭa‘*) strengthened to such an extent that it encroached on the provincial governors′ (*wālī*) administrative authority, such as the right to collect protection fees from both *muqṭa‘*s and peasants. The Seljuqs inherited the Buwayhid *iqṭā‘* and, with slight changes, continued to assign land revenues to military forces of a lower standing. With the consolidation of Seljuq rule, however, the allocation of the administrative *iqṭā‘* to amirs, limited under the Buwayhids, became common practice in both Iraq and Iran.

Chapters 3 to 7 trace in detail the history of the *iqṭā‘* system in Egypt and Syria under the Ayyubids (564-649/1169-1250) and the Mamluks. Imitating the system of the Seljuqs, Salāḥ al-Dīn, the founder of the Ayyubid dynasty, introduced the *iqṭā‘* into Egypt and Syria. During the Ayyubid period, the fief holders had to perform certain duties in exchange for the *iqṭā‘*s allocated to them; for example, to render military service in accordance with *iqṭā‘* revenues and to maintain the irrigation system in their fiefs.

During al-Ẓāhir Baybars′s reign (658-76/1260-77), *iqṭā‘*s were allocated not only to prominent Mamluk amirs and the sultan′s *mamlūk*s, but also to non-*mamlūk* soldiers serving as auxiliary forces for the Mamluk Sultanate, such as members of the *ḥalqah*, Bedouins (*‘urbān*) and the Mongol *wāfidīyah* warriors. Because of his political talents, Baybars, the author concludes, attributed more importance to the assignment of *iqṭā‘*s to the *‘urbān* and the *wāfidīyah* warriors than to the *mamlūk*s.

Behind this policy lay Baybars′s aim of attracting these two forces to his army for use against the Mongol threat from the East.

Sato uses the set of instructions that Sultan al-Manṣūr Qalāwūn (678-89/ 1279-90) gave to Amir Kitbughā al-Manṣūrī, then Vice-Sultan (*nā'ib al-salṭanah*), delegating to the amir the management of the Sultanate in the Sultan′s absence while on an expedition in al-Marqab (Dhū al-Ḥijjah 679/March 1281), as a basis for studying the *iqṭā'* system during Qalāwūn′s reign. The author finds that during this period there was a classification of *muqṭa'*s according to income, which was complicated because this revenue was closely related to the local taxation system. The author, however, does not explain the complexity of either this revenue or local taxation.

The need to improve the position of the sultan′s *mamlūk*s later led to the carrying out of two cadastral surveys (*rawk*). The first, *al-rawk al-ḥusāmī*, was conducted by Sultan Ḥusām al-Dīn Lājīn (698/1298). The second, *al-rawk al-nāṣirī*, which had more far-reaching ramifications for the structure and economy of the Mamluk Sultanate, was carried out by Sultan al-Nāṣir Muḥammad ibn Qalāwūn (713-25/1313-25). *Al-rawk al-nāṣirī* brought about uniformity in the *iqṭā'* system by transferring the right to levy taxes (i.e., land tax [*kharāj*], poll tax [*jawālī*] and tribute goods [*ḍiyāfah*]), from state authorities to the private hands of the *muqṭa'*s. This provided the opportunity to abolish miscellaneous taxes (*mukūs*); the introduction of fair administration further improved the conditions of the villagers.

In the wake of the ″privatization″ of the *iqṭā'*, a withdrawal of the officials previously occupied as tax collectors was also inevitable. The transfer of the right to levy taxes in the *iqṭā'* to the *muqṭa'*s, however, did not encroach on the authority and centralized power of the state because the right to appoint or dismiss amirs and soldiers and to allocate *iqṭā'*s remained at the absolute discretion of the sultan.

Chapter 8 describes the life of the peasantry in Syria and Egypt under the *iqṭā'* system. The author concludes that the sources tell little about the actual conditions of the peasantry in Syria during the Mamluk period. As for Egyptian rural society, the sources are clearer. Relations between the *iqṭā'* proprietors and the peasants (*fallaḥūn* or *muzāri'ūn*) were arranged through *qabālah* contracts. According to this arrangement, the former allocated land and lent seed (*taqāwī*) to the latter; the proprietors employed private agents (*mubāshirūn*) to collect taxes and distribute the seed. Later, when the *muqṭa'*s stepped into the government′s shoes and their position vis-à-vis the peasantry strengthened, they thrust responsibility for the maintenance of the irrigation system in the *iqṭā'*s upon the peasants by levying corvée (*sukhrah*) on them every winter. Under such conditions, the author maintains, village-based peasants (*fallāḥū qarrār*) were treated as ″serfs″ (*'abd qinn*) by their *muqṭa'*s.

Moreover, after al-Nāṣir Muḥammad's death (741/1341), when the government's control over the *muqṭa'*s loosened, the latter increased taxes without regard to the changing conditions of cultivation. A further deterioration in the management of the *iqṭā'* system occurred following the Black Death (749/1348), when common people (*al-'āmmah*) were assigned fiefs in the *ḥalqah*. Political disorder, maladministration, and the repeated outbreak of plagues during the period of the Circassian rule brought about a general decline in Egypt and Syria. One of the major victims of the Circassians' misrule was the peasantry. Officials and fief holders, whose appointments were gained through bribery, exploited the peasants while neglecting their share in maintaining the irrigation system and in promoting the cultivation of land in their *iqṭā'āt*. The failure of the Circassian government to secure public order left the peasants subject to the constant threat of the Bedouins. Unable to bear up under this neglect, the peasants abandoned cultivation.

The author rejects al-Maqrīzī's contention that "political corruption was the cause of economic decline during the Circassian rule." Instead he regards the economic decline as the catalyst for the Circassians' misrule. It was the decline in the *iqṭā'* revenues, in this view, that led the Mamluks to increase taxes, which brought about a stagnation in economic activity in both rural and urban society.

Sato's study is a welcome contribution to the research on medieval Muslim history. It is the first inclusive and comprehensive survey of the history of the *iqṭā'*s, which until now has been fragmentary, based on restricted studies of a specific period and region. The author has also laid out remarkably detailed chronological information on the *iqṭā'* system in the Middle Ages. The contribution of the study could have been more significant if new insights, interpretations, and general conclusions had been provided as well.

A few slips may briefly be noted. The transliteration of the feminine suffix, *al-tā' al-marbūṭah*, is occasionally wrong. There are several cases in which it is silent, whereas it should be pronounced (such as when it is the suffix of a determined noun in an annexation). On p. 193, "Hiba Allāh al-Qibṭī" should read "Hibat Allāh al-Qibṭī"; on p. 212 "qilla al-mā'" should read "qillat al-mā'". In other cases, however, the suffix should be silent: thus, on p. 76, "al-Madrasat al-Fakhrīya" should be "al-Madrasah al-Fakhrīyah"; on pp. 263 and 264, "al-Nuzhat al-Sanīyah . . ." and "al-Tuhfat al-Mulukīyah . . ." should be, respectively, "al-Nuzhah al-Sanīyah . . ." and "al-Tuhfah al-Mulukīyah . . ." The definitions of *muqṭa' aṣlī* and *muqṭa' al-jihah* (pp. 113, 235) do not appear in the glossary. Finally, the process whereby the peasant in Egypt was treated as a slave for life (*'abd qinn*) (p. 236) is not clear.

This study is based on a wide-ranging survey of both primary sources—including both major and less well-known printed books and manuscripts—and modern studies of Abbasid, Ayyubid, and Mamluk history and institutions. These sources

are fully listed in the bibliography, which provides a precious mine for scholars who work in these fields.

'Abd Allāh ibn Rashīd ibn Muḥammad al-Ḥawshānī, *Minhāj Shaykh al-Islām Ibn Taymīyah fī al-Da'wah ilá Allāh Ta'ālá* (Riyadh: Markaz al-Dirāsāt wa-al-I'lām, Dār al-Ishbīlīyā, 1996). Two volumes.

Ṣā'ib 'Abd al-Ḥamīd, *Ibn Taymīyah: Ḥayātuhu wa-'Aqā'iduhu* (Beirut: al-Ghadīr lil-Dirāsāt wa-al-Nashr, [1994?]). Pp. 465.

Reviewed by David C. Reisman, Yale University

Studies devoted to various aspects of Ibn Taymīyah's life and thought have proliferated in recent years. In one respect, such a growing interest is to be expected and perhaps even applauded; the importance of this independently minded thinker for the history of medieval Islamic thought cannot be overestimated. In another respect, the sheer number of works on Ibn Taymīyah requires a principle of classification (both of a given work's content and the author's intention in studying and writing about Ibn Taymīyah) that has yet to be articulated or even discussed in a scholarly manner; hence, the present review.

There are essentially two categories of works written about Ibn Taymīyah these days: one is a historical study that employs a critical methodology to elucidate some aspect of Ibn Taymīyah's life or thought within the context of medieval Arabic-Islamic intellectual history; the other studies Ibn Taymīyah as an important contributing voice to modern Muslim debates on religion, society, and politics. There have been no comprehensive critical studies of Ibn Taymīyah since Henri Laoust published his *Essai sur les doctrines sociales et politiques de Taki-d-Dīn Aḥmad ibn Taimīya* in 1939. Works of the first category can be critically assessed in a modern scholarly publication. If works of the second category are to be critically analyzed, such analysis should occur only within the context of a study on modern Islamic movements and thought, but relevant responses properly speaking should come from participants in those modern Muslim debates.

The two publications reviewed here fall under the second category. As such, this review should be correctly viewed as an anomaly to a publication such as *Mamlūk Studies Review*, concerned as it is with *medieval* history and thought. While both works contain a great quantity of raw data on a number of issues of central concern to Ibn Taymīyah (in the form of extensive quotations from a

number of his treatises and monographs) and so might conceivably be *described* for their potential use as source books of collected passages, *critical review* of the authors′ overall aims, methodology, and opinions should properly be reserved for publications concerned with modern Muslim thought (and Ibn Taymīyah′s place therein).

Al-Ḥawshānī, Director of the Institute for Imams and Preachers at the Jāmi‘at al-Imām Muḥammad ibn Sa‘ūd al-Islāmīyah in Saudi Arabia, has written a rather wide-ranging, if entirely descriptive, two-volume study of the major aspects of Ibn Taymīyah′s thought and socio-religious activity, entitled ″Ibn Taymīyah′s Missionary Program.″ The author understands the wide breadth of Ibn Taymīyah′s interests to be part of a larger missionary activity and the work is designed as a blueprint for modern missionary activity that takes as its model the career of Ibn Taymīyah. It opens with a brief, laudatory biography of Ibn Taymīyah (the main source of which is the hagiographical *al-‘Uqūd al-Durrīyah* by Ibn Taymīyah′s erstwhile disciple Ibn ‘Abd al-Hādī) and then passes to the substantive areas of study. Part 1 (pp. 49-358) treats particular characteristics of Ibn Taymīyah′s ″mission,″ including his views on language and technical terminology, his attempts at reconciling religious knowledge with the dictates of rational demonstration (a collection of passages, pp. 131-35, in which Ibn Taymīyah addresses the *ḥaqīqah-majāz* issue is of particular interest for studies of this Ḥanbalī′s treatment of anthropomorphic Quranic passages), the comprehensiveness of his mission in addressing all groups of his society (a section which overlaps considerably with a later section on ″objectivity in Ibn Taymīyah′s method″), the clarity of his various styles of composition, tailored as they were to specific audiences (for Ibn Taymīyah′s views on women, see pp. 210-20), and concludes with a group of passages highlighting Ibn Taymīyah′s knowledge of the culture of his age. Part 2 (pp. 361-529) deals with the ″basic principles of Ibn Taymīyah′s mission″ which the modern missionary may use as templates with which to organize and assess particular situations and ideas; it is divided into sections on general beliefs (pp. 365-89), religious practices (393-417), and ethics (421-529, spaced across the two volumes). Part 3 (pp. 535-737) is entitled ″al-Asālīb wa-al-Wasā’il″; the author explains that these terms are to be understood as referring to the methods and means of missionary activity respectively (defined p. 544). Missionary methods include the construction of a model believer based upon Ibn Taymīyah′s life-style, the use of debating techniques for defending the religion, and the use of the *fatwá* genre for guiding individual believers. The means of missionary activity are exemplified by Ibn Taymīyah′s use of different genres of writing (it is not clear why the *fatwá* was not included here), his style of preaching, the importance of travel, and Ibn Taymīyah as the moral champion of soldiers engaged in war against unbelievers. Two final discussions of the arenas of preaching—mosques and schools—conclude the section.

Al-Ḥawshānī concludes the work as a whole with a descriptive list of the parts of his work and recommendations for future study of Ibn Taymīyah′s missionary activity that will emphasize the influence of the ″pious forefathers″ of the religion and involve religious students of modern Saudi Arabia.

ʻAbd al-Ḥamīd′s *Ibn Taymīyah: His Life and Beliefs* is a highly personal and often very emotional critique of Ibn Taymīyah′s views on Shiʻism. The author claims that Ibn Taymīyah′s thought has been willfully misrepresented in the past and that it is as a remedy of that distortion that he has written the present work (pp. 10-11). The first part of the work is a largely undocumented and highly anecdotal biography of Ibn Taymīyah (pp. 15-89) that includes rough sketches of the political, social, cultural, and religious dimensions of his age. The second part (pp. 97-184) addresses major areas of belief, including Ibn Taymīyah′s views on *ijtihād* and *taqlīd*, the ever present debate on God′s attributes, and his understanding of Sufism. The third part (pp. 189-271) focuses on Ibn Taymīyah′s discussions of Shiʻism, especially those in his monumental work *Minhāj al-Sunnah* to which Ibn Taymīyah′s contemporary Ibn al-Muṭahhar al-Ḥillī responded with *Minhāj al-Karāmah fī Maʻrifat al-Imāmah* (the biography of al-Ḥillī, pp. 197-212, is to be contrasted with that of Ibn Taymīyah). The final section (pp. 277-428) discusses Ibn Taymīyah′s views on the Prophet′s family, with detailed sections on ʻAlī and Ḥusayn. Throughout, Ibn Taymīyah is engaged less as a subject of historical enquiry than as a formidable and unrepentant opponent. Ibn Taymīyah′s understanding of and response to Shiʻism is an important subject and the debate between Ibn Taymīyah and al-Ḥillī represents a critical moment in medieval Islamic intellectual history. Henri Laoust′s ″Les Fondements de l′imamat dans le Minhāǧ d′al-Ḥillī″ has yet to be surpassed as an introductory essay.[1]

A serious and comprehensive revision of Henri Laoust′s fundamental *Essai* on Ibn Taymīyah has yet to appear despite the continued growth of interest in this major figure of medieval Islamic intellectual history. Arabic-Islamic studies is no more plagued by a lack of continuity in scholarship than any other field, but the absence of very basic research on Ibn Taymīyah should nonetheless be perceived as a serious shortcoming to a proper understanding of the man and his work and not simply as a typical, if woeful, characteristic of the field as a whole. Basic spadework, such as a critical biography, a list and chronology of works, a study of extant manuscripts, and an informed assessment of work to date, seems to be viewed as an unfortunate mechanical aspect of Arabic-Islamic studies best done by someone else, but without such work any study of a discrete aspect of Ibn Taymīyah′s life and thought cannot but be tentative.

---

[1]*Revue des études islamiques* 46, no. 1 (1978): 3-55.

In many ways the study of Ibn Taymīyah is blessed with an enormous amount of primary material, perhaps more so than for any other comparably significant medieval figure. The wealth of primary biographical sources, much of it contemporary, is vast. The very topical nature of Ibn Taymīyah's writings has insured that much of the corpus is internally dated (many of his works are introduced with very specific dates of composition). The diligence of his disciples in preserving their master's program of thought has provided modern scholars with two major lists of his works (Ibn Qayyim al-Jawzīyah, Ibn ʻAbd al-Hādī), in addition to the many partial lists found in the *ṭabaqāt* entries. The continued interest in Ibn Taymīyah on the part of modern Muslim intellectuals as well as the increasing sophistication in the cataloguing of medieval Arabic manuscripts has made the study of the manuscript remains of Ibn Taymīyah's work more viable than ever before.[2] At this critical juncture in Ibn Taymīyah studies, what is most needed is a diligent researcher to undertake such a primary and comprehensive introduction to Ibn Taymīyah. Until such a study is undertaken, we might profitably, if modestly, begin the process of organizing Ibn Taymīyah studies with the simple classification of modern studies on Ibn Taymīyah introduced here.

IBN AL-ʻADĪM, *Zubdat al-Ḥalab min Ta'rīkh Ḥalab*, edited by Khalīl al-Manṣūr (Beirut: Dār al-Kutub al-ʻIlmīyah, 1417/1996). Pp. 528

REVIEWED BY MICHAEL CHAMBERLAIN, University of Wisconsin, Madison

Historians of medieval Aleppo have long benefited from Sami Dahan's admirable edition of the *Zubdat al-Ḥalab* (Damascus, 1951-68). While it may be premature to believe that this edition is getting long in the tooth, so much has been published since that a new edition would seem to be justified. Unfortunately, it is difficult to recall an edition so remarkably inferior to the one it intends to supersede. It appears that the same manuscript was consulted, so there is nothing new - or more accurate for that matter - here. The project could have been justified if the editor

[2]A fine beginning in this regard has been made by Muḥammad ibn Ibrāhīm al-Shaybānī in two manuscript catalogues published in the same year: *Majmūʻat Mu'allafāt Shaykh al-Islām Ibn Taymīyah: Al-Makhṭūṭah (al-Aṣlīyah wa-al-Muṣawwarah) al-Maḥfūẓah fī Markaz al-Makhṭūṭāt wa-al-Turāth wa-al-Wathā'iq* [Jordan], Qism Ibn Taymīyah, 1 (Kuwait: Manshūrāt Markaz al-Makhṭūṭāt wa-al-Turāth wa-al-Wathā'iq, 1993); and *Majmūʻat Mu'allafāt Shaykh al-Islām Ibn Taymīyah: Al-Makhṭūṭah al-Maḥfūẓah fī al-Maktabah al-Sulaymānīyah bi-Istānbūl,* Qism Ibn Taymīyah, 3 (Kuwait: Manshūrāt Markaz al-Makhṭūṭāt wa-al-Turāth wa-al-Wathā'iq, 1993).

had taken into account recently discovered or published works (the complete *Bughyat al-Ṭalab* published by S. Zakkār in 1988-89 comes to mind). However, this opportunity was not only not taken up, the notes fail to include many of Dahan′s references. Bizarrely, it appears that al-Manṣūr declined to consult Dahan′s notes even as he adopted his corrections of scribal errors, and all too often Manṣūr claims that names and toponyms that Dahan managed to track down are unmentioned in other sources (compare Dahan, ii: 293n with al-Manṣūr, p. 331n for a particularly egregious example). In short, where this new edition is generally accurate, and possesses the virtue of availability, it induces a *fasād al-zamān* mood in the reader, and a sense of puzzlement that it was published at all.

MAJD AL-AFANDĪ, *al-Ghazal fī al-ʻAṣr al-Mamlūkī al-Awwal* (Damascus: Dār al-Maʻādd, 1994). Pp. 318.

REVIEWED BY THOMAS BAUER, Universität Erlangen

That poetry of the Mamluk period has a flavor different from that of previous periods is due to a shift of importance given to the various genres of Arabic poetry rather than to a specific stylistic change. Of particular importance was the fact that the number of political leaders capable of appreciating the subtleties of sophisticated panegyric odes had decreased conspicuously. One of the few remaining court poets was Ibn Nubātah, who had managed to win one of the last Ayyubid princes in Ḥamāh as patron. Consequently, the laudatory ode addressed to a ruler, in which the basic values of society were to be reformulated in a ceremonial game between prince and poet, was no longer considered to be the most noble and important genre. Instead, those genres gained ground that immediately reflected the ideas and interests of the civilian elite, a group of which the poets themselves were a part. In this context, the panegyric ode survived, but was now mostly directed to scholars (and often composed by scholars) and other members of the *aʻyān*. In its function as a means of communication between members of the civilian elite, *madīḥ* poems were supplemented by consolation, invitation, and congratulation poems and other kinds of occasional poetry with a more informal character. Even a superficial glance into chronicles and biographical dictionaries of scholars reveals the high importance these and other genres of poetry must have played for the shaping of social identity in Mamluk society. Since the *aʻyān* of this period ″constructed their most intimate and socially critical social bonds

through the cultivation of ʿilm,"[1] as Michael Chamberlain has shown in his seminal study, and since poetry was clearly one of the major fields of *ʿilm*,[2] one can only be amazed by the general neglect of poetry by modern scholars.

It is not sufficiently clear what role love poetry played in all this, but there can be no doubt that the *ghazal* was a genre that profited greatly from developments in this period. Again, the *ghazal* poems of the Mamluk period are not very different from those of the ninth and tenth centuries (which, from a Mamluk point of view, must be seen as its "formative period").[3] Nearly all features that the author of the study in review considers to be new in the Mamluk period were already present two or three centuries earlier (a glance in al-Thaʿālibī's *Yatīmat al-Dahr* would have been helpful). However, love poetry starts to turn up in a great variety of writings as, for example, in all sorts of anthologies and biographical dictionaries. I would even dare to assert that, by the tenth or eleventh century, love poetry had taken the place of the most important poetic genre next to *madīḥ*. Nevertheless, the question of its social function has not even been touched upon yet. Majd al-Afandī does not make an exception even if she devotes an entire chapter to the role of women in Mamluk society, stating that this period can be considered the "golden age of the woman" in the history of Islam (p. 12). But since more than half of the love poems composed during this period are homoerotic, this chapter answers less than half of the questions. More interesting would have been a discussion about possible parallels between teacher-pupil relations on one side and lover-beloved relations on the other, or a more general enquiry about the function of different kinds of emotional bonds between men in this society and their literary representation (and construction), which would help to allocate love poetry's proper place. Al-Afandī cannot see in homoerotic poetry anything other than a sad sign of moral decadence, and has not realized that today the great importance of male-male love relations in pre-modern Islam from the ninth century onwards can no longer be considered a problem of morals, but must be treated as a subject of gender studies, an approach unknown to the author. This is very regrettable since poetry as a simultaneously rather informal as well as generally acknowledged and widely practiced means of communication is one of our most important sources for social history and the history of mentalities of the Mamluk period.

[1]Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190-1350* (Cambridge: Cambridge University Press, 1994), 108.

[2]A fact not unnoticed by Chamberlain, ibid., 85f.

[3]Cf. my study, *Liebe und Liebesdichtung in der arabischen Welt des 9. und 10. Jahrhunderts: Eine literatur- und mentalitätsgeschichtliche Studie des arabischen Ġazal* (Wiesbaden: Otto Harrassowitz, 1998).

Majd al-Afandī confines herself to the study of six major poets from the seventh/thirteenth and the first half of the eighth/fourteenth century: (1) Sharaf al-Dīn al-Anṣārī (586-662/1190-1263), who belongs rather to the Ayyubid than to the Mamluk period (as he is not mentioned in the authoritative Western handbooks, al-Afandī has to be thanked for having rescued this interesting poet from oblivion); (2) Shihāb al-Dīn al-Talla'farī (593-675/1197-1277); (3) Ibn al-'Afīf al-Tilimsānī, known as al-Shābb al-Ẓarīf (661-688/1263-1289); (4) Ṣafī al-Dīn al-Ḥillī (677-759/1278-1348); (5) Ibn Nubātah (686-768/1287-1366); and (6) Ibn al-Wardī (689-749/1290-1349). Each of these poets is treated twice; first in a chapter entitled "The Traditional *Ghazal*" (pp. 44-97) and again in a chapter entitled "The Most Important *Ghazal* Poets of the Time" (pp. 170-258), in which al-Afandī discusses the achievements of these poets in a field she calls the "innovative *ghazal*." Western Arabists might be more familiar with the distinction between *nasīb* and *ghazal*. In fact, nothing else is meant by the differentiation between "traditional" and "innovative" *ghazal*. Al-Afandī simply follows the terminology of traditional Arabic literary theory which does not assign different meanings to the terms *nasīb* and *ghazal*. The author is right in dealing with both types of love poetry in two separate chapters, because the differences between "traditional *ghazal*" on the one hand, and the "innovative *ghazal*" on the other, are still relevant in Mamluk times. "Traditional *ghazal*" (that is, *nasīb*) is love poetry continuing an intertextual line going back to the *jāhilī* prelude of the *qaṣīdah* and featuring themes like the deserted campsite. "Innovative *ghazal*" (what Western Arabists are used to calling simply *ghazal*) continues the tradition of independent love poems in the vein of Abū Nuwās, Abū Tammām, and others (therefore not being really "innovative" in the Mamluk era). One must, however, be aware of the fact that love poetry in the "innovative" style, even in its homoerotic variety, can be found very often now as prelude in the panegyric ode, a place mostly reserved for traditional-style *nasīb* in earlier centuries. Due to this rather complicated situation, one misses a discussion of terminology in al-Afandī's book. Her own classification of the "innovative" *ghazal* in three categories, "sensual," "obscene," and "spiritual" (pp. 98ff.), reflects modern ideas of morality but was rather irrelevant for Mamluk authors, many of whose poems combine lines of more than one type.

In principle, there are two different ways of approaching literature. One can either listen to literature as a recipient, asking if the work appeals to one's taste and wondering what the author has to say to "us." Or one can look at works of literature from a more scholarly angle, trying to elucidate the aesthetic principles of the author's period and the role of literature in his cultural environment and asking about the relation between the particular work of art and the communicative field of which it formed part. Al-Afandī's book belongs to the first category. It is mainly dedicated to an evaluation of the six poets mentioned. The criteria according

to which they are judged are not those of the Mamluk period (or those of any other period of pre-modern Islamic culture), but those of Western literature of the nineteenth and the early twentieth centuries. For al-Afandī, the main criterion is to what extent a love-poem ″expresses the true feelings″ of the poet. Of course, no Arab poet prior to the nineteenth century ever cared about this. Even the expression *al-shuʿūr al-ṣādiqah*, ″true feelings,″ used by al-Afandī *ad nauseam*, would have been completely incomprehensible to the authors of these poems, *shuʿūr* designating nothing but sensory impressions. In fact, there is no way to translate the expression ″true feelings″ into Classical Arabic since pre-modern Islam (as well as pre-modern Europe, China, etc.) lacked any such concept. In their eyes, emotions either were there or they were not. Emotions could not be true or false; they could, however, be concealed or expressed in a more or less sincere way. Further, and most important, pre-modern Arab poets (and perhaps poets of any pre-modern culture) were not supposed to express feelings, but rather to evoke emotions. A poem—any poem—was not judged by its potential of ″expressing″ something but by its potential to arouse the interest of the hearer (if, e.g., it was *muṭrib*, evoking *ṭarab*, or not). To evoke emotions, the poet was not supposed to possess the feeling as ″truly″ as possible, but to possess a poetic gift and the technical command of composing poems. Part of this ability was mastery of the rhetorical devices. These devices were seen as one of several means of arousing emotion (*ṭarab*) in the hearer/reader. To arouse *ṭarab* in this way was considered a legitimate and admirable achievement. Not for al-Afandī, who is startled as soon as she comes across a *jinās* or any similar device. For her, Ibn Nubātah, generally considered by his contemporaries to be the most gifted poet of the period, limited himself to pure formalism which makes no impression whatsoever in the heart of the reader, appealing to the brain but not to the soul (see pp. 244f.). Even worse is the case of Ibn al-Wardī, whose poetry is ″devoid of affection and feelings and inconsistent with the poetical spirit″ (p. 247). It is frustrating to see Arab scholars imitating Western conceptions of aesthetics that never existed in the pre-modern Islamic world and that have become fairly outdated today in the West. At the turn of the century, Western culture displayed a considerable contempt for great segments of its own aesthetic tradition, denouncing everything that hinted of pure *ṭarab* (to use the Arabic term) which did not serve any ideological purpose as false and trivial. As this was the time of colonialism, these concepts were immediately exported to the colonialized parts of the world. In the West, however, these concepts have been overcome or, at least, modified in the last decades. Ornament is no longer seen indiscriminately as a ″crime″ (as the architect Adolf Loos put it at the beginning of the century), and coloratura in music is no longer considered to be merely empty formulas that detract from its ″real″ essence, as is demonstrated with sufficient clearness by the Rossini revival in Europe and the United States. It was this new appreciation of

form and rhetoric that has enabled Western scholars to hold a less prejudiced view of classical Arabic poetry, whereas many colleagues from Arab countries still persist in a negative view of their own aesthetic tradition. Al-Afandī´s book gives several examples of applying the standards of the age of colonialism, as can be seen not only from her negative attitude towards pre-modern Arabic aesthetic principles, but also from her moralistic approach to the homoerotic content of the bulk of Arabic Mamluk *ghazal*, and, finally, even from the book´s cover illustration imitating the style of some bad ″orientalist″ extravagances of Ingres.

This approach prevents the author from noticing some of the most original achievements of the Mamluk *ghazal*. To mention only one example, the Mamluk period represents the apogee in the history of the Arabic epigram. This history starts in the ninth century with poets like Ibn al-Rūmī, and the popularity of epigrams rose from century to century. Never, however, were there composed so many and such original epigrams as during the age of the Mamluks. The most important collection of *ghazal* epigrams was assembled in the Mamluk period by Shams al-Dīn al-Nawājī (d. 859/1455). His book is entitled *Marāti‘ al-Ghizlān*,[4] and is still in manuscript. It contains hundreds of epigrams, mostly from the Mamluk period, many of them from the six poets treated by al-Afandī. Al-Afandī, limiting herself to printed publications, does not know it. Had she known it, she would have disliked it anyway, since epigrams, which were supposed to be witty and pointed, are certainly not the right medium to express ″true feelings.″ Blinded by her normative approach, al-Afandī does not even notice the existence of the epigram as a distinct formal model in Mamluk poetry. So, for example, Ibn al-Wardī, al-Afandī´s most hated poet, was first and foremost a composer of epigrams, dozens of which were included in al-Nawājī´s collection. Al-Afandī, however, does not recognize Ibn al-Wardī as a poet of epigrams, but, bewildered by the fact that most of his poems comprise only two lines (as epigrams usually do), ascribes this ″defect″ to ″the weakness of Ibn al-Wardī´s poetical spirit″ (p. 248).

To do justice to al-Afandī´s book, one should mention that it contains a lot of interesting and useful observations. The best chapter deals with the *ghazal* in ″popular″ forms, where al-Afandī talks about *mawāliyā*, *qūbā*, *kān wa-kān* and *zajal* (pp. 151-69). Al-Afandī likes folk poetry (since she finds true feelings expressed in it) and pleads convincingly for a proper appreciation of its elegance and freshness. If only she would have been able to emancipate herself from aesthetic normativism as readily as she does from the linguistic normativism of disparaging poetry that uses dialect forms!

---

[4]Cf. Brockelmann, *GAL* 2:56

Al-Afandī´s study is, as far as I can see, the first monographic study of love poetry in the Mamluk period. Unfortunately, the author is not able to free herself from the prejudices associated with the Mamluk period since the *nahḍah* period (most of them of Western origin). For her, the Mamluk period is a period of decadence, of economic decline, and of deplorable moral standards. Some gifted poets did their best to compose good poetry despite this sorry state of affairs. In her eyes, they did better the more their poetry complied with literary norms created in the modern West and borrowed by the Arab literati a century ago. Needless to say, this approach does not do justice to the rich and exciting tradition of love poetry in the Mamluk period which has to be measured by its own yardstick and which in turn has to be set in relation to its historical and cultural environment. In reviewing several contributions to the history of Mamluk poetry, Th. Emil Homerin came to the conclusion that ˝most Arab negative opinions [towards Mamluk poetry] appear to be the product of a pervasive reading of this poetry in terms of romantic notions of creativity that embrace the simple and emotional as indicative of personal experience, sincerity, and truth. Therefore, condemnation of Mamluk Arabic verse as decadent and superficial says more about modern tastes than it does about this poetry and its roles within Mamluk society.˝[5] This is also the quintessence of what can be said about al-Afandī´s book.

Pp. 160.

REVIEWED BY REUVEN AMITAI, Hebrew University of Jerusalem

From the title I expected this small volume to deal in a comprehensive way with the history and influence of the successive groups of Mongol immigrants—the so-called *wāfidīyah*, *musta'minah*, or *musta'minūnah*—who found refuge in the Mamluk Sultanate in the late thirteenth and early fourteenth centuries. Although the subject has been studied in the short but seminal article by David Ayalon

---

[5] *Mamlūk Studies Review* 1 (1997): 71

almost fifty years ago,[1] and further discussed by him and other scholars within larger studies, there is certainly room for a monograph which presents the evidence in a systematic and detailed way, analyzing it in light of recent advances in Mamluk studies. From the outset, however, I must say that this book is a great disappointment. The actual events themselves are treated in a most cursory manner, and the author′s thesis—that the influence of these Mongol refugees along with the large number of Mamluks of supposedly Mongol origin was a fundamental if not decisive one on the Mamluk Sultanate—is basically wrong.

This erroneous thesis is due to three major problems:

1) The author completely misunderstands the ethnic composition of the early Mamluk army and officer class. He is, of course, correct in asserting that the majority of the early Mamluks and certainly the Baḥrīyah regiment hailed from the Qipchaq Turkish tribes who lived in the steppes of southern Russian. His mistake is to assume that since the Mongols conquered the Qipchaq steppes around 1240, the Qipchaqs and Mongols should be equated. Thus, whenever the sources mention the importance and prominence of both individual Qipchaqi Turks or these Turks as a group within the Mamluk Sultanate, the author takes it for granted that these were Mongols. The equating of Mongols and Qipchaqs, almost invariably unjustified, is found on virtually every page of the book. To the author′s mind, then, the importance of Qipchaq Turks in the early Sultanate means only the predominant position of Mongols, and thus the extensive Mongol influence on the Mamluk state. This, however, is an untenable position. There is no denying that among the continuous batches of young Mamluks from the Golden Horde there were some of Mongol origin, or Mongolized Turks, or even Turkified Mongols, but this is still a far cry from all Qipchaqs—the dominant ethnic group in the early Sultanate—being Mongols or bearers of Mongol influence.[2]

2) The importance of the Mongol *wāfidīyah* has been greatly exaggerated by the author. Without negating the military qualities of these *wāfidī*s, Ayalon has already shown in his article published in 1951 their inferior position in the Mamluk military society, albeit with some notable exceptions in the early fourteenth century. (These, by the way, are barely mentioned by the author). For Baybars′s reign, the decisive period when the supposedly Mongol influence was at its height, Ayalon′s suggestion can be easily strengthened by examining some evidence from Ibn Shaddād al-Ḥalabī, who writes that among some 3,000 Mongol *wāfidīyah* who arrived during the time of Baybars, ″he made some of them *ṭablkhānah* amirs (i.e.,

---

[1]″The Wafidiya in the Mamluk Kingdom,″ *Islamic Culture* 25 (1951): 89-104 (reprinted in David Ayalon, *Studies on the Mamluks of Egypt (1250-1517)* (London, 1977).

[2]This whole matter is dealt in some detail by David Ayalon in ″The Great *Yāsa* of Chingiz Khān: A Re-Examination,″ *Studia Islamica* 36 (1972): 126-28.

amirs of 40), and others amirs of 10 to 20."[3] There is no reason to assume that anything higher than the middling rank of amir of forty was granted even to Geremün, who led the second group of some 1,300 *wāfidīyah*, which arrived in the Sultanate in 661/1263, and whom one contemporary writer called a commander of a *tümen*, i.e., a unit of 10,000 men.[4] As Ayalon pointed out, there is no evidence that any *wāfidī* leader received the rank of amir of one hundred in these first decades of Mamluk rule. There is certainly no textual basis for the author's conclusion (p. 31) that Baybars gave the senior Mongol *wāfidī*s commissions of amir of one hundred. Another indication of the secondary status of even the senior *wāfidīyah* is seen in the allocations of private land granted by Baybars in 663/1265, after the conquest of Arsūf and Caesarea. Only two of the sixty-one officers named were of Mongol *wāfidī* origin (one of them the above-mentioned Geremün).[5] The Mongol refugees—as a group or as individuals—do not appear to have had a particularly prominent position in the early Sultanate, and it is unlikely that they were a source of overwhelming influence on it.

3) The author virtually ignores all that has been written by modern scholars on the *wāfidīyah* and Mongol influence on the Sultanate. Granted, David Ayalon, tastelessly referred to as "the Jewish historian," is mentioned in passing in a note in the author's introduction (p. 2), as is his famous 1951 article, but there is nothing in the book to indicate that it was consulted.[6] Even in that preliminary overview, Ayalon had discerned the limited role and influence of the *wāfidīyah*, Mongol and otherwise, in the Mamluk military society. No mention whatsoever is made of Ayalon's later study of Mongol influence on the Sultanate, "The Great *Yāsa* of Chingiz Khān: A Re-Examination," which appeared in four parts in *Studia Islamica* in the early 1970s,[7] and was later reprinted in his third Variorum volume, *Outsiders in the Lands of Islam* (London, 1988). Ayalon there dealt in a most cogent way with the contention that there was a decisive Mongol influence,

[3]Ibn Shaddād al-Ḥalabī, *Ta'rīkh al-Malik al-Ẓāhir*, ed. Aḥmad Ḥuṭayṭ (Wiesbaden, 1983), 337. This passage is cited with some changes by Ibn Taghrībirdī, *al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1930-56), 7:190. Later, Nawwār cites this latter passage (p. 59), but only to give the total number of Mongol *wāfidīyah*, and conveniently leaves out the information regarding the low ranks granted to their chiefs.

[6]L. A. Mayer, Ayalon's teacher and professor of Islamic archeology at the Hebrew University in Jerusalem, is misleadingly described (p. 80), as "the German historian."

[7]See vol. 33 (1991): 99-140; 34 (1971): 151-80; 36 (1972): 113-58; 38 (1973), 107-56.

particularly of the *Yasa* (the body of Mongol law attributed to Chinggis Khan), on the Mamluk military society in Egypt and Syria, and showed that this influence was much more limited than had been previously thought. His most decisive proof was the demonstration that the famous evidence by al-Maqrīzī in his *Khiṭaṭ* on the adoption of the *Yasa* by the Mamluks was a deliberate falsification. In addition, Ayalon showed that Ibn Taghrībirdī's well-known passage on Baybars's adoption of Mongol institutions also deserved little credence. Ayalon, it should be emphasized, did not deny any Mongol influence, but showed that it was restricted in scope. It is, of course, Nawwār's right to adopt a different position towards the credibility of these passages (and thus draw dissimilar conclusions on Mongol influence), but the normal approach would be to discuss Ayalon's work, try to disprove it, and demonstrate the veracity of this evidence, not just to assume so in the face of what has become the accepted position among historians of the early Sultanate. It is worth mentioning that Nawwār only fleetingly cites A. N. Poliak, and then only through the work of another modern Arab historian (p. 80 in the note), in spite of the fact that Poliak's work (preceding that of Ayalon) attempted to show the important role of Mongol influence on the early Sultanate.[8]

Throughout the book I was struck by the frequency of unsupported statements, let alone those which were wrong. I will mention just a few. First, it is stated that Baybars himself was raised according to the *Yasa* (p. 61). This, however, was unlikely: Baybars was born in the 1220s in the steppe area north of the Black Sea. Around 1241-42, his tribe fled to Anatolia, where he was taken into slavery. Since the Mongols only gained control over this area in 1238, one wonders how formative the *Yasa* was on this young Qipchaqi Turk. Second, Quṭuz is called a Mongol Qipchaq (p. 23).[9] This is one of countless examples of the arbitrary, and unjustified, juxtaposition of these two ethnic terms. It is interesting to note that some sources report that Quṭuz himself claimed he was descended from the Khwārazm-Shāhs;[10] any Mongolness that Quṭuz was supposed to have had does not seem to have left much of an imprint on his own sense of identity. Third, the author states that the Mamluks did not forget the important role played by the group of Mongols which Berke Khan sent *before* the battle of ʻAyn Jālūt at that battle (p. 24). I do not have a clue as to the possible basis for such an assumption. Finally, it is suggested that the letter sent by the Īlkhān Tegüder Aḥmad was sent in Mongolian, and only upon reaching the Sultanate was it translated into Arabic (pp. 137, 139). This, it is

---

[8]On p. 117, the author claims that the Mamluk state was a sort of branch of the Golden Horde, an assertion eerily reminiscent of the argument found in A. N. Poliak, "Le caractère colonial de l'État mameluk dans ses rapports avec la Horde d'or," *Revue des études islamiques* 9 (1935): 213-48.

[9]On p. 95, Quṭuz is mistakenly called the *khushdāsh* of Baybars.

[10]Robert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250-1382* (London, 1986), 23.

suggested, shows how widespread was the knowledge of the Mongolian language in the Mamluk Sultanate. In fact there is nothing to indicate that this letter was sent in anything but Arabic. When the Mongols did dispatch a letter in Mongolian to the Mamluk court, this was noted by the sources.[11] Further proof of this letter originally being written in Arabic is that identical texts of its contents are found in both Mamluk sources and the pro-Mongol Persian Waṣṣāf. It seems likely that the latter saw a copy of the Arabic letter from before it was sent, rather then a hypothetical Mamluk translation into Arabic from a supposed Mongolian original that found its way back to the Ilkhanate.

To be fair, the book has some value. For example, there is a thoughtful discussion of some of the reasons behind the large-scale trade in *mamlūk*s from the Golden Horde to the Sultanate (pp. 20-21), and the section on the influence of Mongol sartorial practices on the Mamluks is interesting (pp. 71-79). But there is no getting around the unconvincing way in which the book´s main thesis is presented. If one ignores previous scholarship, exaggerates in a most excessive way the role of the *wāfidīyah* in the Sultanate, and equates Mongols and Qipchaq Turks, let alone everything Mongol and Turkish, then one is surely bound to find decisive Mongol influence on the Mamluk state in the military, political, cultural, and even linguistic realms. I, for one, was not convinced.

MUḤAMMAD AL-ḤABĪB AL-HĪLAH, *al-Tārīkh wa-al-Mu'arrikhūn bi-Makkah min al-Qarn al-Thālith al-Hijrī ilá al-Qarn al-Thālithah 'Asharah: Jam' wa-'Arḍ wa-Ta'rīf* (London: Al-Furqān Islamic Heritage Foundation, 1994). Pp. 518.

REVIEWED BY FRÉDÉRIC BAUDEN, Université de Liège

The work at hand belongs to the type of study that flourished mainly after the publication of the first volumes of the *Geschichte der arabischen Litteratur* by Carl Brockelmann—that is, the bio-bibliographical analysis of the historiography of a certain area in the Muslim world at a particular time. Similar works were published for Andalusia by Francisco Pons Boigues,[1] for Morocco by Évariste

---

[11]Waṣṣāf, *Ta'rīkh-i Waṣṣāf* (*Tajziyat al-Amṣār wa-Tazjiyat al-A'ṣār*) (Bombay, 1269 H./1852-53; reprt. Tehran, 1338/1959-60), 113-18.

Levi-Provençal,[2] for Tunisia by Ahmed Abdesselem,[3] for Yemen by Ayman Fu'ād Sayyid[4] and, finally, for al-Shām by Ṣalāḥ al-Dīn al-Munajjid.[5] The first aim of these works has always been to give new impetus to historical research by offering researchers compendiums listing the available sources in published or manuscript form for the defined area.

As far as the Hijaz is concerned, and more particularly Mecca, one can only agree with the author's statement (p. 10) that no wide-ranging study on the historiographical school of Mecca has been completed until now.[6] One may even go further, stressing the fact that scholars specializing in this field have had to wait until recent years for the appearance of a surge of text editions dealing with the history of Mecca.

Indeed, if we glance at the record, we notice that, with the exception of some worthless attempts, the first scholar whose attention was drawn to this field was Heinrich Ferdinand Wüstenfeld, who devoted several volumes to the edition of extracts of basic texts such as *Akhbār Makkah* by al-Azraqī (d. 244/858), *Ta'rīkh Makkah* by al-Fākihī (ca. 272/885), and *Shifā' al-Gharām* by al-Fāsī (d. 832/1429).[7] This first attempt failed to generate any interest among Orientalists.

In the Middle East, we have had to await the second half of this century to witness the appearance of the first editions of historical texts dealing with the history of the Holy City: for the complete edition of *Shifā' al-Gharām* by al-Fāsī in 1956 and for the issue of the first volume of *al-'Iqd al-Thamīn* by the same author in 1959 (the last volume was issued in 1969). These editions may be considered the first of a stream of editions of historical texts about Mecca, several of which were edited as dissertations and, unfortunately, remain unpublished.[8]

Muḥammad ibn Ṣāliḥ al-Ṭāsān (University of Edinburgh, 1979); Muḥammad al-Ṭabarī's "Itḥāf Fuḍalā' al-Zamān" (d. 1173/1760), ed. Nāṣir al-Barakātī (University of St. Andrews, 1972).

The last to be published was probably *Itḥāf al-Wará* by al-Najm Ibn Fahd (d. 885/1480), edited between 1983 and 1989.

Anyone wishing to publish an Arabic text knows that the inevitable starting point must be Brockelmann′s *GAL* and its partial supplement, that is, Sezgin′s *GAS.* Nevertheless, since their issue, several catalogues of manuscripts have appeared, supplementing these two essential works. In order to avoid neglecting any manuscript, a thorough survey of the sources requires the investigation of catalogues. Al-Hīlah′s work happily completes both these sources for Mecca.

By offering researchers a study that includes most of the historians who were born or resided in Mecca, al-Hīlah facilitates forthcoming research in this area and, in particular, serves as a general survey which may help to define a Meccan historical school.

The period in question (from the third to the tenth century A.H.) might appear too broad for the study to be complete. However, the author does not pretend to be exhaustive (see p. 11, note 1) by invoking the fact that numerous texts which may include supplementary information remain unpublished. He invites readers to inform him of missing information; this may appear to some as a weakness.

The reader will perhaps wonder why no explanation is given in the introduction justifying the choice of the period in question. Why did he not take into account the authors preceding the third century?[9] Perhaps because most of the works dating to this time have not been preserved?

In his survey, al-Hīlah has been able to identify 187 Meccan historians whom he orders chronologically according to their death dates. To perform this selection, he considers as Meccan all those who were born in the Holy City, or who went there in order to live permanently, so that they have been described by historians as ″Makkī.″ For this, he mainly relies on *al-ʻIqd al-Thamīn* by al-Fāsī, *Itḥāf al-Wará* by al-Najm Ibn Fahd and *al-Mukhtaṣar min Kitāb Nashr al-Nūr wa-al-Zahr fī Tarājim Afāḍil Makkah min al-Qarn al-ʻĀshir ilá al-Qarn al-Rābiʻah ʻAsharah* by ʻAbd Allāh ibn Aḥmad Mirdād (d. 1343/1954). However, this method produces some inconsistencies. One will be astonished to find a record of ʻUmar ibn Aḥmad al-Shammāʻ (d. 936/1529) from Aleppo, who resided in Mecca in 916 and in 927, but nothing about Ibn Baṭṭūṭah, who resided at Mecca from 727 to 730 and whose travel account is an excellent source for the history of the Holy City at that time. Such instances are common, notably for Egyptian historians (e.g., al-Maqrīzī).

The total number of works for which the author has found any trace amounts to 846. Yet al-Hīlah notes that only ninety-eight titles are available in printed editions, which is not a reasonable sample for such a large number of works. As

---

[9]It seems that *Faḍā'il Makkah* by al-Ḥumaydī (d. 219/834) has escaped the author′s attention.

for the remaining titles, only 245, according to al-Hīlah, are still extant in manuscript form. The terrible conclusion is that 505 titles have not survived.

Al-Hīlah follows a scheme that he repeats for each author: he starts by giving a short biography of the author, mentioning also his most important non-historical works. This biography is followed by the chief bibliographical references. Then he lists the author's historical works alphabetically. Al-Hīlah takes into account not only those works ordinarily considered historical, but also texts from which historical information may be gleaned. These include law texts by *fuqahā'* (*fatwás* and works dealing with pilgrimage ritual) which remain, in al-Hīlah's eyes, the best sources on culture.

For each work, al-Hīlah gives, insofar as manuscripts have been preserved, the contents and sometimes even the table of contents. Al-Hīlah quotes those manuscripts for which he has found a reference in the many catalogues he has consulted, by adding the name of the library, the shelf mark and, if possible, the date of copying. An important place is also reserved for quotations of the works by later authors, and most of the time he manages to give the pages where these are to be found. If the work has been published, he mentions the various editions, and expresses an opinion on the scientific value of these and their historical importance. All of this will surely delight researchers.

Because some Meccan families have been rendered illustrious by several famous representatives, the author strives to devote to them several lines and to establish chronologically a list of the representatives of a given family (Banū Fahd, pp. 99-108; Banū 'Allān, pp. 311-12; Banū al-'Ujaymī, pp. 367-70; Banū Dahhān, p. 397). But al-Hīlah does not explain his criteria for doing so, and some families deserving of similar treatment are ignored. We particularly note the Banū al-Ṭabarī[10] (of whom seven representatives are mentioned in al-Hīlah's book, however), the Banū Ẓahīrah, the Banū Nuwayrī, and the Banū al-Qasṭallānī.

The author begins his work (p. 15) with the famous al-Azraqī (d. 244/858) and ends it (p. 423) with Abū Bakr al-Zur'ah al-Makkī (fl. 13th/19th c.). The book also includes a bibliography, divided into two parts, listing manuscript (p. 427) and printed sources (p. 440), as well as valuable indexes of authors' names

---

[10]For a genealogical tree of this family, from the end of the 12th c. up to the end of the 15th c., see Frédéric Bauden, *Les Ṭabariyya: Histoire d'une importante famille de la Mecque (fin XII^e-fin XV^e s.)*, in *Egypt and Syria in the Fatimid, Ayyubid, and Mamluk Eras*, Proceedings of the 1st, 2nd and 3rd International Colloquiums organized at the Katholieke Universiteit Leuven in May 1992, 1993, and 1994, Orientalia Lovaniensia Analecta, vol. 73, ed. Urbain Vermeulen and Daniel De Smet (Leuven, 1995), 253-66. The author of this review is currently preparing a study of the whole Ṭabarī family in Mecca from the end of the 12th c. up to the end of the 18th c., which will contain a complete genealogical tree and will study the family's relationships with other Meccan families.

(p. 460) and titles of quoted works (p. 473). However, no reference is made in the bibliography to the manuscript catalogues consulted by the author. The table of contents is at the end. A few pictures are scattered within the text of samples of historians′ writings mentioned by al-Hīlah.

The main value of this work is, no doubt, the mention made by al-Hīlah of the manuscripts held in Mecca that represent a significant percentage of those that have been preserved. As a matter of fact, he was able to study these manuscripts because he is Professor of History at the Jāmiʻat Umm al-Qurá in Mecca and is the author of a catalogue of historical manuscripts kept in one of the libraries of the Ḥaram.[11] As for the manuscripts preserved in other parts of the world, one must be more cautious. There are just a few quotations of Brockelmann′s *GAL* and Sezgin′s *GAS*, although the author had at his disposal the Arabic versions of both. Indeed, the author does not seem to have a fluent knowledge of European languages, except perhaps English. This is unfortunately apparent in the European names and titles: Wustenfeld instead of Wüstenfeld (p. 17, and *passim*), Ahlward instead of Ahlwardt (p. 25), Tubengen instead of Tübingen (p. 34), Hands Chriften (read Handschriften) by Edwald Warner (read Ewald Wagner) (p. 63), Mignana instead of Mingana (p. 69), and so on. These mistakes are minor compared to other more serious ones. He constantly refers to the Berlin catalogue of Arabic manuscripts, compiled by Ahlwardt, but most of these references are false, and this is due to his misunderstanding of the German language. He does not seem to have understood that Ahlwardt was citing, at the end of each section, a list of titles belonging to the same subject, relying on the information in Ḥājjī Khalīfah′s *Kashf al-Ẓunūn.* Al-Hīlah mistakenly understood these titles to be preserved in Berlin. Thus the following references are erroneous and must be corrected: p. 17 (MS Berlin 9751 does not contain *Akhbār Makkah* by al-Azraqī, but rather *Zubdat al-Aʻmāl* by al-Isfarāʼinī [see p. 75]), pp. 41, 48, 94, 327 (Berlin 6073 is not a MS), pp. 55, 58 (Berlin 5536/10 is not a MS), p. 118 (MS Berlin 9873 is not dated 1850, but ca. 900/1494), p. 146 (Berlin 9633 is not a MS), p. 165 (Berlin 9877 refers to two copies, and not just one).

In the same way, the author devotes, in reference to no. 141, a record to a certain Ibrāhīm ibn Aḥmad al-Makkī, about whom he says that he was alive in 1117/1705. According to al-Hīlah, this individual is the author of *Majallat al-Ḥunafāʼ* for which he refers to MS Berlin 9658. He acknowledges that he has found no information relating to the life of this author, and he mentions also that he relies only on Ahlwardt. If we go back to Ahlwardt′s work (vol. 9, p. 202), however, we ascertain that this is not the case. Ahlwardt simply says that the

[11] *Handlist of Manuscripts in the Library of Makkah al-Mukarramah: History Section* (London, 1994).

author´s name is missing in the manuscript and adds: ˝Auf der Innenseite des Vorderdeckels steht als solcher (nebst Angabe des Titels) in ganz neuer Schrift Ibrāhīm ibn Aḥmad al-Makkī. Diese Angabe geht aber auf den Abschreiber: der ungenannte Verfasser ist jüngerer Zeitgenosse des Majd al-dīn Abū al-Ṭāhir al-Fīrūzābādī, [. . .], lebt also um 850/1446.˝ Thus, al-Hīlah has gone astray and regarded this copyist, who is unknown, as the author. It may be added that there is another copy of this work in Paris (MS Ar. 1571).

Because this reviewer has been working on a Meccan *faqīh*, al-Muḥibb al-Ṭabarī,[12] who is mentioned by al-Hīlah (no. 24), an assessment of the accuracy of information gathered by al-Hīlah can readily be made. Al-Hīlah mentions (p. 54) that an *ijāzah* of al-Muḥibb al-Ṭabarī, dated 640 A.H., is preserved in MS Leiden Or. 2544. This is absolutely not true: a *samā‘*, dated 604 A.H. (note that al-Muḥibb al-Ṭabarī was born in 615 A.H.), is found on fol. 55b, but nothing else is indicated. However, an *ijāzah* of al-Muḥibb al-Ṭabarī is held in the Maktabat al-Asad in Damascus, MS 3857 (on fol. 71a), and is dated 685 A.H. Al-Hīlah specifies that *Istiqṣā’ al-Bayān* is MS Berlin 5536, being thus a *unicum*, although Ahlwardt just mentions the title, as noted earlier in this review. If al-Hīlah sticks to the rule he has defined in his introduction, and since he mentions two works by al-Muḥibb al-Ṭabarī consisting of *fatwá*s, we wonder why there is no mention of his *Sharḥ al-Tanbīh*, which has not been preserved but which seems to have contained important historical information about Mecca since al-Fāsī quoted it on numerous occasions in his *Shifā’ al-Gharām*, as did al-Samhūdī in his *Wafā’ al-Wafā’*. On the other hand, we do not understand why he mentions his *Kitāb al-Ghinā’ wa-Taḥrīmuhu* (?) for which he says that a *unicum* exists in Berlin (no. 5536/11). Once again, this is erroneous. Comparing our census of the manuscripts preserved for each of al-Muḥibb al-Ṭabarī´s works with al-Hīlah´s, we are struck by the difference. For *Khulāṣat Sīrat Sayyid al-Bashar* (al-Hīlah´s no. 4, p. 55), four manuscripts are listed as opposed to the twenty-nine we have found. *Khayr al-Qirá fī Ziyārat Umm al-Qurá* (no. 5, p. 56) is identical with no. 9 (p. 57), while the Dār al-Kutub al-Miṣrīyah manuscript is not dated to 781 A.H., but was copied before 881 A.H. (three editions were published, all of which are unknown to al-Hīlah). For *Dhakhā’ir al-‘Uqbá fī Manāqib Dhawī al-Qurbá* (no. 6, p. 56), four manuscripts are listed as opposed to twenty-seven that we have found; for *al-Riyāḍ al-Naḍrah*

[12]Frédéric Bauden, *Les trésors de la postérité ou les fastes des proches parents du Prophète (Kitāb Ḏaḫā’ir al-‘Uḳbā fī Manāḳib Ḏawī al-Ḳurbā) de Muḥibb al-Dīn Aḥmad ibn ‘Abd Allāh ibn Muḥammad al-Ṭabarī al-Makkī (ob. 694/1295): Édition critique accompagnée d´une traduction annotée et d´une étude sur la vie et l´œuvre de l´auteur* (Université de Liège, 1996). The Arabic text and the French translation will probably be published by the IFEAD in Damascus. See also on this author, Frédéric Bauden, ˝al-Ṭabarī, Aḥmad ibn ‘Abd Allāh,˝ *The Encyclopaedia of Islam*, 2nd ed., vol. 10.

fī Faḍā'il al-'Asharah (no. 7, p. 56), eleven manuscripts are listed as opposed to forty; for *al-Simṭ al-Thamīn* (no. 8, p. 57), two manuscripts are listed as opposed to fourteen; al-Muḥibb al-Ṭabarī's *'Awāṭif al-Nuṣrah* (no. 11, p. 57), is preserved in a *unicum* (Princeton, 2275, dated 785 A. H.) that al-Hīlah does not mention. Finally, we do not understand what al-Hīlah's aim is when he limits himself to mentioning just a few manuscripts, as these are not even the most important ones, especially in terms of date of copying. Because a comparison of this material with ours produced this result, we actually fear that this might be only the tip of the iceberg. And our fear also seems to be confirmed by the following corrections and additions which may be added to the preceding remarks:

p. 20: *Kitāb Mizāj al-Nabī* (read *Mizāḥ*, cf. *GAS* I, p. 318).

p. 20: *al-Muwaffaqīyāt* consisting of nineteen parts, but only parts fifteen to nineteen are preserved in two manuscripts: the one quoted by al-Hīlah and another one in Gotha (Ar. 76, cf. *GAS* I, p. 318). The following edition of this text, based on both manuscripts, seems to have escaped al-Hīlah's attention: *al-Akhbār al-Muwaffaqīyāt*, ed. S. Makkī al-'Ānī, Dirāsat Dīwān al-Awqāf, Iḥyā' al-Turāth al-Islāmī, no. 7 (Baghdad: Maktabat al-'Ānī, [1392/1972]), 719 pp.; reprint (Qom: Manshūrāt al-Sharīf al-Raḍī, 1996).

p. 25: There is another copy of al-'Uqaylī's *Kitāb al-Ḍu'afā' al-Kabīr*, which is preserved in the Chester Beatty Library, no. 3783 (mentioned in *GAS*).

p. 57: There are three editions of al-Muḥibb al-Ṭabarī's *Ṣafwat al-Qirá*.[13]

p. 57 : al-Muḥibb al-Ṭabarī's *'Awāṭif al-Nuṣrah* is preserved in a *unicum* (Princeton University Library, MS 2275).

p. 59: al-Jamāl al-Ṭabarī's *al-Tashwīq ilá al-Bayt al-'Atīq* has been edited.[14]

p. 153: Richard Mortel[15] refers to another manuscript of al-Najm Ibn Fahd's *al-Durr al-Kamīn* (King Saud University Libraries, Riyadh, MS *fā'* 113/2).

p. 188: al-Hīlah mentions no manuscript for al-Shammā''s *al-Durar al-Multaqaṭah* although we found a copy of it in the Chester Beatty Library (MS 3400), where it is entitled *al-Durrah al-Nayyirah min al-Riyāḍ al-'Asharah*.

---

[13]Ed. Riḍwān Muḥammad Riḍwān (Cairo, 1354/1935), under the title *Ḥijjat al-Muṣṭafá*. The second was also published under the title, *Ḥijjat al-Muṣṭafá* (Cairo, [1981?]). The third was published by Dār al-Ḥadīth in Cairo in 1988, under the same title as the first two (pp. 37-107), together with Ibn Ḥajar al-'Asqalānī's *Quwwat al-Ḥajjāj li-'Umūm Maghfirat al-Ḥujjāj* (pp. 7-36), and Ibn Qayyim al-Jawzīyah's *Awhām al-'Ulamā' fī Ḥijjat al-Nabī* (pp. 109-121).

[14]Ed. 'Abd al-Sattār Abū Ghuddah, under the title *al-Tashwīq ilá Ḥajj al-Bayt al-'Atīq* (Cairo, 1413/1993).

[15]"Madrasas in Mecca during the Medieval Period: A Descriptive Study Based on Literary Sources," *Bulletin of the School of Oriental and African Studies* 60 (1997): 246, note 95.

p. 201: Jār Allāh Ibn Fahd′s *Taḥqīq al-Ṣafā' fī Tarājim Banī al-Wafā'* is preserved in a *unicum* in the Chester Beatty Library (MS 4868) and it was transcribed from the author′s autograph.
p. 233: Al-Hīlah quotes Sylvestre de Sacy′s edition and French translation of al-Jazīrī′s *'Umdat al-Ṣafwah fī Ḥill al-Qahwah*, but not Antoine Galland′s nonliteral translation.[16]
p. 257: There are two other copies (Princeton University Library, MSS 2883 and 4713) of *Tuḥfat al-Ṭālib bi-Ma'rifat man Yantasibu ilá 'Abd Allāh wa-Abī Ṭālib*.
p. 260: another copy of *al-Risālah al-Maqāmīyah fī Faḍl al-Maqām wa-al-Bayt al-Ḥarām* is to be found in the Dār al-Kutub al-Miṣrīyah, MS 8304 *ḥā'*.[17]
p. 299: The number of pages (352) given for the 1316 A.H. edition of *'Uyūn al-Masā'il min A'yān al-Rasā'il* should read 252.
p. 300: The information given for 'Abd al-Qādir al-Ṭabarī′s *Kashf al-Niqāb 'an Ansāb al-Arba'ah al-Aqṭāb* must be supplemented by the following: This work was indeed published in 1309 A.H., but within *Majmū' Jalīl wa-Mu'allaf 'Adīm: al-Mathīl Mushtamil 'alá Khams Rasā'il 'Āliyat al-Isnād 'Aẓīmat al-Imdād* (Cairo: Maṭba'at al-'Āmirah al-Sharafīyah, 1309), 119 pp.
p. 314: It is said that Muḥammad 'Alī ibn Muḥammad 'Allān used to copy manuscripts to earn his living. Evidence of this information may be found in the Maktabat al-Asad, Damascus, MS 4808, which is a copy of al-Muḥibb al-Ṭabarī′s *Dhakhā'ir al-'Uqbá*, where it is to be found on fol. 1: *min kutub al-faqīr ilá Allāh subḥānahu wa-ta'ālá Muḥammad 'Alī ibn Muḥammad 'Allān al-Ṣiddīqī al-Shāfi'ī khādim al-ḥadīth al-sharīf bi-al-ḥaram al-makkī*.
p. 385: there are two more copies in the Leiden University Library of al-Sinjārī′s *Manā'iḥ al-Karam* (MSS 7018-19).[18]

It must be clear that these additions and corrections are those detected upon the first reading of this book. There is no doubt that further readings might reveal additional shortcomings.

To conclude, al-Hīlah′s book remains a good, first step towards the history and the historiography of Mecca that will be useful to students and scholars specializing in this field, especially as a compilation of the manuscripts kept in Mecca and Medina and the contents of published editions. Be that as it may, it must be kept in mind that nobody should rely only on this book in light of the inconsistencies and deficiencies revealed in this review.

AḤMAD IBN ʻALĪ AL-MAQRĪZĪ, *Durar al-ʻUqūd al-Farīdah fī Tarājim al-Aʻyān al-Mufīdah: Qiṭʻah minhu*. Edited by ʻAdnān Darwīsh and Muḥammad al-Miṣrī. (Damascus: Wizārat al-Thaqāfah, 1995). Two volumes.

REVIEWED BY DONALD P. LITTLE, McGill University

As Claude Cahen, Li Guo, and I have had occasion to note before, publication of Mamluk texts and historiographical studies has been erratic, with preference often shown to derivative over contemporary sources and with instances of plagiarism and incompetence. The work here under review provides still another example of scholarly caprice.

As is well known, al-Maqrīzī supplemented his famous annalistic and topographical works on Islamic Egypt with biographical dictionaries; indeed, he undertook to do so with at least two such projects. His *Kitāb al-Muqaffá al-Kabīr* was to consist of biographies of famous men from many professions who had flourished in Egypt since the Muslim conquest. According to Ibn Taghrībirdī, these would have filled more than eighty volumes, or sixteen according to al-Sakhāwī.[1] Surviving portions have been edited and published recently in Beirut.[2] A more specialized work, *Durar al-ʻUqūd*, prepared in the tradition of al-Ṣafadī's *Aʻyān al-ʻAṣr*, was devoted to biographies of al-Maqrīzī's eminent contemporaries. The rationale for such a book the author set forth rhetorically in the preface:

> When I was still close to the age of fifty I had lost most of my friends and intimates. My grief was intense at their loss, and my life went sour thereafter. So I consoled myself with meeting them in remembrance and compensated for not seeing them by listening to reports about them, dictating my information about them in this book, taking pleasure from commemorating them. . . . Then I saw fit to compile the reports about those whom I had encountered, whether in absence or in person, Egyptian or foreign, recording news of kings, amirs, notable scribes and viziers, transmitters of tradition and legists, scholars and poets, both famous or renowned,

[1]Ayman Fu'ād Sayyid, ed., *Le manuscrit autographe d'al-Mawā'iẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (London, 1995), 50.

[2]Edited by Muḥammad al-Yaʻlāwī, 8 vols. (Beirut, 1991).

> whether men of worldly affairs or seekers of the next world, beginning with the year 760.[3]

According to Ayman Fu'ād Sayyid, *Durar al-'Uqūd* contained about 666 biographies,[4] of which the present edition, a fragment, contains 382, all of which cover a person whose name begins either with *alif* or *'ayn*. Oddly enough, although most of the biographees qualify as al-Maqrīzī's contemporaries, a few do not. Perhaps these were intended for *al-Muqaffá*?

Be that as it may, this edition by Darwīsh and al-Miṣrī is based on a *musawwadah*, a rough draft, in the author's hand, with notes and additions from others. Accordingly, many of the biographies are brief and incomplete, with blanks to have been filled in later. But some are fairly long, complete with quotations of poetry. But what is unique about this edition is the fact that the editors do not reveal the identity of the manuscript they used and refer to it only as "the manuscript which we have relied upon in 177 folios."[5] With a truly bizarre twist, they present a cropped facsimile of the title page which eliminates the bottom of the page containing the identifying seal of ownership. This despite the fact that there are known to be only two surviving copies, one in the Gotha collection in Germany, and the second, an apparently complete, privately owned copy in Mosul, which its owner has so far declined to publish or share.[6] Darwīsh and al-Miṣrī were obviously unaware of the latter copy since they express the hope of finding a complete copy some day.[7] Stranger still, three hundred selected biographies were edited and published in Beirut in 1992 with the title *al-Maqrīzī wa-Kitābuhu Durar al-'Uqūd al-Farīdah fī Tarājim al-A'yān al-Mufīdah*, edited by Muḥammad Kamāl al-Dīn 'Izz al-Dīn 'Alī. It is not for me to speculate as to why Darwīsh and al-Miṣrī saw fit to suppress identification of the Gotha manuscript and neglected to cite the Beirut edition; nor do I know the basis of 'Alī's selection of the biographies he included or omitted since he does not himself state this criterion. Suffice it to say that we now have two independent editions of a surviving autograph fragment of *Durar al-'Uqūd*, one apparently complete, the other obviously not. Of the two, the Damascus edition is clearly the more valuable, especially since the editors have provided copious vowels to the text as well as detailed footnotes. On the other hand, 'Alī has written a valuable introduction describing al-Maqrīzī's methodology as a biographer, whereas the Syrian editors were satisfied for the most part with

repeating banalities about Arabic biographical literature in general. Neither edition contains a bibliography. As to the value of the source itself for historians, it would seem from the footnotes in both editions that biographies of practically all the subjects are available in other sources, some of which show signs of borrowing from *Durar al-'Uqūd*, so that with the exception of unique biographies, if such there be, the main value of *Durar al-'Uqūd* may turn out to be historiographical.

Strange are the ways of Mamlukologists.

DORIS BEHRENS-ABOUSEIF, *Mamluk and Post-Mamluk Metal Lamps* (Cairo: Institut français d'archéologie orientale, 1995). Pp. 107.

REVIEWED BY NUHA N. N. KHOURY, University of California at Santa Barbara

Objects of illumination, lighting devices, or, simply, lamps perform the same function today as they always have: to "magically" transform a patch of darkness into light. Beyond their basic, necessary function, all lamps—from the most humble portable earthenware oil-and-wick holders to the translucent "cloth" and paper lanterns such as appear in Timurid miniatures, to the plain and enameled glass, glazed ceramic and more labor intensive metal ones—are compound devices in which a light-giving substance is combined with a "holder" and/or body that is capable of becoming a decorative object. Lamps are eminently useful objects for the archeologist and the cultural historian; they provide information on architectural and urban activities, on technologies, materials, and decorative techniques, and, in the case of Islamic ones especially, often also elicit discussions of religious and philosophical views pertaining to light and its metaphorical or allegorical applications.

The Mamluks—or, at least, a particular sector of Mamluk society—favored two general types of suspended lamps: the well-known enameled glass ones that are occasionally inscribed with the Verse of Light, and the punched, incised, inlaid, and otherwise decorated metal lamps often designed to hold a number of "lights," usually small glass oil containers that are sometimes placed in special compartments within or around the metal body. Although some recent studies have expanded our knowledge of these often beautiful objects, there is still much information to be extracted from them, and, in fact, some collections are still incompletely known. A case in point is the important collection of lamps that forms the core of the study under review, at the Museum of Islamic Art in Cairo (formerly the Museum of Arab Art), which has remained virtually untouched

since Gaston Wiet catalogued some samples in his *Objets en cuivre* over sixty years ago. Now, Doris Behrens-Abouseif revisits this collection to study the formal rather than the purely epigraphic aspects of metal lamps produced in Mamluk, Ottoman, and later times (covering the span from the thirteenth through the nineteenth centuries, and including the so-called Mamluk Revival lamps). In the process, she adds a number of unknown or previously unpublished examples, many of which post-date the "classical" moment that has dominated studies of the arts of Syria and Egypt. Her text at once communicates the excitement of discovery, rehabilitates the often ignored later examples, and positions lamps within a general functional framework on the basis of a variety of historical and descriptive accounts.

The book is divided into an introduction discussing lamps and their uses, followed by five succinct but richly illustrated chapters, and a short conclusion on "stylistic evolution." Of the five chapters that form the body of the book, four are devoted to specific Mamluk types: the *tannūr* ("a monumental type of bronze polycandelon"), "vase-shaped lamps" (considered the classic Islamic type in as much as they have counterparts at other times, elsewhere, and in different media, primarily glass), the *thurayyā* ("polycandelons with spherical shade"), and "pyramid lamps." The author analyzes these lamps from the point of view of design, manufacture, and decoration, in order to create a catalogue and provide a typology of Mamluk metal lamps. Although some of the attributions of anonymous lamps will no doubt be refined in future, the additional samples offered here, ranging from a lamp at the Muʿallaqah church in Old Cairo to ones at the Egyptian Ethnographic Museum, are valuable additions to the available repertoire of Mamluk objects.

The stylistic analysis that appears in these chapters is carried forward into the fifth one, which combines different formal types from post-Mamluk times. The arrangement allows the author to view the objects within a larger comparative and chronological framework that aids in the dating and attribution of the anonymous examples on the one hand, and leads to a discussion of the changes in decorative techniques, tastes, and market demands on the other. Thus Behrens-Abouseif is able to point to a continuity—even renewed creativity—in the production and design of metal lamps after Cairo became a provincial capital under the Ottomans; proof of the persistence of local "styles" based on a Mamluk paradigm. The durability of local traditions in the manufacture and decoration of metal lamps apparently justifies the "post-Mamluk" designation, though it remains unclear why this was the case with lamps and not with other sorts of metal objects, which were more open to developments in Istanbul, or why the "vase-shaped" type disappeared from Cairene markets but not in Istanbul. The extent to which still later post-Mamluk metal (as opposed to glass) lamps satisfied primarily antiquarian demands that transformed them into "*objets d'art*," whether for local consumption or for an

export market, is also problematic. As Behrens-Abouseif's inclusion of these later objects in her catalogue demonstrates, it may be time to reevaluate the evidence arising from the nineteenth and early twentieth century, whose scholars and collectors may have been more captivated by Mamluk products than by their later counterparts.

If the later lamps raise general questions of fashion, manufacture, and market demand, the earlier ones are also implicated in similar problems. The break-down into four formal types, for example, has yet to inform us whether any (and, if so, which) of these types was reserved for domestic uses as opposed to use in mosques or the various religious complexes patronized by the Mamluk elites. The correlation (or lack thereof) between formal types and their functions is of particular interest in regard to Mamluk visual culture, which concentrated on an increasingly limited repertoire of decorative designs. Although this repertoire leads to an immediate identification of Mamluk objects, it does not immediately distinguish functions, leaving such differentiation to larger formal categories or to epigraphy.

Similarly, we are still ill-informed about the material constitution of these objects (even though some are defined by both form and metal, such as the bronze *tannūr* type) and the degree to which they reflect shortages in raw materials (studies that require extensive and expensive technical analyses). However, this raises the issue of possible correspondences between medium, terminology, form, and specific functions and uses as sources of information, as is the case, for instance, with the gold and silver lamps that were donated to shrines and/or used on special occasions, or the *fānūs*, a special functional type discussed by the author and associated with Ramadan celebrations. Although there are rare instances in which an inscription provides its carrier object with a name (for example, the *thurayyā* discussed on p. 43), the vocabulary associated with the lamps remains ambiguous, and there is little attempt here to use terminology as an informative category that may correlate to specific metals, formal types, or uses. This lacuna is particularly striking in regard to Mamluk times, for which we possess copious amounts of historical sources, dictionaries, and *waqf* deeds that have been used in other analyses of material remains and some of which are also used by the author in discussions of certain lamps. Despite this wealth of information, it is, of course, often difficult to connect textual data with actual objects. Still, it would have been interesting to know if, for instance, lamps—or certain types of lamps—were among the objects included in bridal dowries among other essential household furnishings, information that is likely available in some of the same sources that are used to set the scene in the introduction and that do not always correspond to the temporal frameworks of the objects under discussion. Ferreting out such information would add immeasurably to our understanding of Mamluk lamps as objects of daily life, as opposed to their persistent association with mosques and shrines, and would

enhance our knowledge of the typological, functional, and terminological varieties in which they exist. Similarly, the author's incidental reference to olive oil also raises the question of lamp fuels, which are likely to have been less costly vegetable and mineral by-products. These incidentals are yet another part of the reason why lamps are such valuable indicators of the economies and means as well as the tastes and activities of their societies and users. Raising such questions, however, goes beyond the stated aims of the book, whose focus is the formal typology of the lamps and their decorations.

In the end, it is decoration, more than any other aspect, that frames this study of Mamluk and post-Mamluk metal lamps. The lamps are decorated in a variety of designs and techniques, with floral and geometric patterns produced through incising, inlay, *repoussé*, *à-jour* perforation, and various other, less delicate open-work techniques. Many of the lamps carry inscriptions that are either inlaid or "silhouetted" through open-work. As is usual for Mamluk objects, the inscriptions on the more expensive commissions often include the patron's name or titles along with Quranic quotations, with the Verse of Light associated with Mamluk glass lamps noted by the author for its conspicuous absence from the metal ones.

The open-work technique is particularly fitting for objects that play with light and shade, and in which decoration—and the objects themselves—take on one aspect when the lamps are not in use and another when they are lit. The complexity of these effects increases when other materials, such as pieces of colored glass, are incorporated into the lamps. In this respect, these metal lamps most clearly illustrate the additional layer of visual complexity that is a hallmark of Islamic decorative arts. Behrens-Abouseif's sensitivity to this quality is indicated by her inclusion of illustrations of lit lamps, a rare and welcome occurrence that underscores the use of light itself as a medium of decoration. It is in this use, which effects the dematerialization of the surface itself through light, that the objects take on their most striking appearance. These qualities lead to comparisons with Quranic imagery, thereby once again reflecting the tension that exists between the practical need for light and the urge to interpret its carriers and their decorations. The "magical" properties of lamps are thus reasserted, but how far these properties can lead us toward a better understanding of the technical and social aspects of these objects, of their various contextual uses, and of contemporaneous interpretations of light and its metaphoric representations remains a topic for further investigation.

Behrens-Abouseif's book is then a valuable contribution not only because it adds to the repertoire of Mamluk and post-Mamluk metal lamps, providing several previously unknown examples and placing them within a considered formal typology, but also because it continues to reflect questions that need to be raised and, eventually, answered.

YĀSĪN AL-AYYŪBĪ, *Āfāq al-Shi'r al-'Arabī fī al-'Aṣr al-Mamlūkī* (Tripoli, Lebanon: Jarrūs Priss, 1995). Pp. 560.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

This introduction to Mamluk poetry is largely descriptive and somewhat disorganized. Al-Ayyūbī quotes over two thousand verses, but usually in an anecdotal fashion, and so his overall literary analysis is superficial. Further, he draws the vast majority of this verse from published biographical and historical works from the period. Though he occasionally cites several published collections of Mamluk poetry, he never refers to manuscripts, nor to any of the essential studies of the Mamluk period published during the last twenty years, whether by Western or Arab scholars. This is a glaring weakness in the book's first section (pp. 15-98), where the author attempts to frame this verse within its historical, political, and cultural contexts. When listing the great Circassian sultans, for example, he omits reference to Qāytbāy, while his comparison of the Baḥrī and Burjī Mamluk periods is based largely on a long quote from al-Maqrīzī. This Mamluk historian lauded the Baḥrī reign as a golden age in contrast to the later period in which he lived. Yet, al-Ayyūbī never questions al-Maqrīzī's personal stake in the matter and, similarly, he accepts other Mamluk historical and biographical sources as unbiased objective accounts.

The situation improves little when al-Ayyūbī turns from politics to culture, as he adduces evidence of an intellectual life from lists of scholars migrating to Cairo. Then, following an uncritical discussion of important religious and cultural institutions, including the *madrasah* and the mosque, al-Ayyūbī cites the titles and authors of over eighty-five works composed during the Mamluk period on subjects ranging from Quranic commentary, biography, and history, to rhetoric and the belles lettres. Conspicuous by its absence here is any review of collections of poetry, whether by a single author or compiled by anthologists.

The second and longest section of the book is loosely organized around poetic genres and themes, beginning with *madīḥ*, or panegyric (pp. 101-37). Al-Ayyūbī cites examples of verse lauding individuals' good qualities, especially those of the poets' Mamluk patrons. At one point, he draws attention to Ṣafī al-Dīn al-Ḥillī's (d. 749/1349) conscious comparison of the poet's praising his patron to the latter's bestowal of honors on his poet (p. 111). Yet this intriguing reference to the intertwined issues of aesthetics, honor, and ritual exchange is left behind. Instead, al-Ayyūbī quickly outlines recurring themes and elements in panegyrics

of Muḥammad by describing one of al-Būṣīrī's (d. 694/1295) odes to the Prophet. Al-Ayyūbī regards these panegyrics as a subset of poetry in praise of God, and due to its overtly religious themes, he accepts this verse as more sincere than poetry composed for sultans and amirs. Even if true, it is quite clear that these poets, too, offered their praise in hopes of reward, albeit of a more heavenly coin.

Next, al-Ayyūbī reviews the Mamluk *ghazal*, or love poem (pp. 138-61), which he divides into two broad categories. First is the chaste and virtuous 'Udhrī style verse, which was a favorite among the Mamluk Sufi poets. Nevertheless, some of them occasionally referred to the beloved's physical features, if only symbolically, and this leads al-Ayyūbī to a brief review of his second type of love poem, that of sensuality. Whether the subject be male or female, al-Ayyūbī notes, most of this love verse followed earlier models, though with the rhetorical flare characteristic of the Mamluk period. Al-Ayyūbī reaches a similar stylistic conclusion regarding Mamluk *rithā'*, or elegy (pp. 162-80). He divides elegies between those referring unambiguously to historical persons or events, and more general elegies that could be offered for any number of deceased persons. This division, however, is of little critical use as it ignores the importance of standardized themes and their repetition, which are crucial to successful elegies as poets attempt to place their personal sorrow within more universal contexts. Al-Ayyūbī does draw attention to the elegy's broader social and cultural dimensions in his comments on elegies for lost lands and cities, particularly on the traumatic fall of Baghdad.

Al-Ayyūbī's next chapter on *hijā'*, or invective verse, is surprisingly brief given the prominence of this genre in the earlier periods of Arabic literature (pp. 181-191). Yet, al-Ayyūbī argues that this was not a favored form during the Mamluk period, perhaps due to the decline in tribal rivalries. As a result, he claims, Mamluk invective verse tended more toward wit and charm than to scathing insults and personal attacks. Most of al-Ayyūbī's examples resonate with light-hearted or comic tones, as when a wife berates her miserly husband, or when a poet deplores the sorry state of his vermin-infested house. Still, in a later section on social criticism (pp. 238-58), al-Ayyūbī cites many other verses that underscore invective's persistent power to demonize one's enemies, as well as to serve as a form of social protest.

Waṣf, or descriptive poetry, is the subject of the next chapter (pp. 192-222), which quickly becomes tedious as al-Ayyūbī quotes numerous verses cataloging an assortment of human features, animals, plants, and "inanimate objects," including descriptions of cities, and references to the Black Death of 1348-50. Several quatrains on the plague suggest the destructive and demoralizing impact of this pandemic on Muslim life, society, and religion, although al-Ayyūbī seems unaware of such implications or its possible effects on poetry.

Turning to verse of self-praise and personal bravery, *fakhr* and *ḥamāsah* (pp. 227-37), al-Ayyūbī notes the scarcity of boasting matches among Mamluk poets and suggests that this may be due to their homogeneity in terms of social rank and class, and the lack of religious rivalries among them. His one exception is Ṣafī al-Dīn al-Ḥillī, who devoted a section of his *Dīwān* to such poems inspired by the murder of his uncle and tribal chief, for whom the poet demands revenge in the defiant tone of many pre-Islamic odes. The obvious similarities between the genres of *fakhr* and *ḥamāsah*, *hijā'*, and *madīḥ* raise the question as to why al-Ayyūbī did not treat them in a more coherent fashion, particularly in light of his following sections which take up the larger thematic issues of poetry and social criticism (pp. 238-58) and the poets′ relationship to their patrons and power (pp. 259-84). Al-Ayyūbī quotes verses from poets calling for control of marauding bedouins, tax-collectors, and exorbitant prices, and then devotes considerable space to Tāj al-Dīn al-Subkī′s (d. 771/1370) critiques of unqualified religious officials, and al-Būṣīrī′s harangues against corrupt amirs and their civil servants. Al-Ayyūbī then reprints an earlier article on relations between poets and their Mamluk patrons, noting the participation of poets in Mamluk ceremonies and their roles within the civil service as secretaries and press men, who were assigned to record favorably Mamluk military campaigns and public policies.

The final seven chapters of the book′s second section take up a number of prominent cultural themes and issues mentioned earlier in discussions of the genres. On wisdom and manners (pp. 285-305), al-Ayyūbī cites verses on the brevity of life, the importance of friendship, and the golden mean, while his chapter on complaint and longing (pp. 306-39) revolves around laments for lost beloveds, one′s home far away, or for the holy lands of Mecca and Medina. His chapter on wine poetry also contains a few verses on hashish but not on mystical wine (pp. 340-50), though Sufi elements are evident in the chapter on ascetic poetry (pp. 351-60). Verse on the strange and the marvelous (pp. 361-78) and examples of verse riddles and puzzles (pp. 394-404) conclude this second section.

In the book′s third and final section, al-Ayyūbī briefly describes common stylistic and structural elements of Mamluk poetry, including *tawriyah* (double-entendre), *jinās* (paronomasia), and the use of grammatical, rhetorical, and other technical terms in verse (pp. 409-34). He also gives examples of narrative poems, especially on the life of Muḥammad, and Mamluk military campaigns, and some colloquial verse (*zajal*) on political events and crises (pp. 435-66). He then ends the work with a short chapter on didactic poetry, including that on morals, Arabic grammar, and poetics (pp. 467-85).

Al-Ayyūbī could have improved his book significantly had he been more informed and analytical regarding this poetry′s social, political, and religious contexts. Rather than following the standard introduction by genre, he might have

integrated his chapter on poet-patron relations into his introduction, to be followed by his thematic studies on poetry in Mamluk life and culture. Genres should be discussed, but the overall emphasis would be on the life and world views of the cultural elite which, in turn, would give more credence to al-Ayyūbī´s dependence on historical and biographical sources. Granted, the focus of the book would be different, but by so doing al-Ayyūbī could have made a far more substantial and original contribution to the study of Arabic literature in the Mamluk period.

MAḤMŪD AL-SAYYID, *Tārīkh ʻArab al-Shām fī al-ʻAṣr al-Mamlūkī* (Alexandria: Mu'assasat Shabāb al-Jāmiʻah, 1997). Pp. 255.

REVIEWED BY STEFAN H. WINTER, The University of Chicago

The relative paucity of specialized studies on Syrian Mamluk history makes Maḥmūd al-Sayyid´s short book on the Arab tribes of al-Shām a particularly welcome contribution to the field. In it, the author takes exception to the conventional image of the refractory bedouin in perennial conflict with the central state authority, and argues instead for the Syrian tribes´ loyalty to the Mamluk regime and their contribution to Islamicate culture in that period. While not entirely successful in proving this, the case he presents is happily long on scholarly references and short on (viz. devoid of) nationalist or religious jingoism.

The book´s four chapters comprise an overview of Syrian society under the Mamluks, Arab tribal *ʻaṣabīyah* in Syria, and the tribes´ political and ˝civilizational˝ roles in the Mamluk age. These chapters are preceded by a section somewhat inaccurately titled ˝source criticism,˝ in which the author discusses the wide range of documentary, narrative, and archeological sources available to the historian. While he freely cites western scholarly literature throughout, he uses nothing more recent than 1975, and the text consequently lacks any reference to actual problems or debates within the discipline. Nor indeed does al-Sayyid engage in any critical reflection on his primary sources, a fact compounded by the book´s fatal dependence on al-Maqrīzī, al-Qalqashandī and Ibn Iyās.

The first chapter is meant to provide a geographical, administrative, social, and religious sketch of Syria under the Mamluks. To this monumental task it can do little justice, and the reader is left with only some ahistoric generalities on Syria´s ethnic and societal composition that appear either mundane or ill-informed. In particular, the assertions that Hanbalism was the principal *madhhab* and the Protestants an important Christian minority in Mamluk Syria do not inspire

confidence. Al-Sayyid′s mention of some select Arab tribes does little more than anticipate the discussion of later chapters. The references to Kurds, Turkmen, Druze, and their contribution to certain military campaigns, frame the author′s ideological concept of a multicultural Syrian nation united in its support for the Mamluk regime against its foreign enemies. The final chapter suffers from a similar lack of focus, encompassing aspects of Mamluk-era culture at large on the one hand and reaching back to describe great Syrian literateurs from previous centuries on the other. Among the more pertinent and interesting passages is perhaps the discussion of the bedouins′ dress and the gifts received from al-Nāṣir Muḥammad in return for horses (pp. 194-97).

The second chapter concentrates more specifically on the bedouin tribes, and in particular how politics in Syria have been played out historically against a backdrop of tribal rivalries when these could not be subsumed into a single ideology (such as Islam) directed against an external foe. However, the author makes no attempt to come to any sociological, Khaldunian understanding of *ʻaṣabīyah* and is content simply to reduce the dynamics and complexity of tribalism throughout Syrian history to the timeless and overarching Qays vs. Yemen rivalry. Thus the genius of the Syrian tribes is defeated by the Abbasids, re-emerges with the Hamdanids to struggle against Persian, Turkish, and Byzantine encroachment, and attains its full flowering with the coming of the Mamluks. The third chapter, covering the political and military role of the Syrian tribes, serves the author′s central thesis that the Arabs of Syria pursued a conscious policy in supporting the Mamluk regime, in war and in peace, throughout its 250-year existence. The argument rarely transcends an *histoire événementielle* of battles and rebellions, from ʻAyn Jālūt to Marj Ḍābiq, in which certain tribal groups (thence ″the Arabs of Syria″) fought on the side of the Mamluks, receiving fiefs (*iqṭāʻ*) or even political office in return. The heroes of the story are unquestionably the Āl Faḍl and, in particular, ʻĪsá ibn Muhannā and his progeny, who were confirmed as official tribal *zuʻamā'* by successive sultans and even enjoyed a measure of political influence in Cairo. The Arabs, we are told finally, would even have held out against the Ottoman Turks had Qānṣūh al-Ghawrī sent reinforcements to chief Ibn Ḥanash in time.

In sum, the reader interested in the Syrian tribes might do better to refer back to the relevant parts in Gaudefroy-Demombynes′s *La Syrie à l′époque des mamelouks.* The complex issues of urban center vs. nomadic province and of foreign elite and domestic legitimization raised by al-Sayyid serve foremost to recall that the sub-field of Syrian Mamluk history still desperately awaits the sort of narrative study Thierry Bianquis has devoted to the Fatimid era. While this particular work suffers from some critical shortcomings, al-Sayyid deserves credit for his care and evenhandedness in addressing the question of Arab tribal support

for the sultans. His differentiation between the purported Syrian collaboration with, and Egyptian disdain for, the Mamluks, although not entirely original and here not exploited sufficiently, is noteworthy, as is his readiness also to cite evidence contrary to his central arguments. Finally, though the book cannot pretend to have made exhaustive use of the available literature, the author's meticulous footnoting and well-organized bibliography (but unfortunately no index) make it a potentially useful tool for the specialist wishing to locate particular items connected with the bedouin tribes of Mamluk Syria.

BAYYŪMĪ ISMĀ'ĪL AL-SHIRBĪNĪ, *Muṣādarat al-Amlāk fī al-Dawlah al-Islāmīyah (Aṣr Salāṭīn al-Mamālīk)* (Cairo: al-Ḥay'ah al-Miṣrīyah al-'Āmmah lil-Kitāb, 1997). Two volumes.

REVIEWED BY MARLIS SALEH, The University of Chicago

The term "*muṣādarah*," as used in medieval Islamic administration, refers firstly to "an agreement with someone over the payment of taxation due." Its most frequent and characteristic meaning, however, is "the mulcting of an official of his (usually) ill-gotten gains or spoils of office."[1] Readers of Mamluk chronicles cannot fail to be struck by the pervasiveness of *muṣādarah* (or confiscation, as we may loosely translate the term); virtually no individual of any prominence seems to have escaped unscathed by it. It therefore appears to be a topic well worth isolation and focused study. Little attention, however, seems to have been paid to the phenomenon per se; I have come across only a slim volume, approximately half of whose 120 pages are devoted to the Mamluk period.[2] The present substantial two-volume work, originally the author's doctoral dissertation at the University of al-Manṣūrah, thus promised to be a welcome addition to the list of studies devoted to specific aspects of Mamluk history and economic life.

Following a preface discussing the difficulties encountered in doing the research for the book and then outlining it in considerable detail, Shirbīnī begins with a brief introduction defining *muṣādarah* and overviewing it use prior to the Mamluk period. He starts out with the Muslim world in general through the Umayyad age, and then narrows his focus to Egypt.

[1]C. E. Bosworth, "Muṣādarah," *The Encyclopaedia of Islam*, 2nd ed., 7:652-53.

[2]Muḥammad Bahjat Mukhtār 'Uṣfūr, *al-Muṣādarah fī Miṣr al-Islāmīyah min al-Fatḥ al-Islāmī ḥattá Nihāyat 'Aṣr al-Mamālīk (20-923 H./641-1517 M.)* (Cairo, 1990).

Chapter 1, ″The Nature of and Reasons for Confiscation in the Mamluk Age,″ establishes the pattern which is followed throughout the succeeding three chapters. The author divides the reasons for confiscation into the general categories of political, economic, social, and unknown, subdividing each category and providing examples. He next discusses the types of confiscation, which are really more reasons looked at from a different angle: confiscation was used to punish, for reasons of fiscal administration, and to provide compensation.

Shirbīnī proceeds to discuss the personnel and the specific procedures involved in actually carrying out a confiscation. This is one of the more interesting sections of the book, and highlights the potential value of an intensive study of a narrowly defined topic, describing as it does in detail the sort of information which would normally not be dealt with in a more general work. He then goes on to discuss the amounts and types of items which could be seized in a confiscation, the various localities where they could be deposited and the procedures for recording them, and the final fates which befell people whose property was confiscated.

A number of problems with the book become apparent in this first chapter. First of all, the author quotes the specific figure 3306 as the number of confiscations carried out in the Mamluk period, without ever explaining how he arrived at it. Judging by the footnotes and the appendixed chart, he went through the standard chronicles, but nowhere does he discuss his methodology. He then uses this figure to come up with specific percentages of this or that type of confiscation under one sultan as compared to another, lending a scientific aura to the data which it may not deserve.

An even more important flaw, undermining what could have been the primary value of the book, is that the author does not stick to his chosen topic. Instead, he widens his scope to consider virtually any action involving the state whereby anyone suffered a loss of wealth or property as a ″form of″ *muṣādarah*. This includes everything from any sort of non-canonical taxation, to debasement of coinage, to the sultan′s visiting an *iqṭā*ʻ holder who was then obliged to give his royal guest gifts. The book thus becomes much too diffuse, offering superficial discussions of practically every aspect of economic life.

Chapter 2, ″Confiscations and Men of State,″ and Chapter 3, ″Confiscations and the Rest of the People,″ follow the paradigm established in Chapter 1 for discussing confiscations: reasons, types, procedures, types of property, localities of deposit, and final fate of the victim(s), each time applied specifically to men of state and to the general populace respectively. This naturally makes for a great deal of repetition, and any differences there may have been between the groups that would benefit from this presentation are obscured rather than highlighted.

In Chapter 4, ″Confiscations and Family Resources,″ the author shows that despite the fact that one of the major motives for putting property into pious

endowments (*waqf*) was to attempt to protect it from government rapacity, *waqf*s were in fact regularly plundered under various pretexts. Once again, he puts the material through its assigned paces as set down in Chapter 1. Oddly, he feels compelled to adduce some positive aspects of state despoilment of *waqf*ed resources, which include the return of capital to the active economy as well as forcing idle sufis from their parasitic existence back into the labor market.

Chapter 5, ″The Effects of Confiscations on the Nature of the Mamluk State,″ contains a hodgepodge of observations on everything from the decline of Egyptian agriculture due to the *iqṭāʿ* system, to the European discovery of the Cape of Good Hope sea route around Africa. Once again, the book′s lack of focus proves detrimental.

The Conclusion rehashes a number of mostly obvious points that have been made repeatedly before (e.g., men of state suffered confiscation more frequently than the general public). Most of the author′s major conclusions—for example, that confiscations were one of the principal sources of state income, and that their implementation was a symptom of the political and economic decline of the state due to the atrophy of agricultural production—are reduced to banalities by his lumping virtually every source of revenue exploited by the state under the umbrella of ″*muṣādarah*.″

The work concludes with several appendices. First comes a *fatwá* from al-Azhar, requested by the author, on whether or not the practice of *muṣādarah* is permissible. Though throughout the book the author has made it clear that the practice, at least as implemented by the Mamluks, is shocking to his personal religious sentiments, disappointingly, the *fatwá* supports its use under circumstances ″approved by Islam.″

Next come two charts, which are not labelled. The first presents the name of the sultan, the name of the *shādd al-dawāwīn* [the official usually responsible for execution of confiscations ordered by the sultan], the year, comments [on the fate of the *shādd al-dawāwīn*], and sources.

The second chart is potentially more useful. It lists the name of the person or group whose goods were confiscated/his office/year/name of the sultan/executor of the confiscation/type of confiscation/amount/place of deposit/final fate of the victim. In other words, it is basically a schematic distillation of Chapters 1 through 4 of the preceding book, in chronological order. However, as noted, the author has stated that 3306 confiscations occurred during the Mamluk period; this chart contains only 1222 entries. On what basis were these 1222 extracted from the total? The author gives us no clue.

Despite its considerable length, *Muṣādarat al-Amlāk* feels more like an outline for a book than an actual finished work. There is virtually no sustained prose, with each point developing and leading into the next point. Rather, the book is formatted

as a series of discrete lists. An opening paragraph will state, for example, that there were various economic motives for confiscation, then the author will proceed to recount them in list form. Individual items range in length from an incomplete phrase to several pages. The lists are often nested within each other down to several levels, and are enumerated in various ways, such as by numbers, letters, bullets, and flowers, which do not follow a standardized nesting order. This makes it very confusing for the reader suddenly coming upon a *jīm* or a 7 or a bullet in the middle of a page, who is then forced to flip back to discover whether this is a new item in the overarching list, or in a sub-list at the second or third level down. To make matters even more confusing, the author occasionally slips up in the numbering.

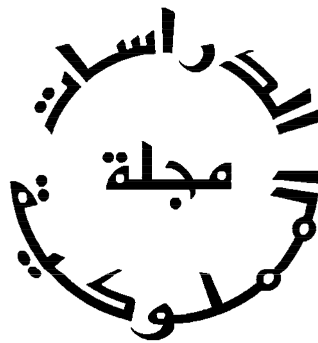
Notes, though copious, are extremely difficult to use, due mainly to the author's resorting to "op. cit." and its Arabic equivalent (*al-marji' al-sābiq*). To cite only one example, if the reader is interested in tracking down the reference to a work by Ḍūmaṭ in note 3 on page 290, he must page back through hundreds of notes on hundreds of pages until finally arriving at a full citation (buried within a footnote containing dozens of citations) in note 1 on page 18. In addition, the text of the footnotes is riddled with errors; the references to Western works in particular are virtually certain to contain typos and are often garbled to the point of unintelligibility. Bizarrely, a bibliography promised and described in detail in the introduction (divided into documents, manuscripts, printed texts, and modern sources [Arabic and foreign]), is nowhere to be found.

Despite its promising title, *Muṣādarat al-Amlāk* is a disappointment. If the author had confined himself to the topic (narrowly defined) and had made use of a good editor, this could have been a much more useful work.

'ĀṢIM MUḤAMMAD RIZQ, *Khānqāwāt al-Ṣūfīyah fī Miṣr*. Vol. 1: *Fī al-'Aṣrayn al-Ayyūbī wa-al-Mamlūkī*. Vol. 2: *Fī 'Aṣr Dawlat al-Mamālīk al-Burjīyah* (Cairo: Maktabat Madbūlī, 1997). Pp. 875.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

During the Mamluk period, nearly fifty *khānqāh*s were founded in or around Cairo alone, suggesting the prominence and importance of this religious institution to medieval Muslims. Nearly two dozen of these *khānqāh*s are profiled and extensively described by 'Āṣim Muḥammad Rizq in this two-volume work, prefaced by three short introductions which outline, in very general terms: 1) the earlier



history of the *khānqāh* and the related institutions of the *ribāṭ* and *zāwiyah* (vol. 1, pp. 21-35); 2) the development of Sufism (vol. 1, pp. 39-63); and 3) architectural features of the *khānqāh* in Mamluk Egypt (vol. 1, pp. 67-123). These chapters offer nothing new, as Rizq reiterates the traditional interpretation of the *khānqāh* as an educational institution meant to spread Sunni Islam among the masses in opposition to Shiʿism. Rizq goes on to claim that, despite this noble origin, the *khānqāh* in the twilight years of the Mamluk period was often the site of outlandish un-Islamic practices encouraged by the ruling elite, and hidden from the larger public under the guise of Sufism (vol. 1, p. 57).

By this point in the book, it is painfully apparent that Rizq has accepted medieval criticism of the *khānqāh*s at face value, and that he is largely unaware of the extensive scholarship devoted to Sufism and its institutions over the last thirty years. Most telling in this regard is Rizq's failure to refer to even one of the many in-depth studies of the *khānqāh* by either Leonor Fernandes or Doris Behrens-Abouseif; also missing are references to similarly important work by Donald P. Little, J. Chabbi, Muḥammad Muḥammad Amīn, and others. Further, although Rizq knows of the many *waqf* documents detailing *khānqāh* endowments and lists them in his bibliography, he rarely cites them directly, choosing to rely instead on secondary sources, particularly Ibn al-Jīʿān and ʿAlī Mubārak.

Clearly, *Khānqāwāt al-Ṣūfīyah fī Miṣr* is a disappointment, especially given its size and, moreover, the importance of its topic. But the work may still be of some use to the careful reader, for Rizq has expended great effort to detail the physical remains and reconstruct the floor plans of a number of *khānqāh*s, and each *khānqāh* reviewed is recorded by diagram and several photographs. Further, Rizq has combed published Arabic sources from the Mamluk period to record the names and occupations of those who studied or worked in these *khānqāh*s, and he usually cites verbatim or slightly abridges the sources. Nevertheless, Rizq draws few conclusions from this mass of evidence, other than such well-established facts as, for example, that Sufis in the *khānqāh*s also assumed non-mystical functions there, such as serving as an *imām* (vol. 2, p. 663), or that Sufis performed their duties at other religious establishments in addition to the *khānqāh*s (vol. 2, p. 587). Sadly, Rizq never tells his reader what these "Sufi duties" were, nor why they were important to religion and society in the Mamluk domains. Indeed, the daily performance of the *ḥuḍūr* with its Quran recitations and prayers, and not teaching, was the primary mission of the *khānqāh* Sufis, and though many *waqf* deeds assign funds for teaching law, *ḥadīth*, and other religious subjects, references in medieval sources to the teaching of Sufism in the *khānqāh*s are conspicuous by their absence. But readers will not find discussion of this or similarly important issues in Rizq's largely descriptive and superficial work.

MAMLŪK STUDIES
REVIEW

Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648-922/1250-1517). The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal will include both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy.

Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page http://www.lib.uchicago.edu/LibInfo/SourcesBySubject/MiddleEast/medoc.html. This site provides a link to the searchable Mamluk bibliography maintained by MEDOC and has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

Ayyubids, Mamluks, and the Latin East in the Thirteenth Century*

There was, once upon a time, a widely accepted myth that the Muslim rulers and peoples of southwest Asia were from the outset bitterly opposed to the presence among them of the Crusaders (variously portrayed as infidels or proto-imperialists), and that they struggled unceasingly if ineffectually to expel them. But that myth has long since been discarded among serious scholars. A series of essays in the mid-1950s by Claude Cahen and Sir Hamilton Gibb demonstrated that we can only perceive a consistent policy and ideology of opposition to the Crusades with the rise to power of Nūr al-Dīn (r. 1146-1174), and then in a more heightened manner under Saladin (r. 1169-1193). A more precise definition of this process, covering the whole two centuries of Crusader rule in Syria-Palestine, was developed for the first time in the splendid monograph of Emmanuel Sivan, *L'Islam et la Croisade*. Sivan almost certainly understated the sanctity of Jerusalem in Islamic consciousness in the pre-Crusade era, and he may not have done justice to the military efforts of the later Fatimids and the Saljuq amirs of Syria, both of whom had to contend with a very unfamiliar threat from a position of grave weakness. But on balance his account remains the best introduction to the subject of the "Counter-Crusade."[1]

In spite of Sivan's important contribution, however, the nature of the relations between the Muslim rulers of Syria and Egypt and the Crusader states after the death of Saladin (1193) has remained something of a puzzle. But in the last three decades we have had an important series of studies on the eastern Mediterranean

*Delivered as the Second Annual *Mamlūk Studies Review* Lecture at The University of Chicago, January 17, 1997.

world in the thirteenth century. These began with two major books by Jonathan Riley-Smith, and now include studies on Crusader Cyprus by Peter Edbury, Crusader-Mamluk diplomacy by Peter Holt, the mid-thirteenth-century Crusades and the Mongol invasions by Peter Jackson, and the reign of Sultan Baybars by Peter Thorau and Reuven Amitai-Preiss. Taken together, these have brought the key issues into far sharper focus and suggested how they might be resolved.[2]

The problem, long familiar to students of the period, is simply that Saladin—by long-term design or happy accident—had left the Crusader states of Syria in a shambles. Even after the bitter and frustrating struggle with Richard Lion-Heart, the Crusaders retained only a few ports on the coast, with a hinterland no more than ten miles deep. The forces of the Franco-Syrian barons had been shattered in 1187-1188, and apart from their severe manpower losses, they had been stripped of almost all the landed possessions which had allowed them to support the surprisingly large military forces of the Kingdom of Jerusalem—forces which had been very nearly equal to those which Saladin himself could mobilize, though of course they were very different in character. And yet the Crusader states, even the frail Principality of Antioch, survived and even flourished for another century.[3] They were clearly prosperous, more so than in the twelfth century. Finally, significant pieces of land, especially in Galilee and southern Lebanon, were recovered and refortified; even Jerusalem reverted to Latin control for about fifteen years, between 1229 and 1244, albeit in a very conditional and tenuous manner. How did they do it?

Part of the answer is certainly that the Crusader states were in reality far less fragile than we had once supposed. A number of scholars, but Professor Riley-Smith in particular, have underlined two key resources which these states still possessed:

---

[2]Jonathan Riley-Smith, *The Knights of St. John in Jerusalem and Cyprus, ca. 1050-1310* (London, 1967); idem, *The Feudal Nobility and the Kingdom of Jerusalem, 1174-1277* (London, 1973). Riley-Smith's more recent publications have focused on the earlier phases of the Crusades, in particular the nature of the movement and the motives which drove its participants. Peter W. Edbury, *The Kingdom of Cyprus and the Crusades, 1191-1374* (Cambridge, 1991). Peter Jackson, "The Crisis in the Holy Land in 1260," *English Historical Review* 95 (1980): 481-513; idem, "The End of Hohenstaufen Rule in Syria," *Bulletin of the Institute of Historical Research* 59 (1986): 20-36; idem, "The Crusades of 1239-41 and Their Aftermath," *Bulletin of the School of Oriental and African Studies* 50 (1987): 32-60. Peter M. Holt, *Early Mamluk Diplomacy (1260-1290): Treaties of Baybars and Qalāwūn with Christian Rulers* (Leiden, 1995). Peter Thorau, *The Lion of Egypt: Sultan Baybars I and the Near East in the Thirteenth Century*, trans. Peter M. Holt (London, 1992). Reuven Amitai-Preiss, *Mongols and Mamluks: The Mamluk-Īlkhānid War, 1260-1281* (Cambridge, 1995).

[3]This point is argued by Riley-Smith in *The Feudal Nobility*, but the evidence for it was already presented by Wilhelm Heyd, *Histoire du commerce du Levant au Moyen Age*, trans. Furcy Reynaud, 2 vols. (Leipzig, 1885-86).

1) The positive role of the military orders, whose income from gifts and their vast landed holdings in Europe allowed them to garrison a large number of castles throughout Syria, and even to undertake the defense of new ones.

2) The revenues generated by the growing commerce of the Levant, especially through Acre, but Tyre, Beirut, and Antioch/San Simeon as well, largely replaced the agricultural rents and dues of the twelfth century.

Both of these points clearly imply that the Crusader states of Syria flourished because western Europe was flourishing—more precisely, because some part of the new wealth of Europe was siphoned off to keep them going. In spite of the undoubted contribution of Acre to the burgeoning commerce of Pisa, Genoa, and Venice, one suspects that on balance the Crusader states gained a good deal more from this commerce than they contributed to it.

Such considerations are strengthened when we look at the Crusades of the thirteenth century—which were far more numerous and better organized than those of the preceding era. Indeed, the recovery of Jerusalem and the security of the Latin Kingdom were a major focus of concern by the Papacy throughout the century. Apart from the two massive Crusades aimed at Damietta (the Fifth Crusade of 1217-1221 and the Crusade of St. Louis in 1249-1254), there were many smaller expeditions which focused on the Holy Land. These latter ironically achieved far more than the two big expeditions. Even when (as was often the case) the new Crusades were more a nuisance than a help to the Crusader states, they were always a standing threat, one which Muslim rulers had to keep constantly in mind in framing their policies. Even the miraculous victories of 1221 and 1250 had been a very near thing indeed—gifts of Crusader stupidity rather than the fruits of Muslim military prowess.

Yet even these elements of strength in the Crusader position do not explain the durability of the Frankish domains in Syria, beset as they were by structural fragmentation and (especially after 1210) weak leadership. This is especially the case after the catastrophic battle of La Forbie (al-Ḥarbīyah) in 1244, which decimated their military resources and led to the dissolution of the last vestiges of political cohesion among them. Even under these circumstances, the Franks managed to hang on for almost half a century longer. The Muslims plainly held an overwhelming theater advantage; they ought to have been able to eliminate these infidel vestiges at almost any moment had they really wanted to do so. But on the contrary, they often went to some lengths *not* to drive away the Franks, and indeed to incorporate them within their alliance and economic structures.

We have all been conditioned to interpret Muslim/Crusader interactions in ideological terms; even when we know better we cannot stop ourselves from measuring actual policies against the normative criteria of ideology, and then being mildly outraged by the inevitable gulf between one and the other. Even with

this caveat, however, it can be instructive to compare the pursuit of concrete goals by the two sides with their professed values. When we do that, we obtain an interesting result. Broadly speaking, the Franks of Syria were occasionally induced by the ideals of Crusade and Holy War to do things that they might otherwise have avoided on grounds of solid material interest. On the other hand, Muslim political elites during the thirteenth century appealed to the idea of *jihād* only to legitimize policies which were clearly demanded by very concrete geopolitical, economic, and military imperatives. That does not mean that this appeal was in any way hypocritical. But the concept of *jihād* is a plastic one, which can be deployed in widely varying ways for varying ends. For thirteenth-century Muslim rulers, there was a happy and all too rare marriage of values and interests. Our task in the balance of this paper is thus to search out the imperatives which underlay the apparently vacillating, shifting Muslim policies toward the Crusader states during the decades between 1193 and 1291.

Policy can only be generated within and applied through political institutions, and so we should begin by noting that Egypt and Syria were governed (more or less) by two very distinct political formations during this period: the Ayyubid Confederation created by Saladin and his kinsmen in the 1170s and 1180s, and the Mamluk Sultanate established by the palace guards who assassinated the last Ayyubid ruler of Egypt in 1250. These two formations had much in common—their formal ideologies, their fiscal administration, many (though certainly not all) of their basic military institutions—but on the deeper level of the often unspoken values, attitudes, and assumptions which shaped political conduct, the rules of the political game, they were fundamentally different.[4] One question we have to ask is

[4]Claude Cahen, "Ayyūbids," *The Encyclopaedia of Islam*, 2nd ed., 1:796-807. R. Stephen Humphreys, *From Saladin to the Mongols: The Ayyubids of Damascus, 1193-1260* (Albany, 1977). There is no modern, full-length monograph on the early Mamluk regime (from 1250 to 1310). However, the concise survey of Robert W. Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate, 1250-1382* (Carbondale, 1986) is a good introduction. For brief treatments, see Peter M. Holt, "Mamlūks," *EI*[2], 6:321-31; and R. Stephen Humphreys, "Mamluk Dynasty," in *Dictionary of the Middle Ages* (New York, 1982-89), 8:70-78. Reflections on the relationship between the two regimes are found throughout the voluminous publications of David Ayalon; see especially his "Aspects of the Mamluk Phenomenon: Ayyubids, Kurds, and Turks," *Der Islam* 54, no. 1 (1977): 1-32; and idem, "From Ayyūbids to Mamlūks," *Revue des études islamiques* 49, no. 1 (1981): 43-57. Ayalon insists on the fundamental identity of the Ayyubid and Mamluk political and military systems. As always, his arguments are enlightening and richly documented; in spite of his criticisms, however, I still adhere to the main conclusions in my "The Emergence of the Mamluk Army," *Studia Islamica* 45 (1977): 67-99, and 46 (1977): 147-82. A recent reevaluation of the early Mamluk state is given in Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nasir Muhammad Ibn Qalawun, 1310-1341* (Leiden, 1995), who departs from Ayalon on certain important points.

whether, or to what degree, these changes in political structure led to changes in policy. We should not take it for granted that the shift from Ayyubid to Mamluk rule necessarily entailed changes in Muslim policy toward the Crusaders, of course, but neither should we just dismiss the possibility.

Apart from the change in regime per se, the Ayyubids and early Mamluks each found themselves acting within a very different international milieu. For most of their existence, the Ayyubids faced no serious threat from their neighbors in southwest Asia; the Crusaders were the only dangerous ″foreign″ problem on the radar screen.[5] The Mamluks, of course, had to contend with a very powerful and extremely hostile Mongol presence on their eastern and northern borders. The Il-Khans, we should recall, could draw on the fiscal and manpower resources of Iran, Iraq, the Jazira, and Anatolia, and they made a number of serious efforts to add Syria (and perhaps ultimately Egypt) to that list. On the other hand, after the end of Louis IX′s venture in 1254 the threat of new Crusades receded markedly. Obviously one could take nothing for granted, and the Mamluks always had to be prepared to confront a new expedition from overseas. But in the event they never had to do so; in effect, the Muslims were now free to take the offensive against the Crusader states in Syria.

With these general points in mind, let us return to the first of our two questions. How did the characteristics of the Ayyubid and Mamluk political systems affect their policy toward the Franks of Syria?

The Ayyubid domination did not represent any sort of unified and centralized state; it was rather a confederation of autonomous appanages or principalities. (At least the principalities desperately desired to be autonomous.) Each of these principalities was governed, usually in a fairly regular hereditary succession, by an appanage prince belonging to a lineage stemming from Saladin′s father Ayyūb or (in one case) his uncle Shīrkūh. For most of the six decades between 1193 and 1250 there were six major principalities (Egypt, Damascus, Homs, Hama, Aleppo, Jazira-Armenia), and each of these might claim suzerainty over one or more satellite principalities held by a cadet member of the locally dominant lineage.

There were no formal administrative structures to ensure general cohesion within the confederation. Such cohesion as there might be was achieved through the sense of common descent among the princely lineages, reinforced (not too strongly) by marriage ties. In addition, all the princes owed allegiance and personal deference to the senior member of the Ayyubid house (*al-bayt al-ayyūbī*, *banū Ayyūb*), who was usually the ruler of Egypt. The senior prince had the customary

---

[5]To be precise, there were two bad moments: an invasion of northern Syria by the Rum Saljuqs in 1218, at the very moment the Crusaders were laying siege to Damietta, and the penetration into Armenia and the Jazira by the stateless warlord Jalāl al-Dīn Mankūbirtī in 1225-1226 and 1228-1230. Threatening as they seemed, both of these dangers were quickly dispelled by Ayyubid counter-attacks.

right to confirm the succession to the throne in the other principalities, and he was expected to go to the aid of any appanage prince threatened by outside attack. This frail web of obligation and deference had real political consequences only in a few situations, however. First, when every appanage prince owed his current status and future hopes to the head of the family, as under Saladin and later his brother al-ʿĀdil. Second—perhaps a special case of the first—when the head of the family was the father of the most important appanage princes and could use his position within the family to dominate them. (Happily the Ayyubids were not given to patricide.) If the nominal head of the confederation had the bad luck to be merely the older brother or nephew of the key appanage princes, he could enforce only a modicum of deference to his authority through cunning and war. These tools were wielded brilliantly by al-Kāmil (1218-1238), the son of al-ʿĀdil and the brother of the princes of Damascus and the Jazira, but even he only got the upper hand in the last decade of his rule.

Political formations of this kind were very widespread throughout the Nile-to-Oxus region between the tenth and fifteenth centuries, and obviously they are inherently unstable. We might have expected the Ayyubid Confederation to fragment into a congeries of city-states after two or three generations, as so many such entities did. Instead, in the course of a complex series of internal struggles between 1237 and 1245, it bifurcated into two large and relatively centralized states. Egypt, Palestine, and Damascus were ruled by al-Ṣāliḥ Ayyūb (r. 1240-1249), who created a unitary, centralized regime with its capital in Cairo; in al-Ṣāliḥ′s domains all territorial government was assigned to men who belonged to his inner circle, either his personal *mamlūk*s or free-born amirs with demonstrated loyalty to him, and these deputies held office at his pleasure. In building this regime, al-Ṣāliḥ created the model for the Mamluk Sultanate, though the turmoil following his death prevented this model from being deployed in any conscious and effective way for more than a decade. But when Baybars finally seized power in 1260, he proclaimed from the outset his firm resolve to follow the practices of his revered master al-Ṣāliḥ Ayyūb.[6]

In northern Syria, the troubles of 1237-1245 yielded a state centered in Aleppo and ruled by a great-grandson of Saladin. This entity was more loosely structured than the rival regime of al-Ṣāliḥ Ayyūb, since it was still based on the old appanage or confederative principle, but now the appanage princes were far more closely supervised than in the past. The ″reformed″ Ayyubid principality of Aleppo survived the Mamluk coup d′etat in Egypt in 1250 and even occupied Damascus and part

[6]David Ayalon, ″The Great Yasa of Chingiz Khan: A Re-examination,″ *SI* 36 (1972): 156-58. See also Humphreys, ″Emergence of the Mamluk Army,″ 154-55.

of Palestine for the next decade. But it had no future, and was swept away in the Mongol deluge of 1259-1260.

What are the implications of the Ayyubid political system for Muslim-Frankish relations? In my judgment there are two main points to consider.

First, each principality within the Ayyubid Confederation had interests of its own, and each had to make its own arrangements with the Crusader states on its borders. Solidarity in the face of the infidel was hardly even an ideal, and was certainly not a reality. Thus, Aleppo was constantly embroiled with Cilician Armenia, and only once (in 1207) did the head of the confederation intervene. Aleppo also signed a series of four commercial treaties with Venice, with no reference to Cairo or anyone else. Likewise, Homs got little help in its constant skirmishes with the Hospitallers of the Crac des Chevaliers. Damascus and Cairo had the same neighbor (the Latin Kingdom of Jerusalem) and were equally affected by new Crusades, but from 1227 on they consistently lined up on opposite sides of any conflict. A Crusader threat to one was a welcome opportunity to the other.

Second, because the Crusader states down to the battle of La Forbie (1244) still represented a considerable military force, they were inevitably drawn (albeit with some reluctance) into the internecine quarrels of the Ayyubid princes. Their participation came with a price tag, of course, and they often gained substantial if temporary advantages from Ayyubid princes bidding for their support. Most significant perhaps was the series of concessions granted by al-Ṣāliḥ Ismā‘īl during his struggle with his nephew al-Ṣāliḥ Ayyūb during the early 1240s; these restored many of the castles in Galilee and south Lebanon lost to Saladin a half-century earlier, and the Franks would retain them until the campaigns of Baybars in 1265. Most shocking to contemporaries, no doubt, was al-Kāmil′s agreement in 1229 to return Jerusalem to the Emperor Frederick II for a period of ten years. Indeed, the evidence suggests that al-Kāmil had himself initiated discussions with Frederick three years before, well before the Emperor had even begun to gather his forces for his long-promised and oft-postponed Crusade. At that time al-Kāmil had indicated that he might return Jerusalem to the Franks in return for Frederick′s aid against his troublesome brother, al-Mu‘aẓẓam of Damascus.

Only in moments which combined grave crisis and an unusual degree of internal cohesion could the Ayyubids act in concert against the Franks. The severest test fell in the summer of 1218, when al-‘Ādil died at a critical moment in the siege of Damietta. His eldest son and successor, al-Kāmil, was able to obtain the active support and close cooperation of his brothers ruling in Damascus and the Jazira until the collapse of the Crusade in 1221. This situation was never replicated, and it is worth asking how it happened even once. Any answer to that question is a matter of speculation rather than hard evidence, but I offer the following reflections. First, it was obvious to everyone that the summer of 1218 represented a very

grave crisis, one which could easily have led to the end of Ayyubid rule. Second, al-Kāmil was defending his own lands; his armies in the Egyptian Delta posed no threat to any other Ayyubid prince. Finally, the three brothers had not yet had any opportunity or need to test their positions vis-à-vis one another; each had been securely ensconced in his own principality for many years, and each had been kept on a very short leash by his autocratic father. The usual rivalries surfaced quickly enough after the crisis passed in 1221.

The political structure of the Ayyubid Confederation does much to explain the restraint, the eagerness to make a deal, which seems so anomalous in a dynasty which owed its legitimacy to the *jihād* of Saladin. But it does not explain everything. Let us examine two points in particular:

1) Sometimes the Ayyubids hastened to make concessions which were not compelled by internal feuding or external pressure. For example, al-ʻĀdil restored a number of places on the Palestinian coast to the Franks in the quite petty Crusades of 1198 and 1204. Only once did they launch a serious sustained offensive; in 1247, the armies of al-Ṣāliḥ Ayyūb recaptured Tiberias and Belvoir/Kawkab in eastern Galilee along with the coastal town of Ascalon. Otherwise, Ayyubid forces always stuck to a defensive posture.

2) How were the Ayyubids able to square their conduct with the demands of the ideology of *jihād* which they had inherited from Saladin, and which they were obligated to exemplify in order to retain their mandate to rule?

The latter point first. As Sivan showed (following the lead of earlier scholars like Elisséeff and Max van Berchem), *jihād* was a complex concept in the twelfth and thirteenth centuries. Far more than a struggle against the foreign infidel, it was also an internal struggle within the Dār al-Islām against laxity and heresy. The commitment to *jihād* found expression not only in military expeditions and occasional inquisitions, but in such positive works as the founding of *madrasah*s, *khānqāh*s, and other institutions of piety and sound learning. To the men of religion and the urban notables generally, the inward-looking face of the *jihād* was perhaps more significant. Indeed, as Michael Chamberlain has recently reminded us, they profited far more directly from this aspect of *jihād* than from any number of victories over the Franks—here again, that happy marriage of interest and religious values which frustrates our efforts to probe the inner motives of these people.[7]

---

[7]Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190-1350* (Cambridge, 1994), 51-66. See also Sivan, *L'Islam et la Croisade*, chap. 5; Nikita Elisséeff, *Nur al-Din: Un grand prince de la Syrie musulmane aux temps des Croisades* (Damascus, 1967), especially vol. 3. Van Berchem's ideas are scattered throughout his *Matériaux pour un Corpus Inscriptionum Arabicarum*, especially the three volumes on Jerusalem: *Mémoires publiés par les membres de l'Institut français d'archéologie orientale au Caire*, vols. 43-45 (Cairo, 1920-27).

In the internal *jihād*, Saladin′s heirs performed splendidly. Most of the Ayyubid princes were, if not pious, men (and women) learned in the religious sciences, skilled litterateurs and poets, and exceedingly generous in the establishment of religious foundations. In Damascus alone they founded sixty-three *madrasah*s, as many as the combined total of the regimes a century on either side.[8] In their official epigraphic protocols, the Ayyubid princes consistently combined titles and epithets denoting three qualities: God-given military victory, religious learning, and royal justice. Victory, of course, could be won against heretics and rebels as well as foreign infidels. A few outrages, such as al-Kāmil′s retrocession of Jerusalem to Frederick II in 1229, or al-Ṣāliḥ Ismā'īl′s exchange of eastern Galilee for a military alliance with the Franks of Acre in 1240, provoked scorching public denunciations from a few *'ulamā'*, but nothing the Ayyubids did of this kind ever provoked a crisis of legitimacy among either the men of religion or the military elite. The coup d′etat of 1250 was rooted in quite different problems. In brief, the Ayyubids knew how to make the ideology of *jihād* serve their policy, however paradoxical it might seem to the literal-minded.

The first point, however—the characteristic and often needless military diffidence of the Ayyubids—is more elusive. It was certainly not a matter of cowardice, since they were bold and tenacious solders when they had to be. The solution to this puzzle, I suggest, lies on two levels.

First, material self-interest. The Ayyubids profited enormously from the trade opportunities brought them by the Frankish outposts in Syria. It is clear that from Jaffa, Acre, Tyre, and Beirut a great deal of wealth (and apparently considerable silver) was funneled into Damascus. Likewise, these ports were prime outlets for goods that came to Damascus by way of the pilgrimage road to Mecca, the Red Sea, and the Persian Gulf-Euphrates route. The major Syrian towns had their own products and manufactures as well, and the Frankish seaports provided a convenient outlet for these.

No doubt Italian and Catalan ships would have continued to visit these places had they been in Muslim hands, but the Ayyubid princes of Syria must have reflected how much more attractive they were if they remained in Frankish hands. Recall also that the Syrian Ayyubids at least had no naval resources at all. Hence if they did recapture the Syro-Palestinian seaports, they had no means of protecting them from piracy or reconquest.

A second reason for Ayyubid caution in dealing with the Franks was doubtless even more compelling. The Ayyubids had been on the verge of ruin on three

[8]R. Stephen Humphreys, ″Politics and Architectural Patronage in Ayyubid Damascus,″ in *The Islamic World from Classical to Modern Times: Essays in Honor of Bernard Lewis*, ed. C. E. Bosworth et al. (Princeton, 1989), 151-74; idem, ″Women as Patrons of Religious Architecture in Ayyubid Damascus,″ *Muqarnas* 11 (1994): 35-54.

separate occasions—the Third Crusade, the Damietta Crusade of 1217-1221, and the Crusade of Louis IX in 1249-1250. At Acre in 1189-1191 and again at Damietta in 1218-1219, the combined forces of the Ayyubid confederation had been inadequate to break a Frankish siege. Indeed, after the fall of Acre Saladin´s splendid army never won another victory, and came perilously close to disintegrating altogether. After the fall of Damietta, al-Kāmil´s forces almost dissolved. And on more distant horizons, the Ayyubids were certainly aware of the catastrophic Almohad defeat at Las Navas de Tolosa in 1212 and the subsequent loss of al-Andalus to the armies of Castile and Aragon.

In brief, the Ayyubids were terrified of the Franks, who, however badly mauled they might be, just kept coming back. For this reason, they often went to extraordinary lengths to avoid threatening the status quo, and even to make generous concessions, in order to fend off a new expedition which might, this time, be fatal. In view of the powerful forces behind the crusading movement in Europe, such a policy of appeasement was bound to fail, but it was at least a rational choice.

We turn at last to the Mamluk Sultanate. The Mamluk coup d´etat of course took place during—and on some level as a consequence of—Louis IX´s expedition to Egypt. Louis´s forces were defeated and he himself captured during the brief reign of the Ayyubid Tūrānshāh, but the final dispositions for his evacuation were made under the new regime. So the Mamluks started their career not only as assassins of their sovereign, but as victors over the Crusaders. For the next decade, however, they paid precious little attention to the Franks of Syria; they were after all too busy struggling to stay in power, sorting out (in what we would now call a mean-spirited manner) problems among themselves, and finally cobbling together an army which could defend Egypt from the Mongols. Only after that terrifying man Rukn al-Dīn Baybars seized and secured his throne did the Mamluks turn their attention to the Franks in any serious way. After 1263, however, Baybars began a relentless series of campaigns that by 1271 left the Frankish states of Syria in ruins and utterly beyond any serious hope of restoration. How can we account for such a radical and sudden shift in policy?

To answer this question, I propose a line of inquiry based on the following five propositions:

1) The Mamluk Sultanate was in principle—and to remarkable degree in fact—a highly centralized autocracy. In contrast to the localized perspectives of the Ayyubid principalities, the Mamluk regime was well able to shape a unified policy toward the Crusader states.

2) The political center of the Mamluk state was Cairo; Syria was a province (or more precisely, a cluster of provinces), and down to 1310 it was also a vulnerable and often-contested frontier zone. As a result, the interests of Egypt always had primacy in the Mamluk political calculus. As a frontier zone, Syria

was strategically vital to the early Mamluks—they fought all their campaigns there—but economically and politically it was of secondary concern. For that reason, the Mamluk regime could quite readily envision neglect or even suppression of the Syro-Palestinian ports and trade routes. Indeed, there was good reason to funnel all commerce with Europe through Alexandria, where it would most directly benefit the Cairo elite, while simultaneously depriving the provincial governors of Syria of a lucrative source of revenue.

3) The Mongol invasion of Syria and the Jazira in 1259-1260 had drastically altered the international context of Mamluk policy. The Mamluks did not have one permanent enemy, as did the Ayyubids, but two; assessing the preponderance of danger had to be their constant concern. Moreover, the Mamluks had to conjure with the possibility of a Mongol-Frankish alliance, and hence to devise a strategy which could frustrate that possibility.

4) The early Mamluks rose to power at an extremely turbulent moment in Mediterranean political history, and the tensions cut right across the traditional regional boundaries of the basin. In the West, the final dissolution of Almohad power left Spain and the Maghrib up for grabs among a host of local contenders, including the rival Kingdoms of Castile and Aragon. In the central Mediterranean, the struggle between the Papacy and the Hohenstaufen for the control of Italy also implicated the ruling house of France, the crown of Aragon, the Hafsids of Tunis, and the Byzantine Emperor Michael VIII. In the East, there was an ongoing contest between the Byzantines and their countless enemies to control Constantinople, along with the rivalry between Pisa, Genoa, and Venice to dominate the Levant trade. These constantly shifting political alignments provided some useful opportunities for the Mamluks, but also delicate challenges. After 1260 Mamluk policy had to be multi-focal, simply because the Sultanate's vital interests were challenged from every direction.[9]

5) Although the Mamluks maintained the formal ideology of the Ayyubids, with its emphasis on *jihād*, Islamic piety and learning, and royal justice, they laid far greater stress on the purely military dimension of *jihād.* Official Mamluk historiography and Mamluk chancery documents make it clear that in the final analysis *jihād* is war against the infidel. The tone of these texts is almost oppressively strident; a reader of Ibn ʿAbd al-Ẓāhir's official biography of Baybars almost gets a headache from the throbbing drums and the glare of sunlight on armor. The Mamluk regime was a near-perfect embodiment of the praetorian state, of course,

[9]The literature is far too vast to survey here. Kenneth M. Setton, *The Papacy and the Levant, 1204-1571*, 2 vols. (Philadelphia, 1976-78), weaves together many of the threads. Naturally the general histories of the Crusades by Runciman and Setton are indispensable, uneven and out-of-date as they are.

so one should not be surprised at this. But the shift of tone is important and must be noted.

In following out the implications of these five propositions, we might begin by listing the main Mamluk campaigns against the Crusader states of Syria. The sequence is well-known and can be sketched as follows:

1265-1266: conquest of Caesarea, Arsuf, and Haifa on the coast, Ṣafad and Toron in Galilee and south Lebanon
1268: conquest of Jaffa, Beaufort, and (the crown jewel) Antioch
1271: conquest of the Crac des Chevaliers, ʻAkkar, and Montfort
1289: conquest of Tripoli
1291: conquest of Acre, followed by the Frankish abandonment of the remaining seaports, including Tyre, Sidon, and Beirut.

These major conquests clearly fall into two separate blocks, the first from 1265 to 1271, the second from 1289 to 1291. The apparent hiatus of almost two decades deserves some brief comment, since the campaign of 1271 had clearly set the stage for a final assault on Tripoli and Acre. The gap is partly an illusion, since this list of campaigns does not include Baybars′s and Qalāwūn′s extremely destructive raids on the Kingdom of Cilician Armenia, which was closely linked to the ruling house of Tripoli and Antioch. Nor does it include the incessant raiding by the two sultans against the coastlands, raids which both demonstrated Frankish defenselessness and deprived the Franks of any revenues from the villages around their main towns. Nor, finally, does it include Baybars′s eradication of the Ismāʻīlī strongholds in the mountains between Homs and Latakia.

But the eighteen-year break in campaigns against the Franks of Syria is not just an illusion. It reflects in part a complex transition of power. When Baybars died unexpectedly in 1277, he was succeeded by two of his sons, neither of whom was up to the job in the eyes of the Mamluk elite. The throne was ultimately seized (in 1280) by one of his most effective generals, Sayf al-Dīn Qalāwūn, but almost immediately he had to face a major Mongol invasion. When this was turned back at the battle of Homs (1281), Qalāwūn faced a severe struggle to secure his throne against the ambitions of other amirs, who regarded him as no more worthy than they. Only in 1289 did it again seem plausible to mount a major, and perhaps definitive, campaign against the Franks of Syria. For a brief time, the succession from Qalāwūn to his son al-Ashraf Khalīl (1290-1293) appeared to go smoothly, and al-Ashraf was able to complete the work commenced by his father. (Like his unfortunate predecessors Tūrānshāh and Quṭuz, he was unable to convert a brilliant victory into effective political capital, but that is a story for another time.)

Even though the war against the Franks of Syria was brought to an end under Qalāwūn and al-Ashraf Khalīl, it is clear that Baybars had made that end inevitable. His achievement therefore deserves closer inspection. Although Baybars was a soldier and spent much of his adult life on horseback, I think we must interpret his goals as essentially defensive rather than expansionist. He certainly realized that however powerful an army he might build—and he unquestionably devoted enormous resources and labor to this enterprise—he would never have the resources needed to capture and hold any substantial Il-Khan territories east of the Euphrates or north of the Taurus. With even greater reason, he could not hope to pursue the Franks beyond the sea. This sense of limits was surely confirmed by his two brief efforts to ″expand the envelope″: the abortive naval attack on Cyprus in 1271, and his brilliant but evanescent victory over Il-Khan and Rum Saljuq forces at Elbistan in 1277.[10] What he could do was to secure the borders of Egypt and Syria—essentially, just those lands held or seized by the Mamluks in the wake of ʻAyn Jālūt. These he could make into a mighty citadel which his adversaries—the adversaries of Islam—could not penetrate or subvert, and that is what he tried to do. On the east, the Euphrates River, secured first and foremost by the great fortress of al-Bīrah, would fence out the Mongols. On the west, the Mediterranean Sea would be his rampart, and that explains his systematic dismantling of the port facilities of the coastal towns as they fell into his hands. (The great fortresses of the interior, like Ṣafad and the Crac, were in contrast not only maintained but reinforced.)

The boundaries (and they really are boundaries, not fuzzy frontier zones) defined by Baybars remained almost unchanged down to the very end of the Mamluk Sultanate. The only area in which we find persistent efforts at territorial and administrative expansion is Nubia, and even that was foreshadowed in a pair of punitive campaigns sent out by Baybars. In the early fifteenth century, Sultan Barsbāy (1422-1438) did launch a far more aggressive policy, but his principal target was the Crusader Kingdom of Cyprus—a logical completion of the policy of Baybars and Qalāwūn. In any case, Barsbāy displays the only significant departure from the geopolitical conceptions of his great predecessor.[11]

I have used the image of a fortress to describe the territorial entity constructed by Baybars. I might also have used the more Islamic metaphor of purification, a concept to which his propaganda often explicitly appealed. The enemies of the Mamluk Sultanate were in every case infidels and heretics—the Christian Franks, the Ismāʻīlīs, the pagan Mongols. In walling out the latter and eradicating the first two, he was purifying the lands of Islam from the pollution of unbelief. It is easy to think of Baybars as a wholly Machiavellian politician, a man obsessed with

power for its own sake. Certainly he was willing to do whatever it took to gain and hold power. But he also saw himself as a Muslim. We witness the public dimension of his commitment to the faith in his extensive program of public works and charitable/religious foundations, in his judicial reforms, in the quite puritanical public morality which he demanded, and—perhaps more persuasively—in his disciplined fiscal administration. The political elite was terrified of him, his ordinary subjects regarded him as a just and equitable monarch—and that was how things ought to be. Most intriguing, though a subject we cannot explore here, was his devotion to the shaykh Khaḍir al-Mihrānī, a man whom many of his contemporaries regarded as a despicable charlatan, but whom Baybars saw as a precious spiritual mentor. In any case, all the evidence indicates that Baybars was personally and deeply engaged with Islam, and this inevitably colored the way he envisioned his strategic policy.[12]

If it is fair to say that Baybars imagined his policies toward the Crusaders in a language of citadel-building and purification, we still need to review the substance of those policies. He was aware, to a very unusual degree, that he could succeed in his goals only within a favorable international environment, and he worked extremely hard to achieve such an environment. In the East, he strove to keep the Il-Khans ″otherwise engaged,″ to limit their opportunities to stage a new invasion of Syria. In the West, Baybars hoped to neutralize the possibility of any major new Crusades—and recall that only hindsight allows us to assert that after the fiasco of Louis IX, there was no longer any real danger from this quarter. Perhaps most of all, he had to do whatever he could to subvert a Papal-Mongol alliance.

To Baybars must surely go the credit for the first systematic and sustained diplomacy with Christian powers in Islamic history, and this he undertook right from the outset of his reign. In 1261 he established links with the Hohenstaufen in Sicily, knowing that they were not only the great barrier to Papal ambitions but also (since 1229) a traditional ″friend″ of the Egyptian court.[13] But Baybars was a realist; when the Hohenstaufen collapsed in 1266 before the armies of the Papal

---

[12]A detailed list of his public works and charitable foundations is given in the contemporary biography written by ʻIzz al-Dīn ibn Shaddād, edited by Ahmad Hutait as *Die Geschichte des Sultan Baibars*, Bibliotheca Islamica, vol. 31 (Wiesbaden, 1983), 339-59. On his administration of religious institutions, see Joseph Escovitz, *The Office of Qâdî al-Quḍât in Cairo under the Baḥrî Mamlûks*, Islamkundliche Untersuchungen, vol. 100 (Berlin, 1984). On Khaḍir al-Mihrānī, see Peter M. Holt, ″An Early Source on Shaykh Khaḍir al-Mihrānī,″ *BSOAS* 46 (1983): 33-49; Thorau, *Lion of Egypt*, 225-29.

[13]A fascinating if all too brief ″memoir″ by Ibn Wāṣil, Baybars′s emissary to the court of Manfred in Sicily: *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb*, ed. Saʻīd ʻAbd al-Fattāḥ ʻĀshūr and Ḥasanayn Rabīʻ (Cairo, 1972), 4:48-251. candidate Charles of Anjou, he quickly moved to establish ties with the latter—and those ties may well have been instrumental in diverting Louis IX´s second Crusade to Tunis in 1271. Likewise, in 1261, he sought a commercial treaty and a sort of alliance with the Byzantine emperor Michael VIII, newly reinstalled in the ancient capital of Constantinople. In harmony with his Byzantine alliance, he successfully sought an alliance with Genoa. Except for the commercial clauses (all-important in the case of Genoa), these treaties did not really commit any of Baybars´s partners to anything substantive, but they did allow him to stay informed about events and trends in Christian Europe, and no doubt reinforced the innate coolness of his treaty partners toward the Crusading enterprise.

In the second half of the thirteenth century, the Il-Khans clearly represented the deadliest and most immediate threat faced by the Mamluk Sultanate. At three points—1260, 1281, and 1299-1303—the very existence of the state was in question. But apart from these major invasions, Baybars had to deal with a large number of Mongol incursions, and at least a few of these went well beyond raids in force. In this light, Baybars´s understanding with the Golden Horde was invaluable. First of all, the very location of the Golden Horde was important, since they could penetrate through the Caucasus passes into northwest Iran, which was the center of Il-Khan power. These same passes gave them access to Il-Khan communications with their Rum Saljuq clients in Anatolia, and to the trade termini in the region (Trabzon, Sīvās, Āyās). Second, the Golden Horde controlled the slave markets of southern Russia (the Dasht-i Qipchaq), and in the thirteenth century (though not later) these were an essential source of Mamluk military manpower. We need to stress, I think, that much of the tension between the Golden Horde and the Il-Khans lay in the fact that these two empires represented rival lineages within the house of Chingiz-Khān, and had conflicting claims to Azerbayjan and Anatolia.[14] Nevertheless, these tensions were clearly exacerbated by the conversion of the Golden Horde ruler Berke Khān to Islam, while the Il-Khans remained firmly committed to traditional Mongol beliefs. Certainly Baybars was able to exploit the religious link between his regime and the Golden Horde to great effect in his early contacts with Berke Khān in 1261-1262. Obviously the conversion of the Il-Khan elite to Islam under Ghāzān Khān (1295-1304) changed the religio-political dynamic, but that lay decades in the future.

Apart from the direct threat represented by the Il-Khans, there was the constant shadow of a Mongol-Papal alliance. No doubt the fear of such an alliance was one of the things that encouraged an aggressive policy toward the Franks of Syria, so as to deprive both the Il-Khans and any European expedition of a foothold in

---

Syria. Again in hindsight, we can say that all the diplomatic coming-and-going between Rome and Karakorum or Tabriz was a farce, in view of the cosmic political claims of the two parties. But in the mid-thirteenth century this was not so clear. Not only did the Papacy send several missions to the Mongol court; it was ultimately able to establish several flourishing missions in northern China, which survived down to the Ming restoration in 1368. Several Nestorian Christians held high positions at the court of Hülegü—his best general Kitbughā and his wife Dokūz Khātūn, to name two. In 1260, the Christian rulers of Cilician Armenia and Antioch were active allies of the Mongols, though the Franks of Acre did maintain a nervous neutrality. There was, in brief, every reason for Baybars to assume that an effective alliance between the Pope and the Il-Khans might be brought off. In fact such an alliance was concluded at the Council of Lyon (1274), which also momentarily reunited the Greek and Roman Churches. Fortunately for Baybars, this alliance quickly disappeared, due to the death of its guiding spirit Pope Gregory X in 1276 and the conflicting interests of Charles of Anjou, now titular King of Jerusalem and the would-be emperor of Constantinople. But it had been a near thing, and no doubt Baybars felt that his efforts with Michael VIII and Charles of Anjou had been well-invested.[15]

We might, finally, take a glance at the diplomacy involved in maintaining regular access to the slave markets of southern Russia. It required three simultaneous alliances: with the Golden Horde, which controlled the manpower reservoir; with Genoa, which controlled the Black Sea trade and the shipping routes between Constantinople and Alexandria; finally, with Byzantium, which controlled the Straits. These three alliances required a nice calculation of the vital interests of each party, and a capacity to exploit the conflicts of each with outside forces. This latter point involved, for example, Genoa vs. Venice, the Golden Horde vs. the Il-Khans, and Byzantium vs. the Papacy and the Angevins. That Baybars and later Qalāwūn brought it off is a high testament to their knowledge of the world outside their borders as well as to their diplomatic skills.

It is time to conclude. The Ayyubids were indeed, as their critics then and since have maintained, reluctant warriors, but I have suggested that they had compelling reasons to be. And likewise the early Mamluks were intensely focused on ridding Syria of the Crusading states at the earliest opportunity. But although

[15]The most recent treatment of Mongol-Frankish diplomacy is Amitai-Preiss, *Mongols and Mamluks*, 94-105. Jean Richard has devoted many important articles to this subject; as examples, see "The Mongols and the Franks," *Journal of Asian History* 3 (1969): 45-57; and idem, "Les Mongoles et l'Occident: Deux siècles de contacts," in *1274, année charnière: Mutations et continuité* (Paris, 1977), 85-96. An older (much older than its date of publication) but carefully documented overview is Marshall W. Baldwin, "Missions to the East in the Thirteenth and Fourteenth Centuries," in Setton, *History of the Crusades*, 5:452-518.

this policy was in part driven by ideology, it was no expression of mindless fanaticism. On the contrary, the geopolitical realities of the world inherited by the Mamluks almost mandated such a policy; at the very least, it represented a sober and realistic assessment of the realities they had to face. Recall that both Ayyubids and Mamluks draped themselves in the mantle of *jihād*; they did so in very contrasting ways, with perfect accuracy and no doubt with perfect sincerity.

A Holograph MS of Ibn Qāḍī Shuhbah's "*Dhayl*" *

Introduction

The following is a study of a hitherto uncatalogued holograph manuscript of a later Mamluk history entitled "al-Dhayl" by Ibn Qāḍī Shuhbah (d. 851/1448). A description of the manuscript and a short bibliographical study of the author or authors is provided, and the work itself is discussed within the framework of a number of larger questions. These questions include the value Ibn Qāḍī Shuhbah's work as a whole has for the modern historian of the Mamluk period; what the manuscript and other related manuscripts might offer studies of Mamluk historiography; and the place Ibn Qāḍī Shuhbah's work occupies as a product of the particular genre of Mamluk historiography known as the "Syrian school." Such questions are addressed through an examination and comparative analysis of the manuscript, other related manuscripts, and other contemporary histories.

Description of Chester Beatty MS 5527

In the summer of 1995, I undertook research at the Chester Beatty Library in Dublin, Ireland. In the course of that research, I was informed by the library staff that there were a number of manuscripts acquired after A. J. Arberry had completed his *Handlist* and which, in addition, had not been included in the more thorough catalogue made by Paul Kahle (the one copy of which is held at the Library). Loosely bound slips of paper, usually with no more than the name of the author and a guess at the title of the work, are all that identify these manuscripts. The manuscript to be examined here is MS 5527. It was rightly identified by the anonymous cataloguer as a holograph copy of a work entitled simply "al-Dhayl" by Ibn Qāḍī Shuhbah.[1] This manuscript is but one volume of a larger Mamluk

---

*I would like to thank Dr. Michael Ryan and his staff at the Chester Beatty Library for their hospitality in August of 1995. I would also like to thank the staff at The University of Chicago Library for providing me with a number of manuscript microfilms. Dimitri Gutas and Ahmad Dallal, both of Yale University, read an initial draft and offered valuable advice and suggestions. I am particularly indebted to Franz Rosenthal for a number of corrections.

[1]There is, however, a parenthetical note which questions whether it might be "al-I'lām bi-Ta'rīkh al-Islām," another work by Ibn Qāḍī Shuhbah which contains biographies extracted from the history of al-Dhahabī, with supplemental information taken from the works of Ibn Kathīr and al-Kutubī. For the "I'lām," see Adnan Darwich, ed., *Ta'rīkh Ibn Qāḍī Shuhbah* (Damascus, 1977-94),

history which our sources tell us covered, in its various versions, the years 764-ca. 850/1362-ca. 1446. The Chester Beatty manuscript contains the years 797-810/1392-1407.

A brief autopsy of this holograph manuscript provided the following information. The manuscript measures 28 cm. by 19 cm. It is heavily wormed and water-stained, particularly in the later folios. It is bound in worn brown leather and board. The manuscript consists of 402 folios; the work begins on folio 1v. and ends, without colophon, on folio 402r. There are twenty-three lines to the page, with extensive marginalia on almost every page. The author's hand is an abysmal *naskh*;[2] there is one other hand (aside from ownership and readership notes): a poor *ta'līq*, in the margin of folio 20v. The upper right margin of the title page is torn away, leaving only part of the title: . . . *manhal min al-Dhayl baynahu wa-bayna al-mujallad alladhī qablahu naqṣ arba' wa-'ishrīn sanah*. Most of this would seem to be an added note to the actual title, of which all that remains is the word [*al-*]*Manhal*. The note indicates that between (at least) two volumes held in one place, there were missing volumes which covered the years 773-796/1371-1393. The actual title ends with *al-Dhayl*; prior to the title there may have been an indication of volume number.[3] The word *manhal* is interesting here: a similar title is to be found in two other manuscripts of Ibn Qāḍī Shuhbah's work. In his description of the holograph manuscript (Asad Efendi 2345) of the abridgement (*mukhtaṣar*) Ibn Qāḍī Shuhbah made of the "Dhayl," Adnan Darwich notes that he found:[4] [*mu*]*jallad thānī min al-Dhayl al-Wāfī fī al-Manhal al-Ṣāfī.* In Chester Beatty 4125, which contains at least part of the "Dhayl" as well as other works by Ibn Qāḍī Shuhbah, we find on the title page: *min al-Dhayl min Kitāb al-Manh*[*al*] *lil-Shaykh al-Imām Taqī al-Dīn al-Ḥanafī al-Ḥalabī*; which has been corrected to: *min al-Dhayl min Kitāb al-Tawārīkh al-Imām* [sic] *Taqī al-Dīn Ibn Qāḍī Shuhbah*. And on folio 179r. of the same manuscript: *al-mujallad al-thālith al-Dhayl* [sic] *min al-Manhal al-Ta'rīkh li-Imām* [sic] *Ibn al-Shiḥnah* [sic] *al-Ḥalabī al-Ḥanafī bi-khaṭṭih*. The title is incorrect and, in the last note, the author's name presumably confused with (Muḥibb al-Dīn) Ibn al-Shiḥnah.[5] All of these notes are in different hands, so

---

vol. 2, French introduction, 23-27; and Caesar E. Farah, *The Dhayl in Medieval Arabic Historiography* (New Haven, 1967), 21.

[2]Modern scholars are not alone in this judgement; see his student's comments in a manuscript of the *mukhtaṣar* of the "Dhayl" described by Darwich (vol. 2, Arabic intro., 70) and Darwich's own comments (ibid., 59). For specimens, see the plates in Darwich, 2:63-68 and in Georges Vajda, *Album de paléographie arabe* (Paris, 1959), pl. 34.

[3]What remains of the bottom portion of the letters of the title would suggest *al-juz' al-rābi'*.

[4]Darwich, vol. 2, Arabic intro., 58.

[5]This Ibn al-Shiḥnah would seem to be Muḥibb al-Dīn Abū al-Faḍl Muḥammad ibn Muḥammad

ascription to one misguided owner or cataloguer is precluded, though there may have been a series of owners or cataloguers repeating an initial error. The note in the manuscript of the abridgement would suggest that the work was thought to be a *dhayl* of some sort to Ibn Taghrī Birdī's *al-Manhal al-Ṣāfī wa-al-Mustawfī ba'da al-Wāfī*.[6]

To the right of the title fragment in MS 5527 there is a brief note indicating the years 797-810 as those covered in the volume. One ownership note is clear: *min 'awārī al-dahr ladá al-faqīr shaykh Muḥammad ibn Muḥammad al-shahīr bi-Chūyi Zādah*. This gentleman remains unidentified, though he did own other manuscripts of Ibn Qāḍī Shuhbah's work.[7] There are additional notes, now almost entirely effaced, in the upper and lower left corners. Additional information on the title page includes three catalogue numbers: one in Arabic, 44; and two others in Roman script, the Chester Beatty Library 5527 and what seems to read 2275. Four readership notes are found on folio 402r.: one by Muḥammad ibn Aḥmad ibn 'Abd Allāh al-Ghazzī, dated 848/1444;[8] the second by Ibrāhīm Ibn Mufliḥ, dated 849/1445;[9] the third, undated, is for one Muḥammad ibn 'Alī (?); and the fourth by one 'Alī ibn Yūsuf al-Buṣrawī, dated 873/1468.[10]

The identification of the work is a simple matter. Chester Beatty MS 5527 is unquestionably one of the later volumes, if not the last, of Ibn Qāḍī Shuhbah's work which came to be known alternately as "al-Dhayl" or simply "Ta'rīkh Ibn Qāḍī Shuhbah."[11] The work is a history of the Mamluk period between the latter

---

(d. 890/1485), who wrote, among other works, a *dhayl* entitled "Nuzhat al-Nawāẓir fī Rawḍ al-Manāẓir" to the work by his grandfather Zayn al-Dīn Muḥammad ibn Kamāl al-Dīn (d. 815/1412) entitled "Rawḍat al-Manāzir fī 'Ilm al-Awā'il wa-al-Awākhir," itself a *dhayl* to Abū al-Fidā''s history; see Carl Brockelmann, *Geschichte der arabischen Litteratur*, 2 vols. (Leiden, 1943-49; hereafter *GAL*), 1:377, 2:42, 44; and idem, *Supplement*, vols 1-3 (Leiden, 1937-42; hereafter S1-3), 2:40-41 for Muḥibb al-Dīn; for the grandfather see *GAL* 2:46, 141, S2:176, and Dominique Sourdel, "Ibn al-S̲h̲iḥna," *The Encyclopaedia of Islam*, 2nd ed., 3:938.

6Published Cairo, 1957.

7His ownership notes are found in Chester Beatty MS 4125 (on which see below) and in a copy of the *mukhtaṣar* of the "Dhayl" (see Darwich, vol. 2, Arabic intro., 71). Darwich records the name with a *jīm* but the *che* is clearly pointed in CB 4125.

8This is in fact Muḥammad *ibn Ibrāhīm* ibn Aḥmad ibn 'Abd Allāh al-Ghazzī (d. 864/1459) who, al-Sakhāwī tells us, "met with Ibn Qāḍī Shuhbah"; see al-Sakhāwī, *al-Ḍaw' al-Lāmi' fī A'yān al-Qarn al-Tāsi'* (Beirut, 1992), 6:324.

9This is Burhān al-Dīn Ibrāhīm ibn Muḥammad ibn 'Abd Allāh ibn Muḥammad ibn Mufliḥ al-Ḥanbalī (d. 884/1479); see al-Sakhāwī, *al-Ḍaw'*, 1:152, and Ṣalāḥ al-Dīn al-Munajjid, *Mu'jam al-Mu'arrikhīn al-Dimashqīyīn* (Beirut, 1978), 258.

10This is perhaps 'Alī ibn Yūsuf ibn 'Alī ibn Aḥmad, whom al-Sakhāwī mentions (*al-Ḍaw'*, 6:53) without birth or death dates.

11Identification can be determined through: (1) references to such a work written by Ibn Qāḍī

half of the eighth/fourteenth and the first half of the ninth/fifteenth centuries and deals primarily with events in Syria and, more specifically, those centered on Damascus. The work was written jointly by Ibn Qāḍī Shuhbah and his master Ibn Ḥijjī (d. 816/1413) and was conceived as a supplement to the histories written by earlier Syrian traditionist-historians such as al-Birzālī (d. 739/1338), al-Dhahabī (d. 748/1347), and Ibn Kathīr (d. 765/1373).[12] The history of the work's composition is a rather convoluted one, exemplified by its many revisions and abridgements. This issue, along with brief biographies of the authors and additional description of the work, will be discussed further below. First, however, it might prove beneficial to examine some of the larger contexts in which this history may be situated in order to determine precisely what the discovery of this manuscript might mean for modern historians, whether concerned with Mamluk history or Mamluk historiography.

THE LARGER CONTEXTS OF THE "DHAYL"

One can approach a medieval Arabic history—whether hitherto unknown or not—with at least two initial goals: (1) to determine the importance the work might have as a historical source for the modern historian; and (2) to situate that history within the context of a study of medieval Arabic historiography, that is, to undertake a thorough examination of the conceptualizations of history, as well as the aims and methodology of the medieval Arab historian. It has long been accepted in the field of Mamluk studies that the first of these two aims represents the cornerstone of any research in Mamluk historical writing. The plethora of historical materials from the Ayyubid and Mamluk periods prompted Claude Cahen over thirty years ago to set forth his suggestions for the editing of these materials and to call for a "repertorium" of sources.[13] Such a repertorium, which would identify,

---

Shuhbah in autobiographical and biographical sources (see, e.g., his own introduction to the *mukhtaṣar*, Darwich, 2:111-12); (2) a comparison of the hand in MS 5527 with that of previously identified specimens of his hand (see above, note 2); (3) comparison of this portion of the work with other identified portions of the work (e.g. Köprülü 1027, Chester Beatty 4125).

[12]Indeed, the work is often titled "al-Dhayl ʻalá Ta'rīkh al-Dhahabī wa-Ghayrih" (viz., al-Birzālī, Ibn Kathīr, al-Ḥusaynī, etc.); see, e.g., al-Munajjid, *Muʻjam al-Mu'arrikhīn*, 229, and Darwich, vol. 2, Arabic intro., 30.

[13]Claude Cahen, "Editing Arabic Chronicles: A Few Suggestions," *Islamic Studies* 1 (1962): 1-25. Cahen chose the term "repertorium" as well as the unusual plural form "repertoriums" (ibid., 4); while one might prefer the simpler "repertory" (which, it should be noted, Cahen used to describe Carl Brockelmann's *GAL* [ibid.]), Donald P. Little continued such a usage (*An Introduction to Mamlūk Historiography* [Montreal, 1970], 2) and so the term seems to have established itself in modern scholarly parlance. Cahen's call for this repertorium stemmed from his dismay at the haphazard way in which the editing of manuscripts has been undertaken in the field. On the question of whether or not to devote the requisite energy to editing a manuscript, Cahen offered

analyze, and prioritize Mamluk histories on the basis of the original material they contained, was undertaken some ten years after Cahen by Donald Little.[14] While Little limited his research primarily to the early Baḥrī period historians, he did provide the field with a developed methodology for comparing our sources, with concrete examples of what such collation would produce and, most importantly, with a clear picture of the relations and interdependency of many major Mamluk histories. Work continues in this area, though largely confined to studies of individual historians and their histories; nothing on the scale of Little's production has been undertaken for the later Burjī period of Mamluk historiography. Thus, when approaching any historical source the student of Mamluk historiography must be prepared to present similar findings. The source's relation to and dependency on other sources of the period need to be outlined and a conclusion concerning the existence of any original material in that source should be provided.

The other aim, which Franz Rosenthal called the history of historiography,[15] is concerned with developing an understanding of the contexts in which medieval Arab historians viewed history, and how they went about producing their works on history. The first of these questions is a large and formidable one and the present paper will not attempt to address it. The second of these questions, that concerning the methodology of medieval historians, cannot fail to be addressed in the course of analyzing the sources and dependencies of a medieval history. For instance, when reading Ibn Qāḍī Shuhbah with an eye to identifying his sources, one is immediately presented with at least one aspect of his methodology, that is, the various ways in which he integrates his sources into a narrative (or not). Furthermore, in the case of Ibn Qāḍī Shuhbah's "Dhayl," we are fortunate in that a number of the work's recensions have been preserved. As we shall see, the group of manuscripts in which the Chester Beatty manuscript finds a place provides a graphic representation of the development of the work. The various stages in the composition of the work are represented by different manuscripts containing revi-

---

the following guidelines: (1) if the manuscript preserves older, extant works, publish those first; (2) if the manuscript preserves an older lost work, it is worth publishing; and (3) if the manuscript contains original, contemporary (to the author) materials, publish those sections first. More recently, Li Guo ("Mamluk Historiographic Studies: the State of the Art," *Mamlūk Studies Review* 1 [1997]: 15-43) has surveyed and critiqued a number of editions of Mamluk histories, reiterating Cahen's exhortations.

[14]*An Introduction to Mamlūk Historiography*; a year before Little's survey appeared, Ulrich Haarmann published a similar work, though one more narrow in scope: *Quellenstudien zur frühen Mamlukenzeit*, Islamkundliche Untersuchungen 1 (Freiburg, 1969).

[15]See his *A History of Muslim Historiography*, 2nd rev. ed. (Leiden, 1968); more recently, Tarif Khalidi has published his *Arabic Historical Thought in the Classical Period* (Cambridge, 1994).

sions, additions, and abridgements. These manuscripts are a virtual treasure trove for information on the craft of at least one Mamluk historian.

These are the two larger contexts, then, in which a study of Ibn Qāḍī Shuhbah´s ˝Dhayl,˝ and the portion of it represented by Chester Beatty 5521, needs to be placed. They are concerned largely with the uses modern historians may have for medieval Arabic chronicles, one for the study of history, the other for the study of historiography. We also need to situate the ˝Dhayl˝ and the Chester Beatty manuscript within more immediate contexts. On the one hand, Ibn Qāḍī Shuhbah´s ˝Dhayl˝ needs to be placed within its proper historical genre. On the other hand, the Chester Beatty manuscript has to be viewed within that group of manuscripts which represents the development of the ˝Dhayl.˝ The identification of genres of Mamluk historical writing is, again, a large one and will be touched upon only briefly here. An excursus on the authors and the background of the composition of the work will provide us with the arena in which to identify the manuscripts of the ˝Dhayl˝ in its various versions.

Historical sources for the Mamluk period can be situated within a wide variety of genres but two such genres concern us here. Again, it was Little who first emphasized the contrast between histories written by Egyptian historians and those written by Syrian historians.[16] Broadly speaking, the former are chiefly political histories while the latter are intellectual histories. Such intellectual histories are by no means concerned with the history of ideas (which is a distinctly modern concept); rather, the primary intention of intellectual histories of the Mamluk period is to produce a record of events and people connected to the institutions and fields of religion, law, and education. Moreover, the ˝Syrian school˝ of historians, as distinct from its Egyptian counterpart, produced works which, in terms of their structure, devote much more attention to biographies and specifically to biographies of people from the intellectual class. While the division of historical writing into *ḥawādith* (reports of events) and *tarājim* (biographies) is common to both genres, the differences that allow us to speak of the ˝Egyptian school˝ and the ˝Syrian school˝ are really those of emphasis.[17] Ibn Qāḍī Shuhbah´s ˝Dhayl˝ is clearly a

---

[16]Little, *Introduction to Mamlūk Historiography*, esp. 46; see also Li Guo, ˝The Middle Baḥrī Mamlūks in Medieval Syrian Historiography: The Years 1297-1302 in the ´Dhayl Mir'āt al-Zamān´ Attributed to Quṭb al-Dīn Mūsā al-Yūnīnī˝ (Yale University, Ph.D. diss., 1994), 117 ff.

[17]In ˝Mamluk Historiographic Studies,˝ 29 ff., 37 ff., Li Guo has surveyed the scholarly debate over the existence of such ˝schools˝ and provided a detailed and convincing argument for the existence of a ˝Syrian school˝; he is, however, less prepared to admit an Egyptian counterpart. There is a certain, admirable, hesitancy among those scholars who have addressed the question of the existence and nature of ˝schools˝ in Mamluk historiography in using the term ˝schools˝ to speak of what may very likely be no more than roughly discernible trends, concerns, and tendencies in conceptualizations of the aims, functions, and forms of historiography. While one is perhaps

conscious product of the "Syrian school." We shall see that, in his conception of the role of historical writing and in his identification of his predecessors, Ibn Qāḍī Shuhbah was himself aware that he was writing a specific type of history.

THE "DHAYL," ITS AUTHORS, AND THE MANUSCRIPTS

Before discussing the work of history represented in part by Chester Beatty MS 5527, a note concerning nomenclature would seem requisite, largely because the work exists or existed in a number of versions and chiefly because one of those versions has been edited and published under a somewhat misleading title. In the following pages, the title "Dhayl" (Supplement) refers to the history as represented by the Chester Beatty manuscript and the title *mukhtaṣar* (abridgement) to the version of the work represented by Adnan Darwich's three-volume edition which he chose to entitle *Ta'rīkh Ibn Qāḍī Shuhbah*. Admittedly, this choice of nomenclature might result in a certain degree of superficial confusion; however, it will prove to be of some importance not only for a discussion of the composition of the work but also when we draw conclusions about the importance the various versions of the work might have as sources for the modern historian. Our sources—both the biographical literature on or by Ibn Ḥijjī and Ibn Qāḍī Shuhbah as well as later historians—equally show no unanimity in naming the work. It was undoubtedly known as "al-Dhayl" but we also find reference to it as "al-Ta'rīkh."[18] That said, we can now turn to a background study of our two authors and their work with its various recensions.

The composition of the "Dhayl" was initially undertaken by Ibn Ḥijjī and later, at his request, it was enlarged and continued by his student Ibn Qāḍī Shuhbah.

---

bound to recognize and appreciate such scholarly caution by signalling the peculiar connotations of terms like "school" by the use of quotation marks (viz., "Egyptian school," "Syrian school"), it would seem equally appropriate to recall the words of the "literary critic" Qudāmah ibn Ja'far (d. 337/948) on technical terms, written in another time and another context (*Naqd al-Shi'r*, ed. Muḥammad 'Abd al-Mun'im al-Khafājī [Beirut: Dār al-Kutub al-'Ilmīyah, n.d.], 68): ". . . I needed to establish certain technical terms (*asmā'*) for what became apparent [in the course of the research]. . . . I have, in fact, done so and there should not be any controversy with regard to them, since they are just labels (*'alāmāt*). If one is satisfied with the technical terms I have established, fine; if not, then anyone who objects to [them] can devise others, for surely no one would argue about *that*."

[18]See, e.g., al-Nu'aymī, *al-Dāris fī Ta'rīkh al-Madāris* (Beirut, 1990), passim; al-Sakhāwī, *al-Ḍaw'*, 1:270, 11:22; Ibn Ṭūlūn, *al-Thaghr al-Bassām fī Dhikr Man Wulliya Qaḍā' al-Shām* (Damascus, 1957), passim; idem, *al-Qalā'id al-Jawharīyah fī Ta'rīkh al-Ṣāliḥīyah* (Damascus, 1949-56), 1:178, 181. One would like to think that later historians distinguished between the "Ta'rīkh" as Ibn Ḥijji had initially written it and the "Dhayl" as it was revised and supplemented by Ibn Qāḍī Shuhbah, but this does not seem to be the case. In his biography of Ibn Ḥijjī, Ibn Ṭūlūn (*al-Qalā'id*, 1:181), calls the work "al-Ta'rīkh al-Tadhyīl."

The works of Aḥmad ibn Ḥijjī ibn Mūsá al-Ḥusbānī (d. 816/1413)[19] fall into a number of broad categories, including law, *ḥadīth* and, most important for our purposes, biography and history. He is credited with a "Mu'jam al-Shuyūkh," a biographical work of the scholars from whom he heard *ḥadīth*, and a work entitled "al-Dāris fī Akhbār al-Madāris"[20] on the *madrasah*s of Damascus and their endowment deeds. The last of his historical works listed is the "Dhayl." We are told that nearly all of his works, excluding the "Dhayl," were destroyed in the sack of Damascus in 803/1400.

Taqī al-Dīn Abū Bakr ibn Aḥmad ibn Qāḍī Shuhbah[21] was born in Damascus on 24 Rabī' al-Thānī 779/30 August 1377 and died on 11 Dhū al-Qa'dah 851/18 January 1448. The corpus of Ibn Qāḍī Shuhbah's writings fall into three categories: works on Shāfi'ī theoretical and applied law (most of which were commentaries on or abridgements of Shāfi'ī textbooks), studies in *ḥadīth*, and works on biography and history. In the biography (*ṭabaqāt*) genre, his two most important works are the collection of biographies of grammarians and the collection of biographies of Shāfi'īs. His most significant contribution in the field of history is the "Dhayl," a work which, as we have noted, was a revision, enlargement, and continuation of his master Ibn Ḥijjī's work. He also compiled another type of historical work, one of which is important for our purposes here. This type is made up of small books, properly notebooks, which were entitled "Selections," or "Excerpts" (*muntaqá*) and, on the basis of what remains of them in manuscript form, they were just that: excerpts, usually verbatim quotes, taken from the works of other historians. He is credited with making excerpts of works by such authors as Ibn 'Asākir, al-Dhahabī, Ibn al-Furāt, Ibn Duqmāq, and al-Nuwayrī. Of these, three have been identified in manuscript form: "al-Muntaqá min Ta'rīkh Ibn al-Furāt," "al-Muntaqá min Ta'rīkh Ibn Duqmāq," and "al-Muntaqá min Ta'rīkh al-Dhahabī." This last is identical to what has been called Ibn Qāḍī Shuhbah's "al-I'lām bi-Ta'rīkh al-Islām," and

---

[19]Bio-bibliographical sources for Ibn Ḥijjī include: Ibn Qāḍī Shuhbah, *al-Ṭabaqāt al-Shāfi'īyah* (Beirut, 1987), 4:12-14 (no. 717); Ibn Ḥajar al-'Asqalānī, *Inbā' al-Ghumr bi-Abnā' al-'Umr fī al-Ta'rīkh* (Cairo, 1969), 7:121-24; al-Sakhāwī, *al-Ḍaw'*, 1:269-71; Ibn Ṭūlūn, *al-Qalā'id*, 1:178-82; al-Nu'aymī, *al-Dāris*, 1:104-7; Brockelmann, *GAL* S2:50; al-Munajjid, *Mu'jam al-Mu'arrikhīn*, 229-30; 'Umar Riḍā al-Kahhālah, *Mu'jam al-Mu'allifīn, Tarājim Muṣannifī al-Kutub al-'Arabīyah* (Damascus, 1957), 1:188. The edition of *Inbā'* used here notes (7:122, n. 3) manuscript evidence for the *nisbah* al-Ḥushbānī rather than al-Husbānī, which latter all other sources provide, though in the same note al-Sakhāwī's *al-Ḍaw'* is said also to indicate al-Ḥushbānī. It is not clear which edition of al-Sakhāwī's work was consulted by the editor of *Inbā'* but the one consulted for this article provides al-Ḥusbānī.

[20]The title recalls the work by al-Nu'aymī (n. 18, above).

[21]Sources for the Ibn Qāḍī Shuhbah corpus have been treated in detail by Darwich, vol. 2, Arabic and French intros., passim.

includes extracts from al-Dhahabī's *Ta'rīkh*, his *Mu'jam*, and his *al-'Ibar*, with additions from Ibn Kathīr's *al-Bidāyah wa-al-Nihāyah* and al-Birzālī's "al-Muqtafá." The former two, extracts from Ibn al-Furāt and from Ibn Duqmāq, exist at least in part in another manuscript in the Chester Beatty Library, MS 4125. The importance of these notebooks will become clear in the discussion of the "Dhayl" and its recensions.

DESCRIPTION OF THE "DHAYL"

Ibn Qāḍī Shuhbah provides us with the most detailed description of the "Dhayl" in his introduction to its *mukhtaṣar*.[22] The backdrop to this description is a brief excursus on the benefits to be had from writing and reading history. It is here that he clearly aligns his interests in historiography to those of the "Syrian school." Indeed, the chief benefit to be had from history books in Ibn Qāḍī Shuhbah's eyes are the biographies. From biographies the common man learns of the people from whom he has received his religion. And on the basis of biographies, the scholar (and here he has in mind specifically the traditionist) can "give preference to the most learned and deserving in cases of conflict" (*ta'āruḍ*).[23] The historians of the "Syrian school" were all traditionists first and foremost. The value of history books for these traditionists lay in the use to which they could be put in *ḥadīth* studies. But this did not mean, for Ibn Qāḍī Shuhbah at least, that the reports of events (*ḥawādith*) in history books were of minor importance.[24] In fact, in his introduction, he proceeds to identify histories which have managed in an equitable manner to combine both *ḥawādith* and *tarājim*. Significantly, not one contemporary history produced by the "Egyptian school" is mentioned in this list, presumably because such works generally avoided detailed biographies. In fact, when he reaches the eighth century, the works mentioned are entirely products of the "Syrian school," some of which managed to strike a proper balance between *ḥawādith* and *tarājim* and others which fell short.

---

[22]Darwich, 2:107-112.

[23]Ibid., 107.

[24]It is interesting to note that the benefits of such reports for Ibn Qāḍī Shuhbah were akin to what *adab* works, for instance, provided the reader. The reader could "take the good qualities of human nature [recorded in history books] as examples, protect against what people condemn and censure, and learn profitable lessons from those who have passed away." Compare Ibn al-Athīr's discussion in his *al-Kāmil fī al-Ta'rīkh* (Beirut, 1987), 1:9-10. The place of history in the education of rulers is an important element of this theme; see, generally, Rosenthal, *History*, 48 ff. Ibn Qāḍī Shuhbah also had recourse to the common argument of the traditionist-historian which notes al-Shāfi'ī's admiration of Muṣ'ab al-Zubayrī's attention to history as an aid to legal studies (Darwich, 1:107-8); cf. Abū Shāmah's defense of historiography noted by Rosenthal, *History*, 41, n. 3.

This list prefaces a discussion of the "Dhayl." Ibn Qāḍī Shuhbah presents Ibn Ḥijjī's work as one which struck the desired balance (though, as we will see, not as thoroughly as Ibn Qāḍī Shuhbah would have liked). Noting that there were no such histories available in his lifetime which covered the years after 741/1340-1341, Ibn Ḥijjī began his "Dhayl," conceiving of it as a combined supplement to the works of al-Birzālī (d. 739/1338), al-Dhahabī (d. 748/1347), Ibn Rāfi' (d. 774/1372), Ibn Kathīr (d. 774/1372), and al-Ḥusaynī (d. 765/1363), all Syrian historians.[25] (See fig. 1.) Ibn Ḥijjī began his work with the block of years 741-747/1340-1346 and then took it up again from 769-815/1367-1412. Ibn Qāḍī Shuhbah tells us that Ibn Ḥijjī's method of presentation was characterized by the monthly division of the year, that is, he divided the year into months and further divided those months into days, providing reports (*ḥawādith*) on a daily basis. Ibn Ḥijjī then appended to each month the biography section (*tarājim*) in which he provided biographies of those who had died in a given month. On his deathbed, Ibn Ḥijjī entrusted the completion of the work to Ibn Qāḍī Shuhbah. The latter had thought this task would involve the simple completion of the missing years 748-769/1347-1367. However, Ibn Qāḍī Shuhbah tells us that once he resolved to take up this task, he found his master's work to be less than adequate as a whole: many biographies had been neglected and accounts of events occurring outside of Syria had been omitted.[26] So he filled the lacunas, enlarged the existing biographies and added others; he also added reports concerning places beyond Syria and additional reports of events he had personally witnessed in Syria. Ibn Qāḍī Shuhbah indicates that in this revision he followed the structure of his master's work, that is, the monthly division with appended biographies.[27] He then tells us that he abridged the work

---

[25]These authors are important because it is their works the "Dhayl" was designed to continue: al-Birzālī's "al-Muqtafá" (MS Ahmet III 2951) ended in 738; al-Dhahabī's *Ta'rīkh al-Islām wa-Ṭabaqāt al-Mashāhīr wa-al-A'lām* (Cairo, 1974-present), combined with his other work *al-'Ibar fī Khabar man Ghabar* (Beirut, n.d.), reached the year 740; al-Ḥusaynī's work was a *dhayl* of al-Dhahabī to the year 764 (published in the Beirut edition of al-Dhahabī's *'Ibar*, 4:119-207); Ibn Rāfi''s work ("al-Wafayāt"; see Munajjid, *Mu'jam al-Mu'arrikhīn*, 208-9) was a *dhayl* of al-Birzālī's work to 774; and Ibn Kathīr's *al-Bidāyah wa-al-Nihāyah* (Beirut, 1988) ended in 767. But Ibn Ḥijjī and Ibn Qāḍī Shuhbah's work begins with the year 741; why weren't the works of Ibn Kathīr, Ibn Rāfi' and al-Ḥusaynī taken into account? According to Ibn Qāḍī Shuhbah (Darwich, vol. 1, Arabic intro., 109-10), Ibn Kathīr's work was, up to the year 738, just an abridgement of al-Birzālī's "al-Muqtafá"; Ibn Kathīr's own additions to 767 were somewhat remiss in the quality of the biographies. One can only surmise that the reason Ibn Ḥijjī and Ibn Qāḍī Shuhbah did not take up where the works of Ibn Rāfi' and al-Ḥusaynī ended was that the latter were concerned only with biography, without the historical record. Perceived deficiencies in the original work is a reason often cited by authors of *dhayl*s for such overlapping (see Farah, *Dhayl,* 1, 8).

[26]Again we see the emphasis on a balanced history.

[27]He is said to have then continued the work from 815/1412 to shortly before his death in

and gives a brief description of that process: he reduced the ″Dhayl″ to about one-third, summarizing accounts of well-known events,[28] abridging the biographies and relocating them to the end of the year in alphabetical order. This alphabetical arrangement he tells us he copied from al-Dhahabī′s method in his *Ta'rīkh al-Islām*.[29] Manuscript evidence indicates that he later made an abridgement of this abridgement.[30]

Ibn Qāḍī Shuhbah′s description of the ″Dhayl″ clearly indicates his allegiance to a particular type of historiography in vogue among Syrian traditionist-historians. His description of his predecessors′ work and his explicitly stated conceptualization of his own historical writing as a continuation of that genre is of great value to our understanding of the ″Syrian school″ of Mamluk historiography.

Ibn Qāḍī Shuhbah′s Recensions of the ″Dhayl″

This, then, is the broad trajectory of the composition of the ″Dhayl″: Ibn Ḥijjī′s initial work; a recension by Ibn Qāḍī Shuhbah; an abridgement of that recension; an abridgement of the abridgement. However, Ibn Qāḍī Shuhbah also tells us what was involved in completing his master′s work, viz., he added information to it from other histories, expanded the biographies and added additional biographies. Manuscript remains of the ″Dhayl″ tell us precisely how Ibn Qāḍī Shuhbah went about that process. There exists an incomplete recension of Ibn Ḥijjī′s work in Ibn Qāḍī Shuhbah′s hand and another recension which incorporated his additions. (See fig. 2.) Many of those additions (for the years 797 and following) can be traced to the works of excerpts noted above, specifically those made of the works of Ibn al-Furāt and Ibn Duqmāq. The details concerning this process will play a part in the analysis of selected years presented below. Here I will provide descriptions of the manuscripts which represent this process of revision. Manuscripts for the *mukhtaṣar* will not be dealt with here (nor certainly the *mukhtaṣar al-mukhtaṣar*) but the work will be used in the analysis.[31]

This group is made up of the following manuscripts: Berlin 9458, Köprülü 1027, Chester Beatty 5527, and Chester Beatty 4125:

851/1447. These last years seem to have been written out in a number of separate notebooks which, his son Badr al-Dīn tells us, could not be found in his library after his death; see Darwich, vol. 2, French intro., 21.

[28]On the basis of Darwich′s edition of the *mukhtaṣar*, it would seem that, beyond a summary of content, these synopses of events (the term Ibn Qāḍī Shuhbah uses is *jumlah*; see Darwich, 1:14) involved the elimination of precisely identified dates.

[29]Darwich, vol. 2, Arabic intro., 112.

[30]Ibid., French intro., 27.

[31]Darwich has provided comprehensive descriptions of the various manuscripts of the *mukhtaṣar* in his edition, vol. 2, Arabic intro.

Berlin 9458: Wilhelm Ahlwardt, in his customary, detailed manner, provided a rich description of this manuscript.[32] Though it was incorrectly identified as the history of Ibn Ḥajar al-ʻAsqalānī,[33] Ahlwardt determined it to be Ibn Ḥijjī′s version of the ″Dhayl,″ covering the years 796-815/1393-1412. Unfortunately, I have not been able to examine the manuscript. I argue here—rather boldly—that those years found in the other manuscripts of this group which have been identified as the first recension by Ibn Qāḍī Shuhbah will be found to reflect closely the corresponding years in the Berlin manuscript. This hypothesis is based on characteristics of the first recension ″Dhayl″ outlined below.

Köprülü 1027: A detailed description of this holograph manuscript cannot be provided here.[34] Darwich described this manuscript as a copy of Ibn Qāḍī Shuhbah′s ″Dhayl,″ covering the years 787-812.[35] In fact, the years covered are 787, 788, 791, 792, 796, 797, 798, 803, 811, and another recension of 791, in that order. A thorough study of the manuscript has also shown that we have in this manuscript years that are part of the second recension by Ibn Qāḍī Shuhbah (787-788, 792), years that are part of the first recension (791, 797; perhaps 796, which might also comprise no more than rough notes), years that are no more than rough notes (798, 803, 811) and finally one year—the second 791—which is probably from one of Ibn Qāḍī Shuhbah′s *muntaqá*s, likely that of Ibn al-Furāt′s work, but might also prove to be no more than rough notes.

Chester Beatty 5527: A description of this holograph manuscript has been given above. It is the second recension of the ″Dhayl″ made by Ibn Qāḍī Shuhbah, covering the years 797-810/1394-1407.

Chester Beatty 4125: There is a brief identification of this holograph manuscript in Arberry′s *Handlist*[36] which lists the three works contained in it as: ″al-Muntaqá min Ta'rīkh Ibn al-Furāt″; ″al-Muntaqá min Ta'rīkh Ibn Duqmāq″; and a fragment

---

[32]Ahlwardt, *Verzeichnis der arabischen Handschriften der Königlichen Bibliothek zu Berlin* (Berlin, 1887-99), no. 9458. Basing himself on Ḥājjī Khalīfah′s information, Ahlwardt identified Ibn Ḥijjī′s work as a *dhayl* to al-Ḥusaynī′s ″ʻIbar al-Aʻṣār wa-Khabar al-Amṣār″; see also Farah, *Dhayl,* 29.

[33]Presumably, it was thought to be his *Inbā' al-Ghumr bi-Abnā' al-ʻUmr*; the title page has: *min Ta'rīkh al-ʻAllāmah al-Ḥāfiẓ Shihāb al-Dīn Ibn Ḥajar*.

[34]A microfilm of the manuscript from Maʻhad al-Makhṭūṭāt al-ʻArabīyah in Cairo (no. 99 *Ta'rīkh*) provided by the University of Chicago Library was used for the present article. A brief description of the manuscript can be found in *Catalogue of Manuscripts in the Köprülü Library*, R. Şeşen et al. (Istanbul, 1986), 1:525-26, where it is incorrectly identified as ″al-Iʻlām bi-Ta'rīkh Ahl al-Islām,″ covering the years 787-791.

[35]Vol. 2, French intro., 23.

[36]A. J. Arberry, *The Chester Beatty Library: A Handlist of the Arabic Manuscripts* (Dublin, 1955-66), 4:40.

of a history of the ninth/fifteenth century. Darwich, for reasons unknown, believed this manuscript to be a copy of the ″Dhayl″ of Ibn Qāḍī Shuhbah covering the years 775-810/1373-1407.[37] This is clearly an error. The manuscript does indeed comprise three works, the first two of which Arberry correctly identified. The *muntaqá* of Ibn al-Furāt′s work covers the years 773-793/1371-1390, that of Ibn Duqmāq′s work the years 804-805/1401-1402. The last work in the manuscript comprises parts of both recensions of Ibn Qāḍī Shuhbah′s ″Dhayl.″ The first recension covers the years 801, 803-810 (fols. 206v.-325r.); the year 791 is found in its second recension (fols. 181v.-196r.). (See fig. 3.)

Two recensions of the ″Dhayl″ made by Ibn Qāḍī Shuhbah have been identified here; what is the evidence for this hypothesis? First and foremost, obviously, is the existence of two versions of certain years in the manuscripts described above: the Chester Beatty MS 5527 contains the years 797-810; overlapping years include 797, 798, 803 (Köprülü 1027), 804-810 (CB 4125). It could be argued that one copy represents Ibn Qāḍī Shuhbah′s work copy, the second his clean copy, but nothing about either indicates this: the extent of marginalia is the same for both, the hand no neater, the material presented no more precisely. A beneficial starting point for determining recensions is marginalia. Marginal corrections (those ending with *ṣaḥḥ* and made by the copyist in the course of collation) are of little use here; both copies contain them and at any rate one cannot determine which copy served as the basis for correction.

However, marginal additions (those ending with the abbreviation *ḥ* for *ḥāshiyah*) can prove useful. The account of the year 810/1407 in the Chester Beatty MS 4125 (identified here as the first recension) contains lengthy *ḥāshiyah* marginalia which in the Chester Beatty MS 5527 are incorporated into the text.[38] The process does not work the other way: *ḥāshiyah* marginalia in Chester Beatty MS 5527 are not found in Chester Beatty MS 4125, either in the text or again in the margin.[39] Because these marginalia are not found anywhere in Chester Beatty MS 4125 and because they are clearly marked *ḥāshiyah* marginalia in Chester Beatty MS 5527, a hypothesis in favor of a mere copying process from Chester Beatty 4125 to Chester Beatty 5527 is untenable. We have before us, then, a clear recension process.

Other indications of a recension process from Chester Beatty MS 4125 to MS 5527 involve the wording of phrases, chiefly exemplified by a change from the first person to third person. Two examples from the year 810:

---

[37]Darwich, vol. 2, French intro., 27.

[38]E.g., CB 4125, 328r. marginalia incorporated into text of CB 5527, 392r., lines 19 ff.

[39]E.g., two such *ḥāshiyah* marginalia in CB 5527, 392r.

1. In Chester Beatty MS 4125, 328v., lines 23-24, we find Ibn Ḥijjī´s ″quotation marks″: *samiʿtu min. . . .* (″I heard from″) which in Chester Beatty 5527, 393r., line 12, becomes: *hādhā kalām Ibn Ḥijjī* (″These are the words of Ibn Ḥijjī″).
2. In Chester Beatty MS 4125, 327r., lines 5-6, Ibn Ḥijjī offers his opinion of someone: . . . *qubiḍa ʿalá Sulaymān ibn al-Ḥājjī wa-sullima ilá ustādhdār al-ṣuḥbah wa-huwa min aẓlam khalq wa-alḥasihim.* In Chester Beatty MS 5527, 391r., lines 4-5, this becomes: . . . *qāla al-shaykh Shihāb al-Dīn Ibn Ḥijjī taghammadahu Allāh fīhi wa-huwa min aẓlam khalq wa-alḥasihim.* This first person to third person process evinces Ibn Qāḍī Shuhbah´s acquisition of the work. The original narrator has become just another source.[40] Obviously, it is a process that does not work the other way. Further, this process is one of the reasons for arguing that the Berlin manuscript of Ibn Ḥijjī´s original version would, if compared to the first recension years, on the whole agree. The first recension made by Ibn Qāḍī Shuhbah represents a *copy* of Ibn Ḥijjī´s original which, with the marginal notes he added to it, formed the basis of his second recension.

There is one other very significant indication of the recension process. Again, Ibn Qāḍī Shuhbah tells us that one of the changes he made to Ibn Ḥijjī´s work was to add material from other sources. We find graphic illustration of this in a comparison of Köprülü 1027 (the first recension) and Chester Beatty MS 5527 (the second recension), this time for the year 797 (the month is al-Muḥarram):

1. a. First Recension (Köprülü MS 1027, 166v., lines 15-16):
ويوم الخميس ثانيه وصل صاحبنا الشيخ محمد المُغَيْرِبي عارف السلطان
يومَ خروجه من حلب و أقام بحماة أياماً.

1. b. Second Recension (Chester Beatty MS 5527, 3r., lines 7-9):
ويوم الخميس ثالثه وصل الى مصر طلب الامير جمال الدين محمود
الاستاذدار من الشام ويومئذ وصل الى دمشق الشيخ محمد المُغَيْرِبي عارف
السلطان يومَ خروجه من حلب و أقام بحماة أياماً.

1. c. The additional material can be traced to Ibn al-Furāt, *Taʾrīkh*, 396, lines 6-7:[41]
وفي يوم الخميس ثالث المحرّم الشهر المذكور حضر الى مصر المحروسة طلب
الامير جمال الدين محمود الاستاذ الدار العالية من الشام.

---

[40]It might also be noted that the optative following Ibn Ḥijjī´s name indicates that this recension was begun after Ibn Ḥijjī´s death.
[41]Ibn al-Furāt, *Taʾrīkh Ibn al-Furāt* (Beirut, 1936-42), vol. 9 pt. 2.

This process is repeated in our second example:

2. a. First Recension (Köprülü MS 1027, 166v., lines 16-18):

ويوم الجمعة قبْلَ الصلاة ثالثه وصل قاضي القضاة بدر الدين بن أبي البقاء عارف السلطان من حمص ويومئذ قدم آخرَ النهار الامير الكبير كَمُشْبُغا فنزل بدار الحاجب على عادته.

2. b. Second Recension (Chester Beatty MS 5527, 3r., lines 7-13):

ويوم الجمعة رابعه توجّه حاشيةالسلطان أحمد بن أوَيْس صاحب بغداد وحريمه لقصد بلادهم حسب مرسوم السلطان ويومئذ قبل الصلاة وصل قاضي القضاة بدر الدين بن أبي البقاء عارف السلطان من حمص ويومئذ قدم الامير الكبير كَمُشْبُغا الاتابك فنزل بدار الحاجب على عادته وبَكْلَمِش العلائي أمير سلاح.

2. c. Ibn al-Furāt, *Ta'rīkh*, 397, lines 3-4:

وفي يوم الجمعة رابع المحرّم المذكور توجّهوا غلمان السلطان مغيث الدين أحمد بن أوَيْس صاحب بغداد وحاشيته وحريمه لقصد بلادهم حسب المرسوم الشريف الظاهري

The formulations of the common report in the first and second recensions generally accord, though with minor modifications in the second recension. The second recension and Ibn al-Furāt are also in accord, showing a definite borrowing from Ibn al-Furāt in the wording of the report. Interestingly, Ibn Qāḍī Shuhbah adds the name of a second amir to the report common to the first and second recensions, *wa-Baklamish al-'Alā'ī amīr silāḥ*. The mention of this amir does not seem to find a place in the content of the report; certainly the intent might prove clear but the syntax is somewhat obscure. Turning to Ibn al-Furāt again (397, lines 5-6), we find Baklamish mentioned at the end of the report for 7 al-Muḥarram 797/2 November 1394, which immediately follows Ibn al-Furāt's report given above: . . . *dakhala al-Sulṭān al-Ẓāhir ilá Dimashq al-maḥrūsah wa-dakhala qablahu al-amīrayn* [sic] *Kamushbughā al-Ḥamawī atābak al-'asākir wa-Baklamish al-'Alā'ī amīr silāḥ.*

Ibn Qāḍī Shuhbah, in combining the report from his first recension (by way of Ibn Ḥijjī's original) with Ibn al-Furāt's report, has reduced the two reports in Ibn al-Furāt to one—with, it might be added, awkward results. In fact, we might have here a case of homoeoteleuton or homoeoarchon, though one would need to examine the copy of Ibn al-Furāt's history that Ibn Qāḍī Shuhbah used, if indeed that copy has survived and could be identified.

This process is clearly one in which a second, expanded recension has been made from a first, more elemental one. Even more importantly perhaps, this examination of recensions has allowed us to identify one source Ibn Qāḍī Shuhbah used for his account of the year 797/1394 as Ibn al-Furāt's *Ta'rīkh*. This should not come as a surprise; it has been noted above that he made a *muntaqá* of the Egyptian's history. But while he occasionally names his sources or alludes to them (e.g., *qāla ba'ḍ al-mu'arrikhīn al-miṣrīyīn*), those instances in which he does not do so (as in the examples above) are far more numerous and they are almost exclusively—at least for the year 797—from Ibn al-Furāt.[42]

It is clear, then, that manuscript remains of Ibn Qāḍī Shuhbah's corpus include two recensions of the "Dhayl" and, as such, constitute an important source of information for the study of book composition in the Mamluk period.

IBN QĀḌĪ SHUHBAH'S SOURCES: SOUNDINGS OF THE YEARS 797, 801, 804, 810

In order to assess the importance the "Dhayl" may have for modern historians as a source for the Mamluk period, a number of soundings were made of Chester Beatty MS 5527. In what follows, an attempt is made to delineate the major sources Ibn Qāḍī Shuhbah drew upon in composing the "Dhayl" and to determine what unique information the "Dhayl" has to offer.

Ibn Qāḍī Shuhbah's reliance on Ibn al-Furāt's *Ta'rīkh* for his account of the year 797 is in fact far more pervasive than these minor reports might lead us to believe. The two examples which follow illustrate this reliance and, in addition, provide illustration of how Ibn Qāḍī Shuhbah reworked the information taken from Ibn al-Furāt for inclusion in the *mukhtaṣar*.

The first example is of a report about the clash between the Sharīf of Mecca 'Alī ibn 'Ajlān and his forces and the Banū Ḥasan in Shawwāl of 797/July 1395.[43]

1. a. Ibn al-Furāt, *Ta'rīkh*, vol. 9, pt. 2, 413:

---

[42]Darwich (vol. 2, French intro., 35-42) has rendered a valuable service in identifying many of Ibn Qāḍī Shuhbah's sources. However, his list would seem to be based almost exclusively on citations in Ibn Qāḍī Shuhbah's *mukhtaṣar* in which the author explicitly names his sources. The degree of borrowing is in fact far greater than such citations suggest.

[43]One correction to the text of each of the three works used for this example has been made. This concerns the place name *Baṭn Marr*. Ibn al-Furāt's *Ta'rīkh* reads *m-r-w*, Chester Beatty 5527 likewise, while Darwich's edition of the *mukhtaṣar* reads *Murah*. Medieval Arab geographers would seem to agree that the correct name is the one given above; see, for instance, Yāqūt, *Mu'jam al-Buldān* (Beirut, 1990), 1:533 and al-Muqaddasī, *Aḥsan al-Taqāsīm fī Ma'rifat al-Aqāsīm* (ed. M. J. de Goeje, Bibliotheca Geographorum Arabicorum, [Leiden, 1906]), 106. B. A. Collins, in his translation of al-Muqaddasī (*The Best Divisions for Knowledge of the Regions* [London, 1994], 97), transliterates the name as *Baṭn Marr*. It might be noted in connection with this that a manuscript variant in the account in Ibn Ḥajar's *Inbā'* (1:495) is given as *m-r-w*.

في يوم الاربعاء أول ذي قعدة من شهور هذه السنة قدم مقبل مملوك عجلان وجماعة نجابة من الحجاز الشريف الى الابواب الشريفة وأخبروا أن في شوال المذكور وقعت وقعة بين بني حسن وقواد مكة ببَطْن مرّ وحصل بين الشريف علي سلطان مكة وبين شخص من بني حسن تماسك فوقعا عن الخيل فضرب كل منهما صاحبه فقتل علي بن عجلان وعاش غريمه وأن قواد مكة وعبيدها ملكوا وحصنوها ولم يمكنوا بني حسن منها ولا من الدخول اليها وأن لهم عن مكة ثلاثة عشر يومًا وكان الشريف حسن بن عجلان محبوسًا فأفرخ السلطان عنه وأخلع عليه وولاه سلطانة مكة المشرفة عوضًا عن أخيه علي وأمره أن يسافر و يلحق الحجاج.

1. b. Ibn Qāḍī Shuhbah, ″Dhayl″ (CB 5527), 24v., marg. and *mukhtaṣar* (ed. Darwich), 3:555; those parts in brackets are missing from the *mukhtaṣar*:

وفي يوم الاربعاء المذكور قدم الى مصر نجابة من الحجاز الى مصر وأخبروا أن [في شوال المذكور] وقعت وقعة بين بني حسن و قواد مكة ببَطْن مرّ [وحصل بين الشريف علي صاحب مكة وبين شخص من بني حسن تماسك فوقعا عن الخيل فضرب كل منهما صاحبه] فقتل علي بن عجلان [وعاش غريمه] وأن قواد مكة وعبيدها حمَوها [وحصنوها] ولم يمكنوا بني حسن منها وأن لهم عن مكة ثلاثة عشر يومًا وكان السيد حسن بن عجلان محبوسًا فأفرج السلطان عنه وخلع عليه سلطانة مكة عوضًا عن أخيه علي وأمر أن يلحق الحجاج.

Ibn Qāḍī Shuhbah′s reliance on Ibn al-Furāt for this report is clear; aside from some minor changes and omissions the two reports are identical.[44] The report in the *mukhtaṣar* evinces what one expects of an abridgement, namely, the exclusion of extraneous material. The report in the *mukhtaṣar* does, however, contain an additional sentence: *wa-sāra wa-ma'ahu Yalbughā al-Sālimī fī sābi' al-shahr al-ātī 'alá al-hujun*. This sentence is to be found in Ibn al-Furāt (p. 414), and consequently in Ibn Qāḍī Shuhbah (fol. 26v., lines 1-7) under Tuesday, 6 Dhū al-Qa'dah as part of an account of the Amir Yalbughā′s postponement of a trip to the Hijaz, a postponement occasioned by a dream in which his late master Abū Bakr al-Bajā'ī warned him against going before Dhū al-Qa'dah. He then duly set out with the new Sharīf of Mecca, Ḥasan ibn 'Ajlān.

[44]It is worth comparing the reports of Ibn Ḥajar (*Inbā'*, 1:495) and al-Maqrīzī (*al-Sulūk li-Ma'rifat Duwal al-Mulūk* [Cairo, 1934], 3:2, 841), who also relied on Ibn al-Furāt (see Jere L. Bacharach, ″Circassian Mamluk Historians and their Quantitative Data,″ *Journal of the American Research Center in Egypt* 12 [1975]: 84), with those of Ibn Qāḍī Shuhbah to see the differences in approach the three authors have to quoting other historians′ material.

The second example is a more complex one. It again demonstrates Ibn Qāḍī Shuhbah´s reliance on Ibn al-Furāt for a report which he recorded in his ˝Dhayl˝ (under the month Sha'bān) and then abridged for the *mukhtaṣar*. But we also find additional related reports unique to the ˝Dhayl˝ (in both recensions). The background is the sultan´s borrowing of money against *waqf*s established for orphans in Egypt and Syria to finance an expedition to Syria. The related reports in the ˝Dhayl˝ detail the legal and financial processes involved in such a transaction.

2. a. Ibn al-Furāt, *Ta'rīkh*, vol. 9 pt. 2, 410:
وفي يوم السبت تاسعه رسم السلطان الظاهر بردّ دراهم الايتام الذي كان اقترضها من المُودَعَين بمصر والشام عند توجّهه للشام، من مودع القاهرة خمسمائه الف وخمسين الف ومن مودع الشام ستمائة الف درهم فتسلّموها أُمناءُ الحكم من مباشري السلطان.

2. b. Ibn Qāḍī Shuhbah, ˝Dhayl˝ (CB 5527), 19v., lines 18-23 and *mukhtaṣar* (ed. Darwich), 3:551; again, those parts in brackets are missing from the *mukhtaṣar*:
وفي بعض تواريخ المصريين أن في يوم السبت تاسعه رسم السلطان الملك الظاهر بردّ دراهم الايتام الذي كان اقترضها من المُودَعَين بمصر والشام عند توجّهه للشام، من مودع القاهرة خمسمائه الف وخمسين الف [ومن مودع الشام ستمائة الف درهم] فتسلّم دلك أُمناءُ الحكم من مباشري السلطان.

The reports are nearly identical, though it is interesting to note that the *mukhtaṣar* has left out the sum borrowed from the Syrian depository, considering the usual emphasis Ibn Qāḍī Shuhbah places on Syrian affairs.[45] Next we find an additional report (under Dhū al-Qa'dah) in the ˝Dhayl˝ and the *mukhtaṣar*, detailing the result of this order from the Sultan:

2. c. Ibn Qāḍī Shuhbah, ˝Dhayl˝ (CB 5527), 26v., lines 7-13 and *mukhtaṣar* (ed. Darwich), 3:555:
ويوم الاربعاء سابعه وصل كتاب السلطان الى نائب السلطانة بأن يشتري ما أُبيع على الايتام وغيرهم من بيت المال عام أول وهو الطاحون بباب السلامة ونصف قرية الأَقْتَريش ويبلغه خمسمائة الف درهم وأن يدفع الثمن اليهم من ثمن القَنْد المبيع على نائب السلطانة ففعل ذلك بعد شهر وقبض المبلغ وأن يسامحوا بما قبضوا من الريع وكان السلطان فعل في شعبان مثل ذلك

---

[45]There are other slight variations in the *mukhtaṣar*: for *'inda tawajjuhihi lil-Shām*, there is *fī al-sanah al-khāliyah*; and in one of the MSS (as Darwich tells us [vol. 3, 551, n. 1]) the correction of *alladhī* to *allatī*.

بالقاهرة كما تقدّم.

We then find two additional reports (under Dhū al-Ḥijjah) in the ″Dhayl″ (both recensions) not found in the *mukhtaṣar*:

2. d. Ibn Qāḍī Shuhbah, ″Dhayl″ (Köprülü 1027), 185v., lines 4-9 and (CB 5527), 27v., line 19-28r., line 2:

ويوم الثلاثاء خامسه جرى عقد التبايع لطاحون بباب السلامة ونصف قرية الأَقْتَريش اشترى نائب السلطانة ذلك لمولانا السلطان بطريق الوكالة بمقتضى الكتاب الوارد في الشهر الماضي من المشتريين كذلك من بيت المال للايتام وغيرهم بحضور قاضي القضاة و القاضي المالكي و أحال النائب بالمال على المستلم من المشتريين للقَنْد من النبات وقبلوا الحوالة وحصل القبض الشرعي وشرعوا في كتابة النسخ لذلك.

2. e. Ibn Qāḍī Shuhbah, ″Dhayl″ (Köprülü 1027), 185v., lines 12-17 and (CB 5527), 28r., lines 6-11:

وليلة الثلاثاء ثاني عشره أندبتُ كتاب التبايع الصادر من النائب بطريق الوكالة عن السلطان من المتكلمين على الايتام وغيرهم من الاوصياء على مشتري الوقوف لما كان أُشتري من بيت المال لهم في العام الماضي بعد أن يُندب وكيل السلطان للنائب عند القاضي المالكي وأندبتُ التبايع المذكور بعد استيعاء الشرائط الشرعية ونقد من الغد على القضاة الاربعة وكتب به نسخة أُرسلت الى مصر ونسخة استمرّت عند النائب ثم كتب به نسختان أخريان بخط العليلي [؟] وتلك النسختان احداهما بخط ابن غزّي و الاخرى بخط الرملي.

Two general conclusions can be drawn from these examples: (1) for the year 797/1394, Ibn Qāḍī Shuhbah′s source for much of the information in his ″Dhayl,″ and so also in his *mukhtaṣar*, was Ibn al-Furāt′s *Ta'rīkh*; (2) there is information, perhaps valuable information, to be had from the ″Dhayl″ (whichever recension) which cannot be found in the *mukhtaṣar*. With regard to the first conclusion, the reliance upon Ibn al-Furāt is much more pervasive than two examples alone can demonstrate. In fact, a rough estimate of the combined *ḥawādith* and *tarājim* taken from Ibn al-Furāt for the year 797 is *fully half* of the ″Dhayl″ and *fully half* of the *mukhtaṣar*. The second conclusion, too, has further implications: *there is no information in the mukhtaṣar which is not to be had from the "Dhayl."* Moreover, the ″Dhayl,″ as we have seen, contains information not taken from Ibn al-Furāt (or it seems from any other source) and which was not incorporated into the *mukhtaṣar*.

Such information is of two types: (1) information which expands upon the brief accounts found in the *mukhtaṣar*; (2) fully unique reports and biographies. The first type of information is akin to our second example above. The second is reports centered around academic, legal, and religious life in Damascus. These are accounts of who taught where and what was taught, legal and teaching appointments received and lost (and often the scandals which occasioned such changes), daily activities of the chief judges, lists and descriptions of letters received from travelling scholars, and bureaucratic information. There are some thirty such reports. Next, there are some twenty biographies unique to the ″Dhayl,″ biographies of usually minor figures who were involved, again, in the intellectual life of Damascus.

So far, we have dealt with the historical importance of the ″Dhayl″ in relation to its *mukhtaṣar*, but what of the relative importance of the two recensions of the ″Dhayl″? We have already seen that Ibn Qāḍī Shuhbah filled out his first recension with information taken from Ibn al-Furāt. There is, however, material in the second recension for the year 797 not to be had from the first recension. Such additions are largely biographies: of the twenty biographies unique to the two recensions of the ″Dhayl,″ roughly half are found only in the second recension represented by Chester Beatty 5527. These are Ibn Qāḍī Shuhbah's own additions to the first recension.

But, admittedly, none of the information unique to the ″Dhayl″ for the year 797 is of a particularly profound nature. The *mukhtaṣar* records the most important events and biographies.[46] The information in the ″Dhayl,″ then, helps to flesh out more fully the social and intellectual dimensions of Damascene life at the end of the eighth/fourteenth century. Granted, it is unfortunate that for the years 797-810/1394-1407 a manuscript of the ″Dhayl″ was not available when the decision to publish the *mukhtaṣar* was made, but such is the state of the field. However, it should be clear now that for the year 797/1394, only half of the information in the *mukhtaṣar* is of real worth as unique information for modern historians: the rest can be had from Ibn al-Furāt. Such a judgement most likely is also applicable to those years preceding 797/1394 and covered by Ibn al-Furāt. Ibn Qāḍī Shuhbah's *muntaqá* of Ibn al-Furāt's *History*, found in Chester Beatty MS 4125, covers the years 778-793/1376-1390, and so it is for those years that we can assume there was borrowing. And though not found in Chester Beatty MS 4125, we can surmise that information for the years 794-799/1391-1396 were also ″selected″ by Ibn Qāḍī Shuhbah on the basis of the presence of such information in the account of the year 797 in both the ″Dhayl″ and the *mukhtaṣar*. But—and this has significance beyond the question of the relative worth of the ″Dhayl″ and *mukhtaṣar*—no manuscripts of Ibn al-Furāt's *Ta'rīkh* have come to light for the years 698-789/1298-

[46]Such a qualitative judgement is, however, relative to what one wants from a Mamluk history.

1387.[47] A thorough investigation of Ibn Qāḍī Shuhbah′s *muntaqá* of Ibn al-Furāt, his *mukhtaṣar* (as edited by Darwich) and the Köprülü MS of his ″Dhayl″ (which includes the years 787-788) for borrowings from Ibn al-Furāt would prove invaluable in reconstructing Ibn al-Furāt′s *Ta'rīkh* for that period.[48]

To return to the ″Dhayl″ and Chester Beatty MS 5527, what can be said about the years after 800, the year the published edition of the *mukhtaṣar* ends?[49] For content concerning events in Syria and particularly Damascus, they resemble closely the preceding years and so equally have a value for the social and intellectual life of that city. It is not necessary to provide as detailed a study of those years as has been done for the year 797 as we are no longer constrained to a comparative study of the ″Dhayl″ and the *mukhtaṣar*. The pattern of expansion from first recension to second recension has also been established and need not be illustrated further.

We know the value of Ibn Qāḍī Shuhbah′s history for events and biographies close to home, but as for those areas beyond Syria, and most especially Egypt, a pattern of borrowing from other histories has been established; thus, it would seem wise to determine just which histories he used to this end. Again, his *muntaqá*s provide a good starting point. The *muntaqá* of Ibn Duqmāq in Chester Beatty MS 4125 covers only two years, 804-805. A brief analysis of the year 804 indicates Ibn Qāḍī Shuhbah′s reliance on Ibn Duqmāq in the ″Dhayl.″ One example, dealing with a minor rebellion by a group of amirs, will suffice. Ibn Duqmāq′s version is given first, followed by Ibn Qāḍī Shuhbah′s version from the Chester Beatty MS 5527, with sections in brackets indicating elements missing from his *muntaqá*.

1. a. Ibn Duqmāq, ″al-Jawhar al-Thamīn,″[50] 219v., line 9 - 220r., line 4:

وفيها في يوم الجمعة ثاني شوال حصل كلام بين الامير نوروز الحافظي وجكم الدوادار وبين الامير سودون طاز أمير أخور وحصل سرّ كبير الى أن لبسوا ونزل السلطان الى الاصطبل وأقام بالمقعد وترامَوا بالنفط والنشاب. ثم إن أمير المؤمنين وشيخ الاسلام والقضاة دخلوا بينهم ومشَوا بالصلح فاصطلحوا وطلع السلطان الى القلعة ونزل كلّ من الامراء الى بيته. ثم طلب السلطانُ

[47]I rely on Cahen′s somewhat dated article on Ibn al-Furāt in the *Encyclopaedia of Islam*, 2nd ed., but I am not aware of any further discoveries. Within that roughly hundred year gap, it is the latter half coinciding with the author′s life that might prove of most importance.

[48]Other historians, e.g. Ibn Ḥajar, al-Maqrīzī, and al-ʻAynī, also used Ibn al-Furāt (see Bacharach, ″Circassian Mamluk Historians,″ 48), and so should be included in such a comparative study.

[49]Darwich tells us (vol. 2, Arabic intro., 57) that the holograph manuscript of the *mukhtaṣar* ends with the year 808; it is not at all clear why he chose not to continue editing the work to this year.

[50]A microfilm of the Bodleian MS Digby Or. 28 of Ibn Duqmāq′s ″al-Jawhar al-Thamīn fī Siyar al-Mulūk wa-al-Salāṭīn″ was kindly provided by The University of Chicago Library.

الخليفةَ وقاضي القضاة فطلعوا الى السلطان. ثم نزلوا فحلّفوا الامراء.

1. b. Ibn Qāḍī Shuhbah, ″Dhayl″ (CB 5527), 247r., lines 3-11 (brackets enclose major omissions in ″al-Muntaqá min Ta'rīkh Ibn Duqmāq″ [CB 4125], 201r., line 20-201v., line 2):

في يوم ثانيه حصل بين الامراء نوروز وجكم وقاني بيه ومَن معهم وبين الامير سودون طاز أخور ومَن انضاف اليه سرّ كبير ولبسوا في اليوم المذكور ونزل السلطان الى الاصطبل السلطاني وأقام به ويقاتل الامراء والمماليك السلطانية و تعس الامراء في ذلك اليوم. ثم إن الخليفة والقضاة وشيخ الاسلام دخلوا بينهم ومشَوا بالصلح فاصطلحوا في ذلك اليوم وطلع السلطان عشية النهار الى القلعة. ثم راح كلّ واحد منهم الى بيته وفي صبح الغد طُلب الخليفة والشيخ والقضاة الى القلعة فاجتمعوا بالسلطان. ثم نزلوا الى بيت الامير[نوروز ثم الى بيت الامير ولي الدين الاتابك والى بيوت مهمة الامراء] وحلّفوهم.

Clearly, Ibn Qāḍī Shuhbah′s version displays a few substantive differences, chiefly with regard to other people involved in the event. While the *muntaqá* made by Ibn Qāḍī Shuhbah reflects some of these changes (viz., Qānī Bāy, *mamālīk sulṭānīyah*), it does not include them all (e.g., the last line[51]). Two possibilities arise. The most obvious is that Ibn Qāḍī Shuhbah used a version of Ibn Duqmāq other than that represented by the Bodleian MS used here. This, however, does not explain the changes from the *muntaqá* version to the ″Dhayl″ version. In other words, Ibn Qāḍī Shuhbah drew either entirely on another source which also used Ibn Duqmāq but which also added the other elements, or he added the additional information from another source. This process could have begun with the *muntaqá* version which was then expanded for the ″Dhayl″ version using additional sources. For the example above, the problem is a minor one; the report agrees almost exactly with Ibn Duqmāq in substance and wording. But the implications for other borrowed elements found in the account for the year 804 are significant: it is likely that he used more than one source (Ibn Duqmāq) for the version he provides in the ″Dhayl.″ This other source remains unidentified.

What of those years not treated in Ibn Qāḍī Shuhbah′s books of excerpts? There is evidence that for the year 810 Ibn Qāḍī Shuhbah relied at least in part on al-Maqrīzī′s *al-Sulūk*. For instance, the reports of the sultan′s hunting trip in

---

[51]The last line in the *muntaqá* in fact reads: *thumma nazalū bi-dār wa-a'lá buyūt al-umarā' fa-ḥallafūhum.*

al-Muḥarram of that year in al-Maqrīzī and Ibn Qāḍī Shuhbah agree almost exactly:

1. a. Al-Maqrīzī, *al-Sulūk*, 4:1, 54:
وفي يوم الاثنين ثامن عشرينه سار السلطان من قلعة الجبل في آخر الثانية بطالع الاسد ونزل بمخيمه من خارج القاهرة تجاه مسجد تبر. وقد بلغت النفقة على المماليك الى مائة ألف دينار وثمانين ألف دينار وبلغت عدة الاغنام التي سيقت معه عشرة آلاف رأس من الضأن [الخ].

1. b. Ibn Qāḍī Shuhbah, ″Dhayl″ (CB 5527), 390v., lines 5-10:
ويوم الاثنين سابع عشرينه خرج السلطان من قلعة الجبل ونزل بمخيمه خارج القاهرة قال بعضهم وبلغت النفقة على المماليك الى مائة ألف دينار وثمانين ألف دينار وبلغت عدة الاغنام التي سيقت معه عشرة آلاف رأس من الضأن [الخ].

Aside from Ibn Qāḍī Shuhbah′s editorial note, his report is very similar to that of al-Maqrīzī. But we also find in the ″Dhayl″ a marginal note listing which amirs accompanied the sultan and which of them stayed behind; no such list is found in al-Maqrīzī. There are additional reports for the year 810 that can be traced to al-Maqrīzī, but, significantly, others which cannot. Ibn Qāḍī Shuhbah introduces these other reports with the words *wa-fī tawārīkh al-miṣrīyīn*, ″and in the Egyptian histories.″ Some biographies, like that of Shams al-Dīn Muḥammad al-Iskandarī, the *muḥtasib* of Cairo, are verbatim copies of al-Maqrīzī. Biographies for other, perhaps more significant individuals, such as that for the *atābak* of the Egyptian army Sayf al-Dīn Aytamish, cannot be found in al-Maqrīzī. This suggests that either Ibn Qāḍī Shuhbah used a common source with al-Maqrīzī or that he added these additional elements from another source altogether. This common or other source remains unidentified.

Ibn Qāḍī Shuhbah′s account of the year 801 is replete with references to Egyptian histories. It seems that for this year, Ibn Qāḍī Shuhbah′s source recorded events with a date differing from the one established by him, so we find phrases such as *wa-yawm al-aḥad sādisuhu wa-huwa fī tawārīkh al-miṣrīyīn khāmisuhu* continually repeated. Perhaps the most significant event of this year was the death of Sultan Barqūq. Ibn Qāḍī Shuhbah′s biography does not, in even a general sense, reflect any of the other contemporary Egyptian sources (e.g., Ibn Taghrībirdī, al-ʻAynī,[52] Ibn Ḥajar al-ʻAsqalānī, al-Maqrīzī) though he must certainly have had

[52]A microfilm copy (Maʻhad al-Makhṭūṭāt al-ʻArabīyah 738) of the MS Ahmet III 2911 of

to rely upon an Egyptian source for this record. It is tempting to think that for 801/1398 and perhaps a few more years early in the ninth/fifteenth century, Ibn Qāḍī Shuhbah relied on Ibn al-Furāt who, as some sources tell us, wrote ″a little″ for the beginning of this century.[53] But as no manuscript remains of Ibn al-Furāt′s *Ta'rīkh* have come to light for the years after 799/1396, this is difficult to prove. Perhaps a stylistic study of these quotations in Ibn Qāḍī Shuhbah′s works might help in this regard.[54]

In brief, then, we have evidence that Ibn Qāḍī Shuhbah relied on both Ibn Duqmāq and al-Maqrīzī (or common sources) for certain years after 800, if only in part. It is also clear that other sources were used, but these remain to be identified. (See fig. 4.)

The soundings of Chester Beatty MS 5527 reveal a number of important facts. At least three contemporary historians were drawn upon in the composition of the ″Dhayl.″ Modern historians′ use of the ″Dhayl″ must, thus, be undertaken with a critical eye. Next, Ibn Qāḍī Shuhbah′s use of Ibn al-Furāt′s *Ta'rīkh* has secured for modern historians parts of an important Mamluk history no longer extant in their original form. Finally, information unique to Ibn Qāḍī Shuhbah, and especially the information unique to the ″Dhayl,″ can be added to the corpus of ″Syrian school″ histories upon which modern historians base analyses of the social and intellectual life of Mamluk Syria.

Conclusions

In drawing conclusions from the above analysis of Chester Beatty MS 5527 in particular and Ibn Qāḍī Shuhbah′s ″Dhayl″ in general, it would be helpful to return to those larger contexts with which this study was introduced. Our first context is that of the modern study of Mamluk historiography, the immediate aim of which is to establish the general contours of relationship among Mamluk period histories. Precisely, one wants to know on the one hand what unique material is to be had from a Mamluk history and on the other what sources that Mamluk history drew upon. The above analysis has provided a number of answers to these questions. It has become clear that the historical information unique to the ″Dhayl″ (in its various recensions and including its abridgement) can be characterized largely as Damascene history for the latter half of the eighth/fourteenth century and the early

---

al-'Aynī′s ″'Iqd al-Jumān fī Ta'rīkh Ahl al-Zamān″ was provided by The University of Chicago Library.

[53]E.g., Ibn al-'Imād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Beirut, n.d.), 4:72: *wa-kataba shay' yasīr minhu awwal al-qarn al-tāsi'*.

[54]Ibn al-Furāt′s style is very distinctive (contemporaries and later historians accused him of a certain vulgarity; see Cahen, ″Ibn al-Furāt″) and so might allow for fruitful comparison with quotations in Ibn Qāḍī Shuhbah′s work.

part of the ninth/fifteenth century. Moreover, the "Dhayl" is a history concerned with the social and intellectual dimensions of life in that particular time and place. The nature of this history, and its strength, lies in its detailed record of the minutiae of daily life. This characteristic is perhaps the immediate result of the work's emphasis on prosopography, that is to say the overwhelming emphasis and space it assigns to biographies. This is not to diminish its importance for political history, but again, in the elements original to the "Dhayl," that political history is limited to the Damascus-Syria area. For political history beyond that geographical area, the "Dhayl" has been shown to rely on other, Egyptian historians. Often, such reliance makes the "Dhayl" redundant as an original source, but in such cases where the original work no longer exists—as in the case of portions of Ibn al-Furāt's history—the "Dhayl" along with its *mukhtaṣar* proves an invaluable repository for information which may not be had from other contemporary sources. In short, and as always when dealing with Mamluk histories, the "Dhayl" is a mixture of important and not so important information for the modern historian.

Studies on the aims and methodology of Mamluk historians do not as yet seem to have acquired cachet with modern historians.[55] The field as a whole is still in its infancy. The group of manuscripts of the various recensions, reworkings, revisions, and abridgements of Ibn Qāḍī Shuhbah's historical legacy, collectively called the "Dhayl," will prove of enormous value to students and scholars who might direct their attention to such methodological studies. Obviously the process to which Ibn Qāḍī Shuhbah subjected his historical information is a complex one and perhaps taxing to work through but, perhaps unlike other contemporary historians whose main historical work gained immediate popularity and so quickly became standardized in clean copy, Ibn Qāḍī Shuhbah has left us with a detailed record of his job as an historian. Such a detailed record is of immense value for an understanding of the craft of the Mamluk historian.

Our third larger context is that of genre. From the foregoing, we can identify Ibn Qāḍī Shuhbah as a representative of the "Syrian school" of Mamluk historians. In his concerns and emphases, in the methodology and structure of his historical writing, he consciously aligns himself with the type of history common to the historians of that school. He, and his master Ibn Ḥijjī, were unquestionably important representatives of the "Syrian school." This is obvious from the readership notes in the manuscripts of his work, obvious even more in the extensive use later Syrian historians made of his work. Ibn Ṭūlūn (d. 953/1546) and al-Nuʿaymī (d.

---

[55]For an example of the directions in which such studies might proceed, see Ayman Fu'ād Sayyid's analysis in "Early Methods of Book Composition: al-Maqrīzī's Draft of the *Kitāb al-Khiṭaṭ*" in *The Codicology of Islamic Manuscripts, Proceedings of the Second Conference of al-Furqān Islamic Heritage Foundation, 4-5 December 1993* (London, 1995), 93-101.

978/1570) come to mind in this regard. Egyptian traditionist-historians, such as Ibn Ḥajar al-ʻAsqalānī (d. 852/1448) and al-Sakhāwī (d. 902/1496) also quoted the ˝Dhayl˝ extensively.[56] For modern historians, then, Ibn Qāḍī Shuhbah represents the link between the earlier eighth/fourteenth century historians such as al-Birzālī, al-Dhahabī, and Ibn Kathīr and the later ninth/fifteenth century historians such as al-Sakhāwī and Ibn Ṭūlūn. The addition of Ibn Qāḍī Shuhbah´s work to the corpus of ˝Syrian school˝ histories, for now in the form of the *mukhtaṣar*, should further contribute to our understanding of the nature and development of this type of Mamluk history writing.

Ibn Qāḍī Shuhbah and his ˝Dhayl,˝ then, are important to the many different facets of the study of Mamluk history and historiography. The dimensions to this judgement of Ibn Qāḍī Shuhbah´s importance of course need to be more fully investigated and understood. Such work, in a profound sense, begins where this small study ends and it can only really begin with a critical edition of those years of the second recension ˝Dhayl˝ left to us in manuscript: 801-810/1398-1407.

---

[56]For these authors in general see the articles in the *Encyclopaedia of Islam*, *GAL*, and al-Munajjid´s *Muʻjam al-Mu'arrikhīn*. The case of Ibn Ḥajar is an interesting one; in his *Inbā' al-Ghumr* he cites only Ibn Ḥijjī by name (and not Ibn Qāḍī Shuhbah), a fact which leads one to suspect that he had access to the original draft of the ˝Dhayl˝ by Ibn Ḥijjī.

A Geniza for Mamluk Studies? Charitable Trust (*Waqf*) Documents as a Source for Economic and Social History*

R. Stephen Humphreys initiates his discussion of primary sources in chapter 2 of his magisterial *Islamic History: A Framework for Inquiry* with the following:

> Islamists like to complain about the state of their sources, but in fact what they have is extraordinarily rich and varied, far surpassing the miserable fragments which challenge the student of the late Roman Empire or early medieval Europe. The real problem is to use this patrimony effectively.[1]

No one would dispute Humphreys's assertion about effective use of surviving texts. But when one considers these admittedly copious sources, the nature of exactly what was preserved does qualify the kind of inquiry a researcher may undertake. It is now widely recognized that the discovery, and subsequent analysis, of the Cairo Geniza documents during the first half of the twentieth century enabled students of the Fatimid and Ayyubid periods to ask questions previously considered unanswerable—beyond exceedingly broad conjecture.[2] I have chosen to compare *waqf* documents with the Geniza material because I am convinced that the former play a role at least as significant for the Mamluk period as the Geniza documents have done for the eras preceding it.

It is important to realize that, for all its diversity and richness, the enormous trove of sources compiled during the independent Mamluk period in Egypt and Syria remains secondary for the most part. That is, most of what has survived

*This essay is a revised lecture given in May of 1997 at the Mamluk Studies Workshop convened by the Center for Middle Eastern Studies at The University of Chicago. It aims at summarizing recent directions in scholarship rather than at presenting new research.

[1](Princeton, 1991), 25.

[2]On the progress of study on documents of the Cairo Geniza, see Norman Golb, "Sixty Years of Geniza Research," *Judaism* 6 (1957): 3-16; S. D. Goitein, *A Mediterranean Society: The Jewish Communities of the Arab World as Portrayed in the Documents of the Cairo Geniza*, 5 vols. (Berkeley, 1967-88); and idem, "The Documents of the Cairo Geniza as a Source for Islamic Social History," in his *Studies in Islamic History and Institutions* (Leiden, 1966), 279-95.

amounts to narrative commentary by either on-site observers or post-hoc distillers of material from a preceding period. While the observations of a contemporary witness certainly count as a primary source, it is a highly selective one since that witness could only report what he saw personally or regarded as important enough to select out for discussion. And this problem of selectivity is greatly compounded in the second case when a chronicler did indeed tap archival material that no longer survives. His subsequent readers are totally dependent on what he elected to draw out from the original archival repository. His rationale for choice of material can only be surmised; his errors of omission or transmission cannot be detected and thus cannot be checked.

With regard to historians of medieval Islam—those for whom original archival data is important—the range of questions they could address has until recently been quite constrained. Why has this been so? An archive above all does not automatically introduce the bias of personal agenda. It rarely represents a process of selective culling on the part of a post-hoc commentator, but stands as the original body of evidence—presumably compiled as an accurate, and thus objective record, of the procedure it documented. An archive has rarely been compiled by a single author. In fact, most archives were assembled anonymously (we thus do not know who organized or quantified its data), or by known accountants, scribes, or notaries (certifying their work with signatures) whose job it was to record evidence accurately rather than to interject their own opinions. We may thus assume that an archive, even if not replete, was compiled objectively with the purpose of leaving an accurate account of the procedure it documented.

It is widely recognized that the states of the eastern Mediterranean and southwest Asia have been administered by sophisticated bureaucracies for millennia. Bureaucracy was indeed their invention. But the Islamic phase of their history is distinguished by a striking paradox. Despite the production of vast archival materials by these bureaucracies, almost none have been preserved from the time of the early Caliphate until around 900/1500. After this date, most of the larger Muslim states are documented by archival collections which are progressively better preserved as the decades proceed from ca. 900/1500. Exactly why archival materials were minimally preserved before this date, if at all, remains one of the salient enigmas of Islamic Studies, yet to be effectively explained. Such materials certainly existed because the extraordinary array of secondary historiographical sources so obviously derive their data from these lost collections. It is impossible to explain the production of such a work as al-Qalqashandī´s enormous encyclopedia of diplomatic, *Ṣubḥ al-A‘shá fī Ṣinā‘at al-Inshā’*,[3] without recognition of the vast

[3]14 vols. (Cairo, 1913-20, repr. Cairo, 1963).

archives of the chancery bureau (*dīwān al-inshā'*) which its author mined. Nonetheless, the original chancery materials have disappeared.

It is in this light that the surviving charitable trust (*waqf*; pl., *awqāf*) deeds of the independent Mamluk period warrant exploration for topics that have previously gone unaddressed. I do think that an explanation for their survival can be hypothesized. *Waqf* documents certify a perpetual legal endowment. As an act of bequeathal performed in the spirit of fulfilling the fourth so-called pillar of behavior incumbent upon a believer: charitable donation (alms-giving or *zakāh*), a pious endowment represented one of the most respected benefits a believer could bestow on the community.[4] As I shall discuss subsequently, this benefit invariably aided its donor as well as its recipient(s)—in tangible as well as spiritual ways. As they evolved over the centuries, legal procedures governing the administration of charitable trusts were enormously elaborated to provide a rich diversity of religious, educational, and welfare services to the Muslim community.

At the same time, these procedures were structured to assure a secure legacy to descendants of their donors. Given the array of strategies that were designed to realize these objectives, the charitable trust remained in its essence an instrument dedicated to perpetual provision of resources. And for this reason, the preservation of its documentation was essential. That is, if a document provided evidence for legal precedent, it merited preservation. On the other hand, altruistic historical reference did not, by itself, constitute a motive for preservation. We cannot assume that the one thousand-plus documents that have survived from the independent Mamluk period in Egypt represent anything approaching the total number of deeds that were actually drawn up during this lengthy epoch. Nonetheless, the fact that these thousand have survived at all—uniquely among the myriad archival collections which once existed in the Mamluk bureaucracy—can be attributed to this underlying imperative of perpetuity and legal precedence. It should also be stressed that *waqf*s continued to be working documents, providing successive details of manipulation and change for the ongoing life and transformation of a perpetual trust.

In this context, some generic comments about the nature of the *waqf* document are in order before considering how it may enlighten our understanding of economic processes heretofore undetected. As I mentioned above, the *waqf* or charitable trust represents a specific aspect of inheritance law inspired by the fourth pillar of

---

[4]On the legal status of *waqf* endowments, see: W. Heffening, "Waḳf," *Encyclopaedia of Islam*, 1st ed., 4:1096-1103; George Makdisi, *The Rise of Colleges: Institutions of Higher Learning in Islam and the West* (Edinburgh, 1981), 35-74; H. Cattan, "The Law of Waqf," in *Law in the Middle East, I: Origins and Development of Islamic Law*, ed. M. J. Khadduri and H. J. Liebesny (Washington, 1955), chapter 8; Nicolas Michel, "Les rizāq iḥbāsiyya: Terres agricoles en main mort dans l'Égypte mamelouke et ottomane," *Annales islamologiques* 30 (1996): 105-98.

behavior incumbent upon a Muslim: charitable donation. In brief, any Muslim man or woman sound of mind and true of faith may grant a portion of his/her personal estate to pious activities that promote the religion or provide for the needs of less fortunate believers. In general, only fixed property (real estate), assets, or services may be designated as *waqf*, although the range of trust instruments is broad enough to permit flexibility in this matter. *Waqf*s were legally categorized as either charitable (*khayrī*) or familial (*durrī, ahlī*), and could be reassigned, exchanged, replaced, sold, or transferred—but only under the supervision of a *qāḍī* or judge.[5] The proceeds of a *waqf* were to be administered by a supervisor (*mutawallī, nāẓir*), often—but not always—the donor, and upon his/her demise one or more heirs. Since family *waqf*s designated a member of the donor′s kin group as a recipient of proceeds, these endowments in particular were frequently subject to corruption and acrimonious litigation in the courts.

The institution of *waqf* attracted the special interest of the Mamluks because of policies and traditions imposed by their own class with respect to tenure over property. Since the Sultanate claimed ownership (or at least custodianship) over state lands, individuals received income rights from allotments (*iqṭā*ʿs) only during active service to the regime. Permanent ownership of an *iqṭā*ʿ was normally denied them, and upon their retirement, dismissal, or death, such allotments reverted to the government for reassignment to a succeeding officer. Accordingly, fixed property granted to support an officer (*amīr*) in lieu of salary during active duty could not be bequeathed to his heirs as a patrimony. Under the law, only cash, movable items or real estate purchased independently constituted an amir′s personal estate. Mamluk amirs regarded this policy of usufruct as a threat—and a very serious one—to their descendants′ future security, not to mention their prosperity. They therefore devised a variety of maneuvers to circumvent it—of which manipulation of charitable trusts was the most reliable.

Given the hallowed status of the *waqf* under the Fourth Pillar of meritorious activity, it transcends laws designed to promote the objectives of a temporal regime. The state cannot prohibit an individual from donating assets to charity, since his generous impulse is sanctioned by Revelation and *sharī*ʿ*ah*. Pious endowments thus provided Mamluk amirs with a convenient means of retaining a measure of control over property that otherwise would revert to the state at the end of their active careers. The extraordinary munificence of the military elite, beginning with the sultan himself, who was bound by the same principle of

---

[5]On alterations legally permissible for a *waqf* endowment, see Claude Cahen, ″Reflexions sur le *waqf* ancien,″ *Studia Islamica* 15 (1961): 37-56; Muḥammad Muḥammad Amīn, *al-Awqāf wa-al-Ḥayāh al-Ijtimāʿīyah fī Miṣr* (Cairo, 1980), esp. chapter 2: ″Izdihār al-Awqāf wa-Tanẓīmuhā fī al-ʿAṣr al-Mamlūkī″; idem and Laylá ʿAlī Ibrāhīm, *Architectural Terms in Mamluk Documents, 648-923/1250-1517* (Cairo, 1990).

usufruct as his subordinate officers, must be understood in this light. From the perspective of the Mamluk elite, the charitable trust enabled them to assure the integrity of their estates, and to pass at least a portion of them on to their heirs.

It is in this context that I should like to summarize some of my own findings that shed light on the fiscal agendas of Sultans al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī (872-901/1468-1496 and 906-922/1501-1517, respectively), and then the discoveries of the prominent French analyst of the late Mamluk period, Jean-Claude Garcin—along with his Egyptian colleague, Mustapha Taher—with regard to the enormous *waqf* of the eunuch guardian of royal princes, Jawhar al-Lālā.[6]

With regard to Qāytbāy and al-Ghawrī, I noted, during my initial survey of Muḥammad Amīn's catalogue,[7] that about thirty-five percent of all the one thousand documents listed there were either granted or acquired by three individuals: al-Ashraf Qāytbāy, his wife al-Khawand Fāṭimah al-Khaṣṣbakīyah, and Qānṣūh al-Ghawrī. My curiosity piqued by this extraordinary concentration, I began examining not only the deeds themselves but their patterns of acquisition.

I observed that Qāytbāy had begun acquiring property and placing it in trusts long before his enthronement. The earliest surviving deed in his name dates from 29 Dhū al-Qaʻdah 855/23 December 1451, seventeen years in advance of his succession.[8] He then purchased a 26.7 percent share of an agrarian tract in Nāḥiyat Salamūn, Gharbīyah Province, for 1,100 *dīnār*s.[9] From this time until the year preceding his death in 1496, Qāytbāy acquired a vast array of rural and urban real estate, the bulk of which he assigned to his *waqf* donations. These deeds, several of which are lengthy and complex, date from 24 Jumādá II 879/5 November 1474 to 15 Dhū al-Ḥijjah 895/30 October 1490. They support some fourteen charitable foundations, including the sultan's mausoleum-mosque located in the Desert Cemetery east of Cairo, several public fountains, district mosques in the capital or Delta, and a college (*madrasah*) in Jerusalem (al-Quds).[10]

---

[6]"Enquête sur le financement d'un *waqf* égyptien du XV[e] siècle: Les comptes de Jawhar al-Lālā," *Journal of the Economic and Social History of the Orient* 38, no. 3 (1995): 262-304.

[7]*Catalogue des documents d'archives du Caire de 239/853 à 922/1516* (Cairo, 1981).

[8]Amīn, no. 116: Dār al-Wathā'iq, Maḥfaẓah 18, Ḥujjah 111.

[9]Shares were not calculated on a decimal basis. Rather, each agrarian/district unit (Ar. *nāḥiyah*), usually corresponding to a village with surrounding fields, was divided into twenty-four portions at the time it was initially surveyed in the Nāṣirī *rawk*, the cadastre commissioned by Sultan al-Nāṣir Muḥammad (r. 1309-1340) and relied upon throughout the late Mamluk period. As the proceeds from these units were subdivided for subsequent reassignment, shares were recalculated as fractions of the original twenty-four portions. To derive percentages, I obtained the relevant fractional values for each transaction and then transformed them into the appropriate percentage figures. On the location of Nāḥiyat Salamūn, see Heinz Halm, *Ägypten nach den Mamlukischen Lehenregistern*, 2: *Das Delta* (Wiesbaden, 1982), 568.

[10]For a roster of Qāytbāy's charitable foundations, see my *Protectors or Praetorians: The Last*

Rather than elaborate further on Qāytbāy′s generosity—which is well documented in narrative sources and widely known in the field—I want to focus on the marked discrepancies I found between annual yields of Qāytbāy′s trusts: the total income they provide, and their annual disbursements for his designated charities as listed in the documents: their total expenses. I estimated the annual income from Qāytbāy′s primary *waqf*—which supported eight of the above fourteen foundations—at about 58,600 *dīnār*s.[11] Annual disbursements, on the other hand, amounted to 4,082 *dīnār*s, 7 percent of the preceding estimated yield. Ninety-three percent of the yield was thus undesignated.

Note that this latter figure, 4,082 *dīnār*s, is not an estimate. The *waqf* deeds specify disbursements but do not provide income figures. Even if the yield estimate undercalculated revenues provided for student stipends, staff salaries, or operational supplies by half, the total would still amount to only 14 percent. Eighty-six percent of income would remain undesignated for any official purpose. Clearly, the great majority of generated income from the *waqf* writs, between 80 to 90 percent of the total, was not devoted to the writ′s stated functions. Since the deeds simultaneously provided for the welfare of Qāytbāy′s family and retainers, one might assume that these individuals collected all the remainder. But in fact, the writs often allow for discretion within the lineage. Amounts reserved for specific persons designated as beneficiaries vary widely from a majority of residual to mere pittances. And sums allotted for supervisory personnel represent minute fragments of total income. Allocation of the majority share of income thus remained undesignated in the documents examined here. For what purposes then was this undesignated majority share intended? To develop a hypothesis, one should compare

---

Mamluk Sultans and Egypt′s Waning as a Great Power (Albany, 1994), 198, note 28.

[11]The term ″estimate″ is emphasized. Since accountants compiling *waqf* documents did not provide specific figures for yields, only for disbursements, the former had to be estimated. Since many properties listed in the primary *waqf* writs granted by Qāytbāy and Qānṣūh al-Ghawrī also appeared in individual sale deeds held by the Waqf Ministry or National Archives, I was frequently able to identify their selling price. I then calculated their estimated annual yield as a percentage of this price, the percentage being derived from average figures on yields provided by scholars who have analyzed Egypt′s agrarian system during the Middle Ages, in particular: Eliyahu Ashtor, ″The Development of Prices in the Medieval Near East,″ *Handbuch der Orientalistik*, Abteilung 1: *Der nahe und der mittlere Osten*, Band 6: *Geschichte der islamischen Länder*, Abschnitt 6: *Wirtschaftsgeschichte des vorderen Orients in islamischer Zeit*, Teil 1, ed. Bertold Spuler (Leiden, 1977), 98-115; idem, *Histoire des prix et des salaires dans l′Orient médiéval* (Paris, 1969); Richard S. Cooper, ″Land Classification Terminology and the Assessment of the *Kharāj* Tax in Medieval Egypt,″ *JESHO* 17 (1974): 91-102; idem, ″A Note on the *Dīnār Jayshī*,″ *JESHO* 16 (1973): 317-18; Hassanein Rabie, *The Financial System of Egypt, 564-741 A.H./1169-1341 A.D.* (London, 1972). While I am confident of the broad accuracy of figures resulting from these calculations, I acknowledge that they are approximations with an inevitable measure of error. General proportions rather than exact sums should be noted.

Qāytbāy´s pattern of donations with that of his eventual successor, Qānṣūh al-Ghawrī.

In marked contrast with Qāytbāy, Qānṣūh al-Ghawrī placed nothing in trusts prior to his enthronement in 1501. His earliest alleged purchases of real estate date from the year 907/1502, several months after his accession. But from then on to his departure for Syria to confront Selim Yavuz in 1516, al-Ghawrī engaged in an unprecedented acquisition of *waqf* properties (at least on the basis of the surviving collection of documents). Of the one thousand total that survive from before 1516 and the Ottoman conquest, some three hundred bear al-Ghawrī´s name—almost one-third. Yet despite this wealth of documentation, al-Ghawrī´s charitable donations are far more restricted than Qāytbāy´s. Al-Ghawrī issued only one major trust deed, and it supports only four foundations—with its benefits concentrated overwhelmingly on the Sultan´s own mausoleum and Sufi hospice (al-Qubbah wa-al-Khānqāh al-Ghawrīyah al-Sharīfah).

From early 907 to the first transaction of his primary *waqf* deed,[12] dated 26 al-Muḥarram 909/21 July 1503, al-Ghawrī amassed a network of properties large enough to generate an estimated annual yield approaching 53,000 Ashrafī *dīnār*s. By the end of 914/April 1509, he had added holdings that provided 31,000 more per year. Thus, by 915, during an interval of seven years, this man gathered a trove of real assets providing roughly 83,000 *dīnār*s annually—all sheltered in a blanket trust dedicated ostensibly to the maintenance of his mausoleum. The other three foundations utilized minimal sums from the trust. But even yearly expenditures on al-Ghawrī´s mausoleum were dwarfed by the trust´s undesignated output. In 914, his mausoleum actually received slightly less than 6,000 *dīnār*s, again 7 percent of the total. The parallel with the ratio between yield and expenditures in Qāytbāy´s main *waqf* is obvious. In both cases, more than 90 percent was left as unassigned income.

Now it is in the context of al-Ghawrī´s fiscal dilemmas which plagued his entire reign that this situation becomes quite interesting. It fits plausibly into the Sultan´s fiscal stratagems. Al-Ghawrī was compelled to raise money to meet incessant demands for bonuses and pay increases by his troops from the day of his accession. He initially turned to the time-tested but politically risky expedient of mass confiscation—in particular of *waqf* yields.[13] While al-Ghawrī was prepared to weather the storm of protest and ill-will generated by mass confiscations of assets, he seems to have found the productivity of this tactic to be inadequate to his fiscal needs—and certainly erratic. Confiscation yielded insufficient and unreliable results.

---

[12]Amīn, no. 652: Wizārat al-Awqāf 882 *qadīm*.

[13]On the decreasing reliability of confiscation as a provider of revenue, due to concealment and hoarding strategies devised by asset holders, see Petry, *Protectors*, 166-76.

During this process of confiscation, al-Ghawrī (and his fiscal advisors) seem to have discerned the enormous potential benefit of acquiring title to trust properties outright, and thereby gaining control over the enormous undesignated surplus yield I mentioned above. I want to stress that no narrative sources allude to such a strategy—while they uniformly condemn al-Ghawrī´s confiscatory measures. But when I compared the acquisition dates on the hundreds of documents certifying properties al-Ghawrī allegedly purchased (or appropriated since no prices are listed on the sale certificates), I found that these paralleled periods of extreme fiscal exigency, when al-Ghawrī confronted truly dangerous episodes of sedition from even his own Mamluk corps. I should emphasize that al-Ghawrī does not seem to have advanced beyond conceiving of this trove as more than a reliable revenue base locked clandestinely in a personal, unofficial reserve. Keep in mind that just when al-Ghawrī was most aggressively engaged in *waqf* acquisition, the political situation on his northern frontiers was becoming unsettled—and diverting his attention from domestic matters.

Given the hypothesis I sketched out for Qānṣūh al-Ghawrī´s stratagem, what processes did Garcin and Taher discover when they examined the enormous trust set up by the eunuch guardian Jawhar al-Lālā? Well, some broad parallels, but also some perceptive discoveries. Jawhar, of Abyssinian (*ḥabashī*) origin, rose through the ranks open to a eunuch guardian of Mamluk trainees to become tutor (*lālā*) to two of Sultan Barsbāy´s sons. Prior to his death in 842/1438 (shortly after Barsbāy´s demise), he endowed a residence (*dār*) and a college (*madrasah*) in the Maṣna‘ district of Cairo near the Citadel. Garcin and Taher meticulously studied each of several transactions (eight total) marking stages in the elaboration of the trust that Jawhar established in support of these and other charities. One should note that eunuchs who rose to elite levels of the ruling establishment were exceedingly vulnerable to appropriation, if not outright confiscation, of their worldly goods.[14] And even though they could produce no children of their own as heirs, they often wished to leave a patrimony either to close associates, or to members of their particular class, or to the heirs of their former benefactors—presumably in return for some measure of protection for the integrity of their estates.

Garcin and Taher observed early on that Jawhar arranged for all proceeds from his trust to remain at his disposal without further justification in his own lifetime.[15] Second, they detected that the majority of the *waqf*´s yield—from its several sources of rural agrarian land and urban rent-paying real estate—was left

---

[14]On the status of eunuchs in the Mamluk military hierarchy, see David Ayalon, ″The Eunuchs in the Mamluk Sultanate,″ *Studies in Memory of Gaston Wiet*, ed. Myriam Rosen-Ayalon (Jerusalem, 1977), 267-95; Shaun Marmon, *Eunuchs and Sacred Boundaries in Islamic Society* (New York, 1995).

[15]Garcin and Taher, 265, 274, 278, 282.

undesignated. They arrived at a proportion of roughly one-third designated/two-thirds undesignated.[16]

Garcin and Taher then proceeded to trace the acquisition process as applied to property purchases in several stages between the dates Jumādá I 831/February 1428 and 17 al-Muḥarram 840/1 August 1437. Over the course of these nine years, Jawhar concluded eight transactions in which property was purchased and/or reclassified. Garcin and Taher detected a shrewd pattern of land purchase wherein Jawhar (or, more likely, his accountants who remain unknown) selected land that was potentially productive but temporarily underutilized due to depopulation from such causes as plague mortality or bedouin spoliation.[17] Available at a depressed price, the property was bought cheap. But its yield was soon restored, even within a decade (thus presumably repopulated and recultivated?). Jawhar was accordingly able to predict and benefit from future yield restoration and consequent price inflation for the rural properties he placed in *waqf*.

And once in trust, these properties were sheltered from taxes, and thus remained as secure from confiscation as any asset held by someone in such a high-profile but vulnerable position could be. Garcin and Taher went on to analyze the salary rates of officials paid out of the *waqf* yield. They noted that, even given the majority surplus, these salaries were calculated to be paid primarily from predicted rates of yield increase resulting from price inflation for the crops and/or rents generated by the *waqf* properties.[18] That is, most of the actual costs of operating the trust charities were covered by inflation and thus represented no real drain on *waqf* proceeds at all.

What I should add to Garcin and Taher′s exceedingly astute analysis is that Jawhar, or more likely his fiscal agents, had to possess some mechanism for calculating inflation accurately. What such a mechanism would be we cannot know, but its existence is a certainty because the predictions are a fact that can be noted by the figures provided in the several trust transactions. Jawhar and his advisors were sufficiently informed to make what amounted to futures decisions when they established salary rates for officials in the several *waqf* charities. But without the presence of these figures in the *waqf* document, this process could not be recovered; and thus no basis would exist for this hypothesis. It is the formation of such hypotheses, resting on careful and penetrating decipherment of the fiscal data in a rich primary source, that has advanced our understanding of financial procedures—and the economy in general—during the later medieval period in

Qāytbāy´s Foundation in Medina, the *Madrasah*, the *Ribāṭ* and the *Dashīshah*

Muslim rulers have always endowed the shrines of the holy cities of Mecca and Medina, competing, and even fighting, for the privilege to be titular custodians of the Ḥaramayn. With the annual pilgrimage caravan, gifts and donations of all kinds were sent to maintain, enlarge, and embellish the shrines, sponsor various religious and philanthropic institutions, support the inhabitants of the holy cities, and assist the pilgrims and the sojourners (*mujāwirūn*) settled there. Pious as well as private endowments, i.e., *awqāf*, from the entire medieval Muslim world generally include a clause stating that in case the primary beneficiary of the endowment or the designated alternatives, whether individuals or institutions, no longer exist, the *waqf* revenue should revert to the Ḥaramayn. Another endowment possibility frequently used was the allocation of a share of a *waqf* revenue, whether a family or a philanthropic *waqf* or a combination of both, for the benefit of the Ḥaramayn in order to provide a specific service, such as the supply of water, the purchase of candles, or the distribution of alms or food. But there were, of course, also direct endowments which were intended primarily for the benefit of the holy cities. The Mamluk sultans, who considered themselves the heirs of the Abbasid caliphs as guardians of the Ḥaramayn, and who did not allow other Muslim rulers to share this prerogative with them, constantly contributed to the architectural, philanthropic, and scholarly promotion of the Holy Cities, including Jerusalem and Hebron, which they had reconquered from the Crusaders.

One of the most prominent sponsors of Muslim holy places all over the Mamluk empire was Sultan al-Ashraf Qāytbāy, the only sultan of the Circassian period to have performed the pilgrimage.[1] His endowments for Mecca, Medina, Jerusalem, and Hebron have been emphasized in contemporary sources,[2] and some of them

[1]Of the Baḥrī Mamluk sultans, al-Ẓāhir Baybars, al-Nāṣir Muḥammad, and al-Ashraf Sha'bān are reported to have performed the pilgrimage.

are also documented by extant *waqf* documents. The *waqf* deeds of Qāytbāy′s *madrasah*s in Jerusalem and Gaza have been published,[3] while that of the *madrasah* in Mecca is not yet known. Qāytbāy′s opulent endowment for Medina is the subject of this study.

The substantial *waqf* deed of Qāytbāy at the Bibliothèque Nationale (BN) in Paris, which has so far not been taken into consideration, opens up a new perspective for a study of Qāytbāy′s pious works.[4] It describes an endowment made for the benefit of a *madrasah*, a *ribāṭ*, and a charitable kitchen in Medina. But of course the value of the document goes beyond the religious and charitable aspects. The considerable real estate alienated in Cairo to finance this foundation reveals another interesting aspect of *waqf* administration in this period, and, moreover, the architectural descriptions of secular and religious buildings can significantly contribute to our knowledge of late Mamluk architecture.[5]

Like his earlier *waqfīyah* endowing his religious-funerary complex in Cairo, Qāytbāy′s *waqfīyah* (235 fols.) at the BN consists of a collection of consecutive endowments dated between 889 and 899.

Qāytbāy′s charitable works in Medina received particular attention in the chronicles because of the circumstances that accompanied this initiative and the way Qāytbāy himself advertised it. The sultan was deeply moved during his pilgrimage in 884/1480 by the poverty and deprivation he saw there. A few months later, in Rabī‘ I 885/1480, during the traditional banquet given by the sultan for the celebration of the Prophet′s birthday and in the presence of the four chief *qāḍī*s and the great amirs, six slaves came in carrying dishes on their heads. When the dishes were uncovered, heaps of gold *dīnār*s were revealed to the guests. According to Ibn Iyās′s account, Qāytbāy asked the Shāfi‘ī *qāḍī* to keep the money (60,000 *dīnār*s) in trust, but he declined. Jawharī adds that none of the four *qāḍī*s was willing to keep this amount in trust, nor the three highest amirs, the great *dawādār,* the *atābak*, and the *rās al-nawbah*. Finally it was the treasurer, or *khazindār*, who agreed to take it in order to conduct the transactions necessary for the *waqf*. This is confirmed by the *waqf* deed which mentions the name of the *khazindār,* Barsbāy al-Maḥmūdī,[6] as having purchased estates in his function as proxy for the sultan.

[6]BN *waqf*, fol. 22.

Jawharī reports, furthermore, that the sultan urged his officials to acquire any decaying estate they might find, even by the means of *istibdāl*, i.e. exchange, and to restore it and invest it for the *waqf*. The Ḥanafī chief *qāḍī*, however, aware of the abuses that an *istibdāl* transaction usually led to, warned the sultan that this should not be practiced, unless it were fully justified.[7] *Istibdāl* is the exchange or sale of an alienated estate that is no longer profitable, in order to allow the endower to substitute for it another more lucrative estate. Alienated or *waqf* estates were not allowed to be objects of transactions under normal conditions. In case the estate had deteriorated to the extent of no longer yielding a revenue, it could be sold in order to allow the acquisition of a better investment. This device was, however, regularly misused to release alienated estates for other purposes, for example when a sultan or an amir became interested in it.

Jawharī praised Qāytbāy for having established a *waqf* in the first instance for the benefit of Medina, and not as ″other kings and people nowadays do″ who dedicate the *waqf* to themselves, their family, and descendants in the first place, leaving to the holy cities only the remainder. The sultan meant to support the people of Medina by making them the first beneficiary of the *waqf* before its yield was consumed, and Jawharī adds: ″if only it remains safe from *istibdāl*!″ It is interesting to note that the sultan himself in his own *waqf* deed strictly prohibited the use of *istibdāl* without his permission, at any time and not even after his death.[8] This did not prevent him, however, from making use of *istibdāl* in order to acquire the plot he wanted for his complex in Medina; a *madrasah*, a *ribāṭ*, and a house had to be demolished and rebuilt elsewhere to make place for Qāytbāy′s constructions.[9]

THE *MAWQŪFĀT* OR ALIENATED ESTATES

When Qāytbāy pledged to donate the sum of 60,000 *dīnār*s to the people of Medina, he stressed that this entire sum came from his own private account, not from the *bayt al-māl*.[10] This is interesting because his previous endowment, dedicated to his funerary complex in Cairo, included both personal property as well as estates from the *bayt al-māl*. Some of the agricultural land alienated for the Medina foundation was *arāḍī kharājīyah*, that is, it belonged to the *bayt al-māl*, which means that Qāytbāy did not finance his philanthropic works exclusively with his private funds, but used also property of the *bayt al-māl*. The inclusion of *kharāj* land that had not been purchased in a *waqf* meant that only its tax revenue

[7]Ibn Iyās, 3:164f.; Jawharī, 480.
[8]BN *waqf*, fol. 17.
[9]Samhūdī, 2:643.
[10]Ibn Iyās, 3:165.

was alienated, not the land itself which remained in the possession of the state.[11] Without entering into the discussion over the complex subject of land property in medieval Islam and its evolution, one may generally say that in medieval Egypt land was considered property of the state. The *kharāj* or tax revenue of land was thus the property of the *bayt al-māl,* held in trust by the ruler for the community. The ruler had the right to lease the land in the name of the *bayt al-māl,* leasing only its usufruct to the holder who would pay the *kharāj* tax. Under the military *iqṭāʻ* system applied in Egypt since the Ayyubid period, the tax revenue of the land belonging to the *bayt al-māl* was granted as *iqṭāʻ* to the amirs as remuneration for maintaining the army.[12]

Theoretically the alienation of an estate as *waqf* could take place only when the estate had been acquired as private property, otherwise it was not *waqf* but *irṣād.* The latter was applied prior to the Ayyubid period, whenever the rulers financed institutions for the public interest or for philanthropic purposes. According to Muḥammad Amīn it was Ṣalāḥ al-Dīn who began to alienate *bayt al-māl* property for the benefit of members of the ruling establishment and their descendants. From that time on, the line between *bayt al-māl* and the sultan's private property was blurred; the Mamluk sultans alienated *bayt al-māl* estates and included them in their *waqf*s in which they themselves and their families were beneficiaries. The sultans were also authorized to sell property of the *bayt al-māl*, which officially opened the way for its alienation as *waqf.* At the end of the Mamluk period, half of Egypt's *kharāj* land was alienated in *waqf*s. Even when the purpose was a philanthropic one, the alienation of a *bayt al-māl* estate was subject to criticism because of its detrimental effect on the *iqṭāʻ* system and thus on military potential.[13] As a result, it happened that in times of military emergency the state treasury was found empty, and the sultans had to request from the religious and administrative establishment authorization to confiscate *waqf* funds in order to pay the soldiers, a measure which was of course illegal. Sultan Qāytbāy himself, during his wars with the Dhū al-Qadr, found himself in such a situation and had to confront the violent opposition of the *ʻulamāʼ*.[14] Thus when he declared that the 60,000 *dīnār*s he had sponsored came exclusively from his private purse, he was probably aiming

[14]Amīn, 326f.; Jawharī, 33ff.

to avert criticism from this side. He did, nonetheless, alienate *kharāj* land for his Medina foundation, as he had done earlier for his funerary complex.

Concerning the legal problems involved in the alienation of *bayt al-māl* property in *waqf*s, Jawharī reports a heated debate between the jurists of the four rites in which Qāytbāy himself participated. It dealt with the question of the extent to which the endower was allowed to modify the stipulations of a *waqf* in which *bayt al-māl* estate is included. He does not inform us, however, about the outcome of the debate.[15]

Apart from the agricultural land, the sultan alienated substantial commercial complexes within the city of Cairo, which shows that he did acquire buildings previously alienated and included them in his own *waqf*. There were also a few estates in Damascus, Aleppo, and in Medina itself.[16] In Medina there were shops, a *ḥammām*, an apartment complex (*rab'*), as well as individual apartments, a house for rent, and three orchards whose revenue served the trust.[17] A *wakālah* with a mill and a bakery were dedicated to the storage and preparation of the wheat for the *dashīshah.*

STIPULATIONS

The BN *waqf* document states that this endowment should follow the same stipulations established in the sultan's previous great *waqf* for his funerary complex.[18] This seems to suggest that no other important *waqf* was established by Qāytbāy between that of the funerary complex dated 879, 881, and 884, and the Medina endowment. As supervisor (*nāẓir*) of the foundation, Qāytbāy nominated himself, to be succeeded by future sultans.[19] The deputy-supervisors (*nā'ib nāẓir*) were to be the Chief of the Armies (*atābak)*, the Chief Secretary (*dawādār kabīr)*, and the Privy Secretary (*kātib al-sirr*). In his first endowment for the funerary complex there is no mention of future sultans as succeeding supervisors. As for the deputy supervisors, they are the same in both endowments. The four chief *qāḍī*s were to act as *shāhid*s or notaries of the endowment.

THE DASHĪSHAH

Qāytbāy employed his public kitchen in Medina for the distribution of the *dashīshah*, a dish made of wheat and fat, following the model of the Hebron kitchen. The sultan had restored the shrine of al-Khalīl, or Hebron, but his chroniclers do not

---

[15]Jawharī, 354f.

[16]BN *waqf*, fols. 13v.-15.

[19]Ibid., fol. 15v.

provide details about a public kitchen there. Mujīr al-Dīn, however, writes that Sultan Barqūq (r. 1382-1399) had made an endowment specifically for the *simāṭ* in Hebron, i.e., for the distribution of food, and that he inscribed the endowment text at the doors of the shrine of Abraham.[20] This *simāṭ* was still going on during the reign of Sultan Jaqmaq (r. 1438-1453).[21] This could have been the model for Qāytbāy's *dashīshah*. In his earlier endowment in Mecca, Qāytbāy also included a kitchen for the distribution of *dashīshah*.[22] The word *dashīshah* derives from the verb *dashsha* meaning to crush. The *dashīshah* was thus a kind of porridge made of wheat and fat, perhaps something like the *harīsah* common in Syria today.

Qāytbāy commemorated his endowments for the *dashīshah* in Medina in a long inscription at the entrance of his *wakālah* near Bāb al-Naṣr, which is unique in Cairene epigraphy.[23] It states that the sultan alienated this structure to serve bread and *dashīshah* to the pilgrims and the needy of Medina. It ends with a kind of prayer written as a poem in the first person, in which the sultan beseeches God to acknowledge his piety and reward him. This poem, of mediocre quality, could have been composed by Qāytbāy himself, for Ibn Iyās writes that he was the author of religious poems which were recited in mosques.[24]

The *waqf* stipulates, furthermore, that six hundred *ardabb*s of Upper Egyptian wheat should be sent every year for *dashīshah* and bread to be distributed at Qāytbāy's *madrasah* in Mecca, also called al-Ashrafīyah, and that funds should be added to the endowment of the Meccan foundation whenever necessary. This *madrasah* is not included in this deed; it was begun in 883/1478-1479 and completed by the time Qāytbāy arrived in Mecca.[25]

Seventy-five hundred *ardabb*s of wheat were to be shipped yearly to Medina for the preparation of *dashīshah* and bread (two loaves daily per person), to be distributed to the poor and the visitors (*al-ghurabā' wa-al-fuqarā' al-āfāqīyah*). Also the community of the *madrasah* was to benefit from this wheat, which was to be distributed indiscriminately to all of these people, whether rich or poor, big or small, male or female, free or slave, so that no one would need to buy food, "as is the case for the *simāṭ* of Hebron."[26] Whatever remained of the wheat was to be stored in order to be used when needed. The reference to women in this stipulation

---

[26]BN *waqf*, fol. 15.

is noteworthy, but because of its singularity it does not allow more than speculation about a possible presence of women among the *madrasah*'s community.

The *waqf* was responsible for the transportation costs of the wheat from Suez to Yanbuʿ, through Jiddah and on to Mecca and Medina, including the cost of its storage, the purchase of oil and kitchen utensils, the upkeep of mills and bakeries, and the cooking and the distribution of the *dashīshah*. It seems that the wheat was to be processed in Cairo, as the *waqf* mentions among the alienated estates a large *wakālah* for wheat and its processing south of Bāb Zuwaylah. Qāytbāy moreover alienated two ships (*markab mismār*) for the transportation of the wheat. The one was called Abū Salāmah, the other Abū al-Saʿādāt. The first was twenty-nine *dhirāʿ bukhārī* long, and the other twenty-six.[27] One thousand *ardabb*s of wheat were to be granted yearly to the amir of Medina.

The Tax Exemption

A decree dated 890/1485 is included in the BN *waqf* document stipulating that the amir of Medina should free the city from all taxes.[28] The tax exemption was not an innovation of Qāytbāy; al-Nāṣir Muḥammad and his son Sultan Ḥasan, as well as al-Ashraf Shaʿbān, had coupled their endowments in the Holy Cities with a tax exemption.[29] It is interesting to note that the text of Qāytbāy's decree included in his deed is almost identical with the one in Sultan Shaʿbān's endowment deed for the Ḥaramayn, with one important difference, however. Shaʿbān's decree excludes from this privilege persons adhering to Shiʿism (*zaydīyah wa-al-rāfiḍīyah*). There is no such exclusion in Qāytbāy's endowment.

The Religious Institution

Qāytbāy's buildings at Medina consisted of a *madrasah,* a *ribāṭ,* and a so-called *ʿimārah*, which is described as a public kitchen and its annexes.[30] They were built as a complex adjoining the mosque of the Prophet. According to Ibn Iyās the building of the *madrasah* had already begun in Rabīʿ I 883/June 1478 and it was completed in Ramaḍān 887/October 1482,[31] which, by Mamluk standards, is a long period. The reason for the delay could have been the fire which destroyed the

prayer hall of the Prophet's Mosque and his funerary chamber in 886/1481, which Qāytbāy began immediately to rebuild. The earliest date mentioned in the *waqf* deed is 889/1484, two years after the date of the *madrasah's* completion as reported by Ibn Iyās.

The restoration works were completed at the end of 887 and cost as much as 100,000 *dīnār*s.[32] A second fire which broke out in Rabīʻ II 898 was followed by a new restoration. The rebuilding of the mosque, which required craftsmen and funds from Egypt, may have delayed the construction of the *madrasah.* Another, though less likely, reason for this delay was the legal problem that obstructed the acquisition of the land for the *madrasah.* To build this complex, Qāytbāy, as stated in the *waqf* deed, purchased and demolished several buildings, including houses. This did not occur without difficulty, however. Ibn Iyās reports that the *qāḍī* who authorized, or rather forced, the transaction was eventually killed by a Shiʻite (*rāfiḍī*) who owned one of these houses.[33] Similarly, the sultan had to dismiss a *qāḍī* in Mecca who tried to stop construction because the new *madrasah* encroached upon a public passage.[34]

Next to the *madrasah*, which adjoined the Prophet's Mosque, was a *majmaʻ* described as a shelter for the poor and the visitors coming to the madrasah (*ma'wan lil-fuqarā' wa-al-wāridīn min zuwwār al-madrasah*).[35] The complex also included a *sabīl*, and a *ribāṭ* consisting of eighty cells to be used as a hostel for visitors (*al-fuqarā' wa-al-wāridīn*), "as is the custom in the *arbiṭah*."[36] It included an ablution fountain and a small bath (*mustaḥamm*). Opposite the *madrasah* was a second building consisting of a *wakālah* with ten rooms for storing wheat above which was an apartment complex (*rabʻ*) with ten living units. The building included also a *sabīl* with a primary school (*maktab*) above it. The vestibule of this *ʻimārah* opened on to a mill, a bakery, the *dashīshah* kitchen, and a stable.

Unlike his *madrasah* in Cairo, Qāytbāy's *madrasah* in Medina was not a Friday mosque; neither a *khaṭīb* to preach the Friday sermon nor an *imām* to lead the prayer were appointed. The staff consisted of thirty Sufis and their shaykh who were to perform the daily *ḥuḍūr al-taṣawwuf* [37] and to dedicate the *thawāb*, that is, the blessing, to the founder and his descendants, as well as a reader of

[35]BN *waqf*, fol. 29.

[36]Ibid., fol. 229v.

[37]The *ḥuḍūr* consists of reading of specific Quranic texts followed by prayers, invocations, and chanting. J. S. Trimingham, *The Sufi Orders in Islam*, 204ff.; Leonor Fernandes, *The Evolution of a Sufi Institution in Mamluk Egypt: The Khānqāh* (Berlin, 1988), 57.

ḥadīth. The Quran reader appointed in this *waqf* was to perform in the Prophet's Mosque. The Sufis were to meet daily in the afternoon with their shaykh in the *madrasah* and to perform the *ḥuḍūr*, dedicating their prayers to the Prophet, to the founder and his descendants, and to all Muslims. The shaykh of the *ribāṭ*, who was not identical with that of the *madrasah*, was required to have scholarly qualifications (*min ṭalabat al-ʻilm*), to assist visitors, and to perform the *dhikr* ceremony with them.

The functions of the *majmaʻ* and the *ribāṭ* seem to have been complementary. The first is described as a shelter but without living units, perhaps only a gathering place like the *majmaʻ* at Qāytbāy's *madrasah* in Jerusalem.[38] The *ribāṭ*, however, was a complex of living units with domestic facilities but does not seem to have included a gathering room. The complex thus hosted a permanent *madrasah* community which consisted of the thirty Sufis and their shaykh who all received allowances, and served visiting scholars and Sufis for whom the *majmaʻ* was the meeting place. These were entitled to food but they received no stipend.

It is noteworthy that the term *ribāṭ* here does not refer to a well-defined Sufi institution but rather to a boarding facility connected with the *madrasah* and the *majmaʻ*. The *madrasah* itself, as far as the stipulations indicate, did not include the teaching of *fiqh*, as in earlier academic institutions, as none of the four rites of Islamic law is mentioned in this context, but only *ḥuḍūr* and *ḥadīth* reading. The only reference to *madhhab*s is made in connection with the ablution fountains, one consisting of a basin and called *shāfiʻīyah*, and the other a fountain with running water of the *ḥanafīyah* type. The *madrasah*, however, had a library for the use of students and scholars (*ṭalabat al-ʻilm*).

The term *madrasah* here should not be taken in its classical sense, but rather in the sense of a *khānqāh*. The fact that it did not include a *khuṭbah* may be explained by its close vicinity to the Prophet's Mosque, because the community could attend the Friday sermon and prayer there. In the Ashrafīyah of Jerusalem, however, the shaykh of the Sufis was in charge of teaching (*tadrīs*) as well as reading the *ḥadīth*; at the same time, he held the office of the *mashyakhah* of the Sufis. This *madrasah* included, according to the original stipulations of 878/1473, sixty Sufis and ten students, but later in 896/1491 the sultan changed the stipulations and appointed only Sufis.[39] However, at the *madrasah* in Mecca, which was planned to house forty students, the curriculum included the four rites of Islamic law.[40] The program offered by Qāytbāy's *madrasah* in Medina could be found in any mosque of this period and was no longer that of the thirteenth and fourteenth

[40]Quṭb al-Dīn, 225.

century orthodox institutions of this name. The loosening of the *madrasah* curriculum in favor of Sufi rituals was a development of the late fifteenth century.[41]

The Expenditures

The revenue of the *waqf* was to cover all expenses of the alienated agricultural land, including the expenses for peasants, fertilizers, dams, bridges, water ways, and waterwheels. The salaries of the staff appointed in Egypt were paid in silver *dirham*s on a monthly basis; the Medina staff was paid yearly in gold *dīnār*s. The latter must have received their pay upon the arrival of the Egyptian pilgrimage caravan. Allowances of the Cairene staff were paid in *dirham*s on a monthly basis:[42]

2,000 each of the four chief *qāḍī*s of Egypt
3,000 each of the two prime deputy-supervisors, the *atābak* Azbak and the *dāwādār* Aqbardī; their successors were to receive only 2,000 *dh*. each
2,000 the Privy Secretary for his function as second deputy-supervisor
2,000 the secretary Abū al-Baqā ibn al-Jī'ān (*mubāshir*)
3,000 the intendant of the *waqf (shādd al-waqf)* Janbalāṭ min Yashbak (his successors were to receive only 2,000 *dh*.)
1,000 an administrator to collect the rents and oversee the craftsmen (*shādd al-mustakhraj wa-al-'imārah*)
1,000 an overseer of the silo *(mubāshir al-shūnah*)
500 a clerk (*muwaqqi'*)
1,500 two notaries (*shāhid 'adl*) to oversee the maintenance of the buildings (*taṣqī'* [?] *al-musaqqafāt*)[43]

Allowances of the staff of Medina paid in gold *dīnār*s, on a yearly basis:[44]

44 the four chief *qāḍī*s of Medina as notaries (*shāhid*) of the endowment[45]
20 the *shaykh ṣūfīyah*
6 each of the thirty Sufis
24 a reader of *Ḥadīth al-Bukhārī* in the *madrasah*
24 a Quran reciter in the Prophet's Mosque
10 a custodian for the Quran (*khādim al-muṣḥaf*) in the Prophet's Mosque
36 a shaykh of the *ribāṭ*

---

[42]BN *waqf*, fols. 184v.-186v.

[43]I was not able to find the exact meaning of *taṣqī'* in this context.

[44]BN *waqf*, fols. 187ff.

[45]The sums indicated for several persons were to be shared equally among them.

10 a custodian for the Qurans in the Prophet´s Mosque (*khādim rab'a*)
30 a librarian (*khāzin kutub*)
20 a teacher in the primary school for orphans (*mu'addib aytām*)
90 thirty orphaned schoolboys
32 four *mu'adhdhin*s
8 a chief *mu'adhdhin* and time-keeper (*mu'aqqit*)
50 the shaykh of the Prophet´s Mosque to supervise the *madrasah* and the *ribāṭ*
30 a eunuch to supervise the trust in Medina (*shādd al-madrasah wa-al-awqāf*)
20 two attendants for the two fountains (*muzammilātī*)
84 cost of refilling the cisterns
32 two overseers of the *dashīshah* (*amīn)*
32 two accountants for the bakery (*shāhid makhbaz*)
16 an accountant for the warehouses in Medina (*amīn ḥawāṣil*)
12 a rent collector *(jābī*)
20 two sweepers for the *madrasah* (*farrāsh*)
8 a sweeper for the ablution fountain of the *madrasah* (*farrāsh mīḍā*)
4 a sweeper around the *madrasah* (*kannās*)
20 two persons in charge of the lighting (*waqqād*)
32 two doormen (*bawwāb*)
6 a craftsman to repair the marble of the *madrasah* (*murakhkhim*)
6 a plumber (*sabbāk*)

The expenditures enumerated in the *waqfīyah* do not indicate the salaries of the personnel working in the bakery and the *dashīshah* kitchen, or the staff in charge of transportation of the wheat and its processing and the maintenance of the *wakālah* and its kitchen, all of whom were to be remunerated by the *waqf*.

Less than a century later, Quṭb al-Dīn (d. 988/1580) wrote that the funds of the Meccan endowment were already exhausted; the pots of the *dashīshah* kitchen as well as *waqf* real estate were being sold.[46] A few years after these words were written, in 997/1589, another sultan, the Ottoman Murād III (r. 1574-1598) made a large endowment for Medina for which he alienated large plots of Egyptian agricultural land, to sponsor renovations at the mosque of Medina and a large public kitchen which served not just *dashīshah*, but an extensive menu including meat and sweets.[47]

The Proposers and Supervisors of *al-Rawk al-Nāṣirī* in Mamluk Egypt

The Nāṣirī cadastral survey (*al-Rawk al-Nāṣirī*) in Egypt and Syria during the years 713-725/1313-1325 was significant in that it determined state structure during the early and middle years of the Mamluk period (648-922/1250-1517). The Egyptian *rawk* of 715/1315, in particular, brought about great changes in the *iqṭā‘* system through comprehensive land surveying and drastic taxation reform. In my recent book I investigated the object, content, and result of the Nāṣirī *rawk,* based on contemporary Arabic sources.[1] However, the names of the proposers and supervisors of the survey were cited without mentioning their origins, careers, or official duties.[2]

The present paper therefore will discuss in detail the proposers and supervisors of the Nāṣirī *rawk* in Egypt in order to better our understanding of this important survey. Using the biographical descriptions of the Coptic officials and the Mamluk amirs involved with the survey, the following questions will be addressed: (1) To what extent were the Coptic financiers responsible for *iqṭā‘* administration in Mamluk Egypt? (2) Were there any criteria for choosing *rawk* supervisors from among Coptic officials and Mamluk amirs?

The primary sources are four biographical dictionaries*: Kitāb al-Wāfī bi-al-Wafayāt* by al-Ṣafadī (d. 764/1363), *Kitāb al-Muqaffá al-Kabīr* by al-Maqrīzī (d. 845/1442), *al-Durar al-Kāminah fī A‘yān al-Mi'ah al-Thāminah* by Ibn Ḥajar al-‘Asqalānī (d. 852/1449), and *al-Manhal al-Ṣāfī wa-al-Mustawfá ba‘da al-Wāfī* by Ibn Taghrībirdī (d. 874/1470). In addition to these sources*, Tālī Kitāb Wafayāt al-A‘yān* by Ibn al-Ṣuqā‘ī (d. after 725/1325), *Nihāyat al-Arab fī Funūn al-Adab*

by al-Nuwayrī (d. 733/1333), *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk* and *Kitāb al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār*, both by al-Maqrīzī, also provide us with valuable information on the persons concerned with the survey. Al-ʿAynī's (d. 855/1451) description of the Egyptian *rawk* in his *ʿIqd al-Jumān fī Taʾrīkh Ahl al-Zamān*, of which parts are still in manuscript, is unique in offering the most detailed list of the supervisors dispatched to the provinces.[3]

THE PROPOSERS OF THE *RAWKS* IN MAMLUK EGYPT

In his third reign (709-741/1310-1341), Sultan al-Nāṣir Muḥammad ibn Qalāwūn carried out four comprehensive cadastral surveys: in central and southern Syria (713/1313), Egypt (715/1315), Tripoli (717/1317), and Aleppo (725/1325). Prior to these surveys, Sultan al-Manṣūr Ḥusām al-Dīn Lājīn (696-698/1296-1299) had carried out an Egyptian survey in 697/1298, known as *al-Rawk al-Ḥusāmī*. The person who proposed the *rawk* to Sultan Lājīn was Tāj al-Dīn al-Ṭawīl (d. 711/1312), a Coptic convert to Islam.[4]

His full name was Tāj al-Dīn ʿAbd al-Raḥmān ibn al-Sīrajī al-Miṣrī, but he was widely known as Tāj al-Ṭawīl.[5] He was a Coptic Muslim (*Muslimānī al-Qibṭ*), who had converted to Islam in the reign of Sultan al-Ashraf Khalīl ibn Qalāwūn (689-693/1290-1293). Even after his conversion, it is said that he strongly favored the Coptic people.[6] However, he was skilled in accounting (*ḥisāb*) and finance (*istīfāʾ*), and understood well the characteristics of every Egyptian district. According

According to Ibn al-Ṣuqāʿī, Tāj al-Dīn's personal name was not ʿAbd al-Raḥmān, but ʿAbd Allāh; a mistake was made by the copyist; see *Tālī Kitāb Wafayāt al-Aʿyān*, ed. and trans. Jacqueline Sublet (Damascus, 1974), 110.

[6]Al-Maqrīzī, *al-Sulūk*, 1:842-43; Ibn al-Ṣuqāʿī, *Tālī*, 110. The behavior of the Coptic converts to Islam is described vividly by Donald P. Little, "Coptic Converts to Islam during the Baḥrī Mamluk Period," in *Conversion and Continuity: Indigenous Christian Communities in Islamic Lands, Eighth to Eighteenth Centuries*, ed. Michael Gervers and Ramzi J. Bikhazi (Toronto, 1990), 263-88.

to al-Nuwayrī, Tāj al-Ṭawīl also had full knowledge of the *iqṭā*ʻs held by the amirs in his time.[7]

When Tāj al-Ṭawīl proposed the implementation of the Egyptian *rawk* to Sultan Lājīn, the sultan appointed two amirs, Badr al-Dīn Bilīk al-Fārisī al-Ḥājib and Bahā' al-Dīn Qarāqūsh al-Ẓāhirī al-Barīdī, as supervisors of the survey.[8] We are not well informed about Badr al-Dīn Bilīk's career, but in 679/1298 he was cited as one of three chamberlains (*ḥājib*) supervising Mamluk military affairs.[9] Bahā' al-Dīn Qarāqūsh was appointed as governor (*wālī*) of Qūṣ in 680/1281, but his *iqṭā*ʻ was later granted to the Mongol amir, Jankalī ibn al-Bābā, who emigrated to Egypt from Āmid in 703/1304.[10]

Together with these two amirs, Tāj al-Ṭawīl joined the Ḥusāmī *rawk* as a chief of finances (*mustawfī al-dawlah*). When the *rawk* was completed, Tāj al-Ṭawīl distributed the land according to the order of Sultan Lājīn and Vice-Sultan Mankūtamur. However, the distribution of *iqṭā*ʻs in favor of the two rulers caused a violent reaction by the amirs against the government, and the Ḥusāmī *rawk* ended in the assassination of Sultan Lājīn and his *mamlūk* Mankūtamur by these amirs.[11] When Sultan al-Muẓaffar Baybars al-Jāshankīr (708-709/1309-1310) ascended the throne in 708/1309, Tāj al-Ṭawīl was dispatched to Tripoli to manage its financial affairs. However, as soon as al-Nāṣir Muḥammad started his third sultanate in 709/1310, he was called back to Cairo and was appointed superintendent of the central administration (*nāẓir al-dawāwīn*).[12]

From the very beginning of his third reign, al-Nāṣir Muḥammad was annoyed with the increasing power of the Manṣūrī *mamlūk*s, that is, the Burjī *mamlūk*s formed by his father, Sultan al-Manṣūr Qalāwūn.[13] A man called Asʻad al-Shaqqī

(d. 716/1316), who had been appointed superintendent of the central administration (*nāẓir al-dawlah*) after the death of Tāj al-Ṭawīl, proposed to the sultan that a cadastral survey be carried out. Al-Maqrīzī has the following to say about this in his *Kitāb al-Muqaffá*:

> [As'ad al-Shaqqī] advised Sultan [al-Nāṣir] to carry out the cadastral survey of Egypt, because the sultan was disturbed by [*al-mamālīk*] al-Burjīyah, the core of the Egyptian army. Because they had taken control of most of the districts [as *iqṭā'*s], there remains no income to cover the sultan's expenditures. When he was informed of this, As'ad met the sultan secretly and discussed the *rawk* with him in order to regain and increase districts which might cover his expenditures.[14]

Like Tāj al-Ṭawīl, As'ad al-Shaqqī was also a Coptic convert to Islam. His full name was Taqī al-Dīn As'ad ibn Amīn al-Mulk, generally known as *al-shaqqī al-aḥwal* (Squint-eyed the Oppressive) due to his "evil" conduct.[15] As already mentioned by Donald P. Little,[16] he was forcibly converted to Islam by his Mamluk employer, the amir Burulghī al-Tatarī. After he served Burulghī as his scribe (*kātib*), As'ad al-Shaqqī was appointed financier of the sultan's servants (*mustawfī al-ḥāshiyah*). In 711/1311, when al-Nāṣir Muḥammad's senior officer Tāj al-Ṭawīl died, As'ad al-Shaqqī was appointed *nāẓir al-dawlah* and administered state affairs single-handedly after the abolition of the vizirate (*wizārah*).[17]

Al-Nāṣir Muḥammad was pleased with As'ad's advice about a cadastral survey. Fakhr al-Dīn Muḥammad ibn Faḍl Allāh (d. 732/1332), supervisor of military affairs (*nāẓir al-jaysh*), was ordered to draw up the documents according to As'ad's specification. When the documents were about to be read before the sultan, however, Fakhr al-Dīn opposed As'ad's plan, saying that his aim was to sow dissension between the sultan and his *mamlūk*s. Although Fakhr al-Dīn persisted, al-Nāṣir Muḥammad did not change his favorable view of As'ad's plan until the amirs and soldiers began criticizing him after the cadastral survey.[18] However, al-Maqrīzī

---

[14]Al-Maqrīzī, *al-Muqaffá*, 2:77.

[15]Ibid., 78; Ibn Ḥajar, *al-Durar*, 1:383. According to Ibn Ḥajar, As'ad was called al-Shaqqī al-Aḥwal because the Muslims hated him.

[16]Little, "Coptic Converts to Islam," 264.

[17]Ibn Ḥajar, *al-Durar*, 1:383; al-Maqrīzī, *al-Muqaffá*, 2:76. Burulghī al-Tatarī (d. 711/1311) was arrested by Muhanná ibn 'Īsá, *amīr al-'arab* in Syria, and presented to al-Malik al-Ashraf Khalīl; however, he later married the daughter of Sultan Baybars al-Jāshankīr and was put in a position of prestige under him; Ibn Ḥajar, *al-Durar*, 2:9-10.

[18]Al-Maqrīzī, *al-Muqaffá*, 2:77-78.

says in his *Khiṭaṭ*, "The sultan agreed with Fakhr al-Dīn about the implementation of the cadastral survey."[19] If this account is correct, it might suggest that Fakhr al-Dīn, though unwillingly, gave in to As'ad al-Shaqqī and al-Nāṣir Muḥammad. Incidentally, when the Syrian cadastral survey was completed in 713/1314, the sultan bestowed robes of honor on both Fakhr al-Dīn and his associate, Quṭb al-Dīn ibn Shaykh al-Sallāmīyah.[20]

Al-Qāḍī Fakhr al-Dīn Muḥammad ibn Faḍl Allāh was also a Coptic convert to Islam. After his conversion he would not allow any Christian to come near him, lest he associate with his former co-religionists. He made pilgrimages to Mecca and Jerusalem many times and built many mosques in Egypt. Since he enjoyed al-Nāṣir Muḥammad's full confidence, not a few notables, such as amirs, *qāḍī*s, and provincial governors, visited his house hoping to receive favors from him.[21] One day al-Nāṣir said to a soldier who requested an *iqṭā'*, "Don't worry. If you are the son of the Qalāwūnid family, al-Qāḍī Fakhr al-Dīn will grant you a *khubz* ("bread"; that is, *iqṭā'*) with revenue exceeding 3,000 dirhams." [22]

As mentioned above, three Coptic converts to Islam—Tāj al-Ṭawīl, As'ad al-Shaqqī and Fakhr al-Dīn—all acquired high positions in the central government and made the most of their superior knowledge of fiscal affairs. They exerted great influence on state policy through their advice to the sultan, particularly in *iqṭā'* administration. Although they were not favored by the common Muslims, the fiscal administration did not function well without their knowledge and efforts. According to Little's study, besides the sultan's privy purse, many other offices were often filled by Copts and Coptic Muslims. All of them were connected with finances and accounting during the Baḥrī Mamluk period.[23]

THE SUPERVISORS OF THE *RAWK*

As stated above, upon the advice of As'ad al-Shaqqī, Sultan al-Nāṣir ordered the Egyptian *rawk*. During Sha'bān 715/November 1315, therefore, the government dispatched amirs and Coptic officials as supervisors to five regions of Lower Egypt and six regions of Upper Egypt. Al-'Aynī lists the names of these supervisors in the most detail in "'Iqd al-Jumān." The following is the list quoted in my book with some revisions.[24]

[31]Zettersté en, *Mamlūkensultane*, 134, lists al-Ṣarkhaṭī; al-Ṣafadī (*A'yān al-'Aṣr wa-A'wān al-Naṣr*, ed. Fuat Sezgin [Frankfurt am Main, 1990], 1:261), lists al-Sarkhadī.

[32]Al-Maqrīzī, *al-Khiṭaṭ*, 1:88, lists al-Qalījī.

(17) Bahādur al-Karakī (al-Karkarī)[33]
(18) Ṭanqish ibn al-Ḥimṣī
(B) al-Fayyūm
(19) Ṭuquṣbā al-Ẓāhirī
(20) Sanjar al-Damīrī (al-Dumaytrī, al-Dumaythrī)[34]
(21) Baybars al-Sāqī
(22) Mughulṭāy al-Martīnī
(C) al-Bahnasāwīyah
(23) Aydughdī al-Talīlī (al-Balīlī)[35]
(24) Uzbak al-Jarmakī
(25) Khaḍir ibn Nūkīyah (Nūkāy, Nūghīyah)[36]
(26) Bahādur al-Ibrāhīmī
(27) Sanjar al-Marzūkī
(D) al-Ushmūnayn and al-Ṭaḥāwīyah
(28) Azuktamur al-Silāḥdār
(29) Ṭaybughā al-Shamsī
(E) al-Ikhmīmīyah
(30) Qijlīs
(31) Sunqur al-Saʻdī
(F) al-Qūṣīyah
(32) Ṭuquṣbā

Among these supervisors the following nine persons cannot be identified from any Arabic biographies and chronicles: (9) Sanjar Khāṣṣ Turkī, (10) Wābiyār Sāṭī, (15) Ṭurunṭāy al-Qulanjiqī, (18) Ṭanqish ibn al-Ḥimṣī, (21) Baybars al-Sāqī, (24) Uzbak al-Jarmakī (27) Sanjar al-Marzūkī, (28) Azuktamur al-Silāḥdār and (32) Ṭuquṣbā. We find that two Coptic officials, (4) Makīn al-Dīn ibn Qarawīnah and (8) Amīn al-Dīn Qarmūṭ, were appointed as supervisors of the *rawk* in Lower Egypt. According to al-Nuwayrī, the sultan dispatched one or several amirs into each region.[37] Most of the other supervisors, therefore, must have been chosen from among the Mamluk or Mongol amirs.

---

[33]Al-Ṣafadī, *al-Wāfī*, 10:300-301, lists al-Karkarī.

[34]Zetterstéen, *Mamlūkensultane*, 165, lists al-Dumaytrī, and al-Ṣafadī, *Aʻyān al-ʻAṣr*, 1:407, al-Dumaythrī.

[35]Al-Maqrīzī, *al-Khiṭaṭ*, 1:88, lists al-Balīlī.

[36]Al-Maqrīzī, *al-Muqaffá*, 7:192, and Ibn Ḥajar, *al-Durar*, 2:173, list Nūkāy, while al-Maqrīzī, *al-Khiṭaṭ*, 2:63, lists Nūghīyah.

[37]Al-Nuwayrī, *Nihāyat al-Arab*, 30:299; see also al-ʻAynī, "ʻIqd al-Jumān," fol. 318r.-v.

THE SUPERVISORS DISPATCHED TO LOWER EGYPT

First, let us look at the careers of the supervisors dispatched to the regions of Lower Egypt.

(A) al-Gharbīyah

(1) Badr al-Dīn Jankalī ibn al-Bābā al-Tatarī (d. 746/1346)[38] migrated with his family from near Āmid, then under the rule of the Mongols, to serve al-Nāṣir Muḥammad in 703/1304.[39] He was granted an amirate of a hundred cavalrymen *(imrat mi'at fāris*) and enjoyed prestige and the favor of the sultan. He came to sit at the right hand of the sultan (*ra's al-maymanah*) at banquets (*simāṭ*), following the amir Jamāl al-Dīn Āqūsh.[40] His daughter married al-Nāṣir Muḥammad's son, the amir Aḥmad.[41] Because Jankalī was talented in poetry and enjoyed amusements, he was said to have been loved by everyone. When al-Nāṣir died in 741/1341, Jankalī was reported to be the leader of twenty-five amirs of the rank of *muqaddam al-alf* (commander of a thousand).[42] Two years later he was designated vice-sultan (*nā'ib al-salṭanah*) by these grand amirs to administer state affairs under the newly installed sultan, al-Ṣāliḥ Ismā'īl ibn al-Nāṣir Muḥammad (743-746/1342-1345).[43]

---

[38]Ibn Ḥajar, *al-Durar*, 2:76, has Jankalī ibn Muḥammad ibn al-Bābā ibn Jankalī ibn Khalīl ibn 'Abd Allāh al-'Ijlī. See also al-Ṣafadī, *A'yān al-'Aṣr*, 1:300.

[39]Al-Maqrīzī, *al-Muqaffá*, 3:75-76; Ibn Taghrībirdī, *al-Nujūm*, 10:143-44.

[40]For example, Baybars al-Manṣūrī, author of *Zubdat al-Fikrah*, held *ra's al-maysarah* until 725/1325 when the post was transferred to the amir Aydamur al-Khaṭīrī (6). See al-Maqrīzī, *al-Sulūk*, 2:266, 269. The editor of *al-Nujūm* explains that *ra's al-maysarah* designated an older amir holding the rank of amir of a hundred, who gave advice to the sultan (Ibn Taghrībirdī, *al-Nujūm*, 12:274, note 2). According to al-Qalqashandī, at the sultan's banquets the *nā'ib al-salṭanah* sat first in line before the sultan, then the *qāḍī al-quḍāh* sat on his right side, and the *kātib al-sirr* (chief secretary) on his left side. Amirs of *ra's al-maymanah* sat behind the *wazīr*, and amirs of *ra's al-maysarah* behind the *kātib al-sirr*. See al-Qalqashandī, *Ṣubḥ al-A'shá fī Ṣinā'at al-Inshā'* (Cairo, 1963), 4:195-96; cf. Muḥammad Aḥmad Duhmān, *Dimashq fī 'Ahd al-Mamālīk* (Damascus, 1964), 29.

[41]Zetterstéen, *Mamlūkensultane*, 195.

[42]Al-Ṣafadī, *al-Wāfī*, 11:199-201; Ibn Ḥajar, *al-Durar*, 2:76-77; Ibn Taghrībirdī, *al-Manhal al-Ṣāfī wa-al-Mustawfá ba'da al-Wāfī*, ed. Nabīl Muḥammad 'Abd al-'Azīz (Cairo, 1988), 5:22-25; al-Maqrīzī, *al-Khiṭaṭ*, 1:425; 2:116, 134, 305; al-Shujā'ī, *Ta'rīkh al-Malik al-Nāṣir Muḥammad b. Qalāwūn al-Ṣāliḥī wa-Awlādih*, ed. and trans. Barbara Schäfer (Wiesbaden, 1978), 121, 191, 235; Ibn Taghrībirdī, *al-Dalīl al-Shāfī 'alá al-Manhal al-Ṣāfī*, ed. Fahīm Muḥammad Shaltūt (Mecca, 1983), 251; al-Yūsufī, *Sīrat al-Nāṣir*, 145, 387; al-Ṣafadī, *A'yān al-'Aṣr*, 1:300-301. According to Zetterstéen (*Mamlūkensultane*, 222), Jankalī was one of four grand amirs at the end of al-Nāṣir's reign. Furthermore, al-Ṣafadī relates that he derived his origin from Sultan Ibrāhīm ibn Adham, a famous Sufi saint in the early Abbasid period; see al-Ṣafadī, *A'yān al-'Aṣr*, 1:301.

[43]Al-Maqrīzī, *al-Khiṭaṭ*, 1:425; however, in al-Maqrīzī's *al-Sulūk*, 1:620, the amir who was

(2) ʿAlāʾ al-Dīn Ṭaybars (d.719/1319), an amir of forty (*amīr al-ṭablakhānah*), held the post of chief of military police (*naqīb al-jaysh*) for the long period of twenty-two years until his death.[44] He was also called al-Khāzindār, since he originally came from the *mamlūk*s of Badr al-Dīn Bilīk al-Khāzindār, vice-sultan during the reign of al-Malik al-Ẓāhir Baybars (658-676/1260-1277).[45] Ṭaybars designed the Khashshāb garden along the bank of the Nile, used for excursions, and constructed a school (*al-Madrasah al-Ṭaybarsīyah*) adjacent to the Azhar Mosque, where he was buried.[46]

(3) Sayf al-Dīn Āqūl al-Ḥājib (d. 738/1337-1338). In 725/1325 when al-Nāṣir ordered the amir Rukn al-Dīn Baybars to organize an army, Āqūl al-Ḥājib participated in it as an *amīr al-ṭablakhānah*. In 731/1331 Āqūl was also dispatched to the province of al-Buḥayrah as a supervisor (*mushidd*) to repair the Alexandria Canal.[47] Furthermore, he was appointed to the post of chamberlain in charge of the military administration under the grand chamberlain (*ḥājib al-ḥujjāb*),[48] although we cannot ascertain the exact year of his appointment. In 734/1334 Āqūl went to Damascus to assume the office of grand chamberlain.[49]

(4) Al-Qāḍī Makīn al-Dīn Ibrāhīm ibn Qarawīnah (d. 771/1370)[50] was a Coptic official who served al-Nāṣir, as did his brother, Mājid ibn Qarawīnah.[51] After the Egyptian cadastral survey in 715/1315, Makīn al-Dīn took the office of chief financial administrator (*mustawfī al-ṣuḥbah*), following Sharaf al-Dīn Ibrāhīm.[52] In 725/1325 he was appointed supervisor of the cadastral survey in Aleppo, together with the amir ʿAlāʾ al-Dīn Mughulṭāy al-Jamālī.[53] After he held the successive

---

designated as vice-sultan was not Jankalī, but Āqsunqur al-Salālī.

44Zetterstéen, *Mamlūkensultane*, 149; according to al-Maqrīzī (*al-Sulūk*, 2:199), Ṭaybars held the post of *naqīb al-jaysh* for about twenty-four years.

45Ibn Ḥajar, *al-Durar*, 2:330; al-Maqrīzī, *al-Muqaffá*, 4:11-12.

46Ibn Ḥajar, *al-Durar*, 2:330-31; al-Maqrīzī, *al-Muqaffá*, 4:11-12; idem, *al-Sulūk*, 2:194, 199; idem, *al-Khiṭaṭ*, 2:304, 383, 426; Ibn al-Dawādārī, *Kanz al-Durar wa-Jāmiʿ al-Ghurar* (Cairo, 1960-72), 9:295; Ibn Taghrībirdī, *al-Nujūm*, 9:246.

47Zetterstéen, *Mamlūkensultane*, 183.

48On the position of *ḥājib*, see David Ayalon, "Studies on the Structure of the Mamluk Army-III," *BSOAS* 16 (1954): 60.

49Al-Maqrīzī, *al-Sulūk*, 2:260, 371, 457; al-Shujāʿī, *al-Nāṣir Muḥammad*, 91; Zetterstéen, *Mamlūkensultane*, 188.

50As to the year of his death, we have other accounts: 749/1348 (al-Ṣafadī, *Aʿyān al-ʿAṣr*, 1:27), 750/1349 (Ibn Taghrībirdī, *al-Nujūm*, 10:243), and 751/1350 (al-Maqrīzī, *al-Sulūk*, 2:812).

51Ibn Ḥajar, *al-Durar*, 1:54. Mājid served Sultan al-Nāṣir as *wazīr* in Syria and Egypt; see *al-Durar*, 3:361.

52Al-Maqrīzī, *al-Sulūk*, 2:247.

53Al-Fayyūmī, "Nathr al-Jumān fī Tarājim al-Aʿyān," Cairo, Dār al-Kutub, MS Taʾrīkh 1746, vol. 3, fol. 190r.; al-Maqrīzī, *al-Sulūk*, 2:264, 812; al-ʿAynī, "ʿIqd al-Jumān," fol. 423v.; see also Sato,

posts of *wazīr*, *nāẓir al-khāṣṣ* (supervisor of the sultan′s estate), and *mustawfī al-ṣuḥbah*, Makīn al-Dīn was appointed supervisor of military affairs in 740/1339-1340.[54] He constructed a grand mansion at the Khashshāb garden;[55] however, his entire estate was soon confiscated and he died of plague in 749/1348 as an unemployed person (*baṭṭāl*).[56]

(B) al-Daqahlīyah and al-Murtāḥīyah

(5) Sayf al-Dīn Qullī al-Silāḥdār (d. 717/1318). In 711/1311 when he went to Syria with Badr al-Dīn Jankalī (1) and other amirs to subjugate Qarāsunqur al-Manṣūrī, the most prominent Manṣūrī (or Burjī) amir in Aleppo,[57] Sayf al-Dīn Qullī commanded an army as *ra's al-maymanah*.[58] When he died in 717/1318, his *iqṭā'* was granted to his comrade, Badr al-Dīn Jankalī.[59]

(C) al-Sharqīyah

(6) 'Izz al-Dīn Aydamur al-Khaṭīrī (d. 737/1337) was a *mamlūk* of Sharaf al-Dīn Awḥad al-Khaṭīr. Then he became one of al-Nāṣir Muḥammad′s *mamlūk*s and was given the rank of amir when al-Nāṣir ascended to his second sultanate in 698/1299. He served the sultan as majordomo (*ustādār*), administering the distribution of monthly salaries and rations to the Royal Mamluks.[60] In 708/1309 he traveled to Mecca together with al-Nāṣir. He was promoted to the rank of amir of a hundred as well as the holder of the left-hand seat at the sultan′s banquets (*ra's al-maysarah*). People saw his favored status in the fact that he stayed at the Citadel in Cairo with al-Nāṣir even at night.[61]

State and Rural Society, 144-45.

[54]Ibn Ḥajar, *al-Durar*, 1:54-55; al-Shujā'ī, *al-Nāṣir Muḥammad*, 62.

[55]Al-Maqrīzī, *al-Khiṭaṭ*, 2:132.

[56]Al-Maqrīzī, *al-Sulūk*, 2:812; Ibn Ḥajar, *al-Durar*, 1:55; al-Shujā'ī, *al-Nāṣir Muḥammad*, 71; al-Ṣafadī, *A'yān al-'Aṣr*, 1:27; see also al-Yūsufī, *Sīrat al-Nāṣir*, 307, 381. According to al-Shujā'ī (*al-Nāṣir Muḥammad*, 231, 238), he held the post of *nāẓir al-jaysh* again from 742/1341-1342 to 743/1342.

[57]Ibn Abī al-Faḍā'il, *Kitāb al-Nahj al-Sadīd wa-al-Durar al-Farīd*, published as ″Histoire des sultans Mamlouks (III),″ ed. and trans. E. Blochet, *Patrologia Orientalis* 20 (1929): 208; Robert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250-1382* (Carbondale, 1986), 105-6.

[59]Al-Maqrīzī, *al-Sulūk*, 2:177, 180.

[60]David Ayalon, ″Studies on the Structure-III,″ 61-62.

[61]Al-Maqrīzī, *al-Muqaffá*, 2:365-68; idem, *al-Khiṭaṭ*, 2:312; al-Ṣafadī, *al-Wāfī*, 10:17-18; Ibn Ḥajar, *al-Durar*, 1:458; al-Shujā'ī, *al-Nāṣir Muḥammad*, 12, 15; Zetterstéen, *Mamlūkensultane*, 193. According to both al-Ṣafadī (*al-Wāfī*) and al-Maqrīzī (*al-Khiṭaṭ*), Aydamur led one hundred twenty cavalrymen.

(7) Sayf al-Dīn Aytamish ibn ʿAbd Allāh al-Muḥammadī al-Nāṣirī (d. 736/1336). He was originally one of Qalāwūn's *mamlūk*s (*al-Manṣūrīyah*) and then served al-Nāṣir Muḥammad. After holding the post of governor (*nā'ib*) of Karak for a period, Aytamish was called back to Cairo in 711/1311. The next year he took charge of the Citadel as acting sultan (*nā'ib al-ghaybah*) during al-Nāṣir's pilgrimage to Mecca. He was appointed *amīr al-rakb* or leader of the pilgrims to Mecca three times, in 724/1324, 731/1331, and 734/1334. He was a well-educated Mongol, fully literate in his native language, and had full knowledge of Mongol customs. Perhaps because of his abilities and reputation for truthfulness, Aytamish was made an emissary between the Mamluk sultan and the Ilkhanid ruler, Abū Saʿīd, at the conclusion of a peace treaty (*ṣulḥ*) in 723/1323.[62] In 736/1336 he was appointed governor (*nā'ib*) of Ṣafad where he died five months later.[63]

(8) Amīn al-Dīn Qarmūṭ (d. ?) was a Coptic financier from the sultan's treasury (*mustawfī fī al-khizānah al-sulṭānīyah*). In 734/1333-1334 he was ordered by ʿAbd al-Wahhāb al-Nashw, the Coptic supervisor of the sultan's estates (*nāẓir al-khāṣṣ*), to confiscate the sultan's property in order to reduce the Sultan to financial difficulties. However, in 738/1337-1338 Qarmūṭ's property was confiscated by al-Nāṣir.[64]

(D) al-Manūfīyah

(11) Balabān al-Muḥassin al-Zarrāq (d. 736/1336) was given an amirate of ten (*imrat ʿasharah*) in 707/1307-1308 during the second reign of al-Nāṣir Muḥammad. After he held the posts of the supervisor of the central offices (*shādd al-dawāwīn*) and the governor (*wālī*) of Cairo, Balabān was appointed governor (*nā'ib*) of Damietta, probably in 735/1335.[65]

---

[62]Al-Maqrīzī, *al-Muqaffá*, 2:335-42; idem, *al-Sulūk*, 2:242; al-Yūsufī, *Sīrat al-Nāṣir*, 329-34; Ibn Ḥajar, *al-Durar*, 1:454; Ibn Taghrībirdī, *al-Manhal*, 3:138; Ibn Taghrībirdī, *al-Dalīl al-Shāfī*, 164; Zetterstéen, *Mamlūkensultane*, 166, 168, 175, 182; al-Shujāʿī, *al-Nāṣir Muḥammad*, 3. On the career of the amir Aytamish, an article by Donald P. Little is the most informative: "Notes on Aitamish, A Mongol Mamlūk," in *Die islamische Welt zwischen Mittelalter und Neuzeit*, ed. Ulrich Haarmann and Peter Bachmann (Wiesbaden, 1979), 387-401 (reprinted in Little's *History and Historiography of the Mamlūks* [London, 1986]); see also Reuven Amitai-Preiss, "Ghazan, Islam and Mongol Tradition: A View from the Mamlūk Sultanate," *BSOAS* 59 (1996): 5.

[63]Al-Yūsufī, *Sīrat al-Nāṣir*, 287-88, 332; Zetterstéen, *Mamlūkensultane*, 191, 192.

[64]Al-Maqrīzī, *al-Sulūk*, 2:370, 455; idem, *al-Khiṭaṭ*, 2:165. On ʿAbd al-Wahhāb al-Nashw, see Little, "Coptic Converts to Islam," 270, 285.

[65]Ibn Ḥajar, *al-Durar*, 2:28; al-Maqrīzī, *al-Sulūk*, 2:37, 385.

(E) al-Buḥayrah

(12) Mughulṭāy ibn Amīr Majlis (d. ?) is not to be confused with ʻAlā' al-Dīn Mughulṭāy ibn ʻAbd Allāh al-Jamālī (d. 732/1331), majordomo of al-Nāṣir.[66] The first account of Mughulṭāy ibn Amīr Majlis says that he advanced into Syria as the commander of a thousand in 712/1312.[67] When the bedouin captured ʻAydhāb in 716/1316, Mughulṭāy was dispatched to regain it with five hundred troops.[68] However, he was then ordered to go to Syria in 718/1318, retaining the same post of commander, and his *iqṭāʻ* of eighty cavalry in Egypt was granted to Rukn al-Dīn Baybars al-Dawādār al-Manṣūrī.[69]

(13) Nāṣir al-Dīn Muḥammad ibn Ḥusām al-Dīn Ṭurunṭāy al-Nā'ib (d. 731/1331). The Arabic sources give us very little information on his career. We know only that his father Ṭurunṭāy was vice-sultan and that he was promoted to commander of a thousand.[70]

(14) Balabān al-Ṣarkhadī (d. 730/1330) was an amir of forty, and it is said that he was diligent in observing everyday prayer. In 725/1325 he participated in the expedition to Yemen under the command of the amir Baybars al-Ḥājib.[71]

(16) Baybars al-Jamdār al-Ruknī al-Muẓaffarī (d. 740/1339-1340). In 729/1329 the amir Baybars was appointed governor (*wālī*) of Alexandria.[72] The city of Alexandria was included administratively in the province of al-Buḥayrah where Baybars took charge of the *rawk* of 715/1315. He held the post of governor until the year of 740/1339, when all his property was confiscated. He died in Alexandria.[73]

THE SUPERVISORS DISPATCHED TO UPPER EGYPT

(A) al-Iṭfīḥīyah

(17) Sayf al-Dīn Bahādur al-Saʻīdī al-Karakī (d. 749/1348). In 710/1310 Sultan al-Nāṣir arrested the *mamlūk*s of the amir Salār al-Manṣūrī, who, together with the amir Baybars al-Jāshankīr, actually controlled state politics during al-Nāṣir

[66]Mughulṭāy al-Jamālī was appointed supervisor of the *rawk* in Aleppo together with Makīn al-Dīn ibn Qarawīnah (4).

[67]Zetterstéen, *Mamlūkensultane*, 157.

[68]Al-Maqrīzī, *al-Sulūk*, 2:162; Zetterstéen, *Mamlūkensultane*, 165.

[69]Al-Maqrīzī, *al-Sulūk*, 2:185; Zetterstéen, *Mamlūkensultane*, 167-68. On the career of Baybars al-Dawādār, see al-Ṣafadī, *al-Wāfī*, 10:352.

[70]Ibn Ḥajar, *al-Durar*, 4:79; al-Shujāʻī, *al-Nāṣir Muḥammad*, 121; according to al-Ṣafadī (*Aʻyān al-ʻAṣr*, 3:27), he made his pilgrimage to Mecca four times.

[71]Ibn Ḥajar, *al-Durar*, 2:27; al-Maqrīzī, *al-Muqaffá*, 2:522; idem, *al-Sulūk*, 2:260.

[72]Al-Maqrīzī, *al-Sulūk*, 2:309; Zetterstéen, *Mamlūkensultane*, 180. Al-Maqrīzī relates that he was also governor of the frontier (*nā'ib al-thaghr*) in *al-Sulūk*, 2:319.

[73]Al-Maqrīzī, *al-Sulūk*, 2:487, 505; Zetterstéen, *Mamlūkensultane*, 205.

Muḥammad's second reign (698-708/1299-1309). Al-Nāṣir then bestowed the rank of amir on some of his own *mamlūk*s, including this man, Bahādur al-Karkarī (al-Karakī), as well as Baybughā al-Ashrafī and Ṭaybughā al-Shamsī (29).[74] Bahādur first served the sultan as an amir of the banner (*amīr ʻalam*), which corresponded to an amir of ten. He was in charge of managing the storehouse for drums and trumpets.[75] In 717/1317 he went to the Hijaz together with the amir Aytamish al-Muḥammadī (7) and returned to Cairo after an absence of one hundred days.[76] He was then appointed chief of administrative offices in Ḥimṣ under the rule of Sayf al-Dīn Tankiz. He afterwards changed his post to that of an amir of forty in the local provinces of Syria, and died at Tripoli in 749/1348.[77]

(B) al-Fayyūm

(19) Sayf al-Dīn Ṭuquṣbā al-Ẓāhirī al-Nāṣirī (d. 745/1344) often transferred his services from one amir to another and was himself granted an amirate by Sultan Ḥusām al-Dīn Lājīn. During the Egyptian *rawk* in 715/1315, Ṭuquṣbā held the post of governor (*wālī*) of Qūṣ.[78] He made two expeditions to Nubia in 705/1305-1306 and 716/1316. In 733/1332-1333 he was appointed *amīr al-rakb* of the year.[79] He lived over 120 years, and died as an amir of forty in Cairo in 745/1344.[80] This information implies that he was over ninety years old when the cadastral survey was carried out.

(20) ʻAlam al-Dīn Sanjar al-Damīrī (d. 732/1331). We know only that he participated in the campaign against the town of ʻAydhāb together with the amir Mughulṭāy ibn Amīr Majlis (12) in 716/1316.[81]

(22) ʻAlā' al-Dīn Mughulṭāy ibn ʻAbd Allāh al-Martīnī (d. 749/1348). The sources give us no information on his origins. He was first appointed to the governorship (*niyābah*) of Bahnasā in Upper Egypt and was transferred to Syria

[75]Al-Maqrīzī, *al-Muqaffá*, 3:689. On the *amīr ʻalam*, see al-Qalqashandī, *Ṣubḥ*, 4:13.

[76]Zetterstéen, *Mamlūkensultane*, 166.

[77]Al-Ṣafadī, *al-Wāfī*, 10:300-301; Ibn Ḥajar, *al-Durar*, 2:33. Al-Ṣafadī in *Aʻyān al-ʻAṣr*, 1:265, has Sayf al-Dīn Bahādur ibn al-Karkarī.

[78]Al-Maqrīzī, *al-Sulūk*, 2:128.

[79]Zetterstéen, *Mamlūkensultane*, 187. Every year during the month of Shawwāl the camel-borne litter (*maḥmal*) departed from Cairo leading the Muslims to Mecca. An *amīr al-rakb* was chosen annually from among the influential amirs to guard them from raids by the bedouins; see F. Buhl and Jacques Jomier, "Maḥmal," *EI*^{2}, 6:44-46. The *amīr al-rakb* was also called *amīr al-ḥājj* during the Mamluk period; see al-Qalqashandī, *Ṣubḥ*, 7:74-75.

[80]Ibn Ḥajar, *al-Durar*, 2:326-27; al-Maqrīzī, *al-Sulūk*, 2:177-78, 236, 673; idem, *al-Khiṭaṭ*, 1:189; al-Shujāʻī, *al-Nāṣir Muḥammad*, 274. The person who was sent to Qūṣ in the survey was also called Ṭuquṣbā (32), who seems to be different from this *wālī Qūṣ*.

[81]Zetterstéen, *Mamlūkensultane*, 165; see also al-Ṣafadī, *Aʻyān al-ʻAṣr*, 1:407.

as the governor (*nā'ib*) of the citadel in Damascus. Then he was given the post of chamberlain, also in Damascus, but was arrested in 747/1346 and died of the plague in 749/1348.[82]

(C) al-Bahnasāwīyah

(23) 'Alā' al-Dīn Aydughdī al-Talīlī al-Shamsī (d. 728/1328) was one of the amirs in Damascus. In 705/1305-1306 during the second reign of al-Nāṣir, he was sent to the ruler of the Maghrib with the amir Aydughdī al-Khwārizmī. In 710/1310 Aydughdī was also chosen to be *amīr al-rakb*.[83] He died unemployed in Damascus.[84]

(25) Jamāl al-Dīn Khaḍir ibn Nūkīyah al-Nāṣirī (d. 758/1357). His father, Nūkīyah or Nukāy al-Silāḥdār al-Tatarī, also had a daughter named Urdukīn. Khaḍir was made an amir in 709/1309-1310 by Sultan al-Nāṣir. His sister, Urdukīn, married al-Ashraf Khalīl, then after his death married his brother, al-Nāṣir Muḥammad, and gave birth to a son. When she died in 724/1324, Khaḍir was allowed to inherit her property.[85]

(26) Sayf al-Dīn Bahādur al-Ibrāhīmī (d. ?) changed service and was promoted to the rank of *naqīb al-mamālīk*, which was restricted to the Royal Mamluks.[86] Although he was relieved from this post in 716/1316, Bahādur still held an amirate and was repeatedly appointed *amīr al-rakb*. However, he failed to quell the revolt of Ḥumayḍah ibn Abī Numayy, lord of Mecca, against the Mamluk regime in 718/1318. When he returned to Cairo the next year, Bahādur was arrested and imprisoned at Alexandria until 720/1320.[87] However, he still held the rank of amir of forty when al-Nāṣir Muḥammad died in 741/1341.[88]

(D) al-Ushmūnayn and al-Ṭaḥāwīyah

(29) Ṭaybughā al-Shamsī (d. ?), together with Bahādur al-Karakī (17), was given the rank of amir when al-Nāṣir, as mentioned above, arrested amir Salār al-Manṣūrī and his *mamlūk*s in 710/1310.[89]

(30) Sayf al-Dīn Qijlīs ibn ʻAbd Allāh al-Nāṣirī al-Silāḥdār (d. 731/1330) was one of the *mamlūk*s of al-Nāṣir Muḥammad and was first appointed *amīr silāḥ* (amir of arms), which was customarily held by an amir of forty;[90] that is, it was an exceptional promotion for the Baḥrī Mamluk period. He was said to have dressed well and to have had a sense of camaraderie. When the Mamluk army succeeded in conquering the town of Malaṭyah, Qijlīs returned from Syria with 350 captives in Rabīʻ I 715/June 1315, four months before the start of the Egyptian *rawk*.[91] After the *rawk* was completed, he was chosen *amīr al-rakb* for 717/1317. Qijlīs became the supervisor of the Ibn Ṭūlūn mosque in Cairo in 723/1323.[92] When al-Nāṣir dispatched his son, al-Nāṣir Aḥmad, to Karak in 726/1326, Qijlīs and other amirs accompanied him.[93] Since Qijlīs had been given great prestige under al-Nāṣir, it is said that he was always ready to manage the important affairs entrusted to him.[94] Furthermore, he was well known as an expert in the making of time-pieces (*mawāqīt*), astrolabes (*asṭurlāb*), and quadrants (*arbāʼ*).[95]

(31) Shams al-Dīn Sunqur al-Saʻdī (d. 728/1328) came from the non-Mamluk cavalry (*ajnād al-ḥalqah*). When al-Nāṣir went to Mecca in order to avert the threat of Amir Salār and Sultan Baybars al-Jashankīr in 708/1309, Sunqur accompanied him, as well as the amir Aydamur al-Khaṭīrī (6).[96] In Cairo Sunqur held the post of *naqīb al-mamālīk*,[97] but was exiled to Tripoli in 723/1323. He was greatly interested in the development of agriculture, and single-handedly established a village in the province of al-Gharbīyah.[98]

The Principles for Choosing Supervisors

We have described the origins, careers and official posts of the supervisors appointed for the Egyptian *rawk* in 715/1315. Now we will examine whether any principles

---

[90] Ibn Taghrībirdī, *al-Dalīl al-Shāfī*, 535. According to Ayalon, the office of *amīr silāḥ* was held not by an amir of forty, but by an amir of a hundred ("Studies on the Structure-III," 60). This amir's duty was to bear the sultan's arms during public appearances.

[91] Zetterstéen, *Mamlūkensultane*, 162-63.

[92] Al-Maqrīzī, *al-Sulūk*, 2:247.

[93] Ibn Ḥabīb al-Dimashqī, *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh*, ed. Muḥammad Muḥammad Amīn (Cairo, 1976-86), 2:161.

[94] Ibn Ḥajar, *al-Durar*, 3:328.

[95] Al-Ṣafadī, *Aʻyān al-ʻAṣr*, 2:350.

[96] Al-Maqrīzī, *al-Muqaffá*, 7:190.

[97] According to Ibn Ḥajar (*al-Durar*, 2:273), he held the post of *niyābat al-jaysh* (supervisor of military affairs).

[98] Ibn Ḥajar, *al-Durar*, 2:273; al-Maqrīzī, *al-Sulūk*, 2:246; idem, *al-Khiṭaṭ*, 1:226. He also constructed al-Madrasah al-Saʻdīyah outside Cairo in 715/1315; see *al-Khiṭaṭ*, 1:250.

or criteria governed the way these twenty-three persons were chosen. Let us examine the above accounts from several points of view.

First, let us compare these men with the supervisors dispatched to the Egyptian regions to survey the irrigation system in 714/1314. According to al-Maqrīzī, the supervisors for the irrigation survey were:[99]

Lower Egypt

(A) al-Gharbīyah:
Amir Sayf al-Dīn Āqūl al-Ḥājib

(B) al-Sharqīyah:
Amir ʻIzz al-Dīn Aydamur al-Khaṭīrī

(C) al-Buḥayrah:
Amir ʻAlā' al-Dīn al-Talīlī

(D) al-Qalyūbīyah:
Amir Badr al-Dīn Jankalī ibn al-Bābā

Upper Egypt

(A) al-Fayyūm:
Amir Badr al-Dīn Baktūt al-Shamsī

(B) al-Bahnasāwīyah:
Amir ʻAlā' al-Dīn Aydughdī Shuqayr

(C) al-Ushmūnayn and al-Ṭaḥāwīyah:
Amir Sayf al-Dīn Qullī

(D) Asyūṭ and Manfalūṭ:
Amir Sharaf al-Dīn Ḥusayn ibn Ḥaydar (Jandar)[100]

(E) Ikhmīm:
Amir Sayf al-Dīn Bahādur al-Muʻizzī

(F) Qūṣ:
Amir Bahā' al-Dīn Aṣlam

Among the above-mentioned ten amirs, those who were re-appointed for the cadastral survey the next year were the following five persons: Sayf al-Dīn Āqūl, ʻIzz al-Dīn Aydamur, ʻAlā' al-Dīn al-Talīlī, Badr al-Dīn Jankalī (in Lower Egypt), and Sayf al-Dīn Qullī (in Upper Egypt). Among them, Sayf al-Dīn Āqūl (dispatched to al-Gharbīyah) and ʻIzz al-Dīn Aydamur (to al-Sharqīyah) were sent to the same regions as in the cadastral survey. However, the above accounts of their careers show that the two amirs had no close connection to either region.[101]

---

[99]Al-Maqrīzī, *al-Sulūk*, 2:137-38; see also Sato, *State and Rural Society*, 227.

[100]Al-Maqrīzī in *al-Muqaffá*, 3:649, has Jandar.

[101]In 712/1313 Sultan al-Nāṣir dispatched the Mamluk army to Syria against the Mongol invasion. Among the twenty-one amirs of a hundred who led the army, the following eight amirs were

Among the five amirs who were not chosen as supervisors in the cadastral survey in 715/1315, two—Aydughdī Shuqayr (al-Ushmūnayn and al-Ṭaḥāwīyah) and Bahādur al-Muʿizzī (Ikhmīm)—were arrested with the amir Sayf al-Dīn Ṭughāy under suspicion of a plot to assassinate al-Nāṣir Muḥammad in Rabīʿ I 715/July 1315,[102] just after the irrigation survey. ʿAlāʾ al-Dīn Aydughdī Shuqayr (d. 715/1315) originally came from the Mamluk corps formed by Lājīn. During al-Nāṣir's reign he was promoted to a high position through the good offices of his comrade (*khushdāsh*), the amir Ṭughāy, and became one of the sultan's favorites.[103] Sayf al-Dīn Bahādur al-Muʿizzī (d. 739/1339) was also one of the *mamlūk*s fostered by Ḥusām al-Dīn Lājīn, and was given the rank of amir when Lājīn ascended to the throne in 696/1296.[104] Thereafter Bahādur was arrested, but was later released. In 730/1330, he was promoted to commander of a thousand.[105]

Sharaf al-Dīn Ḥusayn ibn Jandar al-Rūmī (d. 729/1329), who was dispatched to Asyūṭ during the irrigation survey, came to Cairo from al-Rūm with his father and served al-Manṣūr Lājīn in Egypt and Syria. When al-Nāṣir ascended to the sultanate for the third time in 709/1310, Ḥusayn was appointed amir of a hundred because of his talent for hunting (*ṣayd*). Although he had belonged to Ṭughāy's group of suspected plotters, he was found blameless when Aydughdī, Bahādur, and Ṭughāy were arrested.[106] However, the fact that Ḥusayn was one of Ṭughāy's intimate comrades (*min khawāṣṣ Ṭughāy*) might explain why he was passed over for the position of supervising the *rawk* in 715/1315. It is not clear why the two remaining amirs, Baktūt al-Shamsī and Bahāʾ al-Dīn Aṣlam,[107] were not chosen as supervisors of the *rawk*. However, we may say that the way in which the supervisors

---

chosen again as supervisors of the irrigation survey in 714/1314: ʿIzz al-Dīn Aydamur al-Khaṭīrī, Badr al-Dīn Jankalī, Badr al-Dīn Baktūt al-Shamsī, ʿAlāʾ al-Dīn Aydughdī Shuqayr, Sayf al-Dīn Qullī, Sayf al-Dīn Bahādur al-Muʿizzī, Bahādur Aṣlam, and Sharaf al-Dīn Ḥusayn; cf. Amitai-Preiss, "The Remaking of the Military Elite," 149.

[102]Zetterstéen, *Mamlūkensultane*, 162; al-Maqrīzī, *al-Sulūk*, 2:144; al-Ṣafadī, *Aʿyān al-ʿAṣr*, 1:214-15. Aydughdī Shuqayr, accused of plotting to murder the sultan, was killed on the day of his arrest. In 713/1313 a dispute over *iqṭāʿ* holdings occurred between Aybak al-Manṣūrī and Aydughdī Shuqayr. Sultan al-Nāṣir arrested Aybak al-Manṣūrī, grand amir of the Manṣūrī *mamlūk*s, on the pretext that Aybak and his comrade intended to usurp the sultanate; see al-Maqrīzī, *al-Sulūk*, 2:128.

[103]Al-Maqrīzī, *al-Muqaffá*, 2:342-43; Ibn Ḥajar, *al-Durar*, 1:455; al-Ṣafadī, *Aʿyān al-ʿAṣr*, 1:214.

[104]Al-Maqrīzī, *al-Muqaffá*, 2:501.

[105]Al-Ṣafadī, *Aʿyān al-ʿAṣr*, 1:264.

[106]Al-Maqrīzī, *al-Muqaffá*, 3:649-50; *al-Sulūk*, 2:177-78, 313-14.

[107]Bahāʾ al-Dīn Aṣlam ibn ʿAbd Allāh al-Nāṣirī (d. 747/1346) was originally a *mamlūk* of al-Malik al-Nāṣir and was promoted to amir of a hundred by him, a rank he held until he lost it to the sultan's anger after the cadastral survey; see Ibn Taghrībirdī, *al-Manhal*, 2:455-56; al-Ṣafadī, *al-Wāfī*, 9:285.

were chosen was closely connected to the movements of the Mamluk factions competing around the sultanate in Cairo.

Now let us examine the accounts of the supervisors appointed for the cadastral survey in the following year. As mentioned above, among thirty-two supervisors we may identify twenty-three persons, including two Coptic officials. The biographical accounts do not reveal any close relation between the regions to which the twenty-one amirs were appointed and their posts or *iqṭā*'s. In the *rawk* of Tripoli in 717/1317, for example, Sharaf al-Dīn Ya'qūb al-Ḥamawī, chief of military affairs (*nāẓir*) at Aleppo, was put in charge of the cadastral survey. In the *rawk* of Aleppo in 725/1325, Mughulṭāy al-Jamālī, who held the offices of *ustādār* and *wazīr*, was appointed supervisor; that is, he was neither governor of Aleppo nor chief of military affairs there. This method of appointment was to avoid unfairness on the part of local chief officials or *iqṭā'* holders (*muqṭa'*).[108] Accordingly, it may well be said that such a principle was also followed in the *rawk* of Egypt in 715/1315.

We know the following posts of the supervisors, except the two Coptic officials, at the time of the cadastral survey:

(2) 'Alā' al-Dīn Ṭaybars: *naqīb al-jaysh* (chief of military police)
(3) Sayf al-Dīn Āqūl: *ḥājib* (chamberlain)
(5) Sayf al-Dīn Qullī: *silāḥdār* (bearer of arms)
(6) 'Izz al-Dīn Aydamur: *ustādār* (majordomo)
(11) Balabān al-Muḥassin: *shādd al-dawāwīn* (supervisor of central offices)
(17) Sayf al-Dīn Bahādur al-Karakī: *amīr 'alam* (amir of banners)
(19) Sayf al-Dīn Ṭuquṣbā: *wālī Qūṣ*
(26) Sayf al-Dīn Bahādur al-Ibrāhīmī: *naqīb al-mamālīk* (chief of *mamlūk* affairs)
(30) Sayf al-Dīn Qijlīs: *amīr silāḥ* (amir of arms)
(31) Shams al-Dīn Sunqur: *naqīb al-mamālīk*

It is remarkable that only one local governor (*wālī Qūṣ*) was appointed supervisor. The other supervisors held posts that were closely connected to the sultan's privy council, the Royal Mamluks, or the central administration. This indicates that the cadastral survey was carried out under al-Nāṣir's strong leadership. Al-Nuwayrī says, "Sultan al-Nāṣir himself proceeded to Upper Egypt to preside over the amirs and scribes."[109] The sultan had to obtain good results from the cadastral survey in order to establish a stable Mamluk regime.

---

[108]Sato, *State and Rural Society*, 143-45.

[109]Al-Nuwayrī, *Nihāyat al-Arab*, 30:299-300; see also Sato, *State and Rural Society*, 140.

Finally, let us look at the origins of the amirs appointed as supervisors of the cadastral survey in 715/1315. Among the twenty-one amirs identified above, one, Shams al-Dīn Sunqur (31), was from the non-*mamlūk* cavalry, and two, Badr al-Dīn Jankalī (1) and Khaḍir ibn Nūkīyah (25), were Mongol immigrants (*al-Wāfidīyah*) or the sons of such immigrants who came to serve al-Nāṣir. Both Mongol amirs were appointed to high positions through their relations by marriage to al-Nāṣir. From among the remaining supervisors, those who were *mamlūk*s purchased and fostered by al-Nāṣir were (11) Balabān al-Muḥassin, (17) Sayf al-Dīn Bahādur al-Karakī, (29) Ṭaybughā al-Shamsī, and (30) Sayf al-Dīn Qijlīs. Those who had been originally bought by another sultan or by an amir, and who later switched service to al-Nāṣir were (2) 'Alā' al-Dīn Ṭaybars, (6) 'Izz al-Dīn Aydamur, (7) Sayf al-Dīn Aytamish, (19) Sayf al-Dīn Ṭuquṣbā, and (26) Sayf al-Dīn Bahādur al-Ibrāhīmī. It is interesting that the same number of supervisors was chosen from among both the Nāṣirī and non-Nāṣirī *mamlūk*s. However, even among these amirs we find no one who remained in his former faction, even after the accession of al-Nāṣir to the sultanate.

As I mentioned above, during al-Nāṣir's second reign the Vice-Sultan Salār al-Manṣūrī and majordomo Baybars al-Jāshankīr actually controlled state politics. They were from the Burjī, or Manṣūrī, *mamlūk*s formed by al-Malik al-Manṣūr Qalāwūn.[110] Accordingly, when al-Nāṣir ascended to his third sultanate after eliminating Baybars al-Jāshankīr and his followers in 709/1310, the first thing he had to do was eliminate the influence of the senior Manṣūrī and other amirs.[111] He immediately sent letters to the local *wālī*s, ordering them to seize the estates of these amirs and send them to the prison in Alexandria.[112] In 710/1310 Sultan al-Nāṣir captured Salār and his *mamlūk*s,[113] and in 712/1312 he arrested six amirs of a hundred, including three Manṣūrī amirs.[114] Furthermore, just after the irrigation survey in 714/1314, he arrested those senior amirs, like 'Alā' al-Dīn Aydughdī Shuqayr and Bahādur al-Mu'izzī, who had been fostered by al-Manṣūr Lājīn .[115]

[115]Zetterstéen, *Mamlūkensultane*, 162; al-Maqrīzī, *al-Sulūk*, 2:144. As to the affiliation of these amirs, see al-Maqrīzī, *al-Muqaffá*, 2:342-43, 501; see also Amitai-Preiss, "The Remaking of the Military Elite," 149.

The next step was the execution of the cadastral survey, in order to decrease the *iqṭā'* revenue of those amirs left over from the reigns of the previous sultans.[116] When al-Nāṣir resolved to establish a regime based on his own *mamlūk*s, it was probably deemed proper that the *rawk* supervisors be chosen not from the Manṣūrī *mamlūk* amirs, but from his own confidants, including the Nāṣirī *mamlūk* amirs. After the cadastral survey, al-Nāṣir granted new *iqṭā'*s to the amirs, his own *mamlūk*s and the *ḥalqah* cavalrymen, and ordered that the land the Manṣūrī amirs had purchased in Giza be integrated into the sultan's domain. Furthermore he declared that anyone who returned his authorization (*mithāl*) of *iqṭā'* or complained of the survey results would be beaten and imprisoned after his *iqtā'*s were confiscated.[117] This shows that al-Nāṣir evidently carried out the cadastral survey in order to implement his resolution to eliminate the senior non-Nāṣirī amirs.

Documents Related to the Estates of a Merchant and His Wife in Late Fourteenth Century Jerusalem

Introduction

The majority of the Ḥaram documents[1] are related in some way to the settlement of the estates of persons who died in Jerusalem during the last decade of the fourteenth century. There are over four hundred estate inventories alone, by which we mean lists of the assets and liabilities of dead or dying persons compiled under the supervision of the Shāfiʻī or Ḥanafī courts, often with the participation of officials of the Public Treasury and the Bureau of Escheat Estates as well as representatives of the Viceroy of Jerusalem. These inventories have been studied in detail, by no means exhaustive, for the purposes of social history by Huda Lutfi in her *Al-Quds al-Mamlūkiyya: A History of Mamlūk Jerusalem Based on the Ḥaram Documents*.[2] In this article I shall study one such inventory in conjunction with other types of court and notarial records from the Ḥaram collection which bear on settlement of the estate in question. While my main purpose will be to elucidate the general process of settling estates in Mamluk Jerusalem through the study of documents, several subsidiary goals will be served. Since so few court and notarial records have survived from the Muslim Middle Ages, those that have are of capital importance *qua* documents from several points of view: language and palaeography, for example, and notarial style. They are also significant, of course, as records of legal transactions and court procedures under Mamluk rule. All these points will be addressed in my commentary and analysis.

The four documents here in question—an estate inventory, a record of sale of objects from the estate, an attestation regarding the disposition of the estates, and a certification of the attestation—are all related to the estates of a merchant and

---

[1]The Ḥaram documents consist of approximately nine hundred documents discovered in 1974-1976 in Jerusalem at the Islamic Museum located at al-Ḥaram al-Sharīf. See Linda S. Northrup and Amal A. Abul-Hajj, ″A Collection of Medieval Arabic Documents in the Islamic Museum at the *Ḥaram al-Sharīf*,″ *Arabica* 25 (1979): 282-91; Donald P. Little, ″The Significance of the *Ḥaram* Documents for the Study of Medieval Islamic History,″ *Der Islam* 57 (1980): 189-217, reprinted in idem, *History and Historiography of the Mamlūks* (London, 1986); and idem, *A Catalogue of the Islamic Documents from al-Ḥaram aš-Šarīf in Jerusalem* (Beirut, 1984).

[2](Berlin, 1985).

his wife, both from Baalbek, who had possessions there as well as in Bekaa, Damascus, and Jerusalem. It is only because this merchant happened to die in Jerusalem that we have any knowledge of his or his wife′s affairs, for the local Shāfi'ī Court, some of whose records have fortuitously survived for five hundred years, became involved in the settlement of their estates. I have chosen this particular case for study mainly because it is an extremely complicated one for which, exceptionally, several documents have survived and thus illustrates the intricacies and efficiency of the legal system in the Mamluk empire, even though, as will be seen, the surviving records are incomplete. But there is another reason for my choice. Three of the documents contain notations of numbers written in the Mamluk version of the *siyāqah* script, which I have gradually learned to read after much trial and, alas, continuing error. Though the *siyāqah* or *siyāqat*, as used by the Ottomans, is well known,[3] its use by Mamluk notaries and chancery scribes has come to light only recently.[4] Pending the publication of a fuller study of the Mamluk *siyāqah*, I would like to share with other scholars what I have learned so far.

Before we plunge into the details of this specific case, it should be helpful to review what is already known about the process of settling estates in Mamluk Jerusalem, drawing on Lutfi′s work and my own. Basically, individuals had three options for arranging the disposition of their estates: wills, estate inventories, or a combination of the two. At an appropriate time a person, whether Muslim or *dhimmī*,[5] could voluntarily draw up a will, in which he or she appointed an executor of the estate and designated bequests, not to exceed a third of the estate (in the case of Muslims), to persons, or charities, other than their legal heirs. Moreover, the testator could include in the will an enumeration of assets and liabilities, a declaration of legal heirs, and special instructions, regarding the funeral, for example, or for the performance of memorial prayers or proxy-pilgrimage.[6] Wills were drawn up in the form of notarized documents and could be certified by a court.[7] After the testator′s death the executor proceeded to distribute

the estate in accordance with the will.[8] If a person did not choose to make a will, and sometimes even when he or she did, the odds were strong that the state would intervene in the disposition of the estate, either before or after the person's death. As is well known, medieval Muslim states in Egypt and Syria maintained a special institution known as Dīwān al-Mawārīth al-Ḥashrīyah (Bureau of Escheat Estates), whose purpose was to insure that the government would receive the residue of estates not exhausted by the claims of legal heirs.[9] The Ḥaram documents afford ample evidence that this Bureau was operative in Mamluk Jerusalem and that its efforts were coordinated with the Bayt al-Māl (Public Treasury).[10] Although we cannot yet be sure whether all residents of Jerusalem of a certain class were subject to an estate inventory conducted under the auspices of these institutions and the courts,[11] the survival of 423 inventories conducted in Jerusalem during the last decade of the fourteenth century indicates that many (including Christians and Jews), if not most, were. These inventories always included an enumeration of assets and liabilities and identification of the heirs, including the Bayt al-Māl if it was entitled to a share. In addition, if the person was still alive when the inventory was made, he or she could designate bequests or, more rarely, appoint an executor.[12] Instances of both dispositions are infrequent but suffice to demonstrate the similarity of estate inventories to wills. Nevertheless, the fact that many of the inventories

Executors: nos. 161, 709 (*Catalogue,* 81, 269). In addition, no. 725 (*Catalogue*, 156) cites a will that was prepared three to four months before the inventory was made.

were made for persons already dead, the frequent presence of military and civilian officials, and evidence from Ayyubid, Mamluk, and Ottoman literary and documentary sources, indicate that estate inventories, unlike wills, were not voluntary or, at least, not always so.[13] In most cases we do not know how the estate was distributed after the inventory was made. Sometimes, when there was a possibility of dispute or settlement had to be delayed for some other reason—the absence of heirs from the locality, for example—the estates were kept under seal or in a court depository. Public sales of chattels were held when necessary to satisfy the claims of beneficiaries, be they Quranic heirs or the Public Treasury.[14] From a few documents we learn that after burial expenses and debts had been settled, the residue of an estate was distributed by an executor if there was one, or by a court,[15] as we shall see in the documents studied in this article. Curiously, the Ḥaram documents make only infrequent reference to the apportionment of estates according to the *sharī'ah* formulae governing shares—the *farā'iḍ*.[16] Nevertheless, the identification of heirs both in wills and in estate inventories and the presence of witnesses appointed by the courts certainly suggest that at some stage the precise share due to each heir would have to be reviewed. Be that as it may, the Ḥaram records do show that the courts continued to oversee the disposition of estates when disputes arose among beneficiaries.

---

[13]See Lutfi, *al-Quds*, 13-21. Personally, I find the Ottoman seventeenth century procedures suggestive of what may well have happened under the Mamluks:

"According to Ottoman *qānūn*, when anyone died the treasury had to be notified immediately. A representative of the treasury was sent to the home of the deceased to determine whether the state had any rights over the inheritance (as happened when the deceased left no heirs or if the shares of the heirs did not exhaust the property). The main function of the treasury representative at first was to check the legitimacy of heirs. . . .

"The treasury referred cases in which the state had rights to the *qassām* [apportioner of estates for division]. . . . A committee was then formed, under the supervision of the *qassām*, to survey the estate. The committee was made up of the legal heirs, the representative of the treasury when appropriate, *'udūl* from the court, and *ahl al-khibrah*, whose services were needed for the evaluation or sale of properties. . . .

"The committee began by making a survey of the decedent's estate: personal belongings, commodities and equipment, urban properties, loans outstanding, animals, and slaves. . . ." (Galal H. El-Nahal, *The Judicial Administration of Ottoman Egypt in the Seventeenth Century* [Minneapolis and Chicago, 1979], 47-48). While there were obvious differences between Ottoman and what we believe to be Mamluk procedures, the similarities are striking.

[14]El-Nahal, *Judicial Administration*, 35, and our own document no. 591, below.

[15]E.g., no. 709 (*Catalogue*, 269).

[16]References to the fourth due to a widow and the third set aside for charity and Quran recitations occur in no. 355.

Against this sketchy background we shall now proceed to examine our specific case by transcribing, translating, and analyzing the documents.

I. Ḥaram document no. 133. 27 x 18 cms. Paper.
Recto. An estate inventory, dated 10 Dhū al-Qaʿdah 793/9 October 1391, signed by a judge and containing his judgement, written in the right-hand margin, that the document and its contents are to be certified. See figure 1, p. 181.

Translation

1. In the name of God, the Compassionate, the Merciful, in Whom is my success. Praise be to God, I ask Him for success.
2. On the tenth of the sacred [Dhū] al-Qaʿdah 793 [9 October 1391], viewing [the estate of] a weak man named Shams al-Dīn Muḥammad al-Baʿlabakkī,
3. known as Ibn Jamāl, took place in a house known as ʿAbd al-Raḥmān al-ʿAttāl's, in the Maghribī Quarter of Jerusalem the Noble. He mentioned that those legally entitled to his inheritance
4. are his wife, Ālmalik bint Ḥasan ibn ʿAlī al-Baʿlabakkīyah, present with him; his two full siblings, Ḥusayn and Sutaytah; and his brother and sister by his mother, Aḥmad and Altī,
5. the two children of Muḥammad al-ʿAjamī, absent in Baalbek. That which was found in the aforementioned apartment is [as follows]: the contents of a green sack: silver in current use; the contents of a second, silk sack:
   [778 *dirham*s]
6. Florentine gold in a piece of paper, numbering, silver in current use, and
   [16 coins] [347 1/4 *dirham*s]
   one Venetian *dirham* in a piece of paper; the contents of a third, white cotton sack: gold,
7. Florentine, inside a piece of paper, numbering, Venetian [*dirhams*?] inside
   [7 coins]
   a piece of paper, and silver in current use; and silver in the possession of
   [7 *dirham*s] [2000 (?) *dirham*s]
   his aforementioned wife for the purpose of maintenance: [91 *dirham*s].

8. All of that, she mentioned, had been deposited with Shams al-Dīn al-Zuraʻī, the merchant in Jerusalem the Noble, and he brought it to her (?) on the date of the inventory. That which
9. was found on him (Shams al-Dīn al-Baʻlabakkī) were the clothes of his body: a white linen shirt, a cotton turban, a skull cap, a *ṭarḥ* cloak, a *ṭarḥ ḥanīn*, a ميسر with a blue wool حيده
10. on a Russian fur; inside an old piece of white cotton there was a white linen shirt, a small turban; a cotton turban wrapping, a *ṭarḥ* حنده
11. a *ṭarḥ* cloak, another *ṭarḥ* cloak, and a white head(?)-cap. All of that was placed in the safekeeping (?) of his aforementioned wife. It was enumerated by the witnesses, and she received (?) it in their presence.
12. Also, he has with Shihāb al-Dīn Aḥmad ibn Sanājiq, the merchant in Jerusalem the Noble, of good silver *dirham*s, 3000, which he deposited in their usual places,
13. in accordance with a legal document witnessed by its clerk and al-Shaykh Shihāb al-Dīn Aḥmad ibn ʻAlam al-Dīn Sulaymān al-Mālikī. That inventory was made with the generous permission of
14. Our Lord and Master, the Servant Needy of God the Exalted, Qāḍī of the Muslims, Sharaf al-Dīn al-Anṣārī al-Shāfiʻī, Magistrate in Jerusalem the Noble and its districts,
15. Chief Shaykh, and Supervisor of the Blessed Pious Endowments, may God the Exalted perpetuate his support and reward his increase generously from His bounty. That was done on the date mentioned above.

[a]

16. I viewed
17. the aforementioned person and acted as witness to him regarding his heirs
18. and to his wife regarding delivery of the enumerated items. The end.
19. Written by ʻAbd al-Raḥmān al-Shāfiʻī.
20. He testified before me.

[b]

16. I viewed the person mentioned above
17. and acted as witness to him regarding his heirs and to his wife regarding delivery
18. of the items mentioned therein and to Shihāb al-Dīn
19. ibn Sanājiq regarding his deposition. Written by
20. ʻAbd al-Raḥmān al-Naqīb al-Ḥanafī.
21. He testified before me.

[c]
16. I viewed
17. the aforementioned person and acted as witness
18. to him and to his wife
18a. regarding what is attributed to them therein
19. on the document′s date. Written by ʻAbd Allāh ibn Muḥammad ibn Ḥāmid. The end.
20. He testified before me.

[d]
16. I viewed the person mentioned above and acted as witness to him
17. regarding his heirs and to his wife regarding
18. delivery of the aforementioned items
18a. on the document′s date. Written by Aḥmad ibn al-Naqīb al-Ḥanafī.

Right hand margin:

Let there be witnesses to the certification of the evidence established regarding a legal acknowledgment in it by a veracious person. God is the One Whose help is to be sought.

Two copies

Commentary

This estate inventory conforms to one of the five Ḥaram formats for this type of document, the one used most frequently in fact.[20] Its distinguishing characteristic is the use, after the date, of the opening phrase, *ḥaṣala al-wuqūf ʻalá rajul/imra'ah* (viewing of the estate of so-and-so took place).[21] Like the other types of inventories, this one includes the name and physical condition of the person in question; the place where the inventory was made; identification of the legal heirs, their relationship to the person, and their whereabouts; a list of assets and liabilities, including deposits; the name of the official who authorized the inventory; and the witnessing clauses of the witnesses. Although our document does conform to a standard Ḥaram format, it is unusual, being one of the three that were viewed and approved for certification by a judge. In two instances (no. 133, no. 707), the judge signed the document with his motto and added his judgement for its certification by

[20]Of 423 inventories, 322 are written in this format. *Catalogue*, 63.

[21]Specimens of this type of document have been published by Lutfi, *al-Quds*, 37-38 (no. 82); Asali, *Wathā'iq*, 2:262-69 (nos. 163, 372, 395); Muḥammad ʻĪsá Ṣāliḥīyah, ″Min Wathā'iq al-Ḥaram al-Qudsī al-Sharīf al-Mamlūkīyah,″ *Ḥawlīyāt Kullīyat al-Ādāb, Jāmiʻat al-Kuwayt*, no. 6 (1405/1985), 84-91 (no. 163); and Little, ″The Jews,″ 232-40 (no. 554).

witnesses.[22] In the third (no. 715) the judge did not sign but certified the transaction anyway, on verso.[23] Curiously, our document no. 133 is apparently incomplete. Normally, as we shall see when we examine no. 355, once a judge had endorsed a document with his motto and called for its certification, a consequential document of certification was written on verso, as is indeed the case with the second such inventory, no. 707.[24] Unless, then, the verso of no. 133 has not been photographed (and I do not believe this to be the case), the process of certification was not completed for some unknown reason. Also unknown is why only three of 423 estate inventories should have been singled out for judicial certification.

Contrary to what I have written elsewhere,[25] references to estate inventories can be found in some of the manuals of the Mamluk period, i.e., handbooks of judicial formularies drawn up for the benefit of notaries and judges. Since one of the aims of studying the Ḥaram documents is to determine the degree of conformity of judicial theory with practice, it will be useful to review what two Mamluk *shurūṭ* manuals record about inventories.[26] Only one of these has been published in full: *Jawāhir al-ʻUqūd wa-Muʻīn al-Quḍāh wa-al-Muwaqqiʻīn wa-al-Shuhūd* (The Nature of Contracts and the Aid of Judges, Notaries, and Witnesses) by Shams al-Dīn Muḥammad ibn Aḥmad al-Minhājī al-Asyūṭī.[27] An Egyptian Shāfiʻī *faqīh* who served a Mamluk amir as notary, al-Asyūṭī completed his manual of legal principles and models to be used in drafting documents in 865/1461.[28] His references to estate inventories come at the end of his chapter on wills, ″Kitāb al-Waṣāyā,″ where he discusses the procedures that should be followed after the death of the testator and the executor has assumed responsibility for the estate. Once a judge has, if necessary, probated the will (*wa-thabata ʻalá al-ḥākim al-sharīʻah al-muṭahharah mā yuʻtabaru thubūtuhu fīhā bi-al-ṭarīq al-sharʻī*) and ″there is need to sequester the estate″[29] in the presence of the witnesses to the will,

---

[22]Two other inventories were drawn up in a court, before a judge, but were not certified: nos. 500 and 698 (*Catalogue*, 265, 269).

[23]Ibid., 221.

[24]Ibid., 238.

[25]Little, ″Significance,″ 202; *Catalogue*, 59. Cf. Lutfi, *al-Quds*, 67.

[26]Two other Mamluk manuals, which will be cited below, do not mention estate inventories.

[27]Ed. Muḥammad Ḥāmid al-Fiqī, 2 vols. (Cairo, 1375/1955).

[28]Ibid., vol. 1, plate 2 and p. *nūn.*

[29]According to *shurūṭ* formularies for wills, the executor was enjoined to sequester an estate upon the death of the testator so that the proceeds could be used to pay funeral expenses, outstanding debts, legacies, and claims of legal heirs. Ibid., 1:464; Shihāb al-Dīn Aḥmad ibn ʻAbd al-Wahhāb al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab*, vol. 9 (Cairo, 1351/1933), 105; and Muḥammad ibn ʻAlī al-Jarawānī, ″al-Kawkab al-Mushriq fīmā Yaḥtāju ilayhi al-Muwaththiq,″ Cairo, Dār al-Kutub, MS Fiqh Shāfiʻī 892, p. 58.

or others, ″pending its settlement, a list is to be drawn up of the effects left by the deceased and surveyed by witnesses.″[30] Here the implication seems to be that estate inventories, for al-Asyūṭī, were necessary only when a will existed. Not surprisingly, given the inherent rigidity of formularies, the list should follow a prescribed order, beginning with coinage, identified by type, weight, and number; cloth goods (*qumāsh*), by type and attributes; books, by title and number of parts; weapons; real estate; and instruments of debt. According to al-Asyūṭī, the list, signed by witnesses to the inventory and containing the names and relationships of the heirs, should be kept under lock or seal until such time as the goods were sold or distributed.[31]

The second, unpublished, *shurūṭ* manual, ″al-Kawkab al-Mushriq fīmā Yaḥtāju ilayhi al-Muwaththiq″ (The Resplendent Star for the Needs of the Notary),[32] was also compiled by a Shāfiʻī scholar, Muḥammad ibn ʻAlī al-Jarawānī, who, according to Carl Brockelmann, flourished around 788/1386.[33] Al-Jarawānī′s references to estate inventories are also subsidiary to a discussion of other matters; they form one of six sections in a chapter on miscellaneous ″Matters from Which a Notary Might Benefit.″ However, unlike al-Asyūṭī, al-Jarawānī did not confine the use of inventories to estates for which there was a will and an executor. On the contrary, he placed his discussion in the context of sales of estates which might be initiated by one of several persons, including ″a judge, the director of the public treasury (*wakīl bayt al-māl*), the trustee of orphans (*amīn al-ḥukm*), or the certified executor of the will (*waṣī thābit al-īṣā*ʼ).″[34] Obviously, then, in al-Jarawānī′s view an estate was subject to inventory if a public official—each of whom figures in the Ḥaram inventories—or a legally certified executor decided that the estate, or parts of it, should be sold. Such a view, as opposed to al-Asyūṭī′s, is somewhat closer to our own characterization of the nature and purpose of the Ḥaram estate inventories insofar as the claims of the Public Treasury are concerned. Nevertheless, the format outlined by al-Jarawānī is very similar to al-Asyūṭī′s: ″The inventory of the possessions left behind by the deceased (*ḍabṭ al-mawjūd al-mukhallaf ʻan al-mayyit*) will not omit coinage, cloth goods, or anything else, so that everything is enumerated in witnessed documents″ (*awrāq mashhūd fīhā*).[35] In addition to the list of possessions, the document contains identification of the heirs, the names of the witnesses (the executor or other persons), and the place and date of the

inventory. That the inventory was not regarded as an independent document but was drafted as a preliminary record prior to a public sale al-Jarawānī makes clear when he stipulates that each item is to be listed in a specified order "so that there will be no confusion at the time of viewing [the goods] at the sale."[36] Furthermore, as will be seen in our discussion of document no. 591 below, both al-Asyūṭī and al-Jarawānī considered estate inventories to be closely related to another type of document, i.e., records of public sales.

A glance at the text of no. 133 and of other published Ḥaram estate inventories shows that they contain all the elements described by the two *shurūṭ* authors, though there are often deviations from the prescribed order of lists. In my view the most persuasive indication that the inventories described by al-Asyūṭī are equivalent in form to those drawn up by the Ḥaram clerks comes in a clause he recommends for inclusion in the document: *wa-ḥuḍūr man sayaḍaʻu khaṭṭahu bi-ẓāhirihi min al-ʻudūl al-mandūbīn bi-dhālika min majlis al-ḥukm al-ʻazīz al-fulānī fī taʼrīkh kadhā* . . . (in the presence of those witnesses who will place their signatures on verso, delegated by such-and-such court on such-and-such date . . .).[37] Except for the substitution, usually, of *shuhūd* for ʻ*udūl*, and *ākhirihi* for *ẓāhirihi*, the same, or a similar, clause appears on dozens of Ḥaram inventories, though not, unfortunately for our purposes, on no. 133.[38] Thus I would argue that despite deviations from the exact purposes and formats described by the two Mamluk *shurūṭī*s, the Mamluk notaries and clerks of late fourteenth century Jerusalem were clearly not working in a vacuum but were conforming to and adapting practices recommended by jurists. Conversely, one might argue with equal cogency that some of the *shurūṭ* scholars were describing and prescribing practices already in effect to varying degrees in such provincial sections of the Mamluk empire as Jerusalem.

1. *bismillāh* . . . The practice of opening legal documents with pious phrases is commended in Mamluk *shurūṭ* manuals.[39] The same practice was followed in Mamluk chancery documents for what Hans Ernst calls the "Eingangsprotokol."[40]

[38]See, e.g., no. 376: *"wa-dhālika bi-ḥuḍūr . . . man yaḍaʻu khaṭṭahu ākhirahu min al-ʻudūl al-mandūbīn min majlis al-ḥukm al-ʻazīz al-Shāfiʻī bi-al-Quds al-Sharīf . . . fī taʼrīkhih,"* Asali, *Wathāʼiq*, 1:266; see also ibid., 264, and 2:35, 39, 44.

[39]Al-Asyūṭī, *Jawāhir*, 1:25; al-Nuwayrī, *Nihāyah*, 9:7.

[40]*Die mamlukischen Sultansurkunden des Sinai-Klosters* (Wiesbaden, 1960), xxv-xxvi; but cf. S. M. Stern, "Petitions from the *Mamlūk* Period," *Bulletin of the School of Oriental and African*

al-ḥamd lillāh wa-as'aluhu al-tawfīq. This is the *'alāmah* (motto) used in lieu of a signature by the officiating judge who reviewed the transactions described in the document as well as the document itself.[41] It was obviously written by a different hand and pen from those used in the text of the document.[42] This particular *'alāmah* was used by al-Qāḍī Sharaf al-Dīn 'Īsá al-Shāfi'ī,[43] about whom more below. As we have already noted, this estate inventory is exceptional for the very reason that a judge has signed it, signifying here that the document should be certified, as per his judgement (*tawqī'*) written in the right-hand margin (also with a thick pen) and his endorsement of the witnessing clauses at the end of the document. Because, however, the process of certification was apparently aborted for this document, we shall defer discussion of certification until we analyze no. 355 recto and verso below, wherein the process ran full course.

2. *bi-ta'rīkh* . . . This, of course, is the date of the inventory. Unfortunately, we do not know precisely when the person died. Obviously this occurred on or after the date of the inventory, when he was deemed to be *ḍa'īf*, literally "weak," and before the sale of goods from his estate, which took place on 23 Rabī' II 794/17 March 1392, a period of five months.[44]
   ḥaṣala al-wuqūf 'alá . . . ; *wa-alladhīna dhakara annahum yastaḥiqqūna irthahu shar'an* (line 3); *wa-alladhī wujida bi-al-bayt* (line 5); *wa-ḍubiṭa dhālika ḥasaba al-idhn al-karīm* (line 13); *wa-dhālika fī ta'rīkhihi a'lāhu* (line 15) are all stock phrases and clauses used routinely in estate inventories.[45]

Studies 29 (1966): 246, and Geoffrey A. Khan, "A Copy of a Decree from the Archives of the *Fāṭimid* Chancery in Egypt," *BSOAS* 49 (1986): 448.

[41]For the use of *'alāmah*s by judges of late Mamluk and early Ottoman Egypt, see Rudolf Vesely, "Die richterlichen Beglaubigungsmittel: Ein Beitrag zur Diplomatik arabischer Gerichtsurkunden," *Orientalia Pragensia* 8 (1971): 12-18.

[42]With what al-Asyūṭī calls "a thick pen" *(al-qalam al-ghalīẓ)* (*Jawāhir*, 2:370).

[43]The same *'alāmah* appears on no. 649, published in my "Two Fourteenth Century Court Records from Jerusalem Concerning the Disposition of Slaves by Minors," *Arabica* 29 (1982): 17-28, reprinted in Little, *History and Historiography.* The same document has been published by Asali, *Wathā'iq*, 2:25-27. See also the marriage contract reproduced in *Catalogue*, plate 11. Since the Ḥaram documents originated in the court of this judge, his *'alāmah* appears on several other—as yet unpublished—documents.

[44]Document no. 591, presented below, is a record of that sale.

[45]Cf. Little, "The Jews," 236.

3. *Ibn Jamāl* not *Ibn Kamāl*.[46] The correct reading is derived from no. 355, line 6, and no. 591, line 3, below. He is further identified as a merchant in the former document.
Ḥārat al-Maghāribah is the famous quarter of Jerusalem adjacent to the Wailing Wall of the Ḥaram, settled since the late twelfth century by immigrants from the Maghrib.[47]

3-5. *alladhīna . . . yastaḥiqqūna* . . . is a clause used to specify the heirs to an estate in accordance with Islamic law. Without going into detail, suffice it to say that Ālmalik was a primary Quranic heir, one of the *ahl al-farā'iḍ*, as wife to Shams al-Dīn. Since he had no descendants, she was entitled to one-quarter of his estate. The uterine brother and sister, as secondary Quranic heirs, would share equally one-third of the estate. The full brother as a secondary male agnate, would inherit as a residuary.[48] In this respect it is interesting that this list of legal heirs differs somewhat from that in no. 355 recto, line 8, where Sutaytah is identified not as a full sibling but only as a half sister to Shams al-Dīn and, like Aḥmad and Altī, one of the children by their mother and Muḥammad al-'Ajamī. This shows how easy it was, and is, for error to creep into legal documents, even certified documents.

5. *al-ghā'ibūn* . . . would probably read *al-ghā'ibīn* if we could restore the missing letters, since this is the form it takes in other Ḥaram documents. Be that as it may, the presence or absence of heirs is usually specified in estate inventories, presumably because this factor would affect the ease with which the estate could be settled and the possibility of intervention by the Bureau of Escheat Estates.[49] In reference to the Ayyubid period S. D. Goitein makes the following point:

> . . . a person whose family was not with him at the time of his demise had to face the dire prospect that his property would be confiscated—a case particularly frequent in Jerusalem where old people used to spend the end of their days in devotion, far away from their families.[50]

wa-alladhī wujida . . . It is noteworthy that the list of Shams al-Dīn's possessions follows the order recommended by al-Asyūṭī and al-Jarawānī

[48]See N. J. Coulson, *Succession in the Muslim Family* (Cambridge, 1971), 41, 67.

[49]See Little, "Relations," 90; Lutfi, *al-Quds*, 26; S. D. Goitein, *A Mediterranean Society*, vol. 3, *The Family* (Berkeley, 1978), 277-78.

(coins followed by fabrics), though a cash deposit is added in the end.[51]
al-bayt. Previously, in line 3, the inventory was said to have been conducted in a *dār*. In Ḥaram usage a *bayt* is normally one of the living units comprising a *dār.*
fiḍḍah muʿāmalah is often accompanied in the Ḥaram documents by the name of the mint. Here the term obviously means coinage which was negotiable in Jerusalem at the time and may have included coins from several mints.
sabʿ mi'ah. Although we shall defer discussion of the *siyāqah* numbers until the commentaries on nos. 355 and 591, here it may be noted that the *siyāqah* figures are usually placed under the objects numbered. But in line 7, the money held by Ālmalik for maintenance is incorporated, in *siyāqah*, into the text, while in line 12, three thousand *dirham*s is spelled out in normal script in the text. In other words, the scribe had considerable latitude in treating numbers in the text of a document.

6. *dhahab iflūrī* refers to florins, to be discussed in relation to Mamluk exchange rates in no. 355 recto, line 5, below.
bunduqīyah. Although this term sometimes denotes the Venetian ducat,[52] here it clearly means the Venetian silver *dirham*, known to have been in circulation in Mamluk territory.[53]
7. *nafaqah.* Presumably the amount legally due to the wife from the husband as support for food and shelter for a set period of time. The *shurūṭ* manuals often contain a chapter on documents which spell out such arrangements.[54] Many Ḥaram documents relate to *nafaqah*, particularly that due to minors after their father's death.[55]
8. *mūdaʿan* . . . The depositing of goods or cash for safekeeping with another person was a practice sanctioned by Islamic law. Often a document was drawn up to record this transaction, as, indeed, was the case with another deposit made by Shams al-Dīn to one Ibn Sanājiq (line 13).[56] Perhaps the

[56]Al-Asyūṭī, *Jawāhir*, 1:473-74; al-Jarawānī, "al-Kawkab," 60-61. For a specimen of a Ḥaram

absence of such a document explains why al-Zura‘ī brought the deposits to the house before the death of Shams al-Dīn al-Ba‘labakkī.

Shams al-Dīn al-Zura‘ī al-Tājir is probably the same merchant referred to as Shams al-Dīn Muḥammad ibn Shihāb al-Dīn Aḥmad al-Zura‘ī al-Tājir bi-al-Quds al-Sharīf in two other Ḥaram documents, nos. 17 and 70, both dated 4 Shawwāl 795/13 August 1393.[57] In these he also figures as the holder of a deposit of a person who died in Jerusalem. These two documents are also interesting in that they both record the same transaction, each being drafted and written by a different witness.

9. *malūṭah* is defined by L. A. Mayer as an ″ordinary cloak″ or an ″upper coat with a collar.″[58]

ṭarḥ is a type of cloth, frequently associated with cotton or linen.[59]

ḥanīn. Dozy says that a *ḥanīnī* ″semble être le nom d′un vêtement″![60] In the Ḥaram documents *ḥanīn* is often associated with wool or linen.

9-10. حيده also written as in no. 591, line 29 below, حندا, sometimes in combination with *ḥizām* (waistband, girdle).

11. *fī taslīm* . . . Occasionally the contents of an estate were turned over to an individual or individuals before the estate was settled but after the inventory had been conducted. In no. 524, for example, the goods of a weak woman were in the *taslīm* and *ḥifẓ* of one Ḥājj Mūsá, where *ḥifẓ* would seem to imply safekeeping.[61] But in no. 154 the goods of a dead woman were turned over to two of the heirs.[62] Whether these goods were being held in safekeeping before the final settlement of the estate is not clear. See also documents nos. 173 and 635.[63]

12. *fī maḍānnihi* should probably be read *fī maẓānnihi*, meaning the places where one would expect to find such things. This confusion of *ḍ* and *ẓ* is a rare example of phonological confusion in the Ḥaram documents.[64]

13. *masṭūr* is one of several general terms used for a legal document. *Ḥujjah*, as we shall see in no. 355, is another term frequently encountered in

Ḥaram documents, as is *maktūb*.[65] This particular *masṭūr* would have contained a *wadīʿah*, a document of deposit.

al-Shaykh Shihāb al-Dīn . . . al-Mālikī may be al-Mawlá al-Shaykh Shihāb al-Dīn al-Mālikī, apparently a court clerk who endorsed the *tawqīʿ* written on no. 279.[66]

14. *Qāḍī al-Muslimīn al-Sharafī* . . . is the Shāfiʿī judge whose *ʿalāmah* appears on line 1. Of shady reputation, al-Qāḍī Sharaf al-Dīn Abū al-Rūḥ ʿĪsá ibn Jamāl al-Dīn Abī al-Jūd Ghānim al-Anṣārī al-Khazrajī al-Shāfiʿī is the Shāfiʿī judge from whose court the Ḥaram documents are derived. In addition to the offices specified in the document he was Shaykh of the Ṣalāḥīyah Khānqāh.[67] For the title, al-ʿAbd al-Faqīr ilá Allāh taʿālá, see commentary on no. 355 verso, lines 2-3 below, and no. 591, lines 6, 13-14 below.

16-21. These lines contain the witnessing clauses of the four witnesses to the documents, each of which is introduced by the clause, *waqaftu ʿalá al-madhkūr*. Three of these clauses, [a], [b], and [d], specify that they bore witness to the identification of Shams al-Dīn′s heirs and to his wife′s receipt of the inventoried goods; [c], however, mentions neither the heirs nor the receipt of goods—only to what was attributed (*bi-mā nusiba ilayhimā*) to the husband and the wife in the document. I cannot account for the discrepancy. In any case these clauses make clear that three aspects of the process were deemed to be legally important by the witnesses: the inventory itself, identification of the heirs, and the *taslīm* of the goods.

It is also noteworthy that three of the clauses, [a], [b], and [c], were endorsed by the judge with the formula, written like his *ʿalāmah* at the top and his *tawqīʿ* in the margin, with a thick pen, *shahida ʿindī*, rather than the usual *shahida ʿindī bi-dhālika*, as in no. 355 below. According to al-Asyūṭī this judicial notation is called in Arabic *al-raqm bi-al-shuhūd*,[68] and signifies that the judge has heard the testimony of witnesses whose legal integrity is known to him:

---

[65]Other terms used by notaries are *kitāb, wathīqah, ṣakk*. See Émile Tyan, *Le notariat et le régime de la preuve par écrit dans la pratique du droit musulman*, 2nd ed. (Beirut, 1959), 44.

[66]*Catalogue*, 45.

[67]For other biographical details, see *Catalogue*, 9-10; Little, ″Court Records,″ 24-25; idem, ″The Jews,″ 238-39.

[68]Al-Asyūṭī, *Jawāhir*, 2:370. But not *tarqīm* as in Lutfi, ″*Iqrār*s,″ 281. Cf. the work of still another Mamluk notary in Gabriela Guellil, *Damaszener Akten des 8./14. Jahrhunderts nach aṭ-Ṭarsūsīs Kitāb al-Iʿlām: Eine Studie zum arabischen Justizwesen* (Bamberg, 1985), 300-302, 366-67.

> *Raqm* varies in consideration of the testimony of the witnesses. If they are persons whose legal integrity has been confirmed (*al-mu'addalīn*) and who sit in central offices (*marākiz*) according to Syrian practice or in shops (*ḥawānīṭ*) according to Egyptian, the judge notes (*yarqumu*) for each of them who has testified before him (*shahida 'indī bi-dhālika*). If they are not professionals (*al-jālisīn*), but the judge is recognizant of their legal integrity (*'adālah*), he makes the same notation for them. But if he is not cognizant of their legal integrity, he requests attestation to this from an authorized person. If witnesses are accredited in his presence, he notes under the name of each, *shahida bi-dhālika wa-zukkiya.*[69]

In our document it would seem that the judge was cognizant of the integrity of three of the four witnesses. His failure to have the integrity of the fourth attested to (*zukkiya*) may mean simply that he realized that the testimony of three accredited witnesses was more than was required to certify the document.[70]

Margin:

li-yushhada bi-thubūt mā qāmat bi-hi al-bayyinah . . . fī-hi . . . This notation, written with a thick pen, constitutes the third element, along with the *'alāmah* and the *raqm* of a document deemed by a judge to be certifiable. Called a *tawqī'* by al-Asyūṭī, it contains the judge's verdict that witnesses should be called to attest to his opinion that the transactions recorded in the document and, by implication, the document itself are legally valid.[71] As we have already noted, such a document is usually accompanied by a consequential document written on verso, containing the certification, as is the case with no. 355 below. Since no. 133 lacks this element, we shall defer full discussion of the *tawqī'* to the commentary on no. 355.
mā qāmat bi-hi al-bayyinah. See commentary on no. 355, lines 32-33 below.

---

[69]Al-Asyūṭī, *Jawāhir*, 2:370.

[70]It is well known that although only two male witnesses were needed to attest to Islamic documents, supplementary witnesses were often produced. See Jeanette A. Wakin, *The Function of Documents in Islamic Law: The Chapter on Sales from Ṭaḥāwī's* Kitāb al-Shurūṭ al-Kabīr (Albany, 1972), 48-49.

[71]Al-Asyūṭī, *Jawāhir*, 2:370-71. Cf. Lutfi, "*Iqrār*s," 282.

min iqrār shar'ī . . . This reading, along with *min al-'adalah*, is conjectural. If accurate, it refers to what is tacitly the wife's legal acknowledgment (*iqrār*) regarding her husband's estate.
nuskhatān. Many Ḥaram documents bear a notation in the lower right hand margin, close to the right-hand witnessing clause (which I believe to be that of the witness who actually drafted the document), which indicates how many copies were prepared.[72] In fact, al-Nuwayrī notes that it was the practice to make such a notation "next to (*'inda*) the witnessing clause."[73]

II. Ḥaram document no. 591 recto and verso. 27 x 18 cm. Paper.
A record of a public sale, dated 23 Rabī' II 794/17 March 1392, of chattels from the estate of Shams al-Dīn Muḥammad al-Ba'labakkī, authorized by a Ḥanafī judge in Jerusalem.

Commentary

As we have seen in the commentary on document no. 133, according to two compilers of Mamluk *shurūṭ* manuals, estate inventories were to be drawn up only in special cases, one of these being when an authorized person decided that goods left in an estate should be sold for some reason or other. Although we have reason to believe that the Ḥaram estate inventories were not so restricted, we need to refer again to the *shurūṭ* manuals on the sale of estates in order to set the present document, a record of the sale of chattels from the estate of Shams al-Dīn Muḥammad al-Baʻlabakkī, in the perspective of Mamluk notaries.

Interestingly enough, the sale, conducted under the auspices of a Ḥanafī court in Jerusalem, was held not to satisfy the claims of the legal heirs but to pay a debt which Shams al-Dīn had owed his wife, Ālmalik, which she subsequently transferred to her nephew, al-Amīr Nāṣir al-Dīn. The sale was not held until five months after the inventory had been made. This delay may be accounted for by one or both of

two factors. Shams al-Dīn may have died considerably later than the inventory since he was only ″weak″ when it was conducted. But also important is the fact that Nāṣir al-Dīn, in support of his entitlement, had to produce in Jerusalem two documents that had been certified by courts in Damascus. One of these certifications was granted only three and a half weeks earlier. Accordingly we may surmise that some time must have been lost in communications between the two cities.

Recto A

2-3. *makhzūmah mubārakah.* Among the Ḥaram documents there are twenty-three labelled *makhzūmah*s.[75] All of these except one contain itemized records of court-authorized sales of estates of persons who died in Jerusalem. The exception, no. 539, contains an itemized record of crop revenues included in the income of a *waqf*.[76] In addition there are two documents (nos. 530 and 580), among nineteen Ḥaram documents entitled *waraqah mubārakah*, which are written in the same format as the *makhzūmah*s and which also contain records of estate sales.[77] Several of the other *waraqah*s, like the exceptional *makhzūmah*, deal with *waqf* or other types of institutional finances or with estate matters. Thus we can say that a Ḥaram *makhzūmah* is one of two types of documents drafted to record the sale of chattels from an estate, though a *makhzūmah* might be used for other purposes.[78]

All the *makhzūmāt* have the same format.[79] Written on a sheet of paper folded twice vertically in the middle so as to form four narrow pages, each page is divided into two parts divided by a fold. Page recto A begins with a preamble that contains a heading, the name of the owner of the chattels, the names of those who authorized the sale and the beneficiaries of the sale, and other relevant details. On the right-hand half of this page, under

[77]Ibid., 347-56.

[78]For reference to a *makhzūmah* produced in a criminal case in Damascus in 682/1283-84, in al-Jazarī′s *Ḥawādith al-Zamān*, see Ulrich Haarmann, *Quellenstudien zur frühen Mamlukenzeit* (Freiburg, 1969), 14. Elsewhere Haarmann points to the similarity between *makhzūmah*s and a Ḥaram *mufradah* containing a list of books and other items sold from a Jerusalem estate: ″Die Leiden des *Qāḍī* ibn aṣ-Ṣā'igh,″ in *Studien zur Geschichte und Kultur des Vorderen Orients*, ed. Hans R. Roemer and Albrecht Noth (Leiden, 1981), 17, and ″The Library of a Fourteenth Century Jerusalem Scholar,″ in *The Third International Conference on Bilad al-Sham: Palestine*, vol. 1, *Jerusalem* (Amman, 1983), 105-10, reprinted in *Der Islam* 61 (1984): 327-33.

[79]For photographs of other *makhzūmah*s see *Catalogue*, plates 13 and 14, and Asali, *Wathā'iq*, 2:162-63 (no. 586), with transcription, 157-61. Lutfi (*al-Quds*, 63-66 [no. 767j]) also transcribes and translates a *makhzūmah.*

the preamble, there is an itemized list of the objects sold, the price written in *siyāqah* script for each item sold, and, sometimes, the name of the purchaser. This list continues on subsequent pages if necessary and ends with itemized expenses incurred for the sale, with a notation of the net balance. The gross value of the sale is noted on recto A, in the left-hand half of the page, under the preamble. On a separate page, verso D in the present document, the witnessing clauses are written parallel to the center fold. Since verso C was not needed for the list, a pious sentiment was written on it.

Curiously, given the standardization of the Ḥaram *makhzūmah*s, the *shurūṭ* manuals lack formularies precisely corresponding to the practice of the Jerusalem notaries, as, indeed, was the case for the estate inventories. Nevertheless, both al-Asyūṭī and al-Jarawānī discuss similar documents in the context of estate settlement. If, says the former, goods from an estate were sold after probate of the will and drafting of the inventory, documents of sale (*awrāq al-mabī‘*) were drawn up. These contained (a) a heading with the name of the deceased; (b) a detailed presentation of the contents of the inventory, including the names of the heirs; (c) the name of the person charged with conducting the sale (e.g., the executor of the will, an heir or his agent) plus the names of the witnesses, broker, and money changer; (d) an itemized list of the goods sold with the price opposite, along with the name of the purchaser and the broker; (e) the expenses incurred in the market, broken down into brokerage, rent, witness fees, etc., along with the balance; and (f) a statement of receipt of the proceeds.[80] In many, if not most, respects, al-Asyūṭī's *waraqat al-mabī‘* sounds similar to the Ḥaram *makhzūmah*s, the main difference being that the latter do not contain the names of the purchasers, the brokers, or the money changers. Moreover, the *makhzūmah* for al-Asyūṭī seems to be a distinct document, for he goes on to say, "If the sale was conducted in a single market, a *makhzūmah* should be written for each day of the sale," and given to the executor, "in order to calm his heart."[81] The format of the *makhzūmah* is similar to that of the *awrāq al-mabī‘* and should contain (a) the heading (*makhzūmah mubārakah bi-mā buyi‘a min tarikat . . .*); (b) the name of the deceased; (c) the name of the executor who undertakes the sale along with the name of the wife of the deceased and her agent; (d) the name of the market where the sale was conducted; (e) a list of the items sold and their

[80]Al-Asyūṭī, *Jawāhir*, 1:465-66.
[81]Ibid., 466.

price; and (f) itemization of daily expenses subtracted from the total sales.[82] Still another document was to be drawn up summarizing the *makhzūmah*s: a *jāmi'ah mubārakah*.[83]

For al-Jarawānī, too, a *makhzūmah* is one of several documents used in settling estates which required a public sale of chattels left by the deceased. These documents include an estate inventory (*ḍabṭ al-mawjūd al-mukhallaf 'an al-mayyit*), *makhzūmah*s, and a *jāmi'ah mubārakah*. In one passage al-Jarawānī, like al-Asyūṭī, characterizes the *makhzūmah* as a daily record of sale, containing much the same material as al-Asyūṭī's model. However, in a later passage al-Jarawānī briefly describes a *makhzūmat al-mabī'*, which seems to be an independent document, also similar to al-Asyūṭī's model but with the addition of a clause, declaring that the net balance from the sale was divided among the heirs according to their legal shares.[84]

Since al-Asyūṭī's and al-Jarawānī's conceptions of the purpose and content of the *makhzūmah*s are similar, how do we account for the discrepancies between formularies and the Ḥaram *makhzūmāt*? Here we can only speculate, but it is important to recognize that the *shurūṭ* scholars of the Mamluk period did not regard estate inventories or *makhzūmah*s as primary Islamic documents of the same rank as acknowledgments, bills of sale, endowment deeds, marriage contracts, court records, etc. In fact, two authors, al-Nuwayrī and al-Ṭarsūsī, did not mention these two documents at all, and al-Asyūṭī and al-Jarawānī relegated them to chapters on other subjects—wills, for the former, and miscellaneous matters, for the latter. Accordingly we can surmise that an ability to draft estate inventories and *makhzūmah*s was not regarded as essential equipment for a notary, perhaps because they were not rooted in, or justified by, Islamic law. In addition, we should not assume that any of these particular *shurūṭ* works were available to or used by Jerusalem notaries, who may well have been following a local tradition or traditions which may, or may not, have been codified in a manual or manuals. Instead we refer to these four manuals as representative of those compiled under the Mamluks, without knowledge of how widely they circulated. That being the case, and taking into account the short shrift given to estate inventories and *makhzūmah*s, it is surprising that the Ḥaram specimens contain most, if not all, the elements described by al-Asyūṭī and al-Jarawanī.

---

[82]Ibid.

[83]Ibid.

[84]Al-Jarawānī, "al-Kawkab," 151, 256.

makhzūmah mubārakah bi-mā ubīʿa min al-ḥawāʾij al-mukhallafah ʿan al-marḥūm, the heading of the document, corresponds fairly closely to that recommended by al-Asyūṭī: *makhzūmah mubārakah bi-mā buyiʿa min tarikat fulān.*[85]

4-5. *fī wafāʾ dayn* . . . provides the reason for the sale, i.e., to settle a debt originally owed by the deceased to his wife. Islamic law countenances three types of claims against estates: burial, obligations incurred by the deceased, and succession to his property, in that order of precedence. This means that Shams al-Dīn's debts would have to be paid before his heirs designated in his estate inventory could make a claim on the estate.[86] It is noteworthy, to say the least, that the estate inventory makes no reference to the original debt or to its transfer.

5. *al-Janāb al-ʿĀlī*, according to al-Asyūṭī, is not a title denoting high rank. It was applied to notables in the non-slave regiment of the Mamluk army, i.e., the Ḥalqah, as well as leading non-commissioned officers and functionaries in the service of Mamluk amirs.[87] Since Nāṣir al-Dīn is further identified in document no. 355 recto, below, as a Baʿlabakkī amir, it would seem safe to conclude that he was indeed a member of the Ḥalqah, especially since he was the son of a *qāḍī*. I have not been able to find any references to him or his father in Mamluk chronicles or biographical dictionaries.
al-makhdūmī is not mentioned by al-Asyūṭī. Al-Qalqashandī states merely that it denotes someone who bears high enough a rank to be served by someone else.[88]

6. *al-Nāṣirī* is the polite, *nisbah*, way of referring to a man who bears the *laqab* (honorific title) Nāṣir al-Dīn. Unfortunately his *ism* (given name) is not mentioned in either document, but his *laqab* is often associated with military officers named Muḥammad and, less frequently, ʿUmar.[89]
al-Faqīr ilá Allāh taʿālá is a title associated with persons of piety or a pious office but who enjoy no great distinction.[90] The absence of a loftier

---

[85]Al-Asyūṭī, *Jawāhir*, 1:466.

title and of mention in literary sources indicates that he was a low-ranking judge. In no. 355 he is further identified as *ibn al-Bayḥānī*, which probably refers to the south Arabian origins of the family, *Bayḥān* being a wadi and territory in Yemen.[91]

7. *al-ḥawālah al-shar'īyah.* A *ḥawālah* is a type of legal document by which one person transfers a debt owed to him or her to the benefit of a third party. Al-Asyūṭī devotes a short chapter to the *ḥawālah*, and al-Jarawānī and al-Nuwayrī discuss it briefly.[92]

9. *masṭūr shar'ī.* See the commentary on line 13 of no. 133, above.

10. *iqrār.* This term, meaning legal acknowledgment, is one we have already encountered in the margin of no. 133 above. Though an *iqrār* normally constitutes an independent document with a distinct format of its own,[93] it frequently forms a constituent part of other types of documents. In fact, al-Nuwayrī's formulary for a *ḥawālah* begins with *aqarra fulān . . . iqrāran shar'īyan. . . .*[94] In the present case, however, the *iqrār* seems to have been an independent document acknowledging Shams al-Dīn's indebtedness to his wife, written on a larger document, referred to here as a *masṭūr* and in no. 355, line 15, as a *ḥujjah.*

13. *thabata* in notarial parlance refers to the process whereby a judge certifies the validity of a document and its content. Thus, in the *tawqī'* written in the margin of no. 133 above, *li-yushhada bi-thubūt mā qāmat bi-hi al-bayyinah* . . . , the judge is calling for witnesses to certify the legal evidence established in the document. We shall discuss this process more fully in connection with no. 355 below.

13-14. *Sayyidunā al-'Abd al-Faqīr ilá Allāh ta'ālá*, according to al-Asyūṭī, is a title used for deputy judges (*khalīfat al-ḥukm*, *nā'ib al-ḥukm*) in Syria as distinct from a longer title used for Egyptian deputies.[95]

14. *al-Qaḍā'ī al-Badarī* . . . refers to al-Qāḍī Badr al-Dīn ibn Sharaf al-Dīn ibn Raḍī al-Dīn al-Ḥanafī, *Nā'ib al-Ḥukm wa-Shaykh al-Ḥanafīyah*, who served as deputy to various judges in Damascus from as early as 784/1382 until his death in 800/1398. He was an acknowledged expert on Ḥanafī

[95]Al-Asyūṭī, *Jawāhir*, 2:594.

jurisprudence, Arabic language, Quranic recitation, and other subjects, and taught in at least three *madrasah*s in Damascus.[96]

16. *Sayyidunā wa-Mawlānā*. Oddly enough, this title, as opposed to *Sayyidunā* alone, was used, according to al-Asyūṭī, to differentiate a Chief Qāḍī from a deputy, both in Egypt and Syria.[97] But the former could also be used for "leaders in knowledge, legal opinion, and instruction" (*mashā'ikh*), so that the drafter of this document may have bestowed it on this Deputy Qāḍī in this sense, since he identifies him as *khalīfat al-ḥukm* in line 17.

16-17. *al-Qaḍā'ī al-Shamsī* . . . refers to Muḥammad ibn Muḥammad ibn ʻUthmān ibn Muḥammad ibn Abī Bakr ibn ʻĪsá ibn Badrān ibn Raḥmah al-Saʻdī al-Ikhnā'ī al-Shāfiʻī, known as al-Ikhnā'ī, born in 757/1356 and died in Damascus in 816/1413. He served in many judicial and administrative capacities in Gaza, Raḥbah, Zurʻah, Aleppo, Damascus, and Egypt; he also delivered *fatwá*s and taught in a *madrasah* in Damascus. He is known to have been Deputy Qāḍī in Damascus in 793/1391 and 797/1394-1395 in addition to 794/1392 mentioned in the document.[98] In his obituary in *al-Manhal al-Ṣāfī*, Ibn Taghrī Birdī refers to al-Ikhnā'ī as *qāḍī al-quḍāh*.[99]

17. *al-Ḥākim bi-al-ʻAsākir al-Manṣūrah* is probably equivalent to *qāḍī al-ʻaskar*, the judge "responsible for handling judicial cases which arose while the army was on campaign."[100] None of the literary sources mentions that al-Ikhnā'ī held this post.

19. *wa-ittaṣala al-thubūtayn* . . . is a stock phrase signifying that a document certified by one court has been conveyed to and received by another court. According to al-Asyūṭī this conveyance could be effected in two ways: (a) by a *kitāb ḥukmī*, a court letter, issued by a judge and addressed to any Muslim judges that might be concerned, containing a summary of a legally certified transaction with the names of witnesses; and (b) by *shuhūd al-ṭarīq*, mobile witnesses, who accompany a claimant from one court to another in order to testify to the certification of the contents of a document issued by the former. Al-Asyūṭī asserts that judicial letters are little used at present, their effectiveness having atrophied, but produces, nevertheless, formularies

to be followed by both the original and the recipient judges.[101] The fourteenth-century Ḥanafī judge of Damascus, Najm al-Dīn al-Ṭarsūsī, also produces formularies for correspondence between *qāḍī*s regarding legal transactions that transpired in their courts.[102] In the present document there is no indication as to the method of transfer.

20-21. *al-Qāḍī al-Taqawī* . . . refers to al-Qāḍī Taqī al-Dīn Abū al-Anṣāf wa-Abū Bakr ibn Fakhr al-Dīn Abī ʻAmr ʻUthmān ibn Ṣalāḥ al-Dīn Abī al-Khayrāt Khalīl al-Ḥanafī. According to the historian Mujīr al-Dīn al-ʻUlaymī, Taqī al-Dīn was known to have been serving as Deputy Ḥanafī Qāḍī in Jerusalem in the year 796/1394 and thereafter.[103] This document establishes, of course, that he held that position as early as 795.

25. *shāsh quṭn.* It is interesting to compare the items contained on this list with those included in the inventory (no. 133) of Shams al-Dīn′s estate compiled five months earlier, recalling that the latter goods had been placed in the *taslīm* (safekeeping?) of his wife. Although all of the items in the inventory, except two turbans, are listed among the goods sold, the *makhzūmah* records several items sold that do not appear in the inventory: two rugs, for example, and several garments (two *ḥanīn*s, two *ʻabā'ah*s, a *shāsh*, etc.). Why? The simplest explanation is that the inventory was not accurate; for some reason or another, the witnesses failed to record all the possessions that showed up later at the sale. But it should also be recalled that we do not know when Shams al-Dīn died so that some of these possessions may have been acquired during the interval between the inventory and his death. Noteworthy, too, is the fact that we learn nothing from the *makhzūmah* about the various amounts of cash mentioned in the inventory as belonging to Shams al-Dīn.

بيلون is perhaps Persian *pīlavan*, ″a fine and costly silk.″[104] In context this seems more likely than *biliyūn*: bucket.[105] But my reading is conjectural.

لير The *makhzūmah* offers arithmetical difficulties associated with the use of the Mamluk *siyāqah.* Every Ḥaram *makhzūmah* drawn up for the sale of an estate contains five sets of computations in a standardized format: (a)

[101] Al-Asyūṭī, *Jawāhir*, 2:403-5.

[102] Guellil, *Akten*, 217-18.

[103] *Al-Uns al-Jalīl bi-Ta'rīkh al-Quds wa-al-Khalīl* (Amman, 1973), 2:218.

[104] F. Steingass, *A Comprehensive Persian-English Dictionary* (London, 1892), 269, transliterated as *pelawan*.

[105] Dozy, *Supplément*, 1:137.

the price paid for each item, written under the item; (b) the total paid for all the items, written at the bottom left of the text of the *makhzūmah* preamble; in the present document this total appears on recto A, line 24; (c) the total expenses incurred in the sale, written immediately after the itemized sales: recto B, lines 13-14; (d) an itemization of the expenses, written under the total, i.e., following (c); (e) the balance remaining from the sale after the subtraction of the expenses, written to the left of the concluding text of the *makhzūmah*: recto B.

The presence of these computations provides a useful, but frustrating, check on our decipherment of the *siyāqah* numbers. Frustrating, because it is often the case that all the numbers cannot be reconciled with the totals because of errors made by the clerks in writing them or by us in trying to read them. In the present document there is no difficulty in reading (e), the balance of 364 *dirham*s, or (c), the total expenses of 18 1/4, which when added give 382 1/4. Nor is there any problem in reconciling the itemized expenses, which clearly add up to 18 1/4 *dirham*s. The trouble lies in reconciling the individual sales with the total (b). This figure looks very much like 382 1/4 *dirham*s, but if one calculates the sum of the individual prices, they add up to only 381 1/4 *dirham*s. Therefore, either the scribe, or we, have apparently made an error. Additional details on the *siyāqah* are provided in the commentary on no. 355, lines 42-46 below, and in Appendix B.

29. حندا Note that here this word is written with a dot over the second ligature, unlike recto B, line 5, and no. 133, lines 9, 10: حـيـدة. Moreover, in no. 721, line 6, the word is clearly written جندا.[106]

30. *Maṣṣīṣ* refers to the Anatolian town known in Arabic as al-Maṣṣīṣah. "A speciality of the town was the valuable fur-cloaks, exported all over the world."[107]

Recto B

3. قـضـي I read as *qaḍī*, which, when applied to a garment, means "old and worn out . . . from being long moist and folded."[108] *Fiḍḍī* is also a possibility, meaning sky blue.[109]

---

[106]*Catalogue*, 179.

[108]Edward W. Lane, *An Arabic-English Lexicon* (1885; reprint, Beirut, 1985), 7:2537.

[109]Dozy, *Supplément*, 2:273.

5. *akmūnī* I believe to be the Persianized form of *kammūnī*, meaning cumin colored.[110]
7. *jūbīn* is probably Persian *chubīn*, ″a red kind of kerchief tied over the head.″[111]

24-25. *bi-mawda‘ al-ḥukm al-‘azīz* refers to the depository of the Shāfi‘ī Court in Jerusalem, to which there are many references in the Ḥaram documents.[112] In this depository money and goods were kept under the jurisdiction of the Shāfi‘ī judge until they could be turned over to whoever was legally entitled to them. Thus it would seem that after the inventory of Shams al-Dīn′s estate was made, his possessions were held temporarily in safe-keeping by his wife. At some point, perhaps at his death, they were consigned to the Shāfi‘ī Court and held in its depository until the sale was held, interestingly enough, under the jurisdiction of the Ḥanafī Court.

26. *wa-ḥasbunī* . . . Al-Asyūṭī comments on the meritorious and traditional practice of ending documents with *al-ṣalāt ‘alá al-nabī*, followed by the *ḥasbala*.[113] In our document the former phrase is written on the otherwise blank verso C.

Verso D

All three witnessing clauses are phrased in such a way as to record the witnesses′ testimony to the legality of two transactions set down in the document: (a) the sale itself and (b) Nāṣir al-Dīn′s receipt of the proceeds.

III. Ḥaram document no. 355 recto and verso. 76 x 28 cms. Some holes.
Recto. An *ishhād* (of attestation), dated 24 Jumādá I 795/7 April 1393, calling for witnesses to and certification of Nāṣir al-Dīn′s receipt of amounts held by the Shāfi‘ī Court Depository in Jerusalem, due to him from the estates of Ālmalik and Shams al-Dīn. Like no. 133 recto, the document has been signed by a judge and contains his judgement, written in the right margin, that the document and its contents are to be certified. See figure 4, p. 184.[114]

في الرابع والعشرين

Lines 50-56. See figure 10, p. 190.

٥٠. من جمادى الاولى من شهور سنة خمس وتسعين وسبعماية وصلى الله

على سيدنا محمد واله وصحبه وسلم   حسبنا الله تعالى ونعم

[116]This is what the document reads, but, to make the arithmetic in the document balance, this figure should read الف وسبعماية درهم واحد وربع درهم. Accordingly, I assume that the scribe made an error in recording this figure by writing the abbreviation for eight dirhams instead of that for one dirham (cf. Appendix B), and I translate the latter numeral.

الوكيل

وصرف المبلغ الموصى به وهو الثلث الى مستحقيه شرعا وبالله المستعان

Translation

1. In the name of God, the Compassionate, the Merciful. Praise be to God for His blessings.
2. The Honorable, Masterful Excellency, the Great Victorious Commander, Nāṣir [al-Dīn], *ibn* of the [Servant Needy of] God the Exalted, al-Qāḍī Amīn al-Dīn ʻĪsá, son of the deceased
3. al-Bayḥānī, one of the Baalbek amirs, present on that day in Jerusalem the Noble, may God bolster His aid, and known to the witnesses of this document, called for witnesses that he took, received, and acquired from a legal repository
4. that which was deposited in the depository of the Esteemed Shāfiʻī Court of Sharaf al-Dīn in Jerusalem the Noble, namely, of silver *dirham*s in current use at that time in Damascus the Well-Guarded
5. one thousand seven hundred ninety-four and three-quarter *dirham*s, and of Florentine gold, ten pieces at the exchange value of one hundred ninety-five *dirham*s,
6. this amount being from the estate of Shams al-Dīn Muḥammad ibn Muḥammad ibn al-Jamāl al-Tājir al-Baʻlabakkī and from the estate of Ālmalik bint Badr al-Dīn Ḥasan ibn Abī al-Nūr al-Baʻlabakkīyah, wife of the aforementioned Shams al-Dīn,
7. by dint of the demise of the aforementioned Shams al-Dīn Muḥammad in Jerusalem the Noble. His inheritance was legally restricted to his wife, the aforementioned Ālmalik, his full brother ʻIzz al-Dīn Ḥusayn, and his siblings
8. by his mother: Shihāb al-Dīn Aḥmad, Altī, and Sutaytah, the children of Muḥammad ibn Ibrāhīm al-ʻAjamī, they being absent from Jerusalem the

Noble. Thereafter, the aforementioned Ālmalik died, and her inheritance was legally restricted to her

9. ten siblings: Sutaytah, Altī, Asin, Sitt al-Wuzarā', Fāṭimah: full siblings; and Muḥammad the Elder, known as the First; Muḥammad the Middle, known as the Second; Muḥammad the Younger,
10. known as the Last; Asmā'; and Mughul, [all being related] through her father [alone], with no other partner or precluder. This is in accordance with a legal court record dated the middle [ten days] of Muḥarram 794 [9-18 December 1391], the contents of which were certified
11. by the Servant Needy of God the Exalted, Aqḍá al-Quḍāh Taqī al-Dīn Abū al-'Abbās Aḥmad ibn al-Munajjā al-Ḥanbalī, Magistrate in Damascus the Well-Guarded, in accordance with the attestation (of certification) on the verso of the court record, dated the sixteenth
12. of the aforementioned month [14 December 1391], this certification having been conveyed at the Esteemed Ḥanafī Court in Jerusalem the Noble to Aqḍá al-Quḍāh Taqī al-Dīn Abū al-Anṣāf Abū Bakr, Ḥanafī Deputy Qāḍī in Jerusalem the Noble, in accordance with the attestation (of certification)
13. dated 19 Rabī' II 795 [4 March 1393], the certification of which was conveyed to our Lord and Master the Servant Needy of God the Exalted, Qāḍī of the Muslims, Sharaf al-Dīn Abū al-Rūḥ 'Īsá
14. son of the Servant Needy of God the Exalted, Jamāl al-Dīn, Muftī of the Muslims, Abū al-Jūd Ghānim al-Anṣārī al-Shāfi'ī, Magistrate in Jerusalem the Noble and its districts, Chief Shaykh, and Supervisor of the Noble Endowments, may God support him,
15. in accordance with the attestation (of certification) dated 24 Jumādá I 795 [7 April 1393]. [The disposition of the estate was also] in accordance with a legal document dated 13 Shawwāl 788 [7 November 1386] containing the acknowledgment
16. of Shams al-Dīn Muḥammad ibn Muḥammad ibn al-Jamāl mentioned above that he was indebted by a valid, legal claim to his wife Ālmalik mentioned above for ten thousand *dirham*s. In this document there is a transfer clause dated
17. 23 Ṣafar 789 [15 March 1387] containing the aforementioned Ālmalik's attestation that she transferred to her nephew (her sister's son) the Excellency Nāṣir al-Dīn, the receiver mentioned above, against her husband mentioned above,
18. the amount acknowledged to her above in the aforementioned document, this transfer being valid and legal and the acceptance of it by the transferee being legal acceptance. The document was certified by the Servant Needy of God the Exalted, Aqḍá

19. al-Quḍāh Badr al-Dīn ibn al-Raḍī al-Ḥanafī, Deputy Qāḍī of the Esteemed Court in Damascus the Well-Guarded, according to the attestation (of certification) dated 1 [Dhū] al-Ḥijjah 788 [24 December 1386].
20. The transfer clause was certified by Aqḍá al-Quḍāh the Servant Needy of God the Exalted, Shams al-Dīn al-Ikhnā'ī al-Shāfi'ī, Deputy Qāḍī in Damascus the Well-Guarded, in accordance with the attestation (of certification) dated 28
21. Rabī' I 794 [23 February 1392]. Certification of the document and the transfer was conveyed to Aqḍá al-Quḍāh Taqī al-Dīn Abū al-Anṣaf Abū Bakr al-Ḥanafī, Deputy Qāḍī in Jerusalem
22. the Noble, by the testimony at the end of the document of one of the legal witnesses in attendance at the court at the time of the attestation to the aforementioned certification. The aforementioned recipient brought a legal attestation
23. dated 21 Muḥarram 794 [19 December 1391] containing the acknowledgment made in health and sound mind and with free disposition of his affairs, that His Excellency Nāṣir al-Dīn,
24. the above-mentioned recipient, is entitled to receive whatever is conferred on the acknowledger by legal inheritance from his sister Ālmalik and to whatever was conferred on her by legal inheritance from her above-mentioned husband Shams al-Dīn Muḥammad ibn al-Jamāl
25. of fabric, furniture, gold, brocade, pearls, jewelry, legal debts, productive property, etc., in Damascus, Baalbek, and the Court Depository in Jerusalem the Noble as well as
26. raisins and cardamom, and other things known to the two of them in legal cognizance. An appendix [to the acknowledgment] contains a legal power of attorney dated 4 Muḥarram 794 [2 December 1391] for [Sitt al-]Wuzarā',
27. Fāṭimah, Sutaytah, and Muḥammad [II], children of Ḥasan, assigned to His Excellency Nāṣir al-Dīn, the aforementioned recipient, to claim whatever pertains to the three female mandators and to the orphan Muḥammad the Younger, known as
28. the Last, their brother by their father, who remains under the guardianship of the fourth [male] mandator, of the estate of their aforementioned sister Ālmalik. The proxy received that [power of attorney], his acceptance being legal, and the contents of the
29. acknowledgment and the power of attorney were certified by the Servant Needy of God the Exalted, Aqḍá al-Quḍāh Taqī al-Dīn ibn Mufliḥ al-Ḥanbalī, Magistrate in Damascus the Well-Guarded, in accordance with

30. a legal attestation (of certification) dated 4 Rabīʻ II 794 [29 February 1392]. Its certification was conveyed to Aqḍá al-Quḍāh Taqī al-Dīn Abū al-Anṣāf Abū Bakr al-Ḥanafī, Deputy
31. Qāḍī in Jerusalem the Noble, on 18 of the aforementioned Rabīʻ II [12 March 1392], and the certification of that was conveyed to the Esteemed Court of the above-mentioned Sharaf al-Dīn al-Shāfiʻī, Magistrate in Jerusalem the Noble,
32. may God support him, on 24 Jumādá I 795 [7 April 1393]. Legal evidence was established before him that the mandator for the aforementioned orphan
33. was his legal guardian, with continuing guardianship, at the time of assignment of the power of attorney. Legal evidence was [also] established before him that Muḥammad the Elder, known as the First, and his two sisters by his father, Asmā' and Asin, children of the late
34. Badr al-Dīn Ḥasan ibn Abī al-Nūr, and their full sister Altī acknowledged in health, sound mind, and free disposition during the first ten days of Ṣafar 795 [17-26 December 1392]
35. that the above-mentioned Excellency Nāṣir al-Dīn is entitled to take possession of whatever is conferred on them by legal inheritance from the estate of their sister by their father, the above-mentioned Ālmalik, from what she left behind and from what was transmitted
36. by legal inheritance from the estate of her above-mentioned husband, by the right of one-fourth, of fabric, furniture, gold, silver, pearls, brocade, jewelry, copper, debts, productive property,
37. and real estate from that left behind in Damascus, Baalbek, Bekaa Baalbek, and Jerusalem the Noble, he being known to each of them, and this being a valid, legal entitlement in a valid, legal mode.
38. This [entitlement] was transmitted to him by a transmittance sanctioned by the Noble Law. The acknowledgee, the Excellency Nāṣir al-Dīn, swore to that by God the Glorious, the legal oath designated for a judgement against an absent person.
39. The acknowledgment and the oath were certified by Our Lord the aforementioned Qāḍī Sharaf al-Dīn al-Shāfiʻī, Magistrate in Jerusalem the Noble, May God the Exalted support him, in accordance with the attestation (of certification) dated 24
40. Jumādá I 795 [7 April 1393]. When all of that had been certified and its certification conveyed to the Esteemed Shāfiʻī Court of Sharaf al-Dīn, the aforementioned Magistrate in Jerusalem the Noble, may God the Exalted support him,
41. and the aforementioned Excellency Nāṣir al-Dīn was permitted to take possession of the amount mentioned above, he did so completely, entirely,

and exhaustively, in the presence of legal witnesses and under the surveillance of them. The total of that, with the exchange for gold,

42. of silver *dirham*s in current use in Damascus the Well-Protected is one thousand nine hundred eighty-nine and three-quarter *dirham*s, this being from the two aforementioned estates

43. from the total of seven thousand seven hundred eighty-nine *dirham*s, divided between the estate of Shams al-Dīn, the aforementioned husband, and
[5707 3/4 *dirham*s]
from the estate of the aforementioned Ālmalik. There was spent from
[2081 1/4 *dirham*s]
Ālmalik's estate

44. for burial, the debt of Umm Muḥammad, and the third bequeathed as
[50 *dirham*s] [50 *dirham*s]
charity and for noble recitations of the Quran in Jerusalem the Noble,
[633 3/4 *dirham*s]
leaving a balance thereafter, less that which the Excellency Nāṣir al-Dīn
[7055 1/4 *dirham*s]
received previously, according to an attestation from Ibn Sanājiq, from the estate of

45. Shams al-Dīn, plus the value of the chattels, also from the estate of Shams
[3000 *dirham*s] [364 1/4 *dirham*s]
al-Dīn, and what he received from the estate of Ālmalik from the value of goods sold previously. The balance is what he received from the Depository
[1701 1/4 *dirham*s][118]
of the Esteemed Shāfi'ī Court in Jerusalem the Noble, specified above:

46. from the estate of the aforementioned Shams al-Dīn and from the estate of
[1843 1/2 *dirham*s]
Ālmalik. The aforementioned Excellency Nāṣir al-Dīn made a valid, legal
[146 1/4 *dirham*s]
acknowledgment voluntarily, by choice, in health, sound mind, and free disposal of his affairs, that he had received

47. all which is specified above and that he was no longer entitled thereafter to anything whatsoever, in any manner or form, in the aforementioned Depository of the Esteemed Court or with the Trustee of Orphans in Jerusalem.

---

[118] الف و سبع مية درهم و ثمانية دراهم و ربع درهم, but to make the arithmetic in this document balance, this figure should read الف و سبع مية درهم و درهم واحد و ربع درهم. Accordingly, I assume that the scribe made an error in recording this figure by the logogram for eight *dirham*s instead of that for one *dirham*, and I translate the latter numeral.

48. He verified what the aforementioned Ālmalik bequeathed, i.e., one-third of her property in accordance with what is specified above, that this was spent on the expenses of the legacy, and that thereafter nothing remained to him nor to his mandators, either in the Court Depository
49. in Jerusalem the Noble or with its Trustee, nothing whatsoever. He called for witnesses to everything attributed to him above and made a legal warrant of attorney authorizing that this be certified and requesting that a judgement be made to that effect. He testified on 24
50. Jumādá I 795 [7 April 1393]. Blessings and peace upon Our Lord Muḥammad, his family, and companions. God the Exalted is our sufficiency! What an excellent Guardian is He!
51. The aforementioned Excellency Nāṣir al-Dīn attested that there is no challenge or rebuttal to that which the aforementioned Ālmalik bequeathed or in anything thereto appertaining. Thus the attestation was completed on the date designated above.

[a]

52. I am witness to Our Lord the Magistrate Sharaf al-Dīn mentioned above,
53. may God lengthen his shadow, as to what is attributed to him above in this document, and to the aforementioned Excellency
54. Nāṣir al-Dīn as to what is attributed to him above in this document
55. on the date designated above at the end. Written by
56. Muḥammad ibn Sulaymān al-Shāfiʿī.
57. He testified to that before me, may God the Exalted strengthen him.

[b]

52. I am witness to Our Lord and Master the Magistrate Sharaf al-Dīn
53. mentioned above, may God the Exalted support him, and to al-Qāḍī
54. Taqī al-Dīn al-Ḥanafī, the two magistrates in Jerusalem the Noble, as to what is attributed
55. to them above in this document. Written by ʿĪsá ibn Aḥmad al-ʿAjlūnī al-Shāfiʿī.

[c]

52. I am witness to the Magistrate Sharaf al-Dīn
53. and to al-Qāḍī Taqī al-Dīn, may God support them,
53a. and to the Excellency Nāṣir al-Dīn as to what
54. is attributed to them above in this document,
54a. and I viewed the taking of possession on its date.
55. Written by Aḥmad ibn al-Jalāl
56. He testified to that before me.

[d]

52. I was witness to Our Lord the Magistrate Sharaf al-Dīn

53. mentioned above,
53a. may God the Exalted support him, as to what is attributed to him above, and to the above-mentioned Excellency
54a. Nāṣir al-Dīn as to what is attributed to him above
55. on its date, and I viewed that which he took possession of from the Depository of the Esteemed Court
56. mentioned above as designated therein. Written by Yūsuf al-Naqīb (?) al-Ḥanafī.

[a]

58. I am witness to Our Lord and Master the Magistrate Sharaf al-Dīn
59. mentioned above, may God the Exalted support him, and to al-Qāḍī Taqī al-Dīn
60. al-Ḥanafī, Magistrate in Jerusalem the Noble, as to what is attributed to them above in this document,
61. and to the Excellency Nāṣir al-Dīn as to what is attributed to him above in this document on its date.
62. Written by ʻAbd al-Ḥamīd Muḥammad ibn al-Jalāl al-Anṣārī.

[b]

58. I am witness to that which issued from the above-mentioned recipient as to what is attributed to him above in this document
59. and to his taking possession of that which is designated above. I viewed the taking possession on its date specified above.
60. Written by Aḥmad ibn Yūsuf. May God forgive and pardon both of them.

[c]

57. I was witness to Our Lord the Magistrate Sharaf al-Dīn mentioned
58. above, may God the Exalted support him, as to what is attributed to him
59. above, and to the above-mentioned Excellency Nāṣir al-Dīn,
60. may God strengthen his aid, as to what is attributed to him above,
61. and I viewed the taking possession of what he received from the Depository of the Esteemed Court
62. on its date. Written by
63. ʻAbd al-Raḥmān al-Naqīb al-Ḥanafī.

[a]

61. I am witness to Our Lord and Master the Magistrate Sharaf al-Dīn mentioned
62. above, may God the Exalted support him, and to al-Qāḍī Taqī al-Dīn al-Ḥanafī, Magistrate in Jerusalem the Noble, as to what is attributed to them
62a. above in this document, and to the Excellency Nāṣir al-Dīn as to what is attributed to him above in it on its date. Written by Muḥammad ibn Aḥmad al-Shāfiʻī.

[a]

63. I testify that the mentioned one-third was spent for those entitled to it
64. legally, in the legal manner. Written by Aḥmad ibn Muḥammad al-Shāfiʻī.
65. He testified to that before me.

[b]

63. I am witness to al-Qāḍī Sharaf al-Dīn and to al-Qāḍī Taqī al-Dīn, Ḥanafī Deputy Qāḍī, may God the Exalted support him,
64. and the Excellency Nāṣir al-Dīn, as to what is attributed to them in this document on its date and to the disbursement of the one-third to those legally entitled to it.
65. Written by Aḥmad ibn Muḥammad ibn ʻAlī, may God forgive all of them.
66. He testified to that before me.

Right-hand margin:

1. Let there be witnesses to its certification and to the judgement to the obligatoriness of that, to the validity and bindingness of the transfer, and to the absence of a claim for restitution on the part of the transferee against the transferor and his property, in spite of cognizance of disagreement about that which disagreement exists, God being the One Whose help is to be sought. And [witnesses] to disbursement of the bequeathed amount, i.e., the third, to its claimants legally, God being the One Whose help is to be sought.

Commentary

This *ishhād* forms the first part of a type of document described by al-Asyūṭī in a chapter on *al-qaḍāʼ*, meaning judging, or judicial procedure. Therein al-Asyūṭī discusses the different practices followed by Egyptian and Syrian judges and notaries in drafting documents certifying (*thubūt*) legal transactions. His comments on the Syrians′ practice are relevant to this document and to no. 133 recto, above, though, as will be recalled, the latter lacks the requisite consequential document:

> They write (a) the judge′s request for witnesses (*ishhād*) to [the validity of] certification (*thubūt*), judgement (*ḥukm*), and implementation (*tanfīdh*). (b) The judge writes his motto (*ʻalāmah*) on the recto of the document, to the left of the *basmalah*. Next, (c), in the margin he writes in his own handwriting a request for witnesses to the judge regarding certification, judgement, and implementation. Then (d) he endorses [the witnessing clauses of] the witnesses. (e) The clerk (*al-kātib*) writes the request for witnesses to the judge

(*al-ishhād*) on the verso of the document, without a motto or anything else.[119]

Although no. 355 recto does not mention implementation (*tanfīdh*), it does contain all the formal components mentioned by al-Asyūṭī except (e), which is found, of course, on no. 355 verso.[120]

The recto of this document takes the form of an *ishhād* judged to be valid by a judge. In notarial parlance *ishhād* is an ambiguous term, and I myself have mentioned elsewhere the different types of *ishhād*s found among the Ḥaram documents.[121] I have also pointed to the similarity of one type of *ishhād*, attestation, to the *iqrār*, or acknowledgment, concluding that the difference between the two is a matter of form and language.[122] In her study of the fourteenth-century Ḥanafī formularies of al-Ṭarsūsī, Guellil describes three types of *ishhād*s, which, on the basis of format, she labels as *ishhād-shahādah*, corresponding, roughly, to my attestation;[123] *ishhād-isjāl* (*kitābat ḥukm*), corresponding to my certification;[124] and the *ishhād* form of witnessing clauses.[125] Professor ʻAbd al-Laṭīf Ibrāhīm has also called attention to the various types of documents subsumed by the term *ishhād* and gives a concise statement of its applications. *Ishhād*, he explains, originally meant a request that witnesses testify to the occurrence of a matter; later, it denoted legal instruments such as *iqrār*s; finally, during the Mamluk period in particular, it was applied to court documents which certify and register transactions. In the last case, *al-ishhādāt al-sharʻīyah* applies to "a *waqf* document, [for example,] which had become an official, notarized record with executive force and a legal deed accepted in every circumstance and condition. Accordingly, the purpose of *ishhādāt* is to increase the certitude, confirmation, and authority of the contract, 'pour confirmer le contrat'."[126]

Our document no. 355 recto-verso contains, or refers to, all types of *ishhād* adumbrated above. Recto is (i) an *ishhād* of attestation calling for witnesses to the document and the legal transactions it records; as such it is both a simple attestation

before a judge and a step in al-Asyūṭī´s process of judicial certification. Verso is (ii) an *ishhād/isjāl*, the witnessing clauses of which are cast in an *ishhād* form (iii). In my translations I have distinguished between (i) and (ii) with the term ″attested,″ ″called for witnesses,″ and ″attestations″ for (i) and ″attestation (of certification)″ for (ii).

On 24 Jumādá I 795/7 April 1393, a year and a month after the public sale of Shams al-Dīn´s Jerusalem estate and a year and six months after the original inventory was made, Nāṣir al-Dīn appeared before a Shāfiʻī judge in Jerusalem, calling for witnesses to attest that he had taken legal possession of silver and gold worth 1989 3/4 Damascus *dirham*s which had been kept in the Shāfiʻī Court Depository in Jerusalem until the estates of his uncle, who had died in Jerusalem, and his aunt had been settled there. Nāṣir al-Dīn´s claims on the estates were complex and had nothing to do, apparently, with his blood relationship to his aunt Ālmalik. When Shams al-Dīn died, sometime before 23 Rabīʻ II 794/20 March 1392 (the date of the public sale), his legal heirs, according to this document, were his wife, a full brother, and three brothers and sisters, though as we have seen, Sutaytah was identified in the inventory as a full sister.[127] Since he had no surviving descendents, his wife, Ālmalik, was entitled to a fourth of his estate. But this amount was augmented by the long-standing debt of 10,000 *dirham*s owed her by Shams al-Dīn and legally acknowledged in an *iqrār* dated 13 Shawwāl 788/7 November 1386. In the following year Ālmalik transferred her claim on the debt to her nephew, Nāṣir al-Dīn, in a *ḥawālah*. As we have seen Shams al-Dīn neglected to declare this debt in his Jerusalem estate inventory, perhaps, we may speculate, because he considered it to be a liability against his Damascus, as distinct from Jerusalem, holdings. In any case the *ḥawālah* constituted one basis for Nāṣir al-Dīn´s claim to Shams al-Dīn´s estate. In the meantime, however, Ālmalik died, leaving heirs of her own, namely her ten brothers and sisters, five of whom were full siblings, the other five related to her through their father alone. When Ālmalik died, all of these brothers and sisters, apparently with one exception, formally authorized Nāṣir al-Dīn to represent them in their claims against their sister´s estate, and these authorizations formed the second basis of Nāṣir al-Dīn´s claim when he appeared before a Shāfiʻī judge in Jerusalem.

Remarkably, all or most of these transactions were recorded in legal documents that were certified and registered in courts, originally in courts located in Damascus, presumably because Shams al-Dīn and Ālmalik had been living there or under its jurisdiction. Later, however, when Shams al-Dīn died in Jerusalem and some of his estate had to be settled by Jerusalem courts, it became necessary to have the Damascus documents transferred and certified there, including those related to

---

Ālmalik′s estate. Some of these we have already had occasion to notice in connection with the *makhzūmah*.[128] In brief, this process took place in two phases, as follows:

(a) Shams al-Dīn Muḥammad made an *iqrār* acknowledging his debt of 10,000 *dirham*s to Ālmalik on 13 Shawwāl 788/7 November 1386.
(b) The *iqrār* was certified on 1 Dhū al-Ḥijjah 788/24 December 1386 by a Ḥanafī judge in Damascus.
(c) Ālmalik added a transfer clause (*faṣl ḥawālah*) to the *iqrār*, transferring the proceeds from the debt to her nephew, Nāṣir al-Dīn, on 23 Ṣafar 789/15 March 1387.
(d) The transfer clause was certified on 28 Rabīʿ I 794/23 February 1392 by a Shāfiʿī judge in Damascus.
(e) Both these certified documents were conveyed to a Ḥanafī judge, Taqī al-Dīn, in Jerusalem sometime before 23 Rabīʿ II 794/20 March 1392,
(f) when, under the authorization of this *qāḍī*, a sale of chattels in Shams al-Dīn′s estate was held in order to satisfy his debt to his wife, transferred to Nāṣir al-Dīn.

But these legal transactions were conducted only in conjunction with Nāṣir al-Dīn′s claim to the transferred debt. As we have already seen, he also made a claim to Ālmalik′s estate on the basis of authorizations assigned to him by some of her legal heirs. We do not know the date of Ālmalik′s death; it must have occurred around 4 Muḥarram 794/2 December 1391, when some of those heirs assigned their power of attorney to Nāṣir al-Dīn, enabling him to act on their behalf in settling the estate. Nor do we know with certainty where she died since the place is not specified in any of the available documents. In all probability she died in Jerusalem since part, at least, of her estate was held and settled there, but there is no evidence to place her there at the time of her death. In any event Nāṣir al-Dīn appeared in Jerusalem with several certified powers of attorney and other forms of authorization from Ālmalik′s heirs, which he used to take possession of money in Jerusalem due to these heirs and himself. The process by which the relevant documents were issued and certified can be outlined as follows:

(a) Muḥammad II made an *iqrār* on an unspecified date authorizing Nāṣir al-Dīn to claim his (Muḥammad′s) portion of Ālmalik′s estate.
(b) In an appendix to this *iqrār*, dated 4 Muḥarram 794/2 December 1391, three sisters and Muḥammad II in his capacity as guardian over Muḥammad III assigned their power of attorney to Nāṣir al-Dīn.
(c) In mid-Muḥarram 794/9-18 December 1391, a court record was issued defining Ālmalik′s heirs.

---

[128]See no. 591 recto A, lines 7, 9, 10, 15, 18, above.

(d) This court record was certified by a Ḥanbalī judge in Damascus on 16 Muḥarram 794/14 December 1391.
(e) Muḥammad II's *iqrār* mentioned in (a) was certified on 21 Muḥarram 794/19 December 1391.
(f) The *iqrār* and the appendix mentioned in (b) were certified by the Ḥanbalī judge in Damascus on 4 Rabī' II 794/29 February 1392.
(g) The certified *iqrār* and appendix were conveyed to the Ḥanafī judge Taqī al-Dīn on 18 Rabī' II 794/15 March 1392. (Shortly thereafter, on 23 Rabī' II 794/20 March 1392, the sale of chattels from Shams al-Dīn's estate in favor of Nāṣir al-Dīn was held in Jerusalem.)
(h) Muḥammad I and three sisters made an *iqrār* during the first ten days of Ṣafar 795/17-26 December 1392 that Nāṣir al-Dīn was entitled to their share of Ālmalik's estate. Nāṣir al-Dīn swore an oath to this effect.
(i) The certified court record mentioned in (d) was conveyed to the Ḥanafī judge Taqī al-Dīn in Jerusalem on 19 Rabī' II 795/14 March 1393.
(j) On 24 Jumādá I 795/7 April 1393 all the relevant documents already conveyed to the Ḥanafī judge Taqī al-Dīn, plus others held by Nāṣir al-Dīn, were conveyed or presented to the Shāfi'ī judge in Jerusalem, Sharaf al-Dīn. On the same date this judge heard evidence on other dispositions connected with Nāṣir al-Dīn's claims, to which Nāṣir al-Dīn swore an oath. All that being done, and certified by Sharaf al-Dīn, Nāṣir al-Dīn took possession of what was owed to him and acknowledged that nothing more was due to him and that Ālmalik's provisions for legal bequests had been fulfilled.
(k) On the same date Nāṣir al-Dīn requested that all these transactions, along with the document recording them, be certified by a court.
(l) Thereupon, on the same date, witnesses signed the document, and their signatures were endorsed by a Shāfi'ī deputy judge. He himself signed the document, issued the judgement that the transactions therein recorded were legally valid, and called for witnesses to certify the judgement, the transactions, and the document.

In Appendix A, below, we shall synthesize all the transactions involved in Nāṣir al-Dīn's claims. In the meantime we should note that neither of the two documents already discussed in this article, i.e., the estate inventory and the *makhzūmah,* is mentioned in no. 355. This document we shall now proceed to annotate.

1. *al-ḥamd lillāh ʿalá niʿamihi* is the motto[129] used by the Shāfiʿī Deputy Judge Jamāl al-Dīn Abū Muḥammad ʿAbd Allāh al-Anṣārī, cited on verso, lines 2-5, where biographical details are given in the commentary. For obvious reasons judges were supposed to choose distinctive *ʿalāmah*s that no other judge of the same district and time used. Nevertheless, this was apparently a popular motto in fourteenth-century Palestine. It appears on Ḥaram no. 35, dated 6 Rabīʿ II 778/23 August 1376 as the motto of Deputy Qāḍī Abū al-Ḥasan ʿAlī . . . al-Ghazzī al-Shāfiʿī, a judge in Gaza;[130] no. 708, dated 7 Dhū al-Ḥijjah 778/17 April 1377, for Deputy Qāḍī ʿAlī ibn Muḥammad al-Shāfiʿī of Jerusalem;[131] no. 76, dated 26 Dhū al-Ḥijjah 790/26 December 1390, no. 353, dated 15 Ṣafar 777/16 July 1375, no. 354, dated 14 Muḥarram 781/2 May 1379, and no. 369, dated 10 Muḥarram 771/14 August 1369, for Deputy Qāḍī ʿAlāʾ al-Dīn Abū al-Ḥasan ʿAlī al-Umawī.[132]
2. *ashhada ʿalayhi*. The use of this phrase, or of *ashhada ʿalá nafsihi*, meaning he called for witnesses to himself,[133] establishes the document as an *ishhād* no. (i): ″an *ishhād* of attestation calling for witnesses to the document and the legal transactions it records″ (see above, p. 143). As we shall see, the response of the witnesses to an *ishhād*, which they write in the witnessing clauses at the end of the document, normally takes the form *ashhadu ʿalá fulān.*
3. *aḥad al-umarāʾ al-Baʿlabakkīyah.* Previously (see above, pp. 121-122), we noted that Nāṣir al-Dīn was probably a member of the Ḥalqah in Baalbek. During the Baḥrī Mamluk period Baalbek had the status of a *niyābah* (viceroyship) and was administered by an amir of ten, later an amir of forty, named by the Viceroy of Syria.[134] Nāṣir al-Dīn was apparently an officer of the Ḥalqah attached to this administrative center. In any case Nāṣir al-Dīn, his aunt Ālmalik, and her husband Shams al-Dīn have all been identified now as being associated with Baalbek. As a merchant Shams al-Dīn seems to have been active in both Damascus and Jerusalem.
wa-huwa maʿrūf ʿinda shuhūdihi is an identification formula used in legal depositions to establish that the identity of the attestor is known to the witnesses. According to al-Asyūṭī, ″the Muslim community′s consensus is

[129]For a survey of the use of the *ʿalāmah* in various types of Islamic documents, see S. M. Stern, *Fāṭimid Decrees* (London, 1964), 123-65.
[130]*Catalogue*, 255-56.
[131]Ibid., 253.
[132]Ibid., 289.
[133]Not ″called upon himself as witness″ as in my ″Court Records,″ 21, and ″The Jews,″ 259.

that if someone acts as a witness to a person whose name and *nasab*s he does not know, his testimony is not valid. . . ."[135]
qabaḍa wa-tasallama wa-ṣāra ilayhi are all stock terms to establish not only that the receiver has taken possession of the property but that it has moved into his hands in a legal manner.[136]

4. *al-Sharafī*. This is the same Shāfiʻī judge who authorized the estate inventory for Shams al-Dīn. See commentary on no. 133, line 14 above.
al-mutaʻāmila bi-hā . . . bi-al-Shām. According to al-Qalqashandī, Jerusalem's standard currency was that of Damascus. This was only natural since Mamluk Jerusalem was under the administrative jurisdiction of Damascus.[137]
5. *al-dhahab al-iflūrī . . . maṣārifuhā* . . . refers to the florin, a coin of about 3.5 grams, in use in the Mamluk empire. Its exchange rate in relationship to the *dirham* fluctuated according to the gold and silver content of coins, not to mention governmental monetary policy. According to al-Qalqashandī the "exchange value around 790 A.H., 1388 A.D., was . . . 85 per cent of a dînâr (*Ṣubḥ*, III:442.8: the dînâr at 20 dirhams, the ifrantî [florin] at 17)."[138] According to our document, dated 795/1393, the exchange rate in Jerusalem was 19.5 *dirham*s per florin. This citation is important because it provides independent documentary evidence for the relative value of the florin in the Mamluk empire at a time, moreover, when literary references are lacking.[139]
6. *min tarikat Shams al-Dīn . . . wa-min tarikat Ālmalik* . . . It is not clear here whether Ālmalik left an estate of her own in Jerusalem apart from what was owed to her from the estate of her husband. Later in the document, however, there are indications that she left possessions of her own in the city.[140]

[138] Popper, *Systematic Notes*, 2:47. For a fuller discussion see Bacharach, "A Study," 160-69. Cf. also Bacharach, "The Dinar versus the Ducat," *International Journal of Middle East Studies* 4 (1973): 77-96, and Boaz Shoshan, "Exchange-Rate Policies in Fifteenth-Century Egypt," *JESHO* 29 (1986): 28-51.

[139] Using Venetian documents, Eliyahu Ashtor (*Les métaux precieux et la balance des payements du Proche-Orient à la basse époque* [Paris, 1971], 43) records that a ducat was worth 20 3/4 Egyptian *dirham*s on 2 August 1395.

[140] See commentary on line 45 below.

7. *wa-inḥiṣār irthuhu* is a stock phrase used to specify the heirs to an estate according to Islamic law.[141]

7-8. *ikhwatuhu li-ummihi . . . Sutaytah.* It will be recalled that Sutaytah was designated a full sister in the estate inventory.

8-9. *fī ikhwatihi al-ʻasharah.* Without going into the complex issue of how much of the estate would be due to the uterine collaterals as opposed to agnatic brothers and sisters, suffice it to say that Nāṣir al-Dīn, as a nephew, would have been excluded.[142]

10. *maḥḍar sharʻī*. Perhaps this court record took the form of an estate inventory certified by a court, similar to no. 133 above. Estate inventories, it will be recalled, invariably list assets and liabilities as well as legal heirs.
thābata maḍmūnuhu ladá . . . signifies that the document was certified by a court according to the same process by which the present *ishhād* no. 355 was certified.

11. *Aqḍá al-Quḍāh Taqī al-Dīn . . . al-Ḥanbalī*. Al-Qāḍī Taqī al-Dīn Aḥmad ibn Muḥammad ibn Muḥammad ibn al-Munajjā ibn ʻUthmān ibn Asʻad ibn Muḥammad ibn al-Munajjā al-Ḥanbalī served as a Deputy Qāḍī (hence the title Aqḍá al-Quḍāh)[143] to his brother ʻAlā' al-Dīn and later became Ḥanbalī Chief Qāḍī of Damascus in 803/1401 for a few months. He died in 804/1402.[144]
al-Ḥākim . . . In a study of medieval Islamic documents from Chinese Turkestan, Monika Gronke discusses the distinction in rank between *qāḍī* and *ḥākim*. After examining the evidence in her documents, she observes that *qāḍī* seemed to have a higher value than *ḥākim* and asks, "May we conclude that *qāḍī* did not just designate a superior judge in the Yārkand area, but was also the current general term for 'judge' without referring to specific rank? The question must remain open."[145] Insofar as I have been able to determine, in the Ḥaram documents *al-ḥākim*, in the sense of presiding judge or magistrate, was used for both full *qāḍī*s or Qāḍī al-Quḍāh and Deputy Qāḍīs or Aqḍá al-Quḍāh and Nā'ib al-Ḥukm.[146] In terms of

[141]Al-Asyūṭī, *Jawāhir*, 1:43.

[142]See Coulson, *Succession*, 65-78.

[143]Al-Asyūṭī, *Jawāhir*, 2:594.

[144]Ibn al-ʻImād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Cairo, 1351/1932-33), 7:42.

[145]"The Arabic Yārkand Documents," *BSOAS* 49 (1986): 483. Cf. Gronke, *Arabische und persische Privatsurkunden des 12. und 13. Jahrhunderts aus Ardabil (Aserbeidschan)* (Berlin, 1982), 77.

[146]E.g., in the present document, line 11, "Aqḍá al-Quḍāh Taqī al-Dīn Abū al-ʻAbbās . . . al-Ḥanbalī, al-Ḥākim"; lines 13-14, "Qāḍī al-Muslimīn Sharaf al-Dīn . . . al-Ḥākim"; line 12, "Aqḍá al-Quḍāh Taqī al-Dīn . . . Khalīfat al-Ḥukm"; but lines 59-60a, "al-Qāḍī Taqī al-Dīn al-Ḥanafī al-Ḥākim";

rank, then, I am inclined to believe that *qāḍī* and *ḥākim* were equal in Mamluk Jerusalem.

bi-muqtaḍā al-ishhād bi-ẓāhir al-maḥḍar refers to an *ishhād* of certification like that on the verso of the present document and as defined above, no. (ii), p. 143.

12. *Aqḍá al-Quḍāh Taqī al-Dīn* . . . The same judge who authorized the public sale of Shams al-Dīn's estate in Jerusalem. See commentary on no. 591, recto A, lines 20-21 above.
15. *ḥujjah shar'īyah.* This is the same document referred to in no. 591, recto A, line 9 above as a *masṭūr shar'ī.*
16. *faṣl ḥawālah.* The use of *faṣl* makes it clear that the *ḥawālah* was added as a clause to the *iqrār* and that the *iqrār* and *ḥawālah* constituted the *masṭūr/ḥujjah*.
18. *qubūl al-muḥtāl al-ḥawālah qubūlan shar'īyan* is a stock phrase used to indicate that the person to whom the debt is transferred accepts the transfer in lieu of an obligation owed him by the person who initiates the transfer. Although members of the various legal schools do not agree on all details of this transaction, they do concur that "it is not obligatory for the transferee (*al-muḥtāl*) to accept the transfer."[147] Hence the necessity to include the clause in the document.
19. *Aqḍá al-Quḍāh Badr al-Dīn* . . . See the commentary on no. 591, recto A, line 14 above.
20. *Aqḍá al-Quḍāh Shams al-Dīn* . . . See the commentary on no. 591, recto A, lines 16-17.
22. *bi-shahādat man* . . . This is the most explicit and detailed reference we encounter in this document and no. 591 of the process by which a document from one court was conveyed to (*ittaṣala*) another. Although the Arabic is ambiguous, it could mean that the witness was actually present in the court of Taqī al-Dīn and was thus one of the *shuhūd al-ṭarīq* referred to above in the commentary on no. 591, recto A, line 19. In any event it would seem that it was only the *iqrār* and the *ḥawālah* that were conveyed by this means rather than by a *kitāb ḥukmī*. *'Udūl* was sometimes used like

---

and lines 52-54b, "al-Ḥākim al-Sharafī . . . wa-'alá al-Qāḍī Taqī al-Dīn al-Ḥanafī al-Ḥākimayn . . ."!

[147]Al-Asyūṭī, *Jawāhir*, 1:179. Cf. Joseph Schacht, *An Introduction to Islamic Law* (Oxford, 1964), 148-49.

shuhūd to denote notaries or witnesses.[148] But *ʿudūl* could also mean professional witnesses whose integrity had been examined, confirmed, and certified by a court.[149]

ishhādan sharʿīyan refers here to the simplest form of this type of document—an attestation in which the attestor calls for witnesses to the transaction recorded in the document, namely the *iqrār* cited in line 23. In all probability this type of *ishhād* corresponds to no. (i), p. 143, above.

23. *fī siḥḥah minhu wa-salāmah wa-jawāz amr*. These are standard phrases of *iqrār*s, establishing the competence of the acknowledger to make a valid acknowledgment.[150]

23-24. These lines establish Nāṣir al-Dīn´s entitlement to receive Muḥammad II´s share of his sister´s estate, including the assets due to her from her late husband´s estate, whether in Baalbek, Damascus, or Jerusalem. We do not know, of course, whether estate inventories and public sales were conducted in the two former places as well as in Jerusalem. In effect, Muḥammad II´s acknowledgment must have constituted an assignment of his power of attorney to Nāṣir al-Dīn.

25. *qumāsh wa-athāth* . . . Whether or not this is a list of specific assets and liabilities or simply a formula is not clear. In model documents al-Asyūṭī uses such phrases as *darāhim wa-dhahab wa-thaman qumāsh wa-naḥās wa-athāth wa-ḥayawān wa-ṣāmit wa-nātiq wa-ghayr dhālika.*[151] In another model he adds *ḥulī zarkash*, and *lu'lu'*.[152] Notice, however, that this list in the document adds two specific items—*al-zabīb wa-al-ḥabbahān*—not covered by the generic list. Cf. the list on lines 36-37 below.

26. *al-maʿrūf baynahumā al-maʿrifah al-sharʿīyah.* It is not evident here what would constitute legal cognizance on the part of the two parties (the *muqirr*, Muḥammad II, and the *muqarr lahu*, Nāṣir al-Dīn) but *maʿrifah sharʿīyah* is certainly a recurring phrase in legal documents. There are, of course, standard formats for assigning proxies or powers of attorney.[153]

27. *wa-Muḥammad.* Inadvertently, I believe, the notary has failed to specify which of the three Muḥammads is meant. But since Muḥammad III was an orphan, and Muḥammad I assigns his own power of attorney in lines 33-35, Muḥammad II is left by process of elimination.

[150] See Lutfi, *"Iqrār*s,*"* 260; Guellil, *Akten*, 244.

[151] Al-Asyūṭī, *Jawāhir*, 1:42-43.

[152] Ibid., 50.

[153] Ibid., 192-208; Guellil, *Akten*, 175-76. For examples from the Ḥaram see *Catalogue*, 306-10.

al-yatīm Muḥammad al-ṣaghīr, therefore, refers to the fact that he was not yet of age, as does the term *al-ṣaghīr*.

28. *waṣīyah.* The usual term for guardianship is *wiṣāyah*, whereas a *waṣīyah* is a testamentary deposition "appointing an executor and/or guardian" (*waṣī*).[154] *wa-qabaḍa dhālika wa-qubūl al-wakīl dhālika qubūlan shar'īyan* . . . in order for a *wakālah*, or power of attorney, to be valid, the proxy must formally accept it from the person who assigns it.[155]

29. *Taqī al-Dīn ibn al-Mufliḥ* . . . refers to al-Qāḍī Burhān al-Dīn wa-Taqī al-Dīn Abū Isḥāq Ibrāhīm ibn Muḥammad ibn Mufliḥ ibn Mufarraj al-Rāmīnī al-Dimashqī al-Ḥanbalī. Born in 749/1348-1349 into a family of prominent Ḥanbalī scholars and judges, he became a teacher in Damascus, where his discourses were attended by jurisprudents of all four legal schools. Author of several books, he was regarded as leader of the Ḥanbalī school in Damascus. Before becoming Ḥanbalī Chief Judge, he served as a Deputy Judge to several Ḥanbalī judges. He died in 803/1401.[156]

32-33. *wa-qāmat bayyinah shar'īyah 'indahu.* The use of this clause probably indicates that oral testimony was given to establish that Nāṣir al-Dīn was (a) the guardian of Muḥammad III when the power of attorney was assigned and (b) the agent of Muḥammad I, Asmā', and Asin, authorized to take possession of Ālmalik's estate. "In legal terminology the word *bayyinah* denotes the proof *per excellentiam*—that established by oral testimony—, although from the classical era the term came to be applied not only to the fact of giving testimony at law but also to witnesses themselves."[157] In any case the use of this clause signals that these aspects of Nāṣir al-Dīn's claims to his aunt's estate were established by a means different from those used for other aspects, for which he produced legal documents, as opposed to testimony, certified by courts in Damascus and conveyed to courts in Jerusalem. For some reason or another it would seem that he did not have certified documents for (a) and (b) above and that he therefore had to produce oral testimony in support of them. The clause also appears in the *tawqī'* of no. 133 above.

35. *mimmā khallafathu wa-mimmā intaqala ilayhā bi-al-irth* . . . This clause reinforces Nāṣir al-Dīn's claim to what was due to his aunt from her husband's estate.

[157]R. Brunschvig, "Bayyina," *EI*[2], 1:1150-51. Cf. Little, "Court Records," 27.

36. *ḥaqq al-rub‘* refers to the fourth due to a widow from her husband′s estate in the absence of a descendant.[158]

37. *Biqā‘ Ba‘labakk* refers to the plain, Bekaa, lying between the mountains of Lebanon and anti-Lebanon, the most important center of which is Baalbek itself. In the Mamluk period the *Biqā‘ al-Ba‘labakkī* was one of two *Biqā‘ wilāyah*s subject to the Viceroy of Baalbek.[159]

37-38. *intaqala ilayhi bi-nāqil shar‘ī*. I do not know the precise meaning of this clause. Although al-Ṭarsūsī gives two formularies for a *munāqalah*, both the transactions therein described involve the exchange of goods without resort to cash.[160] In our document the use of this clause reaffirms the inference that Nāṣir al-Dīn did not have certified legal documents for this aspect of his claims against the estate.

38. *al-muqarr lahu* is the beneficiary of an *iqrār*, one of the three essential components of this type of document. The others are *al-muqirr*, the declarant, and *al-muqarr bi-hi*, an object of recognition.[161]

ḥalafa al-yamīn al-shar‘īyah . . . Again, presumably because there were no certified legal documents for this *iqrār* and no contrary witnesses to it available in Jerusalem, Nāṣir al-Dīn was required by the judge to swear an oath to its content. Al-Asyūṭī divides oaths into two categories: those which are given in legal disputes and those which are administered in other contexts. The former are further divided into oaths of response and oaths of entitlement (*yamīn al-istiḥqāq*). The latter have five forms, the last of which is an oath with a witness (*al-yamīn ma‘a al-shahīd*), which has seven applications; no. 6 involves a claim regarding an absent person (*al-da‘wá ‘alá al-ghā’ib*).[162] The use of this type of oath is discussed fully by al-Asyūṭī in his chapter on *al-qaḍā’*, under a sub-section entitled ″Judging against an Absent Person.″ There he explains that if a defendant is legitimately absent from the court and the judge decides, notwithstanding, that the claim can be legally heard and qualified witnesses testify to its truth, the judge cannot rule in the plaintiff′s favor ″until the plaintiff takes an oath that he is entitled to that which is owed him by the absent person and that until the present time he has not received any portion of it. . . . This oath is legally obligatory,″ i.e., in Shāfi‘ī *fiqh*.[163] This clause, then, I interpret to

[158]Coulson, *Succession*, 41.

[161]Y. Linant de Bellefonds, ″Iḳrār,″ *EI*², 3:1078.

[162]Al-Asyūṭī, *Jawāhir*, 2:317.

[163]Ibid., 361.

mean that in the absence of the declarants listed in lines 33-34, the Amir Nāṣir al-Dīn had to swear an oath that he had legal entitlement to receive their share of their sister's estate.

wa-ḥalafa . . . bi-Allāh al-ʻAẓīm. According to some jurists an oath (*yamīn*) "is constituted by the use of the name of Almighty God, or by any of those appellations by which the Deity is generally known or understood."[164] Especially efficacious are those which refer to His power, glory, or might. Thus the reference to God as "al-ʻAẓīm."

38-40. *wa-thabata al-iqrār wa-al-ḥalf . . . fa-lammā thabata dhālika jamīʻuhu wa-ittaṣala thubūtuhu . . .* The procedure alluded to in these three lines is not altogether clear. If *jamīʻuhu* refers to certification of the acknowledgment and the oath by Judge Sharaf al-Dīn, why should it be necessary to convey it to his court, where said certification had actually taken place? Probably, therefore, *jamīʻuhu* refers to the certification and conveyance of all the documents involved in the case. Once this had been accomplished, Sharaf al-Dīn could authorize Nāṣir al-Dīn to take possession of the sum owed to him.

41. *qabaḍa dhālika qabḍan . . . bi-ḥaḍrat shuhūdihi.* As we shall see below in the witnessing clauses, four of the witnesses to the document testified that they saw Nāṣir al-Dīn take possession of the amount due to him.

42-46. The most complicated aspect of this document lies in the arithmetic: How was the amount finally received by Nāṣir al-Dīn calculated? The complexity is increased, moreover, by the use of the *siyāqah* script for some, not all, of the figures. Those written on line 42 and the first half of line 43, as well as lines 4-5 and 16, are written in full, in regular script, whereas "the details" mentioned in the second half of line 43 are written in the *siyāqah.* In what follows I shall attempt to reconstruct the computations.

As we have seen, Nāṣir al-Dīn had two claims: one, a debt of ten thousand *dirham*s owed by Shams al-Dīn to Ālmalik, which Ālmalik had transferred to Nāṣir al-Dīn, and two, the shares of nine of Ālmalik's ten heirs, who had assigned to Nāṣir al-Dīn their power of attorney, or its equivalent, in this matter. Why the tenth, Mughul, had not done so we do not know. Perhaps she had died, since the entire residue of the estate in Jerusalem was paid to Nāṣir al-Dīn. From the commentator's point of view it is fortunate that the document does not take up the question of how much of the total residue was due to Nāṣir al-Dīn in his capacity of transferee and how much was due to him as a proxy and guardian of the heirs. The settlement outlined in the document is complex enough as it

[164] Thomas Patrick Hughes, *Dictionary of Islam* (reprint, New Delhi, 1977), 437.

stands. If my reading of the *siyāqah* script is correct, this is what happened: Nāṣir al-Dīn received the equivalent of 1989.75 *dirham*s from the depository of the Shāfiʻī Court in Jerusalem, 1794.75 silver *dirham*s and ten gold florins worth 195 *dirham*s. The total figure of 1989.75 was ultimately derived from the residue from the estates of Shams al-Dīn and Ālmalik, these being calculated as 5707.75 *dirham*s for Shams al-Dīn and 2081.25 for Ālmalik, for a total of 7789. But 733.75 *dirham*s had to be subtracted from Ālmalik′s estate: 50 *dirham*s for her burial expenses and 50 for a debt, and 633.75 *dirham*s as a bequest for Quranic recitations and other charitable purposes, for a total of 733.75 *dirham*s, leaving a balance of 7055.25 *dirham*s. And, the document goes on to state, Nāṣir al-Dīn had already received substantial portions of the amount due him: 3000 *dirham*s in cash and 364.25 and 1701.25 *dirham*s from goods sold from the estates of Shams al-Dīn and Ālmalik respectively, for a total of 5065.50 *dirham*s. Subtracting, then, 5065.50 *dirham*s from the total balance of 7055.25 leaves the residue of 1989.75 which Nāṣir al-Dīn received, 146.25 *dirham*s from Ālmalik′s estate and 1843.50 from Shams al-Dīn′s. These calculations can perhaps be more readily grasped in the following form:

On deposit in the Shāfiʻī Court and received from the estates of Shams al-Dīn and Ālmalik	1794.75 *dh*	(line 5)
10 gold florins worth	195.00 *dh*	(line 5)
	1989.75 *dh*	(line 42)

This balance represents a split between the proceeds from two estates:

Shams al-Dīn	1843.50 *dh*	(line 46)
Ālmalik	146.25 *dh*	(line 46)
	1989.75 *dh*	(line 42)

Their total estates had been worth:

Shams al-Dīn	5707.75 *dh*	(line 43)
Ālmalik	2081.25 *dh*	(line 43)
Total	7789.00 *dh*	(line 43)

But this total had been reduced by expenses, a debt, and a legacy from Ālmalik′s estate:

Debt	50.00 *dh*	(line 44)

Burial	50.00 *dh*	(line 44)
Legacy	633.75 *dh*	(line 44)
Total subtraction	733.75 *dh*	

Net result: 7789.00 *dh* – 733.75 *dh* = 7055.25 *dirham*s (line 44). In addition, Nāṣir al-Dīn had already received from the two estates:

Cash from Shams al-Dīn´s	3000.00 *dh*	(line 45)
Sale from Shams al-Dīn´s	364.25 *dh*	(line 45)
Sale from Ālmalik´s	1701.25 *dh*	(line 45)
Total already received	5065.50 *dh*	

Balance (line 42): 7055.25 *dh* – 5065.50 *dh* = 1989.75 *dh*.

This means that Nāṣir al-Dīn´s total received in Jerusalem, however it may be calculated, fell considerably short of the ten thousand *dirham*s owed him from the transferred debt, not to mention the amounts due to the other heirs whose proxies he held. But it should be recalled that Shams al-Dīn and Ālmalik had other assets in Damascus, Baalbek, and Bekaa, which presumably were also distributed to the legal claimants. Were these distributions coordinated with the Jerusalem courts? We do not know.

Before leaving this subject we should note that although some of these figures may be reconciled with those contained in the death inventory and the *makhzūmah,* others cannot. The figures cited for the sale from Shams al-Dīn´s estate come close: 364 from the *makhzūmah,* 364.25 from the *ishhād*. The 3000 *dīnār*s held by Ibn Sanājiq are identical in both these documents. But of the total of twenty-three florins mentioned in the inventory, only ten are mentioned in the *ishhād*; it is also difficult to account exactly for the total of 3133.25 *dirham*s (apart from Ibn Sanājiq´s 3000) enumerated in the estate inventory. Again, however, it should be recalled that we do not know how much time elapsed between the date of the inventory and the death of Shams al-Dīn, or what happened to his assets during the interval.

In Appendix B below I have noted the *siyāqah* numbers deciphered so far from the Ḥaram documents.

44. *tajhīz wa-dayn . . . wa-al-thulth al-mūṣá bi-hi . . .* As already noted above (see p. 94) there are three types of claims against estates: burial expenses, debts, and legal heirs. But the testator also has the right to dispose of a maximum of one-third of the estate, after the payment of burial expenses

and debts, in the form of legacies.[165] Obviously Ālmalik left instructions in her will, or estate inventory, that the disposable third of her estate be devoted to charity and Quranic recitations, presumably coupled with prayers for her soul.

45. *thaman al-aʻyān min tarikat Shams al-Dīn* . . . This refers to the proceeds from the sale of chattels, recorded in *makhzūmah* no. 591 above.
min tarikat Ālmalik thaman ḥawāʼij mubāʻah qabla taʼrīkhihi. Although there was obviously a public sale of goods from Ālmalik's estate, there is no indication of when or where the sale was held except that it was concluded before the date of the document. Since there is no specific reference to any sums received by Nāṣir al-Dīn outside Jerusalem, I would infer that the goods were sold in Jerusalem. Unfortunately, if this was indeed the case, no *makhzūmah* has showed up so far.

As already mentioned in footnote 118, this must be an error for . Otherwise the figures on line 45 itemizing the sums that Nāṣir al-Dīn had already received from the two estates add up to 5072.50 *dirham*s, which, if subtracted from the balance of 7055.25 entered on line 44, yield a final balance of 1982.75 *dirham*s rather than the 1989.75 entered on line 42.

47. *Amīn al-Ḥukm.* "In the Mamluk period the *Amīn al-Ḥukm* was a judicial officer, under the jurisdiction of a *qāḍī*, responsible for the welfare of minor orphans."[166] Given the fact that Ālmalik had left at least one orphaned heir, for whom Nāṣir al-Dīn was legal guardian, it is not surprising that he should be required to acknowledge that nothing was due to him from this source.

48. *mā awṣat bi-hi Ālmalik*. The use of this clause, which is standard in wills, indicates that Ālmalik had indeed drawn up a will before her death.[167]
thulth mālihā. Note that a third of her estate (2081.25 *dh* – 100 *dh* = 1981.25 *dh*) is 660.42 *dirham*s, not 633.75 (line 44).
wa-lā li-muwakkilīhi presumably refers to those heirs listed in lines 26-27 above who had assigned their power of attorney to Nāṣir al-Dīn.

49. *wa-wakkala fī thubūtihi . . . tawkīlan sharʻīyan*. This clause means that Nāṣir al-Dīn appointed an agent to act in his behalf in obtaining court certification of his *ishhād* and a judgement as to his claims, a well documented practice during the Mamluk period.[168] I suspect that either the Shāfiʻī *qāḍī*

---

165 Al-Asyūṭī, *Jawāhir*, 1:455. Cf. Muhammad Abu Zahra, "Family Law," 161-62; also Coulson, *Succession*, 213-58.

166 Lutfi and Little, "Emendations," 330.

167 See *Catalogue*, 311-12.

168 For discussion of the service of *wakīl*s in court, representing clients in the absence of attorneys

Sharaf al-Dīn or the court clerk/notary who drafted the *ishhād* served in this formal capacity.

50. *wa-ṣallá Allāh . . . wa-niʻama al-wakīl.* Al-Asyūṭī mentions the merit of closing legal documents with such pious phrases.[169] In practice they were often used as fillers, to complete a final line of a document which might otherwise have been partially blank. This is graphically demonstrated in the photographs of the *iqrār*s photographed in Lutfi's "*Iqrār*s."[170] These phrases were also used in chancery documents, in what Ernst calls the *Schlussprotokoll*.[171]

51. Curiously, although the *taṣliyah* and *ḥasbalah* normally indicate the end of the text of a document, a sentence has been appended here, almost as an afterthought, to indicate that Nāṣir al-Dīn attested to the validity of Ālmalik's bequest.

lā maṭʻan lahu wa-lā dāfiʻ. . . This is a stock phrase that sometimes appears in al-Asyūṭī's formularies after a judge has heard a claim or request from a plaintiff/claimant for a judgement. Before delivering the judgement, the judge will ask the defendant in the case whether he has any challenge or rebuttal. If he has none, he replies that he has no *maṭʻan* or *dāfiʻ*, and the judge issues his verdict.[172] In the context of this document the phrase means that Nāṣir al-Dīn has no challenge to Ālmalik's bequest, and that it should be honored accordingly.

52-65. These lines contain witnessing clauses of no less than ten witnesses to the document or, more accurately, to various depositions and processes contained or described therein. Although two male witnesses would have sufficed, the presence of more is by no means unusual.[173] Nevertheless, ten is a large number and may indicate that the case was perceived to be so complex and problematic that the agreement of this extraordinary number

[171]Ernst, *Sultansurkunden*, xxxv-xxxvii.

[172]Al-Asyūṭī, *Jawāhir*, 2:461, 506, 507, 519, 520, 526.

[173]See note 70 above.

of witnesses would serve to reinforce the legality of the proceedings. As in no. 133 above, the certifying judge saw fit to endorse the testimony of a limited number of the witnesses with the *raqm*, written in a thick pen, *shahida ʿindī bi-dhālika.* Note, however, that of these four ([a]52, [c]52, [a]63, [b]63), one ([a]52)—Muḥammad ibn Sulaymān, who probably indited the document[174]—is distinguished by the addition of the epithet, *″Aʿazzahu Allāh taʿālá.″* According to al-Asyūṭī this epithet was used for witnesses who enjoyed repute as jurists, teachers, or chancery clerks.[175] Lacking further information about the witnesses, we can only opine that the judge singled out Muḥammad ibn Sulaymān for a special mark of respect for reasons unknown. Similarly, we can only speculate as to whether the judge′s endorsement of only four witnesses′ testimony betokens his recognition of the *ʿadālah.*[176]

The witnessing clauses can be further divided according to content. Three witnesses ([a]52, [d]52, [c]57) testify to what the document ascribes to the Shāfiʿī *qāḍī* Sharaf al-Dīn and Nāṣir al-Dīn; of these, the latter two add that they witnessed Nāṣir al-Dīn take possession of the amount kept in the court depository. One witness ([b]58) served as witness to Nāṣir al-Dīn alone, including his receipt of what was owed to him. Two witnesses ([b]52, [c]52) testify to what the document ascribes to the Shāfiʿī judge *and* the Ḥanafī judge Taqī al-Dīn; three more ([a]58, [a]61, [b]63) testify to what is ascribed to all three parties, i.e., both judges plus Nāṣir al-Dīn. Of these, one ([b]63) testifies in addition that Ālmalik′s bequest of one-third of her estate was disbursed legally; and one ([a]63) testifies to this fact alone. Clearly, then, this document required testimony to four specific issues: (a) the validity of the actions and depositions of one or both of the two contemporary judges involved in the proceedings; (b) the validity of the depositions and actions of the claimant, Nāṣir al-Dīn; (c) his receipt of the residual estates held by the Shāfiʿī Depository in Jerusalem; (d) the legal disbursement of Ālmalik′s bequest.

It should be noted, moreover, that of the four witnessing clauses endorsed by the judge, one ([a]52) refers to the Shāfiʿī judge and Nāṣir al-Dīn; one ([b]52) to both judges; one ([c]52) to both judges and Nāṣir al-Dīn′s

---

[174]Although al-Ṭarsūsī suggests that modesty requires the drafter of the document to write his witnessing clause in ″the neutral middle,″ I am convinced from my survey of the Ḥaram documents that the right-hand position directly beneath the text was reserved for this purpose. See Guellil, *Akten*, 364-65.

[175]Al-Asyūṭī, *Jawāhir*, 2:372.

[176]See the commentary on no. 133, lines 16-21, above.

transactions and receipt; and one ([b]63) to the three principals plus Ālmalik′s bequest. Thus, all four issues are witnessed by endorsed witnesses. Although none of the witnesses, whether endorsed or not, testified to all issues, all but one ([a]63) testified to two or more issues.

The witnessing clauses can also be characterized on the basis of format, using the categories derived by Guellil from her study of al-Ṭarsūsī′s formularies. All but one of the clauses ([a]63) fall into the category of *Instrumentszeugnis* or testimony to the document itself, and all follow the standard form (*gewöhnliches Instrumentszeugnis*).[177] In response to Nāṣir al-Dīn′s request for witnesses in line 2, *ashhada ʻalayhi al-Janāb* . . . , all ten witnesses reply, *ashhadu ʻalayhi* (I am witness to him), or in the case of [d]52 and [c]57, in the past tense, *shahidtu ʻalá* (I was witness to . . .). This opening clause is followed in each instance by the name/s of the principal/s involved and the phrase, *bi-mā nusiba ilayhi/ilayhim aʻlayhu/fīhi . . . fī ta'rīkhihi* (to that which is attributed to him/them above/in this document . . . on its date). These witnessing clauses end with the name of the witness, preceded by *katabahu* (he wrote it). But some of these clauses ([c]52, [d]52, [c]57, [b]63) take an expanded form of the standard format, called by Guellil the *erweitertes Instrumentszeugnis*,[178] since they add a clause witnessing either Nāṣir al-Dīn′s receipt of the goods or the correct disposition of the estate. Finally, the one exceptional witnessing clause ([a]63) is couched in the form of a *Sachzeugnisse*, testimony to the case itself,[179] in this instance to the disbursement of the one-third bequest.

Margin:

li-yushhada bi-thubūtihi wa-al-ḥukm bi-mūjab dhālika . . . As noted in the commentary on no. 133 above, this clause, written like the judge′s *ʻalāmah* and the endorsement of some of the witnessing clauses with a thick pen, is called a *tawqīʻ*. It contains the judge′s verdict (*ḥukm*) in response to Nāṣir al-Dīn′s claim (*daʻwá*) that the transactions set out in the document should be certified by a court. Al-Asyūṭī describes the process in some detail in his chapter on *al-qaḍā'*: ″When the witnesses have completed their depositions,″ and the judge has endorsed them and inscribed his motto,

> he turns his attention [to writing] the *tawqīʻ* on the document (*al-maktūb*). Its position is beneath the *bā'* of the *basmalah*,

[177]Guellil, *Akten*, 360.
[178]Ibid., 263.
[179]Ibid., 361.

> at the side of the text, at the beginning of the first line. If the *tawqīʻ* follows the Egyptian model, the judge writes *li-yusajjala khāṣṣatan* and the court clerk handles the phrasing of the certification. . . . If the judge desires, he writes *li-yusajjala bi-thubūtihi wa-al-ḥukm bi-mūjabihi*, or *li-yusajjala bi-thubūtihi wa-tanfīdhihi*, or *li-yusajjala bi-thubūt mā qāmat bi-hi al-bayyinah fīhi wa-al-ḥukm bi-hi*. If the *tawqīʻ* is according to the Syrian model, the judge writes it in the margin, from the beginning of the first line of the text, in the following form: *li-yushhada bi-thubūtihi wa-al-ḥukm bi-mūjabihi*, and mentions in his handwriting everything for which testimony has been given to him, root and branch. If there is any disagreement (*khilāf*) about the question, he states *maʻa al-ʻilm bi-al-khilāf wa-billāh al-Mustaʻān.*[180]

Thus it can be readily seen that this *tawqīʻ* was composed in conformity with the pattern followed by Syrian notaries. Conversely, the document provides evidence that al-Asyūṭī was not writing in a vacuum, from the perspective of a theorist, but was describing actual notarial practice. The fact that he was writing a century or so later than our document merely underlines the conservatism of the Arabic notarial tradition.

ṣiḥḥat al-ḥawālah . . . wa-ṣarf al-mablagh al-mūṣá bi-hi . . . It is noteworthy that in addition to the verdict that Nāṣir al-Dīn's request for certification was valid the judge also singled out the validity of two specific transactions connected with the case, namely the *ḥawālah* and the disposition of the bequest. Obviously the judge must have regarded these transactions as the two critical legal issues, whose validity was open to challenge.

maʻa al-ʻilm bi-al-khilāf is one of several phrases cited by al-Asyūṭī to register a *qāḍī*'s awareness of the possibility of a divergent judgement from another judge on the basis of the same evidence.[181] It is interesting that in al-Ṭarsūsī's formulary the phrase takes the form, *maʻa ʻilmihi . . . bi-al-khilāf bayna al-ʻulamā*' (despite his knowledge of disagreement among legal scholars).[182]

30. in that. Written by Aḥmad ibn Muḥammad ibn ʻAlī.

Commentary

2. *Ashhadanī* . . . This document takes the form characterized by Guellil as *ishhād/isjāl*,[184] whereby a judge calls for witnesses to certify the validity of

[184]Guellil, *Akten*, 260.

the document on recto and all the transactions therein recorded. The intent was obviously to insure that these transactions would not be invalidated by another jurist. In fact, further steps were often taken whereby an *ishhād* was prepared by still another judge certifying the original *ishhād*/*isjāl*. This second *ishhād* would have been written in the space left blank to the right of the *ishhād*/*isjāl* on the present document.[185] In his chapter on *shahādāt* (testimony), al-Asyūṭī distinguishes between two formats for court certifications: the *isjāl* format followed by Egyptian notaries and the *ishhād* followed by Syrians. Since our document follows the latter format, we shall confine the present discussion to it.[186] Here is al-Asyūṭī's formulary:

> Format of a judge's *ishhād*, in lieu of an *isjāl*, in the mode of the Syrians, in which the judge signs with his *'alāmah* on the recto of the document and inscribes on the margin his request for witnesses to him regarding certification, judgement, implementation, etc., in the aforementioned form: Our Lord and Master—if he is a Chief Judge, the appropriate honorifics are mentioned along with the invocation, "may God perpetuate his days, strengthen his judgements, lengthen his shadow, and seal his deeds with good ones"; if he is a Deputy Judge, his honorifics are mentioned along with the invocation, "may God the Exalted support him" (*ayyadahu Allāh ta'ālá*)—with complete citation of the magistrate, his name and those of his father and grandfather, so as to avoid any confusion, followed by "al-Shāfi'ī" or "al-Ḥanafī," for example, in such-and-such a kingdom, called upon me as a witness to his generous soul, may God the Exalted guard him, in his noble council of judgement (*fī majlis ḥukmihi al-'azīz*) in such-and-such a place, that there was certified before him the *ishhād* (of attestation) on recto of the aforementioned buyer and seller[187] as to all that which is attributed to them (*bi-jamī' mā nusiba ilayhim*) on recto, and the validity

---

[185]For examples see *Catalogue*, 258-59 (no. 639), 307-8 (no. 625), 309-10 (no. 717).

[186]See Lutfi, "*Iqrār*s," 282-86; Ibrāhīm, "al-Tawthīqāt," 293-94; and, for a broader discussion of judicial records and registrations, Rudolf Vesely, "Die Hauptsprobleme der Diplomatik arabischer Privaturkunden aus dem spätmittelalterlichen Ägypten," *Archiv Orientální* 40 (1972): 312-43. For further specimens of certified/registered Mamluk documents see [Noberto Risciani], *Documenti e Firmani* (Jerusalem, 1936), 98-109, 190-209, 264-67.

[187]This phrase is used as an example of what the contents of recto might be.

> of the contract of sale between them in the sale designated on recto, in the manner set forth (*'alá al-wajh al-mashrūḥ*) therein, with valid and legal certification (*thubūtan ṣaḥīḥan shar'īyan*). I was witness to him in that (*fa-shahidtu 'alayhi bi-dhālika*) on such-and-such a date. If evidence is established before the judge to more than we have mentioned, this is added, the principle to be followed being the language and expressions the judge employed in signing the document, neither more nor less.[188]

Similar formularies for this type of *ishhād* are found in al-Ṭarsūsī's *Kitāb al-I'lām*.[189] As we shall see, our document conforms fully with these patterns, beginning with the first word, *ashhadanī*, which is the distinguishing opening of the Syrian model, as opposed to *hādhā mā ashhada bi-hi* . . . , which opens the Egyptian *isjāl*.[190]

2-3. *al-Faqīr ilá Allāh ta'ālá al-Shaykh al-Imām al-'Ālim* . . . are titles used in al-Asyūṭī's formularies for deputy *qāḍī*s.[191]
baqīyat al-salaf al-ṣāliḥīn, according to al-Qalqashandī, is used for scholars and virtuous persons.[192]

2-5. *Jamāl al-Dīn Abū Muḥammad 'Abd Allāh ibn Shams al-Dīn Abī 'Abd Allāh Muḥammad ibn Zayn al-Dīn Ḥāmid al-Anṣārī al-Shāfi'ī.* This *qāḍī* is mentioned only briefly by Mujīr al-Dīn, with the extra *nisbah* al-'Irāqī and with the comment that he was judge of Jerusalem, in office in 812/1409-1410.[193] But from the Ḥaram documents we know that he was Shāfi'ī Deputy Judge in Jerusalem as early as 795/1393, the date of this document. Note that in accordance with al-Asyūṭī's formulary his *nasab*s include both his father and his grandfather. The former, Shams al-Dīn Abū 'Abd Allāh Muḥammad ibn al-Shaykh Zayn al-Dīn Abī Muḥammad Ḥāmid ibn al-Shaykh Shihāb al-Dīn Abī al-'Abbās Aḥmad al-Maqdisī al-Anṣārī al-Shāfi'ī, was also a *qāḍī* in Jerusalem according to Mujīr al-Dīn.[194] From

---

[188]Al-Asyūṭī, *Jawāhir*, 2:452-53.
[189]Guellil, *Akten*, 212-14.
[190]Al-Asyūṭī, *Jawāhir*, 2:450, 452.
[191]Ibid., 450.
[192]Al-Qalqashandī, *Ṣubḥ*, 6:40.
[193]Mujīr al-Dīn, *Al-Uns*, 2:129.
[194]Ibid., 126.

the honorifics assigned to him in the document—Muftī al-Muslimīn, Ṣadr al-Mudarrisīn—we can infer that he too was probably a deputy *qāḍī*.[195]

7. *ayyadahu Allāh ta'ālá*. Note that according to al-Asyūṭī's formulary above, this invocation is used for deputy *qāḍī*s.
wa-huwa fī majlis ḥukmihi wa-maḥall walāyatihi. Only the first half of this phrase is found in al-Asyūṭī's formulary above. But the entire phrase occurs in at least one of al-Ṭarsūsī's formularies.[196] Apparently it indicates that the judge was in his legally constituted court when the proceedings were conducted.

8. *annahu thabata 'indahu ba'da taqaddum al-da'wá al-masmū'ah.* This is a stock phrase in the Ḥaram documents.[197] According to al-Asyūṭī the first step for a judge to take in adjudicating a matter is to determine whether a claim (*da'wá*) is legally permissible and can be heard in court. This process is known as *taṣḥīḥ al-da'wá*, which can be a formal proceeding, in which case the judge writes an '*alāmat al-da'wá—uddu'iyat bi-hi*—on verso, indicating that the claim has been heard and is valid.[198] Although in our document this formal procedure was apparently not followed (since there is no '*alāmat al-da'wá*), inclusion of the phrase, *al-da'wá al-masmū'ah*, indicates that the claim was heard and found to be permissible.

8-9. *wa-mā yatarattabu 'alayhā shar'an* is a stock phrase in the Ḥaram documents, indicating that a permissible claim and its legal implication and consequences have been duly submitted to the court.[199]

9-11. *'alá mā nuṣṣa wa-shuriḥa* is a stock clause used by al-Asyūṭī and al-Jarawānī in their formularies to refer to the contents of a certified document.[200] It is found as well in surviving specimens of Mamluk *ishhād*/*isjāl*s.[201] *Buyyina* and *ūḍiḥa* can also be found.[202] *Nuṣṣa wa-shuriḥa* is also used in witnessing clauses at the end of documents.[203]

10. *mā qāmat bi-hi al-bayyinah.* See commentary on no. 355 recto, lines 32 and 33.

12. *'alá al-wajh al-mashrūḥ*. See al-Asyūṭī's formulary above, pp.165-166.

12-13. *thubūtan ṣaḥīḥan shar'īyan mu'tabaran marḍīyan . . . mawthūqan bi-hi markūnan ilayhi* . . . are all stock phrases which can be found in formularies and documents to denote the absolute validity and effectiveness of the certification.[204] I have not come across examples of *ma'mūlan bi-hi mu'awwalan 'alayhi*, but they undoubtedly exist.

14. *mustajmi'an sharā'iṭahu al-shar'īyah* . . . is apparently a variant of the much more common *mustawfīyan sharā'iṭahu al-shar'īyah*.[205] In lines 19 and 20 below the phrase on line 14 is combined with *wa-wājibātihi al-mar'īyah*. Commenting on this combination as it occurs in a Mamluk *isjāl*, Muḥammad Muḥammad Amīn makes the following pertinent remarks:

> It is essential that the conditions of legal validity be fulfilled in the document and that it be written in a legal form which will leave no room for controversy. The most important of the legal conditions which the document fulfills is mention of the legal actor, identification of that which is disposed, without any ambiguity or conjecture, and mention of everything that enhances the validity of the disposition and its freedom from that which diminishes it, in addition to the testimony and signatures of the witnesses and the *qāḍī*'s endorsement of the testimony.[206]

14, 18. *ḥakama bi-mūjab dhālika kullihi . . . wa qaḍā' bi-mūjabihi.* We have already confronted the first clause above in the margin of no. 355 recto. According to Amīn these stock phrases

> mean that the judgement was issued validly and in accordance with other legal requirements, signifying that it is binding for whatever results from the matter in the way in which the judge considered it by law. The judgement requires (a) capacity to dispose (*ahlīyat al-taṣarruf*) and (b) correctness

[205]See al-Asyūṭī, *Jawāhir*, 2:451; Guellil, *Akten*, 213, 214, 216; Little, "Court Records," 28 (no. 649); Asali, *Wathā'iq*, 2:57 (no. 647); Risciani, *Documenti*, 264.

[206]Amīn, *Fihrist*, 350, citing Ibrāhīm.

of form (*ṣiḥḥat al-ṣīghah*). The judge delivers his judgement in accordance with these.[207]

15. *wa-ṣiḥḥat al-ḥawālah.* This is the second element cited in the judge's *tawqī'* written in the margin on recto. Note also that the clause contained therein, *wa-'adam rujū' al-muḥtāl 'alá al-muḥīl*, is repeated in the *ishhād/isjāl.* According to al-Asyūṭī, jurists disagree on this aspect of the *ḥawālah*, i.e., as to whether the creditor (*al-muḥtāl*) has any recourse against the property of the transferor (*al-muḥīl*) if he, the former, does not receive his right from the cessionary (*al-muḥtāl 'alayhi*).[208] The possibility of a challenge on this issue is, of course, one reason for including the phrase, *ma'a al-'ilm bi-al-khilāf* on line 17 and in the *tawqī'* on recto.

16. *wa-ṣarf al-mablagh al-mūṣá bi-hi.* This is the third element which the judge, in the *tawqī'*, cited for certification. By mentioning these three elements explicitly—the *ḥukm*, the *ḥawālah*, and the bequest—the *ishhād/isjāl* conforms to al-Asyūṭī's view that such a document should follow "the language and expressions the judge employed in signing the document, neither more nor less."[209]

18-19. *wa-amḍāhu wa-qaḍá bi-mūjabihi wa-alzama bi-muqtaḍāhu mas'ūlan fīhi* . . . are all stock phrases to be found in the formularies for *ishhād/isjāl*s and other judicial documents. Compare, for example, al-Ṭarsūsī's *wa-qaḍā' bi-mūjabihi wa-alzama bi-muqtaḍāhu wa-ajāza dhālika wa-anfadhahu wa-amḍāhu mas'ūlan fīhi . . .*"[210]

20-30. *fa-shahidtu 'alayhi bi-dhālika . . . ashhadanī . . .* The witnessing clauses follow the format characteristic of the Syrian *ishhād*, in which the drafter of the document responds to the judge's request for witnesses—*ashhadanī*—in the opening line of the text with *fa-shahidtu*. . . .[211] The co-witnesses use the formula *ka-dhālika ashhadanī . . . fa-shahidtu 'alayhi bi-dhālika.*[212] It is noteworthy that two of the witnesses to the *ishhād* served

[211] Al-Asyūṭī, *Jawāhir*, 2:452-53; Guellil, *Akten*, 260. For examples, see Asali, *Wathā'iq*, 2:57 (no. 647); Lutfi, "*Iqrār*s," 283-84 (no. 315 verso).

[212] Guellil, *Akten*, 364. For examples, see Asali, *Wathā'iq*, 2:57 (no. 647); Risciani, *Documenti*, 200, 204, 208.

also as witnesses to the document on recto, namely ʻĪsá[213] ibn Aḥmad al-ʻAjlūnī al-Shāfiʻī and Aḥmad ibn Muḥammad ibn ʻAlī.

I hope that the above commentary has demonstrated that this document is a standardized one which complies with the formularies recommended by al-Asyūṭī (and al-Ṭarsūsī), so much so, in fact, that it resembles a printed form which the notary has copied, filling in only the relevant particulars of name, dates, and transactions. Otherwise, almost all the language of the document consists of notarial clichés in common use in Mamluk Syria and Palestine. In this respect it is noteworthy that al-Asyūṭī, writing around a century after the date of the document, accurately recorded the different practices for certifying documents followed by Syrian, as opposed to Egyptian, notaries and court clerks. Thus we have one more reason for confirming the value of al-Asyūṭī's notarial manual as a historical source.[214]

CONCLUDING REMARKS

What is to be learned from this extended paper chase apart from a mass of detail related to the drafting of legal documents? Not as much, perhaps, as we would like but more than enough to justify the pursuit, given the paucity of data from literary sources on how society functioned below the level of the Mamluk elite and their clients. Here our documents afford us rare glimpses of a thriving but otherwise unknown family from a remote area of the Mamluk empire. The core of the family consisted of a childless merchant and his wife, both from Baalbek, who owned assets there as well as in Damascus and Jerusalem. At the time the first document, an estate inventory, was drafted in October 1391, the two were living in an apartment in the Maghribī Quarter of Jerusalem, presumably on a temporary basis since Shams al-Dīn did not own the building and his possessions listed in the inventory consisted solely of cash, clothing, and two carpets. Shams al-Dīn must have been in Jerusalem on business; otherwise it is difficult to explain the large amount of cash at his disposal in the city: 6133.25 *dirham*s and twenty-three gold coins, plus ninety-one *dirham*s declared by Ālmalik as maintenance. According to the inventory all the money had been deposited by Shams al-Dīn with two other merchants in Jerusalem. Although we do not know whether he took this action for reasons of security, profit, or both, it is interesting that he had such financial arrangements with two colleagues in the city. But the state of the couple's finances should not blind us to the possibility that they were combining business

[213]"ʻĪsá" I now prefer to "ʻAlī" in my "The Jews," 247.

[214]See Little, "Purchase Deeds," 333-35, and idem, "The Nature of *Khānqāh*s, *Ribāṭ*s, and *Zāwiya*s under the Mamlūks," in *Islamic Studies Presented to Charles J. Adams*, ed. Wael B. Hallaq and Donald P. Little (Leiden, 1991), 91-105. Cf. Monika Gronke, "La rédaction des actes privés dans

with piety and pleasure during their sojourn in Jerusalem. After all, the city was a pilgrimage center for Muslims, for which Ālmalik must have felt some affection since she arranged to pay for recitation of the Quran there after her death. In any event, by the ninth of October Shams al-Dīn had fallen sick and had become so weak that arrangements were initiated to prepare for his death. These took the form of the estate inventory conducted in his residence, with Ālmalik and four witnesses authorized by the Shāfi'ī judge Sharaf al-Dīn al-Anṣārī in attendance. Exceptionally, this same judge endorsed the inventory and ruled that it should be certified by witnesses to his judgement, though this step was apparently not taken. Perhaps he, or Shams al-Dīn and Ālmalik, thought that settlement of the estate would be complicated by their ownership of assets, and the presence of their heirs, in Syria and that certification might facilitate the process. Why the certification was not completed is not known.

Nor can we ascertain how soon thereafter Shams al-Dīn died, before the public sale of his possessions in March 1392. However, enough time had elapsed for his wife's nephew in Baalbek to obtain, in February, court certification of a document in Damascus supporting his claims on Shams al-Dīn's estate and to bring that document to Jerusalem. Himself the son of a judge, Nāṣir al-Dīn was an officer in the non-Mamluk corps stationed in Baalbek—the Ḥalqah. As a mere nephew to Ālmalik, he was excluded by other heirs to Shams al-Dīn's estate. Indeed, Shams al-Dīn's heirs are identified in the inventory and a later document as Ālmalik and two brothers and sisters; two or three of these were only half siblings, being the children of Shams al-Dīn's mother by another husband, apparently of non-Arab origin if his *nisbah*, al-'Ajamī, is a reliable indicator. Why these heirs made no claim on their brother's Jerusalem estate is a matter for conjecture: perhaps they were aware that Shams al-Dīn's long-standing debt of ten thousand *dirham*s to Ālmalik, legally transferred to her nephew, took precedence and would exhaust the Jerusalem holdings. Be that as it may, it was the nephew in the army, Nāṣir al-Dīn, who took the initiative and journeyed to Jerusalem, stopping in Damascus to put the necessary papers in order, so as to press his claim to the transferred debt. For the time being, under the auspices of the Ḥanafī Court, he was able to obtain all the proceeds of the sale of Shams al-Dīn's personal effects, netting 364 *dirham*s. More than a third (143.5 *dirham*s) of this amount was fetched from the sale of two garments (*ḥanīn*s) trimmed with fur; the rest came from other clothes and two old rugs. Nāṣir al-Dīn also managed to obtain three thousand *dirham*s held on deposit by one of the Jerusalem merchants mentioned above. But it seems that this was as far as Nāṣir al-Dīn got at this time. Was his aunt still alive at the time of the sale, i.e., 17 March 1392? Undoubtedly not, since four months earlier, in December 1391, Nāṣir al-Dīn had taken steps to make a claim on her estate on behalf of her legal heirs. Ālmalik came from a much larger

family than Shams al-Dīn; one of eleven children by the same father, she had five full sisters and two half-sisters and three half-brothers (all named Muḥammad!) by a second wife to her father. Apparently none of these heirs made a claim on their sister′s estate. Instead all of them, except Mughul, whose actions are unspecified, formally ceded their rights as heirs to Nāṣir al-Dīn, who was himself excluded as an heir. This was accomplished in two stages. In December 1391 he obtained certified documents authorizing him to act on behalf of five of the heirs in their claims against the estate; a year later, in December 1392, four of the remaining heirs granted him similar authorization. Moreover, at some unspecified time a public sale of Ālmalik′s effects was conducted in Jerusalem, from which Nāṣir al-Dīn realized the sizeable sum of 1701.25 *dirham*s. Whether this was released to him to retire the transferred debt or to satisfy the claims of the heirs is not known since no *makhzūmah* or any other document other than the *ishhād* recording the final settlement, drawn up in April 1393, has survived.

Whatever the case may be in this particular instance, our documents as a group acquaint us with the workings of a small nuclear family extended by numerous brothers and sisters, born of various husbands and wives—siblings represented by a nephew—split from the nuclear core by the considerable distance between Jerusalem and Baalbek by way of Damascus. But what is noteworthy in all this is the fact that despite the elaborate provisions made by the Islamic law of inheritance to insure the prescribed distribution of property and wealth among the closest blood and marital relations, in this case a remote relative, a nephew of one of the decedents, was able by assiduously availing himself of legal opportunities to interpose himself in the system to his own advantage. To be sure we cannot determine from our incomplete set of documents whether Nāṣir al-Dīn should be regarded as defender or exploiter of the rights of the legal heirs to his aunt′s estate. But the fact remains that a complex legal system gave him occasion to intervene. In this respect we might heed the advice of another scholar, who speaks in a similar vein on a related matter:

> Thus, if we are to understand how property passed from one generation to the next, we should pay less attention to the fixed rules of inheritance and greater attention to the flexible and dynamic rules that govern the transmission of endowment property.[215]

le monde musulman médiéval: Théorie et pratique,″ *Studia Islamica* 59 (1984): 159-74.

[215]David S. Powers, ″A Court Case from Fourteenth-Century North Africa,″ *Journal of the American Oriental Society* 110 (1990): 243.

If for the last clause we substitute ″rules that govern the judicial system,″ we come close to recognizing one of the advantages to be gained from studying the Ḥaram documents.

The complexity and efficiency of the Islamic judicial system under the Mamluks is a second lesson to be learned from our documents. Here some observations can be made about the operations of the courts in Palestine and Syria at the end of the fourteenth century. First, it is clear that the activities of judges were not isolated according to *madhhab* but that the actions of a judge of one school were recognized as valid by judges of the others. Thus the decisions made on 7 April 1393 by the Shāfiʻī judge of Jerusalem, Sharaf al-Dīn al-Anṣarī, to accept the validity of the proxies assigned to Nāṣir al-Dīn as well as his entitlement to the transfer of the debt owed by his uncle to his aunt involved recognition of the validity of actions taken by Ḥanafī and Ḥanbalī judges as well as other Shāfiʻī judges. Furthermore it is obvious that the activities of the judges were not restricted in venue but were recognized as valid in different towns of the Mamluk empire. It is not surprising, of course, that a court in Jerusalem would accept documents certified by courts in Damascus since the former were under the jurisdiction of the latter for a considerable stretch of the Mamluk period.[216] Nevertheless, we have seen that the *shurūṭ* manuals describe the procedures by which court rulings could be conveyed from one court to another, no matter what the location may have been. In this respect it is possible that the Mamluks′ policy of equalizing the four schools of jurisprudence facilitated recourse to judges of diverse affiliations.[217] The uniformity of judicial and notarial documents throughout the empire, taking into account variations in the Egyptian and Syrian traditions, also served to give the system coherence. In any event no less than seven judges of three *madhhab*s (three Shāfiʻī, two Ḥanafī, and two Ḥanbalī) in two cities are known to have participated in the settlement of the estate in question; there may well have been more cited in documents missing for Ālmalik (estate inventory or will and *makhzūmah*). In addition the four extant documents bear the names of twenty-one witnesses, three of whom witnessed two documents. In line with what has been observed regarding the interaction of the *madhhab*s, it is noteworthy that both the estate inventory and Nāṣir al-Dīn′s *ishhād* of attestation were witnessed by affiliates of both the Shāfiʻī and Ḥanafī schools. Nevertheless, it is somewhat curious that the Ḥanafī judge in Jerusalem loomed so large in the settlement process: he authorized the sale of Shams al-Dīn′s

---

[216]According to Mujīr al-Dīn (*al-Uns*, 2:119), the Shāfiʻī judges in Jerusalem were appointed by the *qāḍī* of Damascus until 800/1397-98, when the Mamluk sultan in Egypt asserted this prerogative.

[217]See Joseph H. Escovitz, ″The Establishment of Four Chief Judgeships in the Mamluk Empire,″ *JAOS* 102 (1982): 529-31; Little, ″Religion under the Mamluks,″ *The Muslim World* 73 (1983): 174-75, reprinted in Little, *History and Historiography.*

chattels; consequently, all the documents from Damascus were conveyed to him before they reached the Shāfiʻī Court where the residue of the estate was deposited.

Finally, the obvious point should be stressed that despite what is often claimed to be an Islamic bias in favor of oral as opposed to written testimony, documents played a conspicuous and essential role in legal transactions. In this particular case, Nāṣir al-Dīn′s certified attestation that he received the money due to him from the Shāfiʻī Depository in Jerusalem, more than twenty documents listed in Appendix A can be identified. Documents issued in Damascus as early as 1386 were adduced in Jerusalem in 1393 in support of legal claims in accordance with a recognized system of conveying legal instruments from one court to another. This is not to deny the importance of witnesses who were physically present to give testimony in judicial proceedings; references in our documents to *bayyinah* and the signatures of witnesses beyond the requisite two demonstrate the prominence of their role. Still, in the tradition of the states that antedated Islam, the medieval Muslim courts were clearly awash with documents and personnel to draft and register them. There can be no doubt that Muslim courts accepted documents as proof as long as they met long-standing criteria drawn up and continuously monitored by jurists.

APPENDIX A

Chronological list of documents and legal transactions involved in the disposition and settlement of the estates of Shams al-Dīn al-Baʻlabakkī and his wife.

1. 13 Shawwāl 788/7 November 1386. A *ḥujjah/masṭūr* (document) containing an *iqrār* (acknowledgment) of Shams al-Dīn′s ten thousand *dirham* debt to his wife Ālmalik and a *faṣl ḥawālah* (no. 3 below).[218]
2. 1 Dhū al-Ḥijjah 788/24 December 1386. An *ishhād* (attestation of certification) by Aqḍá al-Quḍāh Badr al-Dīn al-Ḥanafī in Damascus certifying the *iqrār* (no. 1 above).[219]
3. 23 Ṣafar 789/15 March 1387. A *faṣl ḥawālah* (transfer clause) added to the *iqrār* (no. 1) containing Ālmalik′s *ishhād* (attestation) that she had transferred the debt to her sister′s son, Nāṣir al-Dīn.[220]
4. Unspecified date prior to the estate inventory (no. 5 below). A *masṭūr* (document) containing Ibn Sanājiq′s *ishhād* (attestation) that Shams al-Dīn had deposited 3000 *dirham*s with him.[221]
5. 10 Dhū al-Qaʻdah 793/9 October 1391. An inventory of Shams al-Dīn′s estate in Jerusalem, containing a *ḥukm* (judgement) by al-Qāḍī Sharaf al-Dīn al-Shāfiʻī that the document is certifiable.[222]
6. Unspecified date. Ālmalik′s will or estate inventory.[223]
7. 4 Muḥarram 794/2 December 1391. A *wakālah* (power of attorney), added as a *dhayl* (codicil) to *iqrār* no. 10 below, authorizing Nāṣir al-Dīn to act on behalf of Sitt al-Wuzarā', Fāṭimah, Sutaytah, and Muḥammad III (through his guardian Muḥammad II) in regard to Ālmalik′s estate.[224]
8. Mid-ten days of Muḥarram 794/9-18 December 1391. A *maḥḍar* (court record) from Damascus containing a list of Ālmalik′s heirs.[225]
9. 16 Muḥarram 794/14 December 1391. An *ishhād* (of certification) by Aqḍá al-Quḍāh Taqī al-Dīn ibn al-Munajjā al-Ḥanbalī in Damascus certifying the *maḥḍar* (no. 8).[226]

[226]No. 355 recto, lines 10-12.

10. 21 Muḥarram 794/19 December 1391. An *ishhād* (attestation) containing an *iqrār* of Muḥammad II, acknowledging Nāṣir al-Dīn′s entitlement to his (Muḥammad′s) inheritance from Ālmalik.[227]
11. 28 Rabīʻ I 794/23 February 1392. An *ishhād* (of certification) by Aqḍá al-Quḍāh Shams al-Dīn al-Ikhnāʼī al-Shāfiʻī in Damascus, certifying the *ḥawālah* (no. 3).[228]
12. 4 Rabīʻ II 794/1 March 1392. An *ishhād* (of certification) by Aqḍá al-Quḍāh Taqī al-Dīn ibn Mufliḥ al-Ḥanbalī in Damascus, certifying Muḥammad II′s *iqrār* (no. 10) and the *wakālah* of four of the heirs (no. 7).[229]
13. 18 Rabīʻ II 794/15 March 1392. Certification (no. 12) of the *iqrār* (no. 10) and the *wakālah* (no. 7) was conveyed to and received by Aqḍá al-Quḍāh Taqī al-Dīn al-Ḥanafī in Jerusalem.[230]
14. On or before 23 Rabīʻ II 794/20 March 1392. Certifications (nos. 2 and 11) of the *iqrār* of debt (no. 1) and the *ḥawālah* (no. 3) were conveyed to and received by Taqī al-Dīn ibn al-Munajjā al-Ḥanbalī in Jerusalem.[231]
15. 23 Rabīʻ II 794/20 March 1392. A *makhzūmah* recording the sale of Shams al-Dīn′s chattels in Jerusalem to settle the debt to Ālmalik transferred to Nāṣir al-Dīn.[232]
16. First ten days of Ṣafar 795/17-26 December 1392. An *iqrār* by Muḥammad I, Asmāʼ, Asin, and Altī authorizing Nāṣir al-Dīn to receive whatever was due to them from Ālmalik′s estate.[233]
17. 19 Rabīʻ II 795/4 March 1393. An *ishhād* (of certification) certifying that certification (no. 9) of the *maḥḍar* (no. 8) was conveyed to and received by Taqī al-Dīn al-Ḥanafī in Jerusalem.[234]
18. 24 Jumādá I 795/7 April 1393. An *ishhād* (of certification) certifying that certifications (nos. 9 and 17) of the *maḥḍar* (no. 8) were conveyed to and received by al-Qāḍī Sharaf al-Dīn al-Shāfiʻī.[235]
19. Same date. Certifications (nos. 12 and 13) of the power of attorney (no. 7) were conveyed to and received by Sharaf al-Dīn al-Shāfiʻī.[236]

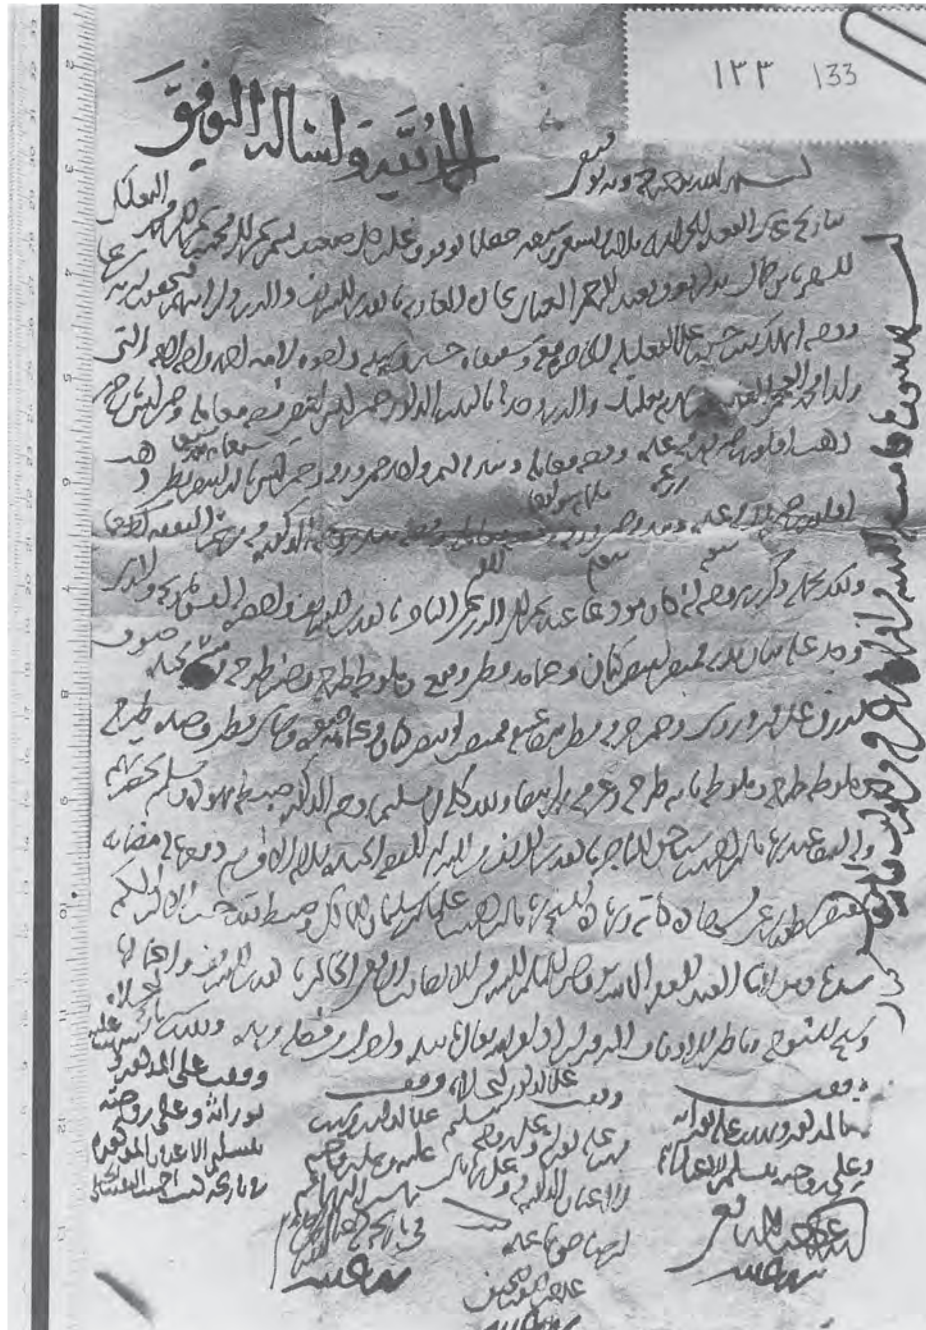
APPENDIX B: NOTES ON THE MAMLUK *SIYĀQAH*

As we have observed in three documents, there is no consistency in the use of the *siyāqah* script for numbers; much obviously depended on the preferences of the clerks and notaries. In the estate inventory (no. 133), all numbers except the date (line 2), one *dirham* (line 6), and 3000 *dirham*s (line 12), are written in *siyāqah*. Almost all the *siyāqah* numbers are placed between the lines of the text, below the nouns they qualify. The one exception is Ālmalik′s *nafaqah* (line 7), which is written on the line of the text. In the *makhzūmah* (no. 591), all the dates except one are written in a normal notarial *naskh* (although the *mi'ah* of *sab'mi'ah* almost disappears in a ligature written beneath the *'ayn* on lines 11, 13, 15, 19, recto A); the exception is the 700 on line 23, recto A: .

In addition, the sum of 10,000 *dirham*s (line 10, recto A) is written out in full in the preamble. All the other numbers are written in *siyāqah*, in conformity with *makhzūmah* conventions. In Nāṣir al-Dīn′s long attestation (no. 355 recto) many numbers are written in *naskh* on the lines of the text (lines 4-5, 16, 42, 43) plus all the dates except one (line 10): 790.

Only when the detailed breakdown of the sums involved in the estates is given does the clerk begin to enter *siyāqah* figures interlineally (lines 43, 44, 45, 46). If, then, we were to try to infer a rule or pattern followed by the clerks in these three documents, it would be that numbers, including dates, are normally written out full in *naskh*, in the text, except when the clerks are required to present itemized lists, as in the estate inventory and the *makhzūmah*, or to summarize calculations, as in Nāṣir al-Dīn′s *ishhād*. Nevertheless, there are unpredictable exceptions to the rule, as noted. As far as dates are concerned, they are usually written out in full, but the clerks sometimes lapsed into *siyāqah* or another form of abbreviation.



Having confessed in the article to our inability at times to reconcile our readings of individual numbers with some of the totals recorded in the documents, we can still present the following list of *siyāqah* notations used by clerks and notaries in Mamluk Jerusalem of the late fourteenth century.[244] Note that the notations for 10, 20, 28, 45, 64, 81, 91, 98, 300, 600, and 3000 have a terminal *mīm*, which stands for *dirham/darāhim*. Fractions are written below the whole numbers in the *siyāqah* texts.

1/4	1/2 (alone)
1/2 (in combination)	3/4

[244]Cf. the notations described by Jaritz, ″Auszüge,″ 169.

Book Reviews

André Clot, *L´Égypte des mamelouks: L´empire des esclaves (1250-1517)* (Paris: Librairie Académique Perrin, 1996). Pp. 354.

Reviewed by Paul M. Cobb, Wake Forest University

Can Mamluk history be popular history? For some historians, no more damning praise could be bestowed than to have one´s work labeled ″popular.″ Yet, to judge from his other works (*Haroun al-Rachid et le temps des mille et une nuits* [1986], *Mehmed II, le conquérant de Byzance* [1990], etc.), popular history seems to be André Clot´s baguette and butter, and he has carried it off with verve in his latest book, a whirlwind tour of the Mamluk Sultanate from its origins to its demise.

The book is divided into two parts. The first part is a narrative survey of the political history of the period, with a brief prologue about precedents for Turkish slave troops in the Islamic world (″Mamluks before Mamluks″). The title of part one, ″Two Hundred Fifty Years of Power and Splendor,″ sums up why the author thinks the Mamluks are worthy of study, as well as his romantic vision of the Islamic past. In summing up this period, Clot concludes (p. 207): ″The *mamlūk*-system possessed enormous defects. Absolute power corrupts absolutely. . . . [The Mamluks were] [b]rutal and without scruple, to be sure, but what grand chivalry was that of the Mamluks, courageous, ready for any sacrifice for Islam and for the empire!″

Clot´s anecdotal narrative, then, is one that chronicles the ″power and splendor″ of the Mamluks, focusing on the colorful, the violent, and the weird. This first part deals with the politics of the Sultanate, and above all with the territorial expansion of the state. For Clot, the Mamluk Sultanate especially saw its greatness in its victories over the Crusader states and the Mongols. Their ″golden age″ was the ″long and glorious reign″ of al-Nāṣir Muḥammad (i.e., his third reign), ending only with the Black Death in 1348, followed immediately by a ″time of crises″ and ″years of blood.″ Despite the Sultanate´s ″Indian summer″ under Barsbāy, the Mamluk achievement was slowly dismantled as Barsbāy´s successors led the Sultanate to its demise. This is hardly a radical vision of Mamluk history. As this periodization suggests, Clot attaches special importance to the personality of individuals as agents of change, and much of this first part is given over to biographical and psychological sketches of the various personalities of the period.

The second part of the book is a topically-arranged survey of various aspects of Mamluk history: social organization (heavily indebted to Lapidus), cities, trade, daily life, art (without any illustrations), and literature. The book concludes with

an epilogue, a sketch of the continuity of the *mamlūk*-system in Ottoman Egypt. Six appendices contain digressions on the Nile flood, Felice Brancacci′s audience with Barsbāy in 1422, a European account of a wedding, the status of Christians, a list of sultans, and a handy time-line.

Specialists may feel themselves above this sort of book, and the author may well be happy to leave them there. On the other hand, some (like this reviewer) might feel a certain guilty pleasure at the author′s fondness for the lurid. Be that as it may, Clot does not treat his subject haphazardly, and the book has much to recommend it, especially to non-specialists. The historical narrative appears to be accurate, although a detailed analysis of the book might turn up errors of fact. Although Clot does not appear to have consulted any indigenous sources in the original, he did make use of the standard Orientalist translations, as well as some of the more important (and older) secondary studies. The second part of the book is especially noteworthy, fleshing out in telling detail an otherwise traditional ″trumpets and drums″ narrative with the sights and smells of daily life. If Clot′s book will not satisfy all readers, it at least paints a rich (if idiosyncratic) picture of an Islamic past.

TH. EMIL HOMERIN, *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, His Verse, and His Shrine* (Columbia, South Carolina: University of South Carolina Press, 1994). Pp. 162.

REVIEWED BY WARREN C. SCHULTZ, DePaul University

This monograph is a study of the Cairene poet Ibn al-Fāriḍ (576-632/1181-1235). Given when he lived, readers of this journal might well ask why this book is being reviewed here. The answer lies in the fact that this volume is more than a biography of Ibn al-Fāriḍ. It is a study of the posthumous transformation of Ibn al-Fāriḍ from highly regarded poet into first, an influential Sufi, then a Muslim saint (*walī*) whose tomb was a locus of pilgrimage, and finally into his modern image as a "God-intoxicated" poet. The first two stages of this transformation happened during the Mamluk period. Thus while the focus of this book is not limited to things Mamluk, Mamlukists will find much that is worthy of their attention.

Ibn al-Fāriḍ's posthumous roles in the Mamluk era are apparent from the first page. The book begins with an account of the appearance of the ghost of Ibn al-Fāriḍ before the father-in-law of Sultan al-Ashraf Qāytbāy. As Homerin demonstrates, the Mamluk sources are replete with mentions of Ibn al-Fāriḍ.

While he is often cited as a poet of supreme quality, those sources often mention that the man and his poetry were open to frequent charges of advocating various "heretical" beliefs, chief among them monism (*waḥdat al-wujūd*), divine incarnation (*ḥulūl*), or the possibility of mystical union with the divine (*ittiḥād*). What is also clear, however, is that Ibn al-Fāriḍ also had his share of supporters. Thus Homerin devotes much of chapters 1 and 3 to detailed discussion of three occasions during the Mamluk era in which the poet's name and verse figured in major controversies. The first occurred in the waning years of al-Manṣūr Qalāwūn's sultanate (pp. 40-44), the second in 831/1428 (pp. 59-60), and the third and most important in 874-875/1469-1470 (pp. 60-75). The figures involved in these disputes ranged from high-ranking members of the *'ulamā'* and leading Sufis to civilian political officials and representatives of the Mamluk elite. It is a major strength of this book, however, that these controversies are not dismissed as merely dichotomous conflicts between learned *'ulamā'* and mystical Sufis. Ibn al-Fāriḍ's supporters and detractors defy such simplistic classification, and Homerin's awareness of this—coupled with his thorough reading of the available sources—enables him to draw out the various political, economic, and even personal contexts (in addition to the theological) of these episodes. He has unpacked levels of information that are all too often lost as one plows through the chronicle accounts.

By concentrating on these episodes, of course, I have ignored several important aspects of the book that are not limited to a Mamluk-only perspective. (In this sense, I am reminded of Robert Irwin's *The Arabian Nights: A Companion* [1995], a book which, while not about the Mamluk era *per se*, contains important and cogent analyses of several aspects of Mamluk society.) Homerin provides a sophisticated introduction to Ibn al-Fāriḍ's poetry, accompanied by lucid translations of many verses. And, as Frederick M. Denny points out in his preface, since there is not an official procedure in Islam for the canonization of saints, this book provides a valuable case study of one long process of sanctification. Homerin also illustrates how Ibn al-Fāriḍ has become part of the fabric of Egyptian culture, whether in the Mamluk era rivalries mentioned above or in the fiction of Naguib Mahfouz. In short, Homerin has distilled a 750-year tradition into a well-written monograph deserving of wide readership.

FĀYID ḤAMMĀD MUḤAMMAD ʻĀSHŪR, *al-Jihād al-Islāmī ḍidda al-Ṣalībīyīn wa-al-Mughūl fī al-ʻAṣr al-Mamlūkī* (Tripoli, Lebanon: Jarrūs Press, 1995). Pp. 368.

REVIEWED BY ANNE F. BROADBRIDGE, The University of Chicago

ʻĀshūr′s work provides what its title promises, and presents the field with a history of Mamluk *jihād* against the Crusaders, the Mongols, the Ethiopians, and Tīmūr, informed by a late twentieth-century consciously Islamist world view. It is not a narrative of general Mamluk military encounters throughout the 267-year span of their rule, but rather focuses only on those battles or campaigns that fit the author′s definition of *jihād*. This results in a somewhat disjointed work, in which chapters can either bear too little relation to each other, or too much.

ʻĀshūr sets up the book by laying out a detailed description of *jihād*. This accomplished, he then employs this definition to call for revolution against, and the removal of, un-Islamic government, as well as for *jihād* and terrorism (*irhāb*) against non-Muslims. Having established his ideological framework, ʻĀshūr proceeds to the body of the work, in which he uses the example of the Mamluks both to illustrate the abstract idea of *jihād* with concrete examples, and to support his call for *jihād* against contemporary corrupt governments, Egypt's in particular.[1]

ʻĀshūr′s arrangement of this subsequent material is quite interesting, although it differs decidedly from standard historiographical practices of chronological or topic-related organization. Most of the chapters focus on the forty-two-year period between 1249 and 1291 in general, and the reigns of Baybars, Qalāwūn, and al-Ashraf Khalīl ibn Qalāwūn in particular. However, ʻĀshūr also includes chapters on al-Nāṣir Muḥammad (only up to 702/1303), Ethiopia, Cyprus, and Tīmūr′s campaign of 1400-1401.

To state that ʻĀshūr focuses mainly on the years 1249-1291, however, does not mean that he approaches these years in chronological fashion. Rather ʻĀshūr chooses to tell the story of the Mamluks and their enemies several times over, focusing in each chapter on different facets of the historical picture. This style of writing is reminiscent of—and might be modeled after—the fascination of early Islamic authors like Ibn Saʻd (d. 844) with the *khabar* or report. Such early authors recorded similar accounts of the same event one after another in order to emphasize different aspects of the event itself, as well as the varying degrees of their confidence in different sources. This technique gradually gave way to the annalistic style favored by al-Ṭabarī (d. 923) and subsequent authors, although the importance of the *khabar* never disappeared entirely. Unlike early Islamic scholars, however, ʻĀshūr is not presenting and critiquing the voices of others in this book,

[1]N.B.: The book was published in Lebanon although ʻĀshūr teaches at ʻAyn Shams University in Cairo.

but merely providing his own voice. As a result the book as a whole lacks any overarching evaluation or source criticism. Additionally, since ʿĀshūr explores different facets of the same or similar sets of historical data in each chapter, the work as a whole suffers greatly from repetition of material, and generally reads like a poorly-edited collection of overlapping lectures.

Following his introduction on *jihād*, ʿĀshūr provides two chapters of historical background, after which he arranges the remaining chapters according to the different enemies the Mamluks faced, first Christian or Crusader enemies (chapters 4-8), then Mongol foes (chapters 9-12). His second chapter, ″The Appearance of the Mamluk State,″ presents the formation of the Mamluk Sultanate in 1249 in opposition to the invasion of the French king Saint Louis IX, and its perpetuation up through both the battle of ʿAyn Jālūt (1260) and the re-establishment of the Abbasid caliphate (1261). Rather than progressing chronologically from 1261, however, the next chapter, ″The Victory of Islam at ʿAyn Jālūt, 1260 AD,″ begins with a brief history of the Mongols before once again treating the French invasion of Egypt, this time in the context of a Frankish-Mongol exchange of envoys. Following this, ʿĀshūr investigates the battle of ʿAyn Jālūt again, this time in much more detail and with a great deal more analysis. These two chapters provide a general historical background.

Next begins the section addressing Christian or Crusader foes of the Mamluks. In chapter 4, ″*Jihād* against the Crusaders in the Age of Sulṭān al-Ẓāhir Baybars,″ ʿĀshūr returns for the third time to the French invasion of Egypt, this time drawing attention to the Crusader presence vis-à-vis not only the Mamluks but also the Ayyubids of Syria. He also discusses Mamluk-Ayyubid rivalry, and touches briefly upon some of the tensions among various Crusader groups, although not with enough detail or specificity, closing the chapter with the introduction of Baraka Khān of the Golden Horde, hitherto unknown to the reader.

These first chapters are the strongest in the book, due to the amount of detailed information they contain and ʿĀshūr′s extensive supportive quotation from sources. The book begins to weaken significantly in its fifth chapter, ″*Jihād* in the Days of Sulṭān Qalāwūn al-Alfī,″ in which ʿĀshūr moves on to discuss Baybars′s successor Qalāwūn and his struggles against the Crusaders. Although equally detailed, this chapter is weakened by a number of moralistic asides and exhortations, which begin by taking up historical issues like Qalāwūn′s internal punitive measures against Christians and Jews, and end with such anachronistic topics as the Israeli-Palestinian conflict. The remaining chapters become increasingly marred by carelessness and similar ahistorical and rampant moralizing.

Chapter 6 is entitled ″Crusader Alliances with Ethiopia against Islam.″ ʿĀshūr′s inclusion of Ethiopia is interesting, as many other scholars of the Crusades ignore the Ethiopian presence; unfortunately, however, Ethiopia occupies only the final

six pages of this twenty-page chapter. ʿĀshūr builds up to the Ethiopian connection with a vitriolic fourteen-page discussion of Christianity's desire to destroy Islam, either through the military action of the Crusades, or through economic warfare against the Mamluks. Although clearly aware of the arguments for economic, strategic, social, or political motives behind the Crusades, ʿĀshūr chooses to hold religion responsible as the single cause for enmity between medieval Europe and the Mamluk Sultanate, and thus takes care to discard all other possible causes as false (p. 211).

Moving away from this promising and yet ultimately unsatisfactory treatment of Ethiopia, ʿĀshūr turns next to "The Mamluks' *Jihād* against the Crusader [State of] Little Armenia," in light of the aforementioned theory of Christian economic warfare against Islam. ʿĀshūr attempts to situate his comments by providing a brief history of Armenia-Cilicia. This is a decidedly superficial presentation of the material; for example, ʿĀshūr describes settlement of the area in the eleventh and twelfth centuries in terms of Armenians "who fled to that region" (p. 229), but neglects to mention the Seljuks, from whom they were fleeing. Nor does he make any reference to the ninth-century Byzantine practice of using Armenian administrators in Cilicia. Following this faulty introduction, ʿĀshūr goes on to rework much of the material from chapter 4 about Baybars's attacks on Cilicia, then brings the narrative up to the final Armenian defeat of 1374.

ʿĀshūr's eighth chapter, "Relations of the Mamluk State in Egypt and al-Shām with Cyprus," seems to have been merely tacked on to round out this section on the Mamluks' Christian foes. After an encapsulated history of Cyprus since the rise of Islam, he focuses on those campaigns that took place in 1365 or later. This sits oddly with the preceding sections of the text, which, except for the Armenian chapter, only reach the year 1291. Although in this chapter events are presented as a unified sequence, the gap of years or decades between them, and the omission of other important internal political and strategic events makes this casual stringing together of battles unconvincing. One example should suffice: ʿĀshūr jumps from 1368 to 1424 without transition, and compounds the problem by discussing one of Sultan Barsbāy's policy decisions without supplying any kind of introduction, background, or greater historical framework.

Having finished his treatment of Christian enemies, ʿĀshūr proceeds to a discussion of the Mamluks' Mongol foes. This means that the ninth chapter, "*Jihād* against the Mongols in the Age of Sulṭān al-Ẓāhir Baybars," is a continuation of the story of ʿAyn Jālūt begun 135 pages earlier. Like chapter 4, this chapter focuses on the period directly following ʿAyn Jālūt, but this time ʿĀshūr concentrates on tension between the Mamluks and the Ilkhanids, rather than military encounters between the Mamluks and the Crusaders. To his credit, he does include a new angle here, namely detailed information about the role of the city of Mosul in

Mamluk-Mongol skirmishing, which has been omitted by such authors as Runciman and Setton, as well as more recently by scholars like Amitai-Preiss.

Similarly the tenth chapter, ″*Jihād* of Sulṭān Qalāwūn al-Alfī against the Tatars,″ once again presents the story of Qalāwūn and the Crusaders (chapter 5), this time with an emphasis on the Ilkhanids′ activities. It is followed by ″*Jihād* against the Tatars in the Age of Sulṭān al-Nāṣir Muḥammad ibn Qalāwūn.″ This is an entirely new piece filled with fresh information, but is nevertheless disappointing. ʻĀshūr seems to be unaware of the work of Emmanuel Sivan and his discussion of the role of the *faqīh* Ibn Taymīyah (d. 1328) in overcoming Mamluk/Muslim reluctance to fight their co-religionist foes, the Mongols.[2] Rather ʻĀshūr′s treatment of Ibn Taymīyah and his importance in the formation of ideology during the Ilkhanid campaigns of 1299 and 1303 is largely restricted to unadulterated praise, which is then used as a vehicle for ʻĀshūr′s condemnation of modern governments for not fighting infidels with enough conviction.

Already limping severely, the book stumbles and falls short in the final full chapter, ″The Attack of Tīmūr Lang on al-Shām.″ ʻĀshūr seems compelled to write on Tīmūr′s campaign against the Mamluks as the last gasp of the ″Mongols,″ but does not do the topic justice. It is clear that he has not yet read the works of Beatrice Manz and John Woods,[3] when he states, for example, that Tīmūr was a Mongol and that his mother was descended from Chingiz Khān, ignoring that it was Tīmūr′s very inability to lay claim to the Chingiz Khanid heritage that led to his elaborate construction of identity and ideology (p. 339). ʻĀshūr also ignores important historical details like the treachery of the Mamluk amir Damardāsh at Aleppo and the presence of Ibn Khaldūn in Damascus at the time of Tīmūr′s campaign, to say nothing of Ibn Khaldūn′s actual meeting with Tīmūr.

ʻĀshūr ends his work with a five-page conclusion in which he waxes fulsome in his praise for the *jihād*-inspired military skills and zeal of the Mamluks. That accomplished, he proceeds to his main purpose, which is to condemn so-called "Islamic" countries today, and to call first for a unified Islamic community, and second to action against Christians and Jews. ʻĀshūr closes with a final general call to terrorism (*irhāb*) to achieve the goals set out throughout the book.

In conclusion, ʻĀshūr′s work is interesting mostly as an example of late twentieth-century Islamist history. He is clearly familiar with the Arabic source material, especially for the earlier years of the Mamluk Sultanate, and often provides detailed

---

[2]Emmanuel Sivan, *Radical Islam: Medieval Theology and Modern Politics* (New Haven, 1985).

[3]Beatrice Manz, *The Rise and Rule of Tamerlane* (Cambridge, 1989); idem, ″Tamerlane and the Symbolism of Sovreignty,″ *Iranian Studies* 21 (1988): 105-22; John Woods, ″The Rise of Timurid Historiography,″ *Journal of Near Eastern Studies* 46 (1987): 81-108; idem, ″Timur′s Genealogy,″ in *Intellectual Studies on Islam: Essays Written in Honor of Martin B. Dickson*, ed. Michel M. Mazzaoui and Vera B. Moreen (Salt Lake City, 1990), 85-125.

information, particularly in the first chapters. Certainly ʿĀshūr′s presentation of his material, although repetitive, unwieldy and obfuscating, is interesting when viewed as an attempt to assert an alternate framework for the writing of history. Nevertheless, even as a modern recasting of the *khabar*-centered histories, the book is unsuccessful. It neither provides a coherent chronological progression, nor, as in the case of the three successive accounts of ʿAyn Jālūt, a broad view of all the intricacies of one event or period. Nor is ʿĀshūr positioning the reports of others within a coherent framework, but rather is merely refracting his own opinions through his organizational scheme. ʿĀshūr′s factual carelessness in his later chapters, as well as his inability to resist opportunities to moralize, seriously weaken the later sections of the book and detract from its overall quality as a work of history. As a final note, it should be pointed out that the book is plagued by numerous typographical errors, poor footnotes, anachronistic, ahistorical and careless use of terminology, and a noticeable lack of uniformity in dates, which sometimes appear using the *hijrī* calendar, sometimes the common era calendar, and only occasionally both. Thus the book should be used with extreme caution, if at all, by anyone other than the student of late twentieth-century Islamist historiographical trends.

MUḤAMMAD IBN ʿABD AL-RAḤMĀN AL-SAKHĀWĪ, *Wajīz al-Kalām fī al-Dhayl ʿalá Duwal al-Islām*, edited by Bashshār ʿAwwād Maʿrūf, ʿIṣām Fāris al-Ḥarastānī, and Aḥmad al-Khuṭaymī (Beirut: Mu'assasat al-Risālah, 1416/1995). Four volumes.

REVIEWED BY FRANZ ROSENTHAL, Yale University

Al-Sakhāwī (831-902/1427-1497) is one of the most informative and prolific authors of his century, above all as an historian but also as a writer on numerous religious subjects, whose work lives on to this day as an inexhaustible source of information and instruction. The appearance in print of an unpublished work of his may deservedly be termed an event. The *Wajīz*, edited here in a well turned-out edition, is no exception.

(After completion of this review in manuscript, I happened upon an earlier edition of the work entitled *al-Dhayl al-Tāmm ʿalá Duwal al-Islām lil-Dhahabī* and edited by Ḥasan Ismāʿīl Marwah and Maḥmūd al-Arnāʿūṭ [Kuwait, 1413/1992]. The edition ends with the year 850; I do not know whether the announced second part has been published. As stated in the preface, it is based upon a photocopy of a manuscript in Tunis dated 979 and thus deserves checking. It is, however, sad that

editions continue to be based upon limited manuscript material [see below], and earlier printings are not even mentioned. The all too frequent phenomenon of the appearance of the same text at about the same time in different places, although it is understandable, constitutes a waste and loss for all concerned, manufacturers, private and public libraries, and, above all, scholarship.)

By Mamluk times, the forms of historical writing were fully developed in all their many varieties. As a faithful disciple of his revered teacher Ibn Ḥajar, al-Sakhāwī followed him in writing a great centennial history, and it is not surprising that he also wrote a history such as the *Wajīz*, arranged annalistically with each year divided into events and obituary notices just as Ibn Ḥajar had done in his *Inbā' al-Ghumr bi-Abnā' al-'Umr*. He, however, did not follow the *Inbā'* with its strict systematic arrangement, but continued the rather skimpy and disorganized *Duwal al-Islām* of al-Dhahabī from 745 to 898. Why he did so is one of the problems we face in this work. It would have been helpful if he had indicated the name of the individual who supposedly suggested to him the composition of the *Wajīz* and who may or may not have been a real person and not merely a convenient fiction. He speaks of him in the beginning as an extremely accomplished and exemplary individual who had inherited his many good traits from his father and grandfather and added to them by his own exertion, ″so much so that when his excellent qualities are counted, it may well be said: ′How much did the first leave to the later′″ (a well-known remark which seems strangely misapplied here). A simple explanation would be at hand if it could be shown that a descendant of al-Dhahabī is meant, but this does not seem to be possible. Thus, it seems, we must fall back upon the feeble assumption that it was merely the fame of al-Dhahabī as the author of a large world history of events and obituaries as well as its very concise abridgment that convinced al-Sakhāwī, who admired him greatly, to compile an abridged history here of the events and obituaries for the century and a half that had passed since al-Dhahabī′s time. It may be noted that following al-Maqrīzī, al-Sakhāwī himself had also compiled a very extended work in the same form, entitled *al-Tibr al-Masbūk* (again see further on).

Since the abridgment covers such a long period of time, the selection process had to be severe, and since the ethos of Muslim historiography required that only information from one or the other presumably authoritative sources be considered for inclusion, another intriguing problem is the motives that governed the choice of material and its relationship to the sources. But first a few remarks on some of the formal characteristics of the work (which, of course, it shares with many others).

There can be little doubt that formal matters in reference works such as the *Wajīz* were as passionately discussed in earlier times as they are nowadays, and they are indeed of almost crucial importance if a given reference work is to be of

use to researchers (as well as a commercial success to the degree possible in the manuscript age). Occasional reflections of such deliberations are preserved in the literature. Alphabetization procedures were occasionally explained, as was done already by al-Khaṭīb al-Baghdādī in his *History of Baghdad* at a time when those procedures were still in their infancy. In *al-Durar*, for instance, Ibn Ḥajar explained why he put the Abū Bakrs where he did, namely, after the names beginning with *alif* and before those beginning with *bā'*: ″I put the Abū Bakrs here on the assumption that Abū is part of the name and the name thus begins with *alif* and assuming at the same time that the name is a composite and would thus begin with *bā'*. Therefore, I [hit upon a compromise solution and] put the Abū Bakrs in between the letters *alif* and *bā'*.″ However, where Abū Bakr is the name of the father of the biographee, it appears at the end of the names beginning with *bā'*. In the *Wajīz*, al-Sakhāwī followed no alphabetical (or precise chronological) arrangement, a step backward but one easily explained as conditioned by the example of al-Dhahabī and the need for brevity. The lack of any order in the obituary notices of the *Wajīz* made it unnecessary for al-Sakhāwī here to ponder where to alphabetize the ʻAbd Allāhs, whether before all other names composed with ʻAbd (as in *al-Durar*) or where the second element belongs in the alphabetical order (as in *al-Ḍaw'*).

A significant difference is the placement of women biographees. In *al-Durar*, Ibn Ḥajar had inserted their obituaries in the alphabetical order. Al-Sakhāwī, in his *al-Ḍaw'*, followed precedents that had been established earlier, as in al-Khaṭīb′s *History of Baghdad*, and put them all together at the end after all the male biographees. This may suggest that he had reasoned that women scholars should be considered as a separate, and presumably less important, category of scholars; to us, it would seem to be another step backward. In an annalistic arrangement as in Ibn Ḥajar′s *Inbā'* and al-Sakhāwī′s *Wajīz*, this, of course, was no issue.

A minor but intelligent choice was made in the *Wajīz* by indicating the age, or the approximate age, of a biographee at the time of death instead of using references to the year of birth. This has been done fairly consistently beginning with the ninth century when al-Sakhāwī usually had the necessary information. It saved some space and allowed elegant variations in expression. For earlier times, this was not really possible. When in his *Rafʻ al-Iṣr ʻan Quḍāh Miṣr*, for instance, Ibn Ḥajar covered the entire Muslim period down to his own time, he often had to take recourse to dating his biographees merely to the century in which they lived.

The abridgment procedures are much more difficult to reduce to a common denominator. Each biographical entry needs to be considered separately. More often than not, interesting differences to ponder and, if possible, to explain, present themselves. Why, for instance, should al-Sakhāwī have added the *laqab* al-Badr (Badr al-Dīn) in an obituary notice (p. 227, no. 476) that seems to be a straightforward rearrangement of *Inbā'*; we cannot tell whether it derives from some other source.

It is easier to explain why, in the extremely brief and uninformative fifty-word entry on Ibn Khaldūn (p. 385), the statement that ″he never changed his (Western) dress in Egypt″ is retained. In al-Sakhāwī′s mind, it had no doubt entertainment value, which was an important factor in all Muslim historiography. It also explains the frequent retention of verses here, although their inclusion obviously conflicted with the aim to be brief. One wonders, however, why, from the often numerous verses in the biographical sources, just some particular verses made it into a given obituary notice in the *Wajīz*. Special artistic merit and conceptual originality may have prompted their retention, but it more probably was meant to prevent boredom and provide an incentive for the reader to go on browsing through the work.

As stated, the historiographical ethos normally forbade the abridger from making extraneous comments of any length prior to his own period; where we cannot pinpoint a source, it is just because we have not yet located it. Very rarely in the earlier years do we find remarks going back to al-Sakhāwī and introduced by *qultu* such as appear on pp. 111 and 163. In the latter passage (as he does again on p. 425), he calls attention to the omission of a reference to the endemic plague in *Badhl al-Māʿūn*, Ibn Ḥajar′s monograph on the subject. It is not clear where the verses on the plague quoted on p. 205 came from; possibly, they were inserted by al-Sakhāwī himself from some less used source, but his introductory words are ambiguous. The sparsity of al-Sakhāwī′s own comments disappears when he chronicles the last fifty years where he himself was a witness. It turns into an avalanche of information for the last few years. He indicated the reason for this at the beginning of the year 895: ″I have enlarged the coverage for this year in comparison to the previous year[s]. The enlarged coverage also extends to the book′s subject matter (*mawḍūʿ*), because now a clean copying of *Tibr al-Masbūk* would be difficult.″[1] The obituaries here remain brief and are all traceable to *al-Ḍaw'*, but the events are in part either directly reported by al-Sakhāwī or first attested for us here. One cannot fail to notice how much he saw himself as part of the happenings during that period. He considers it news where he spent a year, as in traveling for purposes of enlarging his knowledge (pp. 649 and 690) or continuing his residence in the holy cities. His activities as a scholar, lecturer, and author, and whom he saw or who came to visit him take up more and more space. For instance, the year 897, he states (p. 1218), ″began when I was, thank God, in

[1]He adds the general observation: ″Often someone gets angry at what is mentioned about him and therefore (is ready in the future) to avoid the implications of what is written about him. Or he may enjoy agreeable statements about him and, therefore, exert his efforts to do what he likes to be mentioned about him. This belongs to the useful aspects of history that are not kept out from an abridgment′s limited coverage.″ Al-Sakhāwī, as we know from his *Iʿlān al-Tawbīkh*, was fond of general reflections on the value of history, as in the introduction of his *Tibr*, cf. Rosenthal, *A History of Muslim Historiography*, 2d ed., 329 f. (Leiden, 1968). The ″clean-copying″ here seems to involve the preparation of a new edition and continuation of the work.

Mecca, hoping for acceptance and blessing by God, He be praised. My writings that year included a new essay on the completion of [the reading of] the *Sīrah* of Ibn Sayyid al-Nās, a clean copying of my work *al-Tawbīkh li-Man Ḍamma al-Tawrīkh* in several quires, and a second draft of my work on *al-Firaq*, a volume I have not yet completed the way I would like.″ [2] For the Muslim historian (as well as the modern historian), it was not unusual to see his own times in a more personal light, but the extent to which this was done by al-Sakhāwī possibly reflects an increasingly pronounced inward turn away from public life to the individual. This, of course, is not to deny the innate human weakness for self-advertisement.

The editors of the *Wajīz* have done a very satisfactory job overall. Their introduction covers the essential items. One misses a list of the sources cited in the footnotes with bibliographical indications as to the editions used (which would be especially useful for readers in later generations) and a listing of the secondary literature including information on previous relevant publications by the editors. The index covers the entire fourth volume or almost half the number of pages of the text. For the voluminous Mamluk histories, indices are indispensable and most important. It is a sign of true progress that in recent years they have become a prominent feature in text editions. The one here contains a survey of the contents according to years (233 pp.) and an alphabetical listing, with cross-references, of the individuals whose obituary notices are in the text (269 pp.), followed by indices of places and localities (36 pp.), groups (2 pp.), selective cultural topics (13 pp.), and books mentioned in the body of the text (32 pp.). Some might have been expanded, others shortened, and more might have been provided; there is no end to what can usefully be done and the editors′ choice is acceptable. For reasons of space, their decision to restrict footnotes to the most basic minimum must also be endorsed. References to *al-Durar* and *al-Ḍaw'* are given with complete regularity, so much so that sporadic omissions as on p. 887, note 1, and p. 943, note 2, or a wrong reference as on p. 964, note 1, deserve notice (one wonders why references to Ibn al-ʻImād, *Shadharāt*, are often included, seeing that they contain nothing additional).

The text itself is based on two manuscripts, preserved, respectively, in the Köprülü and Bodleian libraries. The latter dates to the lifetime of al-Sakhāwī. The former ends on p. 1125 and thus lacks about 270 pages. Considering the fact that the available sources have also served in lieu of manuscripts, the two manuscripts appear to be sufficient to establish a basically reliable text, but for a scholarly edition, it would have been advisable at least to try to give some information on

---

[2]The essay on the biography of the Prophet by Ibn Sayyid al-Nās was entitled *Rafʻ al-Ilbās*, and the accepted title for *Firaq* was *Rafʻ al-Qalaq wa-al-ʻAraq bi-Jamʻ al-Mubtadiʻīn min al-Firaq*, see *al-Ḍaw' al-Lāmi' li-Ahl al-Qarn al-Tāsiʻ*, 8:18, lines 11f., and 19, lines 8-10 (Cairo, 1353-55).

other manuscripts such as those listed with some confusion in *GAL* (as far as I can see, the Vienna manuscript does not contain the text of the *Wajīz*, the Berlin manuscript has part of it, containing the years 828-894). This might have contributed to a better understanding of the interrelationship of the manuscript material and clarified the gradual growth of the text at the end, customary in all annalistic historiography. Some more detail on later continuations as preserved in the manuscripts might also have been useful. This reviewer realizes how difficult it would have been for the editors to become acquainted with manuscripts outside the Near East. It shows how much remains to be done for international cooperation between Near Eastern and Western scholars and scholarly institutions, on all levels and in all directions.

The editing appears to have been done with care. The specimen pages reproduced on pp. 28 to 35 of the introduction tend to confirm this impression. Comparison with the photo (intro., p. 30) shows the omission of *f-ʿ-l-y* before *bi-ḥusn al-taṣawwur* on p. 3, line 9. Furthermore, note 2 on p. 3 states that for *al-muʿaddilīn*, Ms. Köprülü has an apparently meaningless *al-ʿāl-m-y-n* in the text; however, the Bodleian Ms. has the same word in the text and offers the correction *al-muʿaddilīn* in the margin. This situation requires rechecking with the manuscripts. As the photo (intro., p. 31) shows, on p. 873, line 16, *lī* is omitted after *qarraḍa* (*al-Ḍaw'* confirms its existence). In the following line the printed text adds *sanatan* after *sittīn*; ″year,″ however, does not appear on the photo, and the word is not ordinarily, if ever, used here in connection with indicating the age of a biographee. Finally, the photo (intro., p. 32) shows that on p. 885, line 15, *al-Ḥanafī* followed *qāḍīhā*. This is very little. If a check of the manuscripts in their entirety should produce nothing more substantial, it testifies to careful work done by the editors. Editing all these pages is a tremendous task. A couple of minor mistakes is fully allowable for each page. It should, however, be kept in mind that even such trivial mistakes may have unforeseen consequences.

The problem of where and how to indicate vocalization cannot be solved systematically and to everybody′s satisfaction. In the present edition, vowels have been supplied judiciously. Minor errors and misplacements go doubtlessly back not to the editors but to the printer, certainly in *ṣallū*, for *ṣallaw* (p. 81, line 20), but there also occur some debatable vocalizations such as (p. 59, line 16*) lam tughayyar lahū ḥay'atun wa-lā wassaʿa lahū dā'iratan*, where *yughayyir . . . ḥay'atan* would seem preferable. The editors show the same concern with the often doubtful vocalization of proper names as did their Mamluk predecessors, and they try to give guidance to the reader. Nevertheless, much vacillation and uncertainty remain. This sometimes occurs in the case of Arabic names and is hardly avoidable. For instance, al-Zuraʿī, accurately vocalized in most occurrences, suddenly becomes al-Zarʿī on p. 742, line 2. Foreign, especially Turkish, proper

names, cause special headaches. There are two ways of looking at them, either from the point of view of Arabic speakers and how they pronounced them or from the point of view of etymology. Thus, names beginning with *K-m-sh* may sometimes have been pronounced *Kamash*- as indicated in the edition, but since *k-m-sh* represents *gümüş*, ″silver,″ *Kumush*- would seem preferable. While final *-miş* and *-muş* may both be acceptable, *-maş* hardly is, and so on. A most obvious desideratum (at least, according to the knowledge of this reviewer) is a comprehensive dictionary, complete with etymological discussion, of the foreign, mainly Turkish, elements occurring in Mamluk literature. It is difficult but can be done.

When dealing with the edition of a text, small, indeed piddling, details are what really count. When they are taken care of, the content will take care of itself, and the reader can enjoy what is offered to him, in this case insight into the method and the psychological and material background of the abridger, on the one hand, and valuable new information coming from the historian′s own period, on the other. Of course, no text edition is ever perfect. The present one appears to have done what, considering its time and circumstances, can fairly be expected. The work itself, as al-Sakhāwī says in his autobiography,[3] referring to it simply as *al-Dhayl ʻalá Duwal al-Islām lil-Dhahabī*, is indeed ″very useful″ if only in some ways.

ḤAMMŪD IBN MUḤAMMAD IBN ʻALĪ AL-NAJĪDĪ, *al-Niẓām al-Naqdī al-Mamlūkī, 648-922 H./1250-1517 M.: Dirāsah Tārīkhīyah Ḥaḍārīyah* (Alexandria: Mu'assasat al-Thaqāfah al-Jāmiʻīyah, 1993). Pp. 664.

REVIEWED BY WARREN C. SCHULTZ, DePaul University

This voluminous work is best approached as a useful compilation of much, but not all, earlier work on the Mamluk monetary system. Its strengths lie in the massive amount of data crammed between its covers; its weaknesses lie in what is surprisingly absent from these six hundred-plus pages. While it thus has the potential to become a well-thumbed resource, it should be used with caution.

The book is organized into an introduction, six major sections, a brief conclusion, nine appendices of limited usefulness, and a seven-part bibliography. The first section (pp. 47-159) provides an overview of mints and coin minting in the Mamluk Sultanate. The second section (pp. 161-261) introduces the reader to Mamluk money itself, with major subsections addressing types of money (including

[3] *al-Ḍaw'*, 8:17, lines 6f.

a discussion of monies of account—*al-nuqūd al-ḥisābīyah*), weights, purity, and how coins were issued. The last passage contains a useful, though incomplete, historical survey of coin issues. The next section (pp. 263-372) addresses the topic of monetary values (*al-qiyam al-naqdīyah*) across the spectrum of gold, silver, and copper coins. Section four (pp. 373-461) discusses the purchasing power (*al-qīmah al-shirā'īyah*) of Mamluk money. The fifth section (pp. 463-536) covers the circulatory relationships between Mamluk money and the money of the Sultanate's neighbors. Finally, the sixth section (pp. 537-597) addresses what al-Najīdī calls the monetary weakness and collapse (*al-fasād al-naqdī)* observed in the Mamluk Sultanate.

The analyses found in the above sections are based upon evidence found in the usual sources. By this I mean the standard Mamluk-era chronicles. As is well known, these chronicles are chock-full of monetary information, and much of that information shows up in this book. These sources are much richer for the Circassian period, however, and that bias is reflected here. There are, however, frustrating and unexplained lacunae in how al-Najīdī handles this data. An example of this is found in table I (pp. 521-530). This table lists those rates of exchange between Mamluk and Italian gold found in the chronicles for the period 790-849/1388-1445. It is an impressive list. But given that exchange rates are known for dates outside of this period, and from other sources than those consulted in this study, their unexplained omission is curious. (On this matter there is another point—or rather an admission—that I must make. In a review published in this journal last year, I asserted that this particular table of exchange rates superseded the discussion of the same topic found in Ra'fat al-Nabārāwī's *al-Sikkah al-Islāmīyah fī Miṣr: 'Aṣr Dawlat al-Mamālīk al-Jarākisah* [Cairo, 1993]. Upon closer examination and comparison, however, it is clear that my earlier assertion was wrong. There is more exchange rate information available in the second section of al-Nabārāwī's book, albeit not in convenient tabular format.) There is one welcome development, however, for which al-Najīdī should be commended. He has begun to incorporate monetary data derived from *waqf* documents into his analysis, sources that have yet to be thoroughly exploited for Mamluk monetary history.

More important to note, however, are those sources which are not fully exploited in this discussion of Mamluk money: the coins themselves. While the views of such figures as Ibn Taymīyah or Ibn al-Hāyim (discussed by al-Najīdī) on how money should work are valuable, it must be emphasized that such normative descriptions give only part of the picture of Mamluk monetary history. The analysis of Mamluk coins, which survive in great number, does much to complete that picture, and it is in the exploitation of these actual artifacts of the Mamluk monetary system that al-Najīdī's work falls short. No catalogues of major collections are consulted. While there is an obligatory acknowledgment of Balog's corpus of

Mamluk coins, there is only limited application of numismatic data, such as the examination of actual coin weights, hoard evidence, or issues of metallic purity. In this last area, the evidence presented is drawn from the works of others, such as Bacharach and al-Nabārāwī. The failure to use the coins as either a check against the veracity of the chronicle citations or to supplement our knowledge where the Mamluk authors are silent is this book´s most serious weakness.

Finally, in a similar vein, the bibliography is strong in some areas, and weak in others. The bibliography is strongest for Arabic language resources, including several unpublished theses that we can hope will one day surface as published studies. Works in European languages are few (nine, with ten others in translation), and unevenly represented. Thus two of Bacharach´s valuable articles are utilized extensively, but others are completely ignored. The important works of Shoshan and Hennequin are missing. Al-Najīdī also makes some striking omissions in his use of modern analyses of Mamluk economic history. Important overviews and specific studies by authors such as Rabie or Labib (regardless of language) are absent, and only one work of Ashtor´s is utilized. While it may be the case that these works were inaccessible to the author, their absence diminishes the overall value of the conclusions made by al-Najīdī.

ÉRIC GEOFFROY, *Le Soufisme en Égypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans: Orientations spirituelles et enjeux culturels* (Damascus: Institut français de Damas, 1995). Pp. 510.

REVIEWED BY MICHAEL WINTER, Tel Aviv University

By the end of Mamluk rule in Egypt and Syria, Sufism had grown into an extremely rich, complex, sophisticated, and multifaceted religious, cultural, and social phenomenon. Far from being a marginal or a sectarian movement, Sufism became a central, mature and, one could add, highly successful trend of Islamic culture, which was followed and practiced by illiterate commoners, but also by many members of the political, social, and intellectual elites. Fully realizing these basic characteristics of the movement, Éric Geoffroy presents in this comprehensive study a panoramic view of Egyptian and Syrian Sufism in the fifteenth and early sixteenth centuries. He is aware that in order to do justice to his subject, it cannot be studied in isolation from other aspects of Islamic religion and culture in that period. The result is a thorough, extensive, useful, and readable volume that contains much more than its title implies.

The study is based on impressive source-materials, including many Arabic manuscripts located in Damascus libraries. The list of the primary and secondary sources used for this study is exhaustive. The bibliography is well organized and convenient to use. So are the five indices.

The first part consists of the usual survey of sources and the existing studies on the subject, and the political and social background. Some central themes are already examined here, such as the *'ulamā'* and the Mamluk government, the religious minorities and Sufi attitudes regarding them, and the Ottoman conquest.

The second part of the book, entitled ″Sufism and Muslim Society,″ addresses such topics as Sufism and the Sunnah, Sufism and *ḥadīth*, the model of the Prophet as a way to enhance Sufism′s legitimacy, aspects of sanctity (*walāyah*), miracles, and relationships between rulers and Sufis. Sufi institutions are discussed, and the writer makes a strong case for the centrality of the *zāwiyah* in Sufi life. On the other hand, the *khānqāh* was an official institution established by the authorities in earlier times, which did not have a good reputation with many Sufis. The *zāwiyah* was more independent and was associated with Sufi teachers and masters. The Ottomans constructed *zāwiyah*s and *takīyah*s, but not *khānqāh*s.

The third part deals with different modes of affiliation with the Sufi *ṭarīqah*s, which the writer prefers to translate as a spiritual method or a way of initiation rather than a Sufi order.

On the question of multiple membership in the *ṭarīqah*s, Geoffroy writes that in the period studied it became a general phenomenon and under the Ottomans it became the norm (pp. 199-201). This is certainly true about prominent Sufis. A famous example is al-Sha'rānī′s initiation into twenty-six *ṭarīqah*s. The question which is still to be answered satisfactorily is whether this principle applied also to simple adherents of the Sufi way. There are indications that in those cases this was discouraged by the Sufi shaykhs.

Chapter 11 surveys the various orders in Syria and Egypt. Chapter 12, called ″Contrasts and Similarities,″ compares Egyptian and Syrian Sufism with its Maghribi and Turco-Persian counterparts. This is an interesting and important analysis, since these alternative versions of Islamic mysticism left their mark on the Sufism of the central Arab world (which in turn influenced them).

The book′s fourth part is called ″An Outline of Spiritual Typology.″ It describes and analyzes extensively (pp. 283-360) the main types associated with Sufism: *al-zāhid*, the ascetic; *al-'ālim al-'āmil*, the scholar who lives up to his scholarship; the *ummī* (illiterate) shaykh; the *majdhūb*, the enraptured one; *arbāb al-aḥwāl*, those of the spiritual states; the *malāmatī*s, those who invoked blame upon themselves by their ostensibly outrageous behavior. Of course, sometimes the lines separating one character from another are blurred.

The fifth part deals with confrontations, debates, and mutual perceptions of Sufis and jurisconsults (*fuqahā'*). The writer presents the standard accusations, arguments, and debates across the Sufi-*faqīh* divide. In these confrontations, there was room for accommodation, dissimulation, exegesis, apologetics, and other means to defend one's position and to denounce the other side. Some well-known themes and practices associated with the Sufis, which were denounced or looked upon with suspicion by their opponents, are discussed, such as *dhikr,* the central Sufi ceremony; *samā'*, listening to music and dancing; as well as the mystical doctrines of *waḥdat al-wujūd*, "the unity of being," or *waḥdat al-shuhūd*, "the unity of contemplation." These notions were regarded by a few, strict theologians as blasphemous, verging on infidelity. Public debates and quarrels erupted occasionally around the figures of the mystical poet Ibn al-Fāriḍ and the mystical writer Ibn 'Arabī, both controversial thirteenth-century figures, whose ideas were still attacked and defended three hundred years after their deaths. Ibn Taymīyah, the great fundamentalist theologian and polemicist, who was the archenemy of Ibn 'Arabī's ideas, was still quoted and considered as an authority, centuries after his death in 1328. As Geoffroy shows, although Ibn 'Arabī's ideas were often proscribed and condemned (in Damascus more than in Cairo), the leading scholars and writers of Islam, notably the great al-Suyūṭī and al-Sha'rānī among others, wrote long treatises in defense of Ibn 'Arabī, who was also called al-Shaykh al-Akbar. It can be stated that by the sixteenth century Ibn 'Arabī had become a shibboleth for Sufism. Finally, the triumph of Ibn 'Arabī over Ibn Taymīyah was best expressed by the official support given to his ideas by the Ottomans. Sultan Selim erected a domed mausoleum over Ibn 'Arabī's grave in Damascus, but the work had to be done at night to avoid antagonizing the residents of the Ṣāliḥīyah quarter of Damascus, who were hostile to the deceased mystic. Finally, Ibn Kamal Pasha, the Ottoman Grand Mufti, issued a strongly-worded *fatwá* supporting Ibn 'Arabī (the Arabic text is reproduced on p. 511). According to Geoffroy, it was the writings of Ibn Taymīyah that were forbidden for a long time (p. 83, but references are needed for such a statement).

The writer is undoubtedly right in emphasizing the success of Sufism as a spiritual trend, Islamic discipline, and cultural force in the late Mamluk and early Ottoman period. Among his interesting observations is the notion that the "candidates" to the distinction of *mujaddid al-dīn*, "the renewer of religion" which, according to a well-known *ḥadīth*, should appear at the turn of every century, were now Shādhilī Sufis (pp. 489-491).

As the book's title indicates, the study is stronger as an intellectual and religious history than a social history. It is successful in demonstrating the richness of Egyptian and Syrian Sufism and masterfully examines it against the heritage of Islamic culture. Yet some questions concerning the decline of Sufism *after* the

period covered by the study should be raised and addressed. Why did the great figures studied here, such as Zakarīyah al-Anṣārī, al-Suyūṭī, al-Shaʻrānī, ʻAlī ibn Maymūn and his disciples Muḥammad ibn ʻArrāq and ʻAlwān al-Ḥamawī, not have worthy successors and followers? And, on the other hand, what were the circumstances that encouraged the unprecedented proliferation of popular *mawlid*s in sixteenth-century Egypt, as attested by Evliyā Çelebi, al-Jabartī, and ʻAlī Bāshā Mubārak?

The writer′s mastery of Arabic is impeccable and his numerous quotations well chosen. (Yet, *al-ḥūr al-ʻayn* should be corrected to the Quranic *al-ḥūr al-ʻīn*, p. 325.)

A few critical comments:

The writer says (p. 75) that the Syrian and Egyptian population regarded the Ottoman occupation as a liberation. This statement has some truth with regard to Syria, but not as far as Egypt is concerned, as is abundantly clear from every page of the fifth volume of Ibn Iyās′s chronicle. It is shown even from scattered remarks in al-Shaʻrānī′s writings.

Ṭarīq al-qawm (the Way of the People) is a term sometimes used for Sufis. The author mentions *ṭā'ifat al-qawm* instead (p. 270), a term which at least this reviewer finds unusual; references would have been welcome here.

Geoffroy writes (p. 77) that for the leading Sufis and men of religion generally, Mamluks and Ottomans were equally strangers, ″Turks.″ Yet in the Arabic sources, the term ″Turks″ (*atrāk*) was reserved for the Mamluks (despite the fact that at this time they were predominantly Circassians), while the Ottomans were called Turkomans (*tarākimah*), Rumis (*arwām*), or Ottomans (*ʻathāminah*). The Mamluks were thoroughly familiar and seemed ″strangers″ much less than the Ottomans.

On the same page, the writer cites without any reservations a notice by Ibn Ayyūb, a Damascene historian, that after his conquest of Damascus, Sultan Selim visited the Shādhilī Shaykh Muḥammad ibn ʻArrāq, the disciple of ʻAlī ibn Maymūn al-Fāsī, and asked his authorization to conquer Egypt as well. Even if this had really taken place (which is unlikely, owing to the Sufis′ tendency to brag about their influence with members of the ruling class), it seems hardly more than a gesture of respect on the part of the sultan. One can be too carried away in admiring one′s research subjects.

The Bakrī family head did not assume the *mashyakhat al-mashāyikh* (*al-ṣūfīyah*) before Mehmet Ali′s reign (p. 79); the source Geoffroy is using, Muḥammad al-Bakrī′s family history, is inaccurate.

Discussing the relevance of the *madhāhib* (legal schools) to Sufism, Geoffroy concludes that in the debates regarding Sufism, the *madhhab* was not pertinent (p. 500). True, but still the impression, from al-Shaʻrānī′s works at least, is that it was the Mālikī *faqīh* who personalized for the Sufis the critical and hostile opponent.

Finally, while the present reviewer is described (correctly) by the writer as ″le chercheur israelien″ (p. 49), Bilād al-Shām is defined in the following manner: ″Cette region comprend *grosso modo* Syrie, Liban, Jordanie et Palestine actuel″ (p. 52, note 3). A writer whose favorite expressions throughout the text are *nuance* and *subtil* should be more careful in his geography of the Middle East: In 1995, the year of the book′s publication, the historical Bilād al-Shām comprised a state called Israel, while no state named Palestine was on the map.

These few comments notwithstanding, Éric Geoffroy′s study will be a basic, required reading for anybody interested in the history of Sufism or in the history of the central Arab lands in the transition period from Mamluk to Ottoman rule.

Le Waqf dans l′espace islamique: Outil de pouvoir socio-politique. Edited by Randi Deguilhem (Damascus: Institut français de Damas, 1995). Pp. 337.

REVIEWED BY LEONOR FERNANDES, New York University

One can only applaud an ambitious work that brings together a large and diverse number of articles under the title *Le Waqf dans l′espace islamique: Outil de pouvoir socio-politique*. Before reviewing the book one has to pause and wonder about the choice of the title for such a work: Does ″espace islamique″ have any particular meaning for the editor herself? What are the criteria used to define an ″Islamic space″? And what is the place of the *waqf* in this so-called space?

Setting aside the odd title of the book, we can appreciate the efforts of this group of distinguished authors whose research has contributed to our understanding of this otherwise poorly studied institution. They have indeed proved, as the author has mentioned (p. 15), that if one knows how to question the texts of the *waqf*s, they can yield interesting information which can improve our understanding of the histories of Arab and Islamic societies.

In her introduction, Randi Deguilhem indicates (p. 21) that the subject of the book itself, the study of the *waqf* from the beginning of Islam to the present time, has dictated a thematic approach to its organization. Hence, she divides the book into three sections: methodology, case studies, and the *waqf* and the world of politics. An Arabic section is added to the preceding three and bears the title ″Partie arabe″ without any reference to its relation to the other sections. One wonders if the fact that the contributions to this section were written in a non-Western language made them difficult to integrate within the themes of the book.

The methodology adopted by the book follows two different lines of research, one defined as ″ponctuel″, the other as ″quantitatif.″ Both lines of research yield

information which are said to be complementary. The ″approche ponctuelle″ deals with features concerned with the infrastructure of the society and throws light on such features as the *wāqif*s themselves, the type of properties they endowed, and their beneficiaries (p. 19). The ″approche quantitative″ uses an empirical method to sort out the data provided by a collection of documents, thus allowing for a statistical analysis of the information. This latter approach favors a computerized analysis of the data collected.

The book consists of sixteen articles that cover a wide range of topics spread mostly between the fourteenth and nineteenth centuries. Among the articles one notes Abdelhamid Henia′s ″Pratique habous, mobilité sociale et conjoncture à Tunis à l′époque moderne (XVIIIe-XIXe siècle).″ The author uses the data provided by *waqf*s to draw interesting conclusions about the nature of a group of *wāqif*s, the ʻĀ'ilāt (elite) of Tunisia in the eighteenth and nineteenth centuries. He analyzes the data to show the mobility of the properties endowed. Furthermore, he links the internal dynamics regulating this mobility to the economic changes affecting the group of notables in question, as well as to the historical events influencing a change in conjuncture. Marco Salati follows the evolution of a Shiʻite family living in Aleppo in the seventeenth century, the Zuhrāwī, tracing the role of *waqf*s in the consolidation of the socio-economic activities of the family. Randi Deguilhem studies the development of a *waqf* founded in Damascus by a woman, Ḥafīẓah Khānum al-Mūrahlī, in the last quarter of the nineteenth century.

The control and administration of the *waqf*s and/or the socio-political factors affecting their development is the object of a number of articles. Richard van Leeuwen looks at the economic and political pressures exerted by two prominent families, the Khāzin and the Ishʻayā, on the administration of *waqf*s created by the Maronite Church in the Lebanon. He examines the *waqf*s founded in the eighteenth century for a monastery in Kisrawān, that of Sayyidat Bkirkī, and traces the role played by the Vatican and the Maronite Church at the local level in Lebanon. Gregory Kozlowski′s study examines the degree of control exerted by the state on the administration of *waqf*s. He chooses to focus his research on particular cases from India, post-revolutionary Iran, Turkey, Saudi Arabia, post-colonial regions of the Maghrib and Mashriq, and other regions of the former Soviet Union. Aḥmad Qāsim deals with Tunisia during the second half of the nineteenth century, and tries to determine the role played by the state in the administration of *waqf*s and more specifically on the Jamʻīyat al-Awqāf established under the French Protectorate and designed to provide the state with a tighter control over the resources of the *waqf*s. Byron Cannon examines the administration of *waqf*s in Algeria under colonial rule in the middle of the nineteenth century. He studies the degree of control the state had over the region of Biskra, on the edge of the Sahara, and the relationships that existed between the local chiefs and elites on the

one hand and the state on the other. Ḥamzah ʻAbd al-ʻAzīz Badr and Daniel Crecelius choose to look at a social institution, the *ḥammām*. Relying on the information provided by a *waqf* (Waqf al-Maṭrabāz), they study the place it occupied in the urban fabric of Mamluk Cairo. The authors provide us with a valuable translation of a document found in the archives of the Ministry of Waqfs listed under the name of a certain ʻUthmān al-Maṭrabāz Jāwīshān (no. 337, dated 1181 *hijrī*, Maḥkamat al-Bāb al-ʻĀlī). It is unfortunate that they do not provide us with any biographical information about al-Maṭrabāz himself. Moreover, they do not indicate how these two *ḥammām*s, which were originally part of the *waqf* of Sultan Qalāwūn, ended up in the hands of this new *wāqif*. Also, a better and fuller analysis of this important document would have certainly enhanced our understanding of the functioning of this poorly studied institution. An interesting article in Arabic, that of Muḥammad ʻAfīfī, sheds light on the role played by *waqf*s in the Red Sea trade and the religious and politico-economic changes affecting it. The author examines a number of Ottoman *waqf*s, focusing on the one founded by the wife of Sultan Suleiman the Magnificent in 1553, and the one created by Sultan Murad in 1588, known as Waqf al-Dashīshah. He concludes that by that period ships were bought to benefit a *waqf* and, in some cases, were specifically built with *waqf* revenues. Such ships were involved in the transportation of grain and staples from Cairo to the Hijaz. By 1723 the number of ships belonging to *waqf*s had reached six. In time, the ships were used for the transportation of diverse goods between Egypt and the Hijaz and came to play an important role in the Red Sea trade as a whole.

Two of the contributions in the book deal specifically with Mamluk Egypt: Denoix offers an interesting approach for the study of *waqf*s focusing on a corpus of Mamluk *waqf*s, while Jean-Claude Garcin and Mustafa Anouar Taher concentrate on a case study. A third contribution by Doris Behrens-Abouseif concentrates on the analysis of some *waqf*s from the early Ottoman period.

Sylvie Denoix′s ambitious and challenging contribution which forms part of a larger project of the Institut de recherches et d′études sur le monde arabe et musulman, entitled ″Histoire de la vie materielle et des sociétés urbaines,″ draws our attention to the fact that there is still a lot to be done by scholars specializing in the study of *waqf*s. Her idea is to look at the large corpus of Mamluk *waqfīyah*s, since they represent a homogeneous collection of documents which, as she points out, have the same structure and provide the same type of information. Accordingly, she sees that the analysis of these documents yields data that sheds light on the *wāqif*s, their socio-political status, the type of properties they endow, the group of beneficiaries, and so on. She urges scholars to examine whole collections rather

than concentrate on individual documents, implying that the study of a collection as a whole can be more fruitful than the traditional approach that limits itself to the detailed analysis of individual cases.

Her main goal is to classify the data provided by Mamluk *waqfīyah*s in order to draw some general conclusions about the nature of the *wāqif*s, their socio-economic background, their professions, gender, and the type of investments. One has to recognize that her approach has a certain appeal and what she proposes to do with the data collected could be justified. However, a number of questions have to be answered and some comments have to be made here.

The title of her article, ″Pour une exploitation d′ensemble d′un corpus: Les waqfs mamelouks du Caire,″ builds up our expectations as to the benefits of what is termed an ″approche globale et serielle″ (p. 30) to be used in the study of these documents. Yet, rather than study the *waqfīyah*s themselves, or even the catalogues in the archives of Cairo, the Dār al-Wathā'iq al-Qawmīyah, Denoix deems it sufficient to base her research on a published catalogue and focuses exclusively on Muḥammad Muḥammad Amīn′s *Catalogue des documents d′archives du Caire de 239/853 à 922/1516*. She hastily explains that it is fortunate that Amīn has researched the topic (p. 32) and that he already provides the necessary data on the *wāqif*s′ names, their titles, professions, gender, the type of transactions, and other information. In order to show how her ″étude serielle″ would work, Denoix proposes to look at some entries in the catalogue. She selects a sample (pp. 32-33) consisting of fifteen entries (nos. 13 to 27) from the catalogue which spans over 327 pages and covers 888 entries (in addition to the publication of a number of documents covering pp. 334-508) and provides us with the results of her analysis of the data. Since the choice of the entries is nowhere explained, the reader has to assume that they were selected at random. Furthermore, since the sample covers only fifteen out of the 888 entries in the catalogue, the reader has to be prepared to accept her choice without questioning it and assume that her reading and analysis of the data collected from the rest of the catalogue will lead to a meaningful ″study of Mamluk *waqf*s.″ However, before we accept her conclusions and the general statements she makes on *waqf*s, two crucial questions have to be answered first: How reliable is the data provided by the catalogue? How accurate is her reading of the data? A brief look at the entries she examined helps the reader make up his own mind on the matter. Indeed, even though she has chosen to limit her analysis to a very short list of *waqf*s (fifteen entries only), the author has managed to provide a sloppy and inaccurate reading of the entries. For instance in the very first entry of her sample, corresponding to no. 13 in the catalogue, she gives the date of 13 Shawwāl 687 for the *waqf* of Ṣandal ibn ʻAbd Allāh al-Ṭawāshī, while Amīn writes 1 Rabīʻ al-Ākhir 669. Any such mistake could be regarded as trivial or attributed to a typographical error. But, trivial as it may appear, when examined in

the context of the other information collected from entries in the same collection, it may prove to be serious and misleading. Also, entry no. 17 is listed as the *waqf* of Abū al-Ḥasan ʿAlī ibn Majd al-Dīn al-Tājir al-maʿrūf bi-al-Sharābīshī and dated 687, while Amīn specifically mentions two *waqf*s under this number, one being the *waqf* mentioned by Denoix, the other being that of Zayn al-Dīn ʿAbd al-Qādir al-Khazrajī dated 802 and 803. Since the purpose of the study is to produce a systematic analysis of the collection as a whole and since conclusions will be based on statistical data put at the disposal of a great number of researchers who do not have access to the documents themselves, one should hope that greater caution will be applied in the retrieval and analysis of the data from the remaining entries which represent the bulk of the collection.

Equally, some reservations have to be voiced as to the validity of relying on a catalogue and not on the *waqfīyah*s themselves. Without undervaluing the study undertaken by Muḥammad Muḥammad Amīn, relying on his catalogue represents a danger. Indeed, the goal of its author is to provide the researcher with easy yet not fully comprehensive access to the information contained in the documents he lists. Since a detailed analysis of the documents lies outside the scope of his catalogue he often does not bother to specify the nature of the listed *waqf*, i.e., whether the *waqf* is *khayrī* (for charitable purposes), *ahlī* (a family *waqf*) or a mixture of the two. Often, he does not mention that the document he lists includes more than one type of transaction. Hence, the rubric of an entry in his catalogue may indicate that the document is a *bayʿ* or an *istibdāl*, while the reading of the corresponding document may reveal that it was followed by a *waqf*. Occasionally, discrepancies can be detected between what Amīn lists in his entries and what appears in the register of the Dār al-Wathā'iq al-Qawmīyah and/or the text of the *waqfīyah*s themselves. Finally, the accidental omission of some *waqfīyah*s from the list in the catalogue could weaken conclusions based on statistics. These are some of the problems faced when dealing with a catalogue. If one adds to these the fact that we cannot assume that we have in our possession all of the *waqf*s dating from the Mamluk period and that the great bulk of *waqf*s created by civilians have disappeared (we know of their existence from the sources), statistics regarding the involvement of that particular group of individuals in the creation of *waqf*s would be irrelevant unless complemented by data provided by chronicles and biographical dictionaries.

Some mistakes in the translation of professional occupations and of certain Mamluk titles could have been avoided by consulting al-Qalqashandī's *Ṣubḥ al-Aʿshá*. For instance in no. 95, Khushqadam, "al-Adur al-Sharīfah" does not refer to the "biens chérifiens" but to the Royal Harem (or residences of the wives of the sultan). Likewise, no. 110, which mentions al-Jamālī Yūsuf as a Nāẓir al-Khawāṣṣ al-Sharīfah, does not refer to a "*nāẓir* des biens chérifiens" (p. 35) but a Nāẓir of

the Privy Fund of the Sultan. Sitt Ḥadaq/Miskah was not the wife of al-Nāṣir Muḥammad (p. 36); all contemporaneous chroniclers refer to her as being his Dada or Qahramānah put in control of his harem. Disregarding these petty mistakes, one can hail the initiative taken by Denoix and hope that her approach and methodology, when applied properly, will benefit and enrich our understanding of Mamluk society as a whole and that of the *waqf* institution in particular.

An interesting contribution focusing on a case study is presented by Jean-Claude Garcin and Mustafa Anouar Taher. Following the traditional approach, this study deals with the *waqf*s of a fifteenth century amir, Jawhar al-Lālā, a eunuch and tutor of Sultan Barsbāy′s children. The authors undertake the painstaking effort of retracing, if I may say, the road to the creation of a large *waqf*. Focusing on the *waqfīyah* of Jawhar al-Lālā and the data retrieved from chronicles and biographical dictionaries, they succeed in showing how the eunuch had planned the foundation of his *madrasah*, built between 1429 and 1430, and how he worked over the years to accumulate properties which would form part of the large *waqf* created to maintain it. Through their analysis of the amir′s urban acquisitions and the historical developments affecting Jawhar′s career in general, they allow us to determine how a member of the military elite occupying a privileged position in the court would use his power and influence to acquire the commercial and residential properties necessary to sustain his charitable foundation and at the same time accommodate his own life-style. Explaining the logic behind the choice of the properties acquired between 1429 and 1437, they track all of his *waqf*s and analyze the data they provide to come up with the conclusion that the acquisition of properties by Jawhar focused primarily on two urban localities, Khuṭṭ al-Maṣnaʻ and Khuṭṭ al-Khiyamīyīn, where the *wāqif* bought a large number of residential and commercial properties. The former locality seems to have been the most important of the two since it was part of a residential quarter located near the Citadel and inhabited by Mamluks, and because it was in this particular Khuṭṭ that Jawhar chose to live. The commercial nature of the second Khuṭṭ, that of the Khiyamīyīn, located near al-Azhar, attracted the founder′s interest because of its lucrative advantages. Relying on the information in the *waqfīyah* in a *tour de force*, the authors managed to trace the plan of the *madrasah* and situate it in its immediate urban context. They also managed to show how Jawhar′s acquisitions in the vicinity of his own residence had slowly come to surround his religious foundation, which became the center of his *waqf*s. Once the *madrasah* complex had formed the nucleus of his properties, he took up residence in quarters located within the foundation. In an interesting comment, the authors suggest that perhaps Jawhar had deliberately intended to build for himself a little estate in a quarter in which he himself had personal ties: the Khuṭṭ al-Maṣnaʻ, and that the revenues

from the properties he had acquired in the Khuṭṭ al-Khiyamīyīn were to be used for the maintenance and functioning of his *madrasah*.

The study is followed by the edition of the Arabic text of two documents representing, respectively, the *waqf* of a *qāʻah*, dated 1435, and that of a complex comprising rental properties, shops, and warehouses, dated 1436. Such well-researched and thorough analysis of a *waqf* in its urban and historical context is most welcome and one hopes it will open the door for more researchers to follow in their footsteps.

The last contribution, by Doris Behrens-Abouseif, deals with Egypt in the early Ottoman period and is entitled ″The Waqfs of a Cairene Notable in Early Ottoman Cairo, Muḥibb al-Dīn Abū al-Ṭayyib, Son of a Physician.″ The study of his *waqfīyah*, dated 1528, eleven years after the conquest of Egypt by the Ottomans, is of great importance since, as the author notes, very few *waqf*s were created by local notables at the time. While Garcin and Taher have focused on the *waqf*s of a member of the military elite, Behrens-Abouseif chose to study the *waqf*s of a Cairene notable in order to show the extent of his investments in the city. She focuses on one *waqfīyah*, that of Abū al-Ṭayyib Muḥammad (Wizārat al-Awqāf, Daftarkhānah no. 1142, dated 1528). (There exists another *waqfīyah* in the Dār al-Wathā'iq al-Qawmīyah, no. 45, dated also 934/1528, in the name of Abū al-Ṭayyib Muḥammad; one wonders if it is a copy of the same *waqfīyah* or whether it contains some additional information about the *waqf*s.) Looking at the *waqf*s forming part of the *waqfīyah* as well as at a number of historical sources, Behrens-Abouseif manages to trace the biography of this notable who was the son of a physician. She clearly shows how the information contained in Abū al-Ṭayyib′s *waqf*s can shed light on the life-style of this sixteenth century notable living in Cairo. Worthy of mention is her painstaking effort to enumerate the 169 books endowed by the *wāqif* to be part of the library in his religious foundation. As she mentions, the study of the subjects of the books selected to form part of this library helps to sharpen the picture we have of the educational background of the fifteenth to sixteenth century *'ulama'*, and falls in line with the information provided by al-Sakhāwī in his biographical dictionary.

Studies on the *waqf* institution as a whole are wanting; therefore, the publication of a book like the one edited by Randi Deguilhem is most welcome and deserves great credit. The collaboration of so many distinguished scholars writing in three different languages is most enriching. Thanks to the new approaches they have adopted in their study of *waqf*s, they have succeeded in opening new avenues for the investigation of this institution and have challenged us to do more research in the field. Reading this book increases our awareness of the importance of this new genre, which is crucial not only for the study of architecture, the development of cities, and their urban fabric, but also for understanding the interdependence of

*waqf*s and political control and the relationships that existed between political power and the religious establishment on one hand and the religious establishment and the civilian notables on the other. Regardless of the approach adopted for their studies, contributors have proved that, when examined within the proper socio-economic context affecting the fortunes of the *wāqif*s (military or civilian), *waqf*s contribute greatly to our understanding of Arab and Muslim societies as a whole.

AL-QAḤṬĀNĪ, RĀSHID SA'D RĀSHID, *Awqāf al-Sulṭān al-Ashraf Sha'bān 'alá al-Ḥaramayn* (Riyadh: Maktabat al-Malik Fahd al-Waṭanīyah, 1994). Pp. 259.

REVIEWED BY DORIS BEHRENS-ABOUSEIF, University of Munich

Al-Ashraf Sha'bān, together with al-Ẓāhir Baybars, al-Nāṣir Muḥammad, and al-Ashraf Qāytbāy, was among the few Mamluk sultans who performed the pilgrimage. Sultan Sha'bān's deed of endowment for Mecca and Medina is the subject of this study.

After a short introduction about the origins of *waqf* in Islam and the history of *waqf* in Egypt, relying mainly on Muḥammad Amīn's work, the author documents briefly Baḥrī Mamluk policy concerning the Ḥaramayn, using published chronicles as well as some *waqf* documents. This first chapter includes, in addition, a biographical résumé of Sultan Sha'bān with reference to his buildings and pious works in the Holy Cities as described in the chronicles (pp. 51-62). In the second chapter the alienated estates of the *waqf* are enumerated, which consisted of agricultural plots in Syria. Their locations are indicated on several maps (pp. 65-85).

The third chapter (pp. 89-137) describes the endowment itself with a list of the expenditures both in Mecca and in Medina. These do not include the construction of new buildings or institutions but rather the enhancement of existing institutions by means of the restoration of buildings, the supplementing of salaries, and the creation of additional staff positions, such as teachers of Quran, *ḥadīth*, the four rites of Islamic law as well as teachers for a primary school for orphans. The *waqf* provides additional stipends for the Shāfi'ī, Ḥanafī, and Mālikī shaykhs, thus neglecting the Ḥanbalī shaykh. In Medina, the endowment emphasizes philanthropic services, such as the distribution of food and the upkeep of a hospital with one physician, although no hospital building is mentioned. Besides the religious and

scholarly institutions, the endowment provides for a wide range of social services such as burial of the dead, maintenance of the water supply, cleaning and infrastructural works, building restoration, and distribution of alms and food. A significant charity for the population of the Holy Cities was tax exemption.

The full text of the *waqfīyah* is published at the end, following the short conclusion (pp. 167-259). There are a number of noteworthy points in this document, such as the equal salaries for male and female cleaning staff and the salaries of the teachers and students of the four rites of Islamic law. Teachers were given equal salaries for teaching a class of ten students each; the instructor of a class of five, however, received a smaller salary. The discrimination against the Ḥanbalī shaykh has been mentioned. Similarly, the Ḥanbalī students had smaller stipends than the students of the other rites. Moreover, it is interesting that Shi'i Muslims (Zaydīs and Rāfiḍīs) were excluded from all charitable services provided in the endowment. The author does not try to investigate these points.

The interest of this book, which is a junior scholar's work, lies in the topic of the *waqfīyah* itself, rather than in the analysis of the subject, which could have been more developed. More information on the Mamluks' policy towards the Ḥaramayn could have been extracted from the chronicles. Al-Qaḥṭānī could have consulted Quṭb al-Dīn's (d. 988) or al-Fāsī's (d. 832) histories of the Holy Cities. He does not refer to the *imārat al-ḥājj*, nor to the competition between Mamluks and other Muslim rulers for the privilege of protecting the Holy Cities, which would have been part of this subject. Every publication of a *waqfīyah*, however, is beneficial to scholarship, and this is a very interesting document.

ḤAYĀT NĀṢIR AL-ḤAJJĪ, *Anmāṭ min al-Ḥayāh al-Siyāsīyah wa-al-Iqtiṣādīyah wa-al-Ijtimāʻīyah fī Salṭanat al-Mamālīk fī al-Qarnayn al-Thāmin wa-al-Tāsiʻ al-Hijrīyayn/al-Rābiʻ ʻAshar wa-al-Khāmis ʻAshar al-Mīlādīyayn* (Kuwait: Jāmiʻat al-Kuwayt, 1995). Pp. 260.

REVIEWED BY LI GUO, The University of Chicago.

The book under review, as the title suggests, deals with some "aspects" of the political, economic, and social history of the Mamluk Sultanate during the eighth/fourteenth and ninth/fifteenth centuries. Instead of a monograph with a coherent theme, this volume is a collection of three previously published articles, each of which takes on a particular issue not necessarily related, either chronologically or thematically, to the others. It thus defies explanation why they

should be brought together and reprinted here without any revision. It should also be pointed out that the author never mentions this fact in her preface to the book, leaving the impression that these are new studies. Oddly enough, not only are the topics of these essays largely independent of each other, but so are the bibliographies. Thus we have in this small volume three separate bibliographies, many of the titles having been repeated three times. Sometimes non-Arabic works are cited (essays 1 and 2), sometimes not (essay 3); sometimes the titles are underlined, sometimes not. There is no index.

The first study, entitled ″The Political and Economic Situation during the Reign of al-Mu'ayyad Shaykh (815-824/1412-1421)″ (previously published in *al-Majallah al-'Arabīyah lil-'Ulūm al-Insānīyah* 9, no. 36 [1989]: 8-55), begins with a discussion of three major issues of al-Mu'ayyad Shaykh′s political legacy: his seizing power (pp. 19-22), his rivalry with the Abbasid caliph al-Musta'īn billāh (pp. 22-28), and his Syria policy (pp. 28-56). The author then moves on to al-Mu'ayyad Shaykh′s economic reform (pp. 56-96). The reason why al-Mu'ayyad Shaykh is singled out, the author claims, is because his reign ″saw a series of political changes and economic initiatives that were unprecedented and unique″ (p. 10). We never learn, however, what exactly these ″changes″ and ″initiatives″ were, much less their impact on Mamluk society at large. The author, for instance, disputes al-'Aynī′s statement that the transfer of power from al-Musta'īn billāh, the first Abbasid caliph to be appointed sultan, to al-Mu'ayyad Shaykh was peaceful and smooth by arguing that ″most of such transfers in the Mamluk period were known for violence, bloodshed, and brutality″ (pp. 20-21). Nevertheless, she fails to provide any sources or facts to support this generalization. One is left wondering whether the transfer of power, in this particular case, was bloody or not. The author′s discussion of al-Mu'ayyad Shaykh′s economic reform also suffers from this kind of superficial generalization. Except for a brief discussion, based merely on speculation, of the factors that are thought to have caused high prices during al-Mu'ayyad Shaykh′s reign and a laundry list of the functions and duties of the market inspector (*muḥtasib*), it is unclear what exactly al-Mu'ayyad Shaykh′s ″economic initiatives″ were, or indeed, whether there were such things to begin with. The most interesting part of this chapter may be the discussion of al-Mu'ayyad Shaykh′s monetary reform as well as the problem of counterfeit *dirham*s (*al-darāhim al-maghshūshah*) that had a long lasting effect on the decline of the late Mamluk economy (pp. 76-96). But, unfortunately, the author has limited the scope of her inquiry to a single literary source, i.e., al-Maqrīzī′s *al-Sulūk*, while totally ignoring the rich body of contemporary sources on the subject, especially those treatises on monetary issues, e.g., al-Maqrīzī′s *al-Ighāthah* (she clearly is not aware of Allouche′s 1994 study of the work), as well as many new studies on Islamic

numismatics. As a result, the author's discussion contributes very little to our understanding of Mamluk economic life.

The second study, entitled "Amīr Qawṣūn: A Living Example of the System of Governing in the Mamluk Sultanate" (appeared earlier in *al-Majallah al-ʻArabīyah lil-ʻUlūm al-Insānīyah* 8, no. 32 [1988]: 6-55), is a case study of the dynamics of Mamluk internal politics (pp. 109-187). The author has utilized a great number of primary sources, many of which are unpublished manuscripts, in an attempt to reconstruct Amir Qawṣūn's (d. 743/1341) life. One is not sure why this particular amir is selected here, for as far as can be gathered from his biographical sketch, his "unique" career path, which the author tries to prove, appears to be anything but. Is this amir's career typical? If this is the case, how is it so? Or does this amir's life story offer a rare and special case in which some intriguing irregularities and nuanced peculiarities in Mamluk internal politics can be traced? If this is the case, how? There are no answers to these questions.

The third study is a social history of the markets in Mamluk Cairo and was previously published in *Buḥūth wa-Dirāsāt fī al-Tārīkh al-ʻArabī* (Damascus, 1992). It begins with a general historical survey of the growth and development of markets in Cairo (pp. 200-205). This is followed by a description of the system of specific market places, such as the horse market, the fruit market, and others (pp. 205-214). The following two sections deal, respectively, with different types of markets and the professional guilds associated with them (pp. 214-217), and various alternate types of markets, such as the *wikālah*, the *khānah*, and the *qaysārīyah* (pp. 217-226). The function and duties of the market inspector (*muḥtasib*) are discussed, again, at length (pp. 226-238). The study concludes with a discussion of the decline of market places in Cairo which the author attributes to "some"—again, without any details—practices of price fixing established by the sultan for the purpose of control and stability (pp. 246-256). Two photographs of the *wikālah* of Qāytbāy at the Azhar Mosque in Cairo are presented (pp. 223-224) and their quality is rather poor. Like the previous two essays, this ambitious one is no more than a summary of the author's reading of some well-known Mamluk sources, such as al-Maqrīzī's *al-Khiṭaṭ* and *al-Sulūk*, Ibn Baṭṭūṭah's *al-Riḥlah*, Ibn Taghrībirdī's *al-Nujūm*, Ibn Iyās's *al-Badā'iʻ*, etc., and a few modern studies (e.g., those of Ziyādah, ʻĀshūr, Ayalon) published in the '60s and '70s. The division of some of the sections is rather arbitrary and confusing; the section on the *wikālah* and other markets, for instance, ought to be a subsection under the rubric "the different types of market"; and the section on "the social and cultural significance of the office of the *muḥtasib*" ought to be a subsection under the section on the *muḥtasib*.

Throughout the book, the author has demonstrated a very rigid style of writing. The essays usually open with a "big" statement, quotes from various sources, often

selected at random, then the posing of some questions, usually three in number, with some answers. This mechanical way of presenting material and discussion reaches its peak in the second essay which is entirely based on this ″question, answer, 1, 2, 3 . . .″ mode. In addition to typos in both Arabic and English, the book is laced with incomprehensible jargon (e.g., [*al*-]*nufūdh al-adabī*, [*al*-]*markaz al-adabī*, [pp. 114, 115]), combined with an assertive and self-serving tone in argument (″This volume contains a detailed and meticulous survey of the subject and offers fruitful results . . . ″ [p. 14]; ″We who study the primary sources are absolutely sure that . . .″ [p. 20]) and irritating punctuation marks (″!!?,″ ″??!,″ ″!!!″). It is not an easy read.

Overall, the book is a disappointment for those looking for new information and insightful analysis of the political, social, and economic history of the Mamluk era. One is bound to come away empty-handed. The book not only suffers from serious flaws in methodology, but it is also marred by its rigid style, confusing writing, and numerous typos. I would not recommend it to anyone. For the graduate student who ventures into the secondary literature written in Arabic, this book is not worth the time and effort. And for the researcher, he or she may well be better off simply checking the primary sources and secondary literature instead of the unreliable, incomplete, and confusing synthesis this book offers.

SHERMAN A. JACKSON, *Islamic Law and the State: The Constitutional Jurisprudence of Shihāb al-Dīn al-Qarāfī* (Leiden: E. J. Brill, 1996). Pp. 249.

REVIEWED BY JONATHAN P. BERKEY, Davidson College

In his now-classic study *Muslim Cities in the Later Middle Ages* (1967), Ira Lapidus observed that we know remarkably little about the inner functioning of the schools of law (*madhāhib*, sing. *madhhab*) in Cairo and other medieval Islamic cities. Three decades later, we at last have a book-length monograph in which the *madhhab* and its legal and political role provide the center of attention. Sherman Jackson′s study of the seventh/thirteenth-century Mālikī jurist Shihāb al-Dīn al-Qarāfī represents a fascinating and useful contribution to several fields of investigation concerning the legal and political configuration of medieval Islamic societies. Mamluk-period specialists may be surprised by Jackson′s choice of a Mālikī jurist as the focus of his attention, accustomed as we are to thinking of the Shāfiʻī and Ḥanafī schools as the principal jurisprudential parties of post-Fatimid Egypt; but Jackson reminds us that, at least until Saladin′s favoring of the Shāfiʻī

school, Mālikism was dominant among Egyptian Sunni Muslims, and so al-Qarāfī's viewpoint proves exceptionally valuable to a study of the *madhāhib* during the period of Sunni consolidation under the Ayyubids and early Mamluks.

The book addresses several important but conceptually difficult themes. The first concerns what Jackson labels "constitutionalism," which he identifies in his introduction as "the value of and mechanisms for promoting and sustaining the rule of law" in the face of the raw power of the state (p. xxi). (Incidentally, readers should not be tempted by its separate pagination to skip the author's introduction, for it represents one of the most intellectually satisfying portions of the book.) The starting point of al-Qarāfī's (and Jackson's) discussion of this issue was the exclusivist policy of the Shāfiʻī chief *qāḍī* Ibn Bint al-Aʻazz, who refused to implement judgements made by his deputies which contradicted his own interpretation of Shāfiʻī law. To understand al-Qarāfī's frustration, one must recall that Ibn Bint al-Aʻazz served as *qāḍī al-quḍāh* before Sultan Baybars's appointment of four chief justices, one for each of the four Sunni *madhāhib*: the rulings he ignored, in other words, may have been perfectly acceptable according to the Mālikī or Ḥanafī schools of his deputies. Hence the "constitutional" issue: al-Qarāfī groped for arguments to compel the chief *qāḍī* to implement rulings made according to non-Shāfiʻī law, in effect, to level the playing field and remove the arbitrary advantage held by the Shāfiʻī school as a result of its status as the *madhhab* favored by the state. In making this argument, Jackson draws on the insights of the Critical Legal Studies (CLS) school of late twentieth-century American jurisprudence, in one of several instances in which he tries to connect his own very specialized research with discussions in other, quite disparate fields. The connection is obvious: CLS has stressed the incoherence of legal patterns outside the context of the power wielded by the state and by dominant social elements, precisely the situation confronted by a Mālikī jurist such as al-Qarāfī. In al-Qarāfī's opinion, the principle of the mutual acceptance of the four *madhāhib* required that, once a legal viewpoint had been adopted as a legal ruling (*ḥukm*) by a jurist acting as a *qāḍī* and not simply as a *muftī*, accepting it was binding upon all (including the *qāḍī al-quḍāh*), provided that the ruling fell within the consensus of the *madhhab* of the judge who issued it.

A second issue takes the discussion considerably beyond the constitution of the early Mamluk state. Jackson throws himself fearlessly and confidently into the on-going debate about the persistence or demise of *ijtihād* (independent legal reasoning) in the Islamic Middle Period. He provides a useful survey of the debate, from Joseph Schacht's formulation of the standard position (that, at some point in the early Middle Period, the "doors of *ijtihād*" effectively closed) to Wael Hallaq's vigorous contention that *ijtihād* remained central to Islamic jurisprudence throughout the medieval period. On the surface, Jackson adopts a position closer

to that of Schacht than Hallaq: despite the arguments of some jurists who always insisted the ″doors of *ijtihād*″ remained open, the historical record clearly indicates the existence and dominance of a ″regime of *taqlīd*″ in the later Middle Period. He would prefer that we not view *ijtihād* and *taqlīd* as ″mutually exclusive linear moments in Muslim history but rather [as] competing hegemonies that stood (and continue to stand) in perpetual competition with each other″ (p. 77). But he notes a profound shift in the practical experience of Islamic law, one reflected most clearly in a transformation of the character of treatises describing the role of a *qāḍī* (*adab al-qāḍī*): whereas earlier works in this genre were essentially on the ″foundations of jurisprudence″ (*uṣūl al-fiqh*), ″designed to teach judges how to interpret scripture, deduce rules, and apply them to cases″ (p. 78), those dating from the sixth/thirteenth century and later ″assume the form of statute manuals designed to provide judges with the rule already deduced on the basis of one of the recognized schools″ (p. 79).

In fact, however, Jackson′s argument is more nuanced, and he would recast the terms of the debate itself. What Jackson refers to as the ″post-formative″ period of Islamic jurisprudence was a self-conscious one: it was aware that times had changed, that the character of its jurisprudential thought and practice was different than that of an earlier era. The most fundamental change was that of the nature of authority: no longer did it reside in an individual jurist, whether the founder of one of the four schools or any later *mujtahid* (one who exercises *ijtihād*); now it lay squarely with the *madhāhib* themselves. In al-Qarāfī′s jurisprudence, the *madhāhib* really do move to center stage, for in a sense it is the received body of opinion within a *madhhab*, rather than the Quran or *sunnah* of the Prophet, which defines the parameters of the law. With al-Qarāfī, the

> *madhhab* has come to constitute not merely a broad method of legal reasoning but a specific body of concrete legal rules. At the same time, *taqlīd*, as the institution relied upon by the *madhhab* to sustain and perpetuate itself, emerges as the dominant hegemony. This marks the second phase in the development of the *madhhab*, one that witnesses the ultimate ascendancy of the regime of *taqlīd* (p. xxx).

It is a mistake, however, to view the institution of *taqlīd* as a reflection of ″decline″ from some earlier, golden period of free and independent thinking; rather, it represents a *development* of Islamic jurisprudential thought, one which provided Islamic law with a critical element of all successful legal traditions: reasonable consistency, internal coherence, and freedom from arbitrary judgment. But neither did *taqlīd* preclude change and innovation in the application of the law. *Taqlīd* did

not necessarily constitute ″blind imitation,″ as Western scholars have sometimes translated the term. Rather, it was performed at a variety of different levels, the most advanced of which al-Qarāfī identified as *takhrīj*, which Jackson translates as ″extrapolation″ (i.e., of methods of legal reasoning from the rulings of the founder of the *madhhab*). And *takhrīj* provided scope for flexibility in the application of established legal principles, a flexibility which could even take into account changes in the customs and popular expectations which lay behind those actions and controversies which jurists were expected to judge. In effect, then, *takhrīj* is ″the *ijtihād* of the *muqallid*-jurisconsult″ (i.e., the jurist operating under the regime of *taqlīd*) (p. 94).

Clearly this is a rich vein of argument, one which speaks to a variety of both historical and contemporary debates, and Jackson is fully aware of the political and religious implications of his analysis. Those who have seen Islamic law under the regime of *taqlīd* as characterized by ″crippling and ubiquitous stagnation″ (p. xxxi) have missed the true nature of that regime. *Ijtihād* goes on all the time, in the modern world in the work of Mohammed Arkoun, Fazlur Rahman, Fatima Mernissi, and others. Its success, however, is limited by the failure to recognize the proper method of debate under the regime of *taqlīd*, a method outlined by Shihāb al-Dīn al-Qarāfī. Where the locus of authority is the *madhhab*, a successful argument will claim that authority for itself, rather than quixotically attempt to return to Islam′s ″roots″ and dispense with the accumulated discourse of the post-Prophetic centuries. A successful argument, in other words, will avail itself of what Jackson calls ″legal scaffolding,″ the process of modifying and mitigating existing rules by arguing *within* a legal tradition, which is the product of Islamic jurists in the post-formative period.

Like all good monographs, Jackson′s leaves a number of questions unanswered. Islamic modernists may not fully accept his advice on how to conduct a debate and make authoritative arguments from within the Islamic tradition. They may observe, for example, that Jackson himself seems to acknowledge that the regime of *taqlīd* and the ″legal scaffolding″ it implies, for all their hidden flexibility, tend inevitably to ossification and ″increased rigidity and farther removal from the practical needs of society″ (p. 99). As a historical matter, too, the impact of al-Qarāfī on medieval jurisprudence remains an open question. Is it not a matter of some consequence that Jackson found few references to al-Qarāfī in the biographical literature through which the medieval ʿ*ulamā*ʾ perpetuated memory of themselves? How widely accepted were al-Qarāfī′s views? Jackson himself admits that some of them were ″unique″ to him (p. 186). In particular, how did the creation of four separate chief *qāḍī*-ships affect Mamluk-period jurists′ understanding of the *madhāhib* and their function? In the final analysis, this book′s most valuable contribution may be its implicit reminder that we err if we

conceive of Islamic jurisprudence simply as an impersonal abstraction. It was/is in fact the product of particular jurists with strong personalities and articulate and discernible viewpoints, more of which deserve to be studied with the care that Sherman Jackson has devoted to Shihāb al-Dīn al-Qarāfī.

Le Manuscrit autographe d'al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār de Taqī al-Dīn Aḥmad b. ʻAlī b. ʻAbd al-Qādir al-Maqrīzī (766-845 AH/1325 [sic]*-1441 AD)*, edited by Ayman Fu'ād Sayyid (London: al-Furqān Islamic Heritage Foundation, 1416/1995). Pp. *106, 534.

REVIEWED BY LI GUO, The University of Chicago

Taqī al-Dīn Aḥmad al-Maqrīzī's *Kitāb al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār*, widely known as al-Maqrīzī's *Khiṭaṭ*, is one of the most significant sources on the history, architecture, and topography of Islamic Cairo. The 1853 Būlāq edition, the first and the only complete edition of the text, is notorious for its serious defects and countless errors (several later printings published in Baghdad, Beirut, and Cairo are all based on the Būlāq edition without significant corrections). The French scholar Gaston Wiet's ambitious editing project, which began in 1911, ended abruptly in 1927 when the editor, having discovered more manuscripts along the way, came to the conclusion that the enormous number of extant codices, more than 170, were too many for a single person to handle. Since then, editions of parts of the work, as well as translations and studies, have continued. In addition, an ongoing project of compiling indexes of the monumental work under the auspices of the French Institute in Cairo was started in 1975 and has so far produced three volumes, and the need to complete Wiet's aborted project has been repeatedly reiterated.

With all this in mind, the current edition of al-Maqrīzī's masterpiece is timely and most welcome. This lavishly printed, handsomely produced, and superbly edited volume, the first in the series of Arabic manuscripts published under the sponsorship of the London-based al-Furqān Islamic Heritage Foundation, is an autograph and draft version (*musawwadah*) of the work. Its significance is manifold. First, being an autograph with the author's own marks and vowel signs, a solid and surer textual basis is thus established to correct errors of the Būlāq edition. Second, it offers a draft version that differs from the complete version (*mubayyaḍah*), thus paving the way for further investigation into the history of the development of the text. Third, the publication of this abridged version of the lengthy text

provides the reader with a handy one-volume synopsis. And furthermore, no one is more qualified to undertake a project like this than Dr. Ayman Fu'ād Sayyid, who wrote his Sorbonne dissertation on the history and topography of Fatimid Cairo and has published extensively in the field of studying and editing Arabic manuscripts.

The volume is divided into four parts: the introduction (pp. *1-*106; a French abstract is on pp. iii-v), the Arabic edition (pp. 1-435), a bibliography (pp. 436-453), and indexes (pp. 457-534).

The introduction comprises an excellent monograph in its own right on the history of the *khiṭaṭ* genre and al-Maqrīzī's work. After a preface that highlights the importance of the work (pp. *1-*6), it begins with a discussion of the purpose and scope of the work in question and a historical survey of *khiṭaṭ* writings in Islamic historiography (pp. *6-*35). This section is, in my opinion, the most illuminating segment of the introduction. It explores the historical evolution of the *khiṭaṭ* genre, with special reference to those produced in, and about, Cairo, and al-Maqrīzī's own contribution to its development, from the so-called "Pre-Maqrīzī *Khiṭaṭ* Writings" (pp.*7-*21), to "al-Maqrīzī's Cairo" (pp. *22-*24), to the "Post-Maqrīzī *Khiṭaṭ* Writings" (pp. *24-*35). The pre-Maqrīzī period included pioneers of the genre like al-Kindī (d. 961). The Fatimid historians Ibn Zūlāq (d. 996), al-Musabbiḥī (d. 1029), al-Quḍā'ī (d. 1062), and al-Sharīf al-Jawwānī (d. 1092) played a central role in giving the genre its reputation and serving the needs of the Fatimid dynasty after the city of al-Fusṭāṭ became the center of the state and a "Métropole" in the real sense.

The Ayyubid era witnessed a decline of interest in urban development and thus *khiṭaṭ* writing suffered from a lack of attention. However, some descriptions of the church and monastery buildings and Coptic quarters by Christian authors (e.g., Abū Ṣāliḥ al-Armanī) and Muslim travelers from the Maghrib and Baghdad, such as Ibn Jubayr (d. 1217), 'Abd al-Laṭīf al-Baghdādī (d. 1231), and Ibn Sa'īd al-Maghribī (d. 1287), who visited Cairo and al-Fusṭāṭ and left us their recollections, kept interest in the genre alive.

An ambitious expansion and re-planning of Cairo took place in the Mamluk period, especially during the reign of Sultan al-Nāṣir Muḥammad ibn Qalāwūn. And it is not surprising that his contemporary Ibn Faḍl Allāh al-'Umarī's (d. 1349) *Masālik al-Abṣār*, a historical topography of Egypt, Syria, Hijaz, and Yemen, was a milestone in the evolution of the *khiṭaṭ* genre. It is noteworthy that while all the previous authors focused their attention on al-Fusṭāṭ, i.e., the old city of Cairo, the first *khiṭaṭ* work on al-Qāhirah, the new Cairo, was actually produced during the Mamluk period by Ibn 'Abd al-Ẓāhir (d. 1293). The latter's *al-Rawḍah al-Zāhirah fī Khiṭaṭ al-Mu'izzīyah al-Qāhirah* is important in that it not only served as a model for al-Maqrīzī's future writings but was also the primary source utilized by

al-Maqrīzī in his *Khiṭaṭ*. Other Mamluk authors who were significant sources for al-Maqrīzī's writing are al-Qalqashandī (d. 1418), and two of al-Maqrīzī's contemporaries, Ibn Duqmāq and al-Awḥadī, who are discussed at length in the introduction. In the segment on "al-Maqrīzī's Cairo," the editor draws attention to the fact that despite being a native of Cairo, al-Maqrīzī himself did not see the glorious "good old days" of Cairo which he recorded in his *Khiṭaṭ* in utmost detail, but rather, he witnessed the decline of the city in the chaotic years after Timur's invasion of Syria and the deteriorating economic situation caused by internal and external turmoil. Therefore, he relied heavily on what he had heard or read about the city when he wrote most of the *Khiṭaṭ*, in the years between 818/1410 and 827/1422. The segment on "Post-Maqrīzī *Khiṭaṭ* Writing" begins with stellar names such as Ibn Taghrībirdī (d. 1470), al-Maqrīzī's own student, and al-Suyūṭī (d. 1505), who incorporated material from the *Khiṭaṭ* in their writings. However, only three works of the genre in its strict sense are known, and all of them are *mukhtaṣar*s, or abridgements, of al-Maqrīzī's *al-Khiṭat*, by Āqbughā al-Khāṣikī, al-Bakrī (d. 1650), and an unknown author named Aḥmad al-Ḥanafī, a fact that further attests to the fame of al-Maqrīzī's work. The rest of the story is well known to those familiar with the scholarship on pre-modern Egypt. The editor offers a brief but balanced survey (pp. *27-*31) of works on the topography of Egypt since the seventeenth and eighteenth centuries, works by Western, especially French, scholars, such as the monumental *La description de l'Égypte*, and works by Egyptian scholars, such as al-Jabartī (d. 1822), 'Alī Mubārak, and Wafā'ī al-Ḥakīm, among others. The introduction also contains a discussion of the so-called *kutub al-ziyārāt* (descriptions of visitations to saints' tombs) as a body of literature that is closely linked to the *khiṭaṭ* topoi (pp. *31-*35).

Section 2 of the introduction deals with the life and works of al-Maqrīzī. The editor offers a "new biography" of al-Maqrīzī (pp. *35-*45) which supplies the reader with more details of al-Maqrīzī's life and career than can be found in previous studies. Among the interesting issues raised is al-Maqrīzī's alleged filiation to the Fatimids (pp. *44-*45), which has a certain bearing on his being keen on the description of Fatimid Cairo. The list of al-Maqrīzī's works (pp. *45-*64) is most useful insofar as the editor has provided the reader, drawing from his vast knowledge of and immense practical expertise in Arabic manuscripts, much new information on manuscripts, publication records, and the current state of research on al-Maqrīzī's works. One example will suffice here: the editor mentions a manuscript of al-Maqrīzī's *al-Muqaffá al-Kabīr* discovered by Jan Just Witkam in 1990 and the discussion he had with the latter, in 1993, about its verification and other issues (pp. *50-*51). This stock-taking is presented under two rubrics: (1) al-Maqrīzī's major historical writings; (2) al-Maqrīzī's minor works. Here the editor echoes al-Shayyāl's assessment that al-Maqrīzī's minor works have not

received the scholarly attention they deserve. Many of these works deal with particular issues, or topics, or theoretical details that are not usually dealt with in mainstream historical writings, and thus shed light on various rarely explored issues and interesting materials (pp. *57-*60). A short discussion is devoted to the so-called ″pseudo-Maqrīzī″ works (pp. *62-*64) as well.

The third section of the introduction deals with the work in question. The editor begins with a discussion of the format and structure of the *Khiṭaṭ*. His observations are that, just as in Ibn Khaldūn′s case, there is a gap between al-Maqrīzī′s *ideal* of historical writing, and his *actual* writing, inasmuch as the *Khiṭaṭ* is not balanced in its overall structure. Al-Maqrīzī, for instance, mentions that he intended to arrange his materials in seven chapters (*ajzā'*): (1) a general survey of the topography of Egypt; (2) cities and towns; (3) al-Fusṭāṭ; (4) al-Qāhirah; (5) newly constructed buildings in Cairo and suburbs; (6) the Cairo Citadel; (7) the causes of the destruction and deterioration (*khirāb*) of the historic sites in Egypt. However, as modern scholars, such as the Russian orientalist I. Kratchkovsky and others, have already noted, chapter 6, which is on the Cairo Citadel, is in fact incorporated into chapter 5 in the final version (*mubayyaḍah*) of the work as a natural continuation of the latter, which is devoted to the newly constructed buildings of Cairo. More tellingly, the work actually concludes with a chapter on the Jewish and Coptic architectural sites in Cairo. The promised final chapter, that is, ″The Causes of the Destruction of Egypt,″ was in fact never delivered. In his discussion of the contents of *al-Khiṭaṭ,* the editor stresses that the most original and significant parts of the entire work are those in which al-Maqrīzī describes the taxation system (*al-kharāj*, *al-ḍarā'ib*) and the *iqṭā'* fiefs, as well as the parts on Fatimid Cairo and the foundation of al-Qāhirah (pp. *66-*67). It is rather a surprise, as the editor observes, that al-Maqrīzī′s coverage of his own time, i.e., the Mamluk period, is not as original and sound as that on earlier periods. This is particularly true with regard to the present autograph manuscript, a draft version of the work, which is very short on the Mamluk era (p. *67). This problem is then discussed in a segment entitled ″The Problems of Editing the *Kitāb al-Mawā'iẓ wa-al-I'tibār*″ (pp. *67-*79). The main argument is that this has to do with the on-going nature of al-Maqrīzī′s writing which perhaps never resulted in a final version of the work. More importantly, it has to do with the way al-Maqrīzī handled his sources, in that he usually quoted from other independent sources, many of them ″pre-Maqrīzī″ as well as contemporary *khiṭaṭ* works, verbatim and without acknowledging them, a practice for which al-Sakhāwī accused him of ″literary theft″ (*al-sariqah*). Among al-Maqrīzī′s sources, the most frequently quoted ones are Ibn Duqmāq′s (d. 1407) *al-Intiṣār li-Wāsiṭat 'Iqd al-Amṣār* and al-Awḥadī′s (d. 1408) draft of an unfinished manuscript on the description of Cairo. Previous scholarship on the controversy (Quatremère, Muḥammad 'Abd Allāh 'Adnān, Kratchkovsky,

Brocklemann, Sa'īd 'Abd al-Fattāḥ 'Āshūr, and Ayman Fu'ād Sayyid) over the relationship of al-Maqrīzī's *al-Khiṭaṭ* to these two sources is presented with insightful analysis (pp. *68-*74). The editor seems to be of the opinion that al-Maqrīzī is not to blame given the nature of the manuscript as an autograph "work-in-progress" draft and the fact that half of the material in the *Khiṭaṭ* in fact deals with the sites built after al-Awḥadī's death. A lengthy, perhaps slightly repetitive, source criticism follows. It is basically a summary of the previous scholarship on the subject (Langlès, Sylvestre de Sacy, Quatremère, Wüstenfeld, Ravaisse, Casanova, van Berchem, Salmon, Guest, Creswell, Garcin, Raymond, Aḥmad Fakrī, 'Abd al-Raḥmān Zakī, Yūsuf Rāġib, among others), with a list of the titles that were evidently utilized by al-Maqrīzī in the preparation of his *Khiṭaṭ*, especially the sources used in the current edited *musawwadah* version (pp. *79-*89). Other issues presented in this section include the publication history of al-Maqrīzī's *Khiṭaṭ*, including partial translations and index volumes, as well as studies of the work (pp. *89-*99).

The introduction concludes with a description of the manuscript (pp. *99-*101) and the editing method. Thirty-two plates of sample folios of the manuscript are presented. It is a little disappointing that the plates are not of high quality since they are produced from microfilms rather than directly from the original manuscript now housed in the Topkapı Palace Library, Istanbul.

The edition is admirable. It is based on the sole Istanbul manuscript, collated with the Būlāq edition and other parallel sources, such as Ibn Taghrībirdī's *al-Nujūm al-Zāhirah* and Ibn 'Abd al-Ẓāhir's *al-Rawḍah*. The integrity of the text is taken into consideration so that we find that the entire text of the author's introduction (pp. 1-11), which is *not* in the draft manuscript, is supplied from the Būlāq and Wiet editions. The first chapter, which is misplaced at the end of the Istanbul manuscript (fol. 179), is returned to its appropriate place (pp. 15-18). There are two kinds of apparatus underneath the main text: the upper level apparatus deals with textual matters (verification of text, variant readings, etc.), and the lower level is devoted to historical, biographical, and bibliographical annotations. The indexes are organized under fifteen categories: proper names, historic sites, architectural terms, titles and ranks of the *dīwān* system, places, rare words and technical terms, tools and equipment, textiles, food and drink, Quranic verses, *ḥadīth*s, poetic verses, tribes and peoples, writers and poets, and written sources mentioned in the work.

Since the project is such a gigantic enterprise, some shortcomings may be unavoidable. As far as the physical aspects of the edition are concerned, there certainly is some room for improvement. In the following I have proffered some remarks on editorial and typographical details.

1) A major reservation may be raised concerning the way the footnotes are arranged. By and large, these notes are meticulously executed; however, frequent inconsistencies have made them less useful and occasionally confusing. For instance, the original manuscript, as we are told, is referred to as *khazīnah* (which stands for the Hazine collection at the Topkapı Library), but very often it is mentioned as *al-aṣl*, and occasionally as *al-musawwadah* instead. The Būlāq edition is abbreviated as "Būlāq," but not infrequently we have "al-Khiṭaṭ" instead (the different references to the same source even occur on the same page, e.g., pp. 201, 212). More serious problems emerge when the variant readings from the Būlāq edition and other independent sources are repeatedly provided for cross-checking, which tends to work better on single words rather than on phrases and clauses. In the latter cases, the device of marking the beginning and end of a phrase or clause with superscript letters is *sometimes* applied but unfortunately not always. As a result in most cases, we are not told where the variant reading begins and where it ends (e.g., p. 4, notes (b), (c), (e), (f), illustrate this problem). Other inconsistencies are seen in the emendations made in the text. Textual additions, quoted between brackets, are sometimes given their sources, e.g., "added after such-and-such" (*ziyādah min* . . .); but quite often, they are simply indicated as "missing from (*sāqiṭah min*) the original"; so we do not know whether the addition is the editor's conjecture, or from another source. On many occasions, the information of the parallel sources is not adequately given; e.g., p. 295, the sources for the volume and page numbers in notes (a), (d), (g) are not identified. Textual emendations are usually given explanations and sources, but occasionally we are left wondering why they should read so; e.g., p. 56, the change of the original *al-gharbī* to *al-sharqī*; p. 119, *al-safīnah* to *al-saqīfah*; p. 158, an entire clause in the manuscript is omitted after the (a) sign; pp. 221, 222, we are given neither reasons nor sources for the emendations between the signs (a - a). Likewise, some lacunas in the text need more explanation; e.g., p. 31, line 4. While the editor provides the reader with an enormous amount of information in the footnotes, certain difficult words are not treated satisfactorily; e.g., p. 240, the words *al-aqwāt* and *al-muḥāqa'ah* are merely commented on by "[sic]"; one might wonder if there are parallel readings from the Būlāq edition or other sources. Sometimes upper apparatus textual notes should be lower apparatus explanatory notes, and vice versa; e.g., p. 194, (b); p. 227, (d); p. 301, (2); p. 326, (4); p. 336, (a); p. 344, (1); p. 351, (1); p. 360, (2); p. 379, (3); p. 396, (a). Occasionally a question mark replaces the regular apparatus signs (e.g., p. 323, line 3).

2) Another reservation I have is about the typesetting. Various fonts and inconsistent indentation appear throughout the text. The inconsistency of typesetting frustrates the reader's effort to figure out the complex structure of the work and the exact division of chapters and sections of the text. In this regard, I find the

table of contents does a better job than the main text whose rubrics and headlines are always confusing due to inconsistent sizes and styles (plain, bold, calligraphic, etc.) of the Arabic fonts. For instance, on p. 64, the section heading (″Khiṭaṭ al-Qāhirah . . .″) and the sub-section heading (″Dhikr Quṣūr . . .″), according to the division given in the table of contents, ought to be set in each other′s fonts. The indentation of these headings is just as chaotic. Oddly enough, the wording of many items in the table of contents is not the same as they appear in the main text. A more serious problem is that many of the headings are marked with brackets, indicating conjectural additions, but without any explanation. Should we assume that they are taken from the Būlāq edition? Or perhaps from other sources? Or supplied by the editor?

Other general observations concerning the typesetting: (a) Footnotes are, in most cases, arranged in a double-column format, but quite often this format is not observed. (b) Inconsistent spacing is frequent. (c) The Arabic fonts used in the edition are nice, with one exception: in the plain text, the coarse, aloof *hamzah* is really ugly. (d) The *alif maqṣūrah* is often misspelled as *yā'* (with two dots underneath); examples are too numerous to be listed here. (e) The punctuation is generally good, but occasionally inconsistent: for instance, parentheses and brackets are used inconsistently (p. 127, line 4); blank spaces (e.g., pp. 308, 412) and ellipsis points (e.g., pp. 410, 433), both used to indicate the lacunas in the manuscript, are also used inconsistently. Sometimes the punctuation is odd; e.g., p. 112, line 12, the quotation mark splits the definite article *al* into two parts.

3) The vocalizations on the text are very helpful, but sometimes they tend to be excessive (e.g., the *alif maqṣūrah* and the *fatḥah* sign are constantly, and unnecessarily, used together), or inadequate (e.g., full vocalizations are given to some common words and obvious case endings, while some rare words and difficult passages that call for attention are not vocalized). On several occasions, the vocalizations are inconsistent (e.g., the same word is vocalized as *ṣinf* on p. *57, but *ṣanf* on the next page) or inaccurate (examples will be listed below). Following are some of the obvious errors that I caught:

p. *20, line 10, تَعَدّ , read تُعَدّ
p. *47, note 1, *Tā'rīkh*, read *Ta'rīkh*
p. *54, line 12, بمناسة, read بمناسبة
p. *69, line 6, امُتُحن, read امْتُحن
p. *79, line 17, دارسةَ, read دراسة
p. *81, line 11, سمّيتَ , read سمّيتُ
p. *82, line 11, وُجَدْتُ, read وَجدْتُ
p. 21, note (a - a), omit في
p. 26, note (a), بالسوداء , is identical with the Būlāq edition, so what′s the

point?

p. 431, note (b) in the upper apparatus, كلمة , ought to be كلمات (the addition cited here is more than one word)

These, however, are minor defects. Dr. Ayman Fu'ād Sayyid is to be commended for an excellent job in bringing to light al-Maqrīzī's rare autograph of a draft version (*musawwadah*) of his all-important *al-Khiṭaṭ* and for keeping alive the vision of eventually publishing the complete work. One can only hope that the dream will one day come true.

MUḤYĪ AL-DĪN IBN 'ABD AL-ẒĀHIR, *al-Rawḍah al-Bahīyah al-Zāhirah fī Khiṭaṭ al-Mu'izzīyah al-Qāhirah*, edited by Ayman Fu'ād Sayyid (Cairo: Maktabat al-Dār al-'Arabīyah lil-Kitāb, 1996). Pp. 185.

REVIEWED BY PAUL E. WALKER, Chicago, IL

Having completed and published an edition of the *musawwadah* of al-Maqrīzī's *Khiṭaṭ* (reviewed above), Dr. Ayman Fu'ād Sayyid, who has given us so many important editions of major texts or what remains of them, next turned to a work that was thought lost, but which resurfaced recently in a collection of manuscripts in the British Museum. It is another *Khiṭaṭ* from an earlier period and is, in fact, the earliest *Khiṭaṭ* of Cairo, since its predecessors—those by al-Kindī, al-Quḍā'ī, and al-Sharīf al-Jawwānī—concentrated almost exclusively on Fusṭāṭ and the Qarāfah. The new text was compiled by the Baḥrī official and historian Muḥyī al-Dīn Abū al-Faḍl 'Abd Allāh Ibn 'Abd al-Ẓāhir al-Miṣrī (d. 692/1293), who is well known both for his various roles in the government, particularly in the Dīwān al-Inshā', and for his authorship of biographies of the sultans he served: Baybars,[1] Qalāwūn,[2] and al-Ashraf Khalīl.[3]

Ibn 'Abd al-Ẓāhir was fully cognizant of the ascendancy of Cairo in his age, due, in part, to the near total eclipse of Baghdad after 656, and he knew also that his subject had not yet been covered satisfactorily. Al-Maqrīzī, who used this

[1] *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir.*
[2] *Tashrīf al-Ayyām wa-al-'Uṣūr fī Sīrat al-Malik al-Manṣūr*.
[3] *Al-Alṭāf al-Khafīyah min al-Sīrah al-Sharīfah al-Sulṭānīyah al-Ashrafīyah.*

Khiṭaṭ extensively in his own, also gave credit to its author for being the first to assemble the data on Cairo. Beginning about 647, Ibn ʻAbd al-Ẓāhir drew for his work on a number of sources that he cites by title in his introduction. Out of his initial efforts came a first draft—a *musawwadah*—and later he either rewrote it at least once or continued to add notes on the margins of the earlier version, possibly both. Ibn al-Dawādārī examined the former and noted that it was a *musawwadah* specifically from 647, and al-Maqrīzī and al-Qalqashandī used the latter. Al-Maqrīzī, in fact, consulted two different versions of it. Unfortunately, it is the first—the earlier draft—that appears to be what we now have, although it contains information that can only have been added after 647. To compound the difficulties of understanding the history of this work, and unlike the situation with al-Maqrīzī, the surviving manuscript is itself a late (and evidently quite poor) copy of Ibn ʻAbd al-Ẓāhir′s original first draft (with some additions). The copyist says explicitly that he copied all that he found in the hand of the author, including an appendix containing a copy of the *waqfīyah* of al-Ḥākim in favor of al-Azhar, the mosques of al-Ḥākim and of al-Maqs, and the Dār al-ʻIlm.

In order to achieve a usable edition, Sayyid had, therefore, not only to emend the text on the basis of common sense and his own extensive knowledge of the subject, but add words, phrases, and whole passages that appear in the works of later writers who quoted from one or the other versions of it but which, for various reasons, are missing from the one manuscript now available. He has marked these additions carefully as to provenance and has provided, as well, a valuable series of citations for sources that run parallel to or complement Ibn ʻAbd al-Ẓāhir. There are also eleven separate indexes and a clear, informative introduction. Despite a few inconsistencies of form and some typographical errors, it is on the whole a welcome contribution and a commendable piece of scholarship.

It is, however, of some interest to assess the value of this undertaking given how much of the text was known previously either in the form of direct quotations or in other transmissions of the information it contains. Quite apart from its critical role in the history and development of the *Khiṭaṭ* genre prior to the work of al-Maqrīzī—a matter of special concern to Sayyid—this version of Ibn ʻAbd al-Ẓāhir adds, it seems on first inspection, little. One curiosity, for example, is that it accords but a single line to al-Azhar and thus confirms by its silence the neglect of this mosque in the century preceding the time of the author. There may be other examples of a similar kind and importance but, as few are obvious, spotting and evaluating them must be done on a case by case basis.

JÖRG-DIETER BRANDES, *Die Mameluken: Aufstieg und Fall einer Sklavendespotie* (Sigmaringen: Jan Thorbecke-Verlag, 1996). Pp. 340.

REVIEWED BY STEPHAN CONERMANN, University of Kiel

What *can* "popular historiography" achieve?

Until now only very few scholars have succeeded in presenting their studies to a wide and varied audience in popular language. This is the reason why a "popular historian" can be a mediator between the scholarly researcher in the field of history at a university and the uninformed but interested outsider. For twenty-five years there has been an ongoing debate among theoreticians over the question of whether language is at all capable of "translating" historical events. Language as such does not necessarily lead to understanding, but refers only to the cognitive impotence of the person who uses it, or in the words of Hayden White: "All systems of knowledge begin in a metaphorical characterization of something presumed to be unknown in terms of something presumed to be known, or at least familiar."[1] However, the human consciousness turns "incidents in time" into "historical events." In the first place, the "popular historian"—like any other historian—observes the deeds, thoughts, and feelings of the actors concerned and formulates his own impressions in accordance with the reports on and the evidence of the acting persons. The common medium for fixing this mental process is the narrative text, although one should keep in mind that in principle the deeds committed, the narration of these deeds, and their interpretation differ only insignificantly from each other. In this way, the difference between fiction and historiography becomes questionable, and the role of "popular historiography" naturally becomes more important, as one of its presumptions is normally the use of fictional characters and a plot.

If this kind of historiography aims at "reviving the past" for an uninformed reader, the "popular historian" should neither disregard the complexity of different epochs nor should he fall back upon positivist modes. Positivist historiography was based on the concept of a passive historical thought from which the compliant historian is able to extract only the most obvious information: legal data from a legal text, information on production and distribution from an economic source, a narration of events from a chronicle. The hallmark of this kind of historical writing was the mere accumulation of such facts within a narrative of wars, kings and empires. To avoid this antiquated positivist method it might be useful to the "popular historian" to write his work against the backdrop of a theoretical approach (structuralism, micro-history, history of mentalities, psychohistory, etc.). In any

[1]Hayden White, "The Question of Narrative in Contemporary Historical Theory," *History and Theory* 24 (1984): 12.

case, one of his main tasks should be to reconstruct images of the world which are representative of different epochs and cultural traditions. This requires the reconstruction of the subjective reality which formed the content of the consciousness of the people of a given epoch and culture. It is, however, wrong to try to understand a foreign epoch by forgetting one´s own cultural background. A pre-condition of this understanding is that the ″popular historian″ should recognize that he belongs to a time and culture different from the people he seeks to describe. He should be guided by an understanding of the ″otherness″ of what he presents to the reader. This implies that he has in mind that there is a difference between the people, the culture and the mentality being studied, and the spiritual make-up of his own society.

Last but not least, the ″popular historian″ has the privilege of dropping footnotes and bibliographies. This, however, should not mean that he is allowed to refrain from making a diligent and systematic inquiry into his subject. On the contrary, it is necessary for him to consult the relevant literature and to go through the most important sources, at least in translation. In any case, he should seek the help of a scholarly advisor if he wants his book to be taken seriously.

The problem with Jörg-Dieter Brandes´s book *Die Mamluken: Aufstieg und Fall einer Sklavendespotie* is that it does not fulfill any of the above-mentioned criteria. The very title is badly chosen and tells us a lot about the author´s conception of the world. Who does not associate *Sklavendespotie* with Karl A. Wittfogel´s controversial *Oriental Despotism: A Comparative Study of Total Power* (New Haven, 1957) and thus with Karl Marx´s idea of an *Asiatische Produktionsweise* within Oriental societies? But, without referring to these known theories, Brandes draws the outline of a more and more degenerating Mamluk caste (pp. 202-205) within a society, which for him represents dictatorship (p. 133).

His presentation does not and cannot assert a claim to originality and literary quality. He therefore abandoned the idea of introducing fictitious characters within a Mamluk setting. So, what we have is neither a historical novel like Umberto Eco´s *Il nome della rosa* (Milan, 1980) or Frans Gunnar Bengtsson´s *Röde Orm* (Stockholm, 1941-45), nor a literarily high-ranking historiography like Roy Mottahedeh´s *The Mantle of the Prophet* (New York, 1985) or Theodor Mommsen´s *Römische Geschichte*, vols. 1-3, 5 (Leipzig, 1854-85), for which the Nobel prize for literature (!) was granted in 1902. Brandes pretends to have written a scholarly study, but this is not a maintainable claim if we take a closer look at the work.

The author has done nothing more than produce a narrative account of the political history of the Mamluks. Unfortunately, he did this with the help of only a very few books that partly consist of obsolete secondary titles and partly of unrepresentative translations from the original sources. It is unpardonable that he

made no effort to consult recent literature, although any scholar could have named him dozens of well-written articles and monographs.

If Brandes's book is not literature in the common sense of the word but a pseudoscholarly work, it is no wonder that a theoretical approach is missing as well. On the contrary, we have to deal with a quite antiquated kind of historiography that even stands behind the somewhat outdated works by Stanley Lane-Poole (*History of Egypt in the Middle Ages* [London, 1913]) and Gustav Weil (*Geschichte der Chalifen*, vols. 4 and 5 [Stuttgart, 1860-62]). Mere descriptive accounts of rulers, kings, and empires go hand in hand with lengthy reports of battles. Besides some historical distortions, many things are told erroneously and without questioning the trustworthiness of the translated sources. The author's positivist *Weltanschauung* becomes clear when he speaks of an alleged "higher cultural level of the Burdjī-Mamluks" (pp. 180ff.) or when he characterizes the life of the Mongols "throughout the centuries" as "primitive and without history" (p. 60). The scant comments on social phenomena during the Mamluk period give only a static impression of Egypt without leaving any room for inner developments. They do not at all tackle the complex socio-economic changes within Mamluk society but rather serve to create an Oriental coloring of Brandes's battle-stories.

The author does not make an effort to undertake an objective analysis or to describe the past as a "sympathetic observer." Thus, his book is full of subjective judgements and inappropriate evaluations. Above all, he gives the reader vivid but inopportune characterizations of all Mamluk rulers. The whole narration is more or less essentialist. The Druzes are "proud" (p. 154) and the Copts and Jews constantly suffer from suppression and mistreatment (pp. 34, 97-98, 110). The narrow streets in the cities are always "full of vibrating life and noise" (p. 46). They breathe the "atmosphere of a Thousand and One Nights" (pp. 7, 8, 45) and you can hear "old Arabian music" with its "inciting rhythm" (p. 196). All Brandes tells us about Sufism during the reign of the Mamluks in Egypt is a supposed "ecstatic howling of the Dervishes" (p. 43) on the battlefield. As an explanation of bedouin rebellions we read: "The will for freedom stirred up the sons of the desert to impetuous rebellion" (p. 50). Similarly superficial is his analysis of the "fall" of the Mamluk empire: "The empire had become large and tired and fell to pieces" (p. 15). For him, one of the reasons for this decline seems to be the "fact" that "at the beginning of the fourteenth century within the Islamic countries the imaginative power and the scholarly quest for knowledge had come to an end" (p. 177). Perhaps by following Stefan Zweig's well-written *Sternstunden der Menschheit* (Leipzig, 1927), Brandes formulates: "Historic *Sternstunden* to save the unity of the Islamic World passed by unused. Islam remained without a spiritual leader and, in this way, the way had been smoothed for foreign rulership and later on, for the rather confused ideas of an 'Arabian World' without corporate identity" (pp.

76, 238). This is also a good example for the constant attempts on the part of the author to refer to the present political situation in the Near East (pp. 8, 12, 69, 90). Unfortunately, his interpretations do not contribute to a better understanding of today's problems in this region. The only thing one can conclude from these passages is that Brandes considers the policy there to be determined by irrational forces.

As to the transcription of Arabic names and technical terms, no logic or system is visible. If one does not have a very good knowledge of Arabic—no one would really care when dealing with a "popular historian"—one should not pretend to be an expert in it. Transcriptions like *la ilaha, illaha wi mohammedun rasulullah* (p. 260) are as incomprehensible as "Nizam al-milk" (p. 98) or "Hasan ben Saba" (p. 89). A very interesting translation of Miṣr al-Qāhirah can be found in the glossary: "Capital of the triumphant" (p. 334). By the way, the reader should avoid a glossary altogether in which *qibṭ* is deduced from *kutub*.

Last but not least, one has to speak of some of the historical inaccuracies and errors. Who, one might ask, is this frequently mentioned "Allah" (pp. 55, 162, 163, 187-188, 202) and who are the "Shi'ite Abbasids" (p. 14)? The reader is also caught by surprise when Brandes alludes to a "wave of Shi'ism" that came like a flood over *Vorderasien* in the beginning of the tenth century (pp. 16, 263). The brief sketch of the rise of the Safavids (pp. 251ff.), Brandes's understanding of *siyāsah* (p. 131), the characterization of Tīmūr (pp. 193f.), or the account of the Assassins (pp. 89f.), all give evidence for the misinterpretation of basic facts within the history of Islam. In the fourteenth century "Moghuls" did not exist in India (p. 177), "within the Sunnite community" there were more than "originally four different *madhāhib*" (p. 100), and "former Islamic rulers" were not "possessed of a religious zeal to convert all unbelievers" (p. 163). The culmination of these distortions seems to be the following general description of the religious scholars during the Mamluk period which should better be left in the German original: "Die finstere Ulema kannte [*sic*!] in ihrem religiösen Starrsinn selten Erbarmen. Der Tod eines politischen Widersachers war für sie kein Mord, sondern lediglich ein notwendiges religiöses Opfer, ist doch Politik im fundamentalen Islam [*sic*!] seit jeher Mittel und Werkzeug der Religion und der Geistliche der von Allah Auserlesene, der über Leben und Tod zu entscheiden hat." (p. 217)

To make a long story short, there might be someone who buys this book, but anyone who would like to read something serious about the era of the Mamluks in Egypt should leave it on the shelf.

SHAUN MARMON, *Eunuchs and Sacred Boundaries in Islamic Society* (Oxford and New York: Oxford University Press, 1995). Pp. 162.

REVIEWED BY MICHAEL CHAMBERLAIN, University of Wisconsin, Madison.

In spite of their ubiquity in the sources, eunuchs have received surprisingly little attention from Islamicists. Apart from Pellat's "Khāṣī," in the *Encyclopaedia of Islam*, Ayalon's seminal articles on the subject, and a few recent studies of the endowments of particular eunuchs, the field has produced little to stack up against the historiography of eunuchism elsewhere. One has only to consult Orlando Patterson's *Slavery and Social Death* to note how Islamic as opposed to Chinese or Byzantine eunuchism has been neglected, all the more so since significant new research on Chinese and Byzantine eunuchs has appeared since Patterson's book was published. Islamicists, and Mamlukists especially, will welcome this intriguing and original study of the eunuch-guardians of the Prophet's tomb.

Since eunuchs were often to be found at liminal zones, between men and women in domestic life, between rulers and their subjects in citadels, and between the living and the dead in tombs, Marmon begins with an examination of the boundaries that eunuchs "both defined and crossed." The first chapter deals with eunuchs and boundary-mediation in medieval Cairo, a little disorienting perhaps in a book intended to deal with the Hijaz, but understandable given that the sources from Cairo are so rich in comparison. Using al-Ghuzūlī's imaginary topography of domestic space as a starting point, Marmon examines vestibules (*dihlīz* and *darkāh*) as transitional zones between the protected—and partly sacred—interior of the household and the outside world. Moving from domestic space to the citadel of Cairo, Marmon argues that eunuchs controlled access to the sultan in much the same manner as they marked the boundaries of domestic life. In both cases eunuchs protected the sacred inviolability (*ḥurmah*) of the interior (*ḥarīm*) from disruption (*fitnah*, sexual and political) and in both cases the line was not drawn between the political and the sexual or the domestic, but between the sanctuary and the exterior. After the deaths of powerful individuals, eunuchs could guard their tombs in much the same way as they guarded households. Underlying the domestic, the political, and the world of the dead, therefore, was a single way of conceiving of space. The most highly-charged boundaries were mediated by the presence of eunuchs, people who were ideally suited to both mark and cross them.

Chapter 2 attempts to find the origins of the society, to describe the endowments that supported it, to chart changes in its patronage, and to understand its organization, social networks, and leadership. Succeeding chapters deal in part with the activities of the society in the politics of the Hijaz. Marmon argues that Saladin supported

the eunuch society less to suppress Shiʿism in the Hijaz than to demonstrate his reverence for the Prophet and the *sunnah*, a point that seems well-taken and confirmed by research into the "Sunni Revival" elsewhere. She also shows how eunuchs marked boundaries to separate Sunnis and Shiʿis in *fitnah*s, the *ṣaff al-khuddām* (the "row of the eunuchs," between worshippers and the pulpit in the Prophet's mosque) making its first appearance to quiet one such *fitnah*. The physical boundary, here as in domestic and sultanal eunuchism in Cairo, was also a moral line, one that reduced the possibility of *fitnah*. Marmon also asks how eunuchs were viewed by others, and argues that they inspired reverence and dread even as jurists viewed the phenomenon of eunuchism with skepticism, and others saw eunuchs as somehow incomplete or childlike. Particularly striking (and worthy of comparison with Cairo) are the patronage activities of wealthy eunuchs: as patronage was a necessary attribute of any great man or woman, some eunuchs seem to have been esteemed in much the same light as a high-ranking amir or a sultan—as great men themselves. The final chapter, "The Longue Durée of the Eunuchs of the Prophet," seems tacked on and a bit out of place (it is based almost entirely on Western travelers' accounts, with a few minor exceptions); in any case the chapter will be of less interest to scholars of the Mamluk period.

The book is thus as much about social, cultural, and religious boundaries as it is about eunuchs. Many readers will hear an echo of Bernard Lewis's suggestion that the pre-modern Islamic world was a place of ins and outs rather than ups and downs: it is the interiority and exteriority of relatively equivalent entities, rather than hierarchies of specialized elements, that gave form to fields as distinct as domestic life, politics, and architecture. Less directly, one senses an unacknowledged debt to symbolic anthropology's insights into how people build boundaries in space in the same way as they make them in their heads, and into how anomalous beings and substances mediate such boundaries. But in a book such as this, intended to be neither theoretical nor programmatic, the absence of any explicit discussion of the approaches that helped Marmon disentangle this most complex subject is no defect.

A work of such originality will inevitably inspire more reservations and criticisms than one that follows better traveled paths. One possible reservation is that the work is too short to cover such a broad expanse of time and space. Although it has the length of an essay and the scope of what could have been a large book, this is more than made up for by its originality. The same reply could be made to the usual niggling concerns over terminology (the *muṣādarah* as "enforced extralegal taxation" seems especially anachronistic) and small errors (al-Maqrīzī's *Khiṭāṭ* should be *Khiṭaṭ*). A larger reservation is that many Mamlukists will want to know why so many of the sources that carry significant accounts of important eunuchs were not cited. Moreover, in a work that devotes so much

attention to eunuchs, power, and domestic life, it would have been useful to hear something about those eunuchs who maintained their own powerful households. Though Marmon mentions that the eunuch-guardians of the Prophet's tomb had their own household retinues (p. 55), it seems to this reviewer that more could have been made of this issue, especially since she was willing to bring Cairo into the discussion. Similarly, Marmon's discussion of the boundary-mediating roles of eunuchs in tombs is exciting and convincing, but the absence of any discussion of those eunuchs who built their own magnificent tombs leaves the reader with the feeling that more could have been said. The sources—both the usual chronicles and biographical dictionaries, together with the *waqfīyahs* that Petry and Garcin have studied—contain masses of information on these topics. But these are minor reservations, reflecting this reviewer's hunger for additional information more than anything else, and should not deflect attention from this fascinating and path-breaking work.

Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras. Edited by U. Vermeulen and D. De Smet (Leuven: Peeters, 1995). Pp. 371.

REVIEWED BY R. STEPHEN HUMPHREYS, University of California, Santa Barbara

This useful but loose-knit volume is made up of papers in English, French, and German presented at three international colloquia held at the Katholieke Universiteit Leuven (Louvain) between 1992 and 1994. The contents are quite evenly divided between the three dynasties, with nine on the Fatimids, six on the Ayyubids, and eight on the Mamluks. In spite of the title, there is very little here on Syria; Cairo continues to dominate scholarly discourse—perhaps to a degree which distorts the realities of medieval life.

Those who edit volumes of this kind have three principal tasks: to obtain contributions from outstanding scholars, to see that these papers are carefully prepared and well-presented, and to bring the papers together within some sort of unifying framework. In the present case, De Smet and Vermeulen have seen to the first two tasks quite successfully; the third they have not attempted. The papers are of variable weight and substance, but all have a contribution to make. Some are still very much oral presentations, others have been considerably revised for publication. The standard of production is high—a compliment to the publisher as well as the editors—with good paper, an attractive format (including real footnotes rather than endnotes!), and careful proofreading. The volume is a pleasure to read,

something which is too often not the case in contemporary scholarly publishing. Beyond grouping the papers according to dynasty, however, the editors make no effort to link them together. There is no introduction (the usual device), and under each dynastic heading, they simply arrange the papers by the authors′ names in alphabetical order. Nor is there an index or a consolidated bibliography. To this miscellany every reader will have to bring his own sense of coherence and unity.

Four scholars have contributed papers to the Fatimid section: two from Michael Brett, three each from D. De Smet and Heinz Halm, and one from Pieter Smoor. They cover a wide range of topics: military institutions, political biography, caliphal ceremonial, theology, legal prescriptions, poetry. Under such circumstances detailed commentary is out of the question, but a few points can be noted. In his two articles Brett throws much light on the military resources available to the twelfth century Fatimids, and thereby on their inability to take effective action against the Franks and then Nūr al-Dīn. His first paper does this by a deconstruction of the Arabic sources for the several battles of Ramlah between Crusaders and Fatimids in the crucial period of 1099-1105. His second looks at late Fatimid fiscal practices and shows how these were carried over into the distinctive *iqṭāʿ* regime of Mamluk Egypt.

In his three articles, De Smet examines aspects of Fatimid doctrine. The first interprets (quite persuasively) al-Ḥākim′s apparently arbitrary decrees on food and drink by showing that they represent an extremely rigorous application of Ismāʿīlī *fiqh* or *ḥikmah*; as such they are the product not of madness but of hyperzealousness. The second examines the conflict between Sunni and Ismāʿīlī doctrine on determining the dates of the Ramaḍān fast. The third is an analysis of al-Shīrāzī′s brilliant defense of revealed religion against the attacks of that mysterious arch-heretic Ibn al-Rāwandī. In all three papers De Smet demonstrates both a detailed knowledge of Fatimid theological and legal texts and a gift for subtle analysis.

Heinz Halm devotes one paper to examining the locales where Ismāʿīlī *ḥikmah* and *fiqh* were studied; al-Azhar, he points out, was a mosque, never a center for training *dāʿī*s. His second and third papers examine Fatimid ceremonial and royal symbolism. Especially interesting is his argument that the *shamsah* was not a parasol (as it is usually taken to be) but a crown suspended on a chain from a baldachin or arch. This symbol had its origins in Sasanian Iran, but it spread all over the medieval Mediterranean world and even into Germany. Finally, Pieter Smoor analyzes the imagery of Fatimid court poetry; in view of the opacity of much of this verse, his extensive citations and analyses are very welcome. As poetry, I am sorry to say, it is mostly very poor stuff.

The Ayyubids receive rather less attention than the two dynasties flanking them. They still tend to be the step-children of Syro-Egyptian history. Of the six

articles in this section, in fact, the most substantial is Angelika Hartmann's study on the Abbasid caliph al-Nāṣir li-Dīn Allāh ("Wollte der Kalif sufi werden?"). The two appreciations of Saladin and al-Qāḍī al-Fāḍil by D. E. P. Jackson are thoughtful and pleasant to read, but rather light-weight. On the other hand, the pieces by A. Louca on the fiscal clerk Ibn Mammātī and by J. N. Mattock on a panegyric ode to al-Ṣāliḥ Ayyūb by the poet Baḥā' al-Dīn Zuhayr are more closely focused. Anne-Marie Edde examines three much-discussed Ayyubid military terms—*ḥalqah*, *jamdār*, and *ustādh al-dār*. The meanings of the latter two words are convincingly worked out. To the problem of the Ayyubid *ḥalqah*, she brings both new texts and a clear head; her discussion is a real step forward in decoding this vexing term, though important questions remain.

The eight papers on the Mamluks come from five authors. The longest are a pair by Doris Behrens-Abouseif, who focuses on the architecture of Cairo—obviously one of the most important and permanent achievements of Mamluk rule. Her first paper compares the patronage of al-Nāṣir Muḥammad and al-Ashraf Qāytbāy; the goal of these two sultans was not merely to leave a large body of monuments to perpetuate their names, but also, and more importantly, to build up or conserve the urban fabric of the capital. Though she does not make the comparison, the ambitious designs of al-Nāṣir Muḥammad recall those of his distant successor, the Khedive Ismā'īl. Her second paper looks at Norman Sicily as a possible source for some of the distinctive features of Cairene Mamluk architecture; she argues her case cautiously, but it is interesting and suggestive.

P. M. Holt continues his valuable studies on early Mamluk diplomacy with a meticulous analysis of Qalāwūn's abrogation of his treaty with the Latin Kingdom of Jerusalem just before his death in 1290. His other paper examines the complex web of family relationships in which al-Nāṣir Muḥammad was embedded. Al-Nāṣir's many marriage alliances with the military aristocracies of the Golden Horde and the Il-Khans—and his own mother was in fact the daughter of a Mongol commander—demonstrate that the ties between Mongols and Mamluks were far more intimate than we have recently been led to believe. Likewise intriguing is the failure of al-Nāṣir's complex marriage diplomacy to establish a secure succession to the throne for any of his numerous sons.

The other papers can be treated more concisely. Frederic Bauden reconstructs the very complex family tree of a learned family of Mecca—an enormous amount of labor, which yields results interesting in their own right, but also needing to be placed within a broader study of Mamluk-era *'ulamā'* "dynasties." Jean Michot takes a new look at Ibn Taymīyah, to see what light he can throw on some of the key political controversies of his time. Particularly revealing is Ibn Taymīyah's scathing (and probably ill-informed) denunciation of the Il-Khanid vizier Rashīd al-Dīn Faḍl Allāh, whom he encountered during Ghāzān's occupation of Damascus

in 1299-1300. The volume closes with two brief papers by Urbain Vermeulen, one on Mamluk royal insignia, the other on a letter by the shadow-caliph al-Mustakfī to the Yemen in 1307.

In spite of the disparate contents of this collection, many of the papers should be read together. For example, it is very useful to compare Brett´s source analysis of the battles of Ramlah with Holt´s dissection of the texts describing the reasons for Qalāwūn´s treaty abrogation two centuries later. Likewise, Smoor´s survey of the Fatimid court poets fits neatly with Jackson´s discussion of al-Qāḍī al-Fāḍil and Mattock´s of Baḥā' al-Dīn Zuhayr. The family networks explored by Bauden and Holt throw a bright light on the radically contrasting social and political worlds inhabited by the learned and military aristocracies of the Mamluk era. Other readers will find equally useful groupings of their own. In brief, De Smet and Vermeulen have given us a useful volume which accurately reflects the current state of research on Fatimid, Ayyubid, and Mamluk Egypt. With some additional effort, they could have provided a much better integrated view of the field.

Short Notices

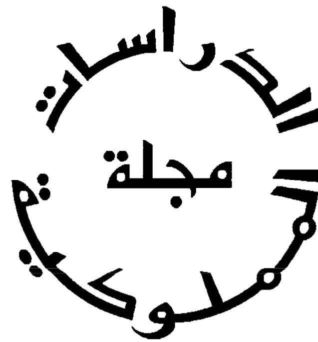
Ṣubḥī ʿAbd al-Munʿim, *al-Sharq al-Islāmī Zaman al-Mamālīk wa-al-ʿUthmānīyīn* (Cairo: al-ʿArabī lil-Nashr wa-al-Tawzīʿ, 1995). Pp. 258.

This book is a superficial survey of events in the Middle East from the mid-thirteenth century to the early years of the twentieth. Focusing primarily on the history of Mamluk and Ottoman Syro-Egypt, the author also reviews such collateral issues as the rise of Safavid Iran and the expansion of the Ottoman Empire into the Hijaz, Yemen, and Iraq in the sixteenth and seventeenth centuries, as well as the late eighteenth century French invasion of the Levant. The early sections on Mamluk history, which make up nearly half the book, are organized briefly around events occurring in the reigns of some of its most famous rulers from Shajar al-Durr through Qānṣūḥ al-Ghawrī. Copious but short notes at chapter endings. (W. W. C.)

Najm al-Dīn Ibrāhīm ibn ʿAlī al-Ṭarsūsī, *Tuḥfat al-Turk fīmā Yajibu an Yuʿmala fī al-Mulk*, edited by Riḍwān al-Sayyid (Beirut: Dār al-Ṭalīʿah lil-Ṭibāʿah wa-al-Nashr, 1992). Pp. 110.

This example of *Fürstenspiegel* was composed for the benefit of the Mamluk Sultan al-Malik al-Nāṣir Ḥasan (fl. 748-762) by the author, Najm al-Dīn al-Ṭarsūsī (d. 758). Al-Ṭarsūsī was the outspoken Ḥanafī *qāḍī al-quḍāh* of Damascus, who succeeded his father to that position in 746. Preceded by a long and useful historical introduction, the text is divided into twelve short chapters commemorating his *tarājim* as a Ḥanafī *qāḍī al-quḍāh* concerning the proper operation of the then century-old Mamluk state. Al-Ṭarsūsī's *fuṣūl* contain a variety of stock admonitions calling for the investigation of such things as the functioning of government *dawāwīn*, conditions among local peasants, maintenance of local infrastructure (dikes, fortifications, ports), as well as related fiscal issues (*awqāf*, confiscations, disbursements from the *bayt al-māl*). While the author's ambition to review the condition of "everything pertaining to the interests of Muslims" falls short, reading between the lines of al-Ṭarsūsī's text may be helpful in developing a fuller appreciation of the problems facing Mamluk society in the critical decades following al-Nāṣir Muḥammad's passing. The notes and bibliography are useful. (W. W. C.)

Anwar Zaqlamah, *al-Mamālīk fī Miṣr*, Ṣafaḥāt min Tārīkh Miṣr, no. 24 (Cairo: Maktabat Madbūlī, 1995). Pp. 192.



This reprinted volume undertakes in twenty-one short chapters to characterize briefly the external relations of Mamluk Egypt with various states, both Muslim and Christian, some well-known (Mongol, Armenian, Ottoman, Venetian, French), some not (Nubian, Cypriot, Portuguese). The book´s chronological scope ranges from the end of the Ayyubid period in the mid-thirteenth century to the end of the French occupation in the early nineteenth century. The notes are short, and the book is without a bibliography. (W. W. C.)

Al-Sayyid ʻAbd al-ʻAzīz Sālim and Saḥar al-Sayyid ʻAbd al-ʻAzīz Sālim, *Dirāsah fī Tārīkh al-Ayyūbīyīn wa-al-Mamālīk* (Alexandria: Mu'assasat Shabāb al-Jāmiʻah, 1997). Pp. 321.

This is primarily a history of the Levantine maritime frontier from the thirteenth through fourteenth centuries and, in particular, the events leading to the infamous Cypriot sack of Alexandria in 1369. Beginning with Saladin´s seizing power in Egypt (1169), much of the book in fact covers the Ayyubid period. Those limited number of pages concerning Mamluk history are devoted largely to a review of earlier Cypriot maritime raids in the Baḥrī period as well as the state of Mamluk Alexandria before 1369. Appended also are brief histories of several prominent constructions of the Mamluk period located principally in the maritime cities of Tripoli and Alexandria. (W. W. C.)

MAMLŪK STUDIES
REVIEW

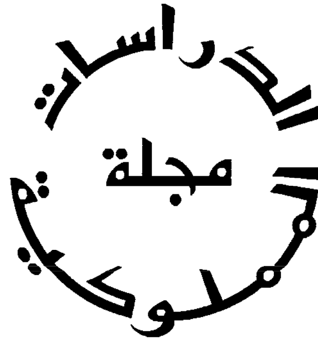
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago



Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648-922/1250-1517). The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal will include both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy.

Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page http://www.lib.uchicago.edu/e/su/mideast/medoc.html. This site provides a link to the searchable Mamluk bibliography maintained by MEDOC and has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

The logo that appears on the cover and title page was created by John E. Woods.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA

Ulrich Haarmann, 1942-1999

When I had to fulfil the sad task of writing this obituary about Ulrich Haarmann, I recalled the following two scenes: The solemn burial service at the Littenweiler cemetery in Freiburg was in progress, when suddenly out of nowhere, in the midst of this very peaceful gathering, the faint utterances of a newborn were heard. After a while, the escalating little voice of the infant grew louder and louder and more demanding—it was the sound of a baby crying out to the world. With disapproving glances, the crowd turned their heads in an attempt to signal the student, who had brought her child to the funeral, that she should take the disturbance away. If Ulrich Haarmann had been there to witness this, he would have given a sympathetic smile, which was so typical of him, and I am sure he would have asked the mother to come to the front. After all, he had been fascinated, since his childhood, by creation in its immeasurable variety and by life in all its unfathomable dimensions; thus, he would have certainly enjoyed this allegorical representation of life and death on such an occasion.

It was the mixture of self-irony, uprightness, the enchanting ease with which he made contacts and professional appearances, his cosmopolitan tolerance, and the ability to unite and compromise without ever losing sight of his own interests which made people want to befriend Ulrich Haarmann. In addition to this, his strong sense of duty and profound scholarly dedication, along with his warm kindness, made him a highly esteemed colleague wherever he went. It is, therefore, no surprise that first and foremost it was his personality which made him the perfect candidate for the post of Director of the Zentrum Moderner Orient/Center for Modern Oriental Studies (ZMO) in Berlin. In spite of his illness, he carried out his duties as Director of the Center from 1 April 1998 to the end with enthusiasm and earnestness. In fact, even during the last days of his life, he added corrigenda and addenda by hand to the Center′s current proposal book submitted to the Deutsche Forschungsgemeinschaft/German Research Association (DFG) in July 1999. Incidentally, he was thrilled about working in Berlin from the very first day. This was not only because of the fantastic atmosphere at the ZMO but also due to the twelve months he had spent in Berlin as a fellow at the Wissenschaftskolleg/

Institute for Advanced Study (1995/96 and February/March 1997)—a time which he always considered as having been wonderful, important, and very productive.[1]

It was also within the rooms of the Wissenschaftskolleg where the second scene I recalled took place: It was a beautiful, sunny day when I visited Ulrich Haarmann and found him, upon my arrival, amidst a group of other fellows in one of the residents′ rooms at the institute. He was in his element: First, he spoke to a German colleague on his right about cultural life in Berlin; then he discussed emphatically in French with someone on his left the financial misery of German universities before he switched to English to converse with the gentleman opposite him about the complicated careers and activities of Mamluk descendants before the Ottoman conquest of Egypt. Somewhat shy, I had stepped into the international circle without Ulrich Haarmann having noticed. When he took notice of me, he jumped up enthusiastically and introduced me in perfect Standard Arabic to a colleague from the Comores. Later that evening, he even tried his (to my reassurance) somewhat rusty Russian on an acquaintance from Moscow. One could really feel the ease with which he changed from one idiom to another. Enchanted by the phenomenon of language, he delighted himself in engaging others in his enthusiasm.

Ulrich Haarmann was born in 1942 in Swabia. After having attended the Eberhard-Ludwig-Gymnasium in Stuttgart (classics), it was Arabic which he chose to study at the University of Freiburg. Thereafter, he quickly attained a Fulbright scholarship at Princeton, from which he graduated with a B.A. in Oriental Studies on 15 June 1965. In many ways, this early stay abroad in the USA had a strong influence on the rest of Ulrich Haarmann′s life: First, he discovered a love for Arabic grammatical theories, acquired from his examination work under Rudolf Mach on Ibn Bābashādh′s *Al-Muqaddimah fī al-Naḥw*; second, he developed an interest in editing Arabic texts. In a short time, he mastered this philological craft, which for a long time was one of the most sought-after skills in a German orientalist. Despite the demands of today′s students to deal only with modern topics, he made a continuous and conscious effort to stress that a solid philological education was indispensable.

At Princeton, Ulrich Haarmann hardly visited the hectic city of New York although it was only an hour away by train. He learned to value the exclusivity and privacy of a campus university, and therefore I believe that the wonderful location of the ZMO in Berlin fulfilled his expectations of a scientific retreat. The years at Princeton laid the groundwork for his lifelong and heartfelt relationship with the USA and Canada. In 1974, he spent four months as visiting professor of Islamic History at the University of California in Los Angeles (UCLA). After two

[1]See his account of this year at the Wissenschaftskolleg: ″Joseph und seine Söhne,″ *Wissenschaftskolleg –Jahrbuch 1995/96*, 65-71.

similar stays at McGill University in Montreal (1976 and 1986), he participated as a fellow in a research program at the Annenberg Institute for Judaic and Near Eastern Studies in Philadelphia (January-April 1990). In the meantime, he remained loyal to Princeton over the years: first, as a research fellow (January-April 1987), then as a visiting professor (March-June 1992) in the School of Historical Studies of the Institute for Advanced Studies, where he had the opportunity to further his scholarly activities.

Free from the bureaucratic burdens of a German professorship, during these quiet and peaceful months he was able to finish many of his scientific projects. It should suffice to mention the critical edition of Abū Ḥāmid al-Qudsī´s *Duwal al-Islām;* some important articles about the careers of the sons of the Mamluks, the legal opposition to Mamluk autocracy, and ethnic and racial prejudices in the medieval Near East; and lastly his pioneering study on life and trade in Ghadames (Libya) in the nineteenth century.

The starting point for Ulrich Haarmann´s intellectual occupation with the somewhat controversial, unique, and fascinating rule of Turkish slaves over the native population of Egypt was his decision to leave Princeton and to return to Freiburg to write his dissertation on *Quellenstudien zur frühen Mamlukenzeit*. His supervisor then was Hans Robert Roemer, the leading figure in German Oriental Studies after 1945.[2] Roemer not only supported Ulrich Haarmann´s Ph.D., but he also took great pleasure in witnessing Haarmann´s work at the Deutsches Archäologisches Institut/German Archeological Institute (DAI) in Cairo from autumn 1969 until May 1971. Upon completing this first stay in Egypt, he was offered an assistant professorship in Freiburg. Just one year later he would qualify for his *Habilitation* in Islamic Studies on the basis of his current writings, in particular his dissertation and his edition of the *Chronik des Ibn ad-Dawādārī*. With this, he paved the road for a university career: From 1974 to 1976, he was an assistant professor; from 1976 to 1978 an unscheduled professor; and from 1979 to 1992 a full professor at the University of Freiburg. At the same time, he continually worked in different areas and offices within the administrative organization of his alma mater. His last position before his post in Berlin was a full professorship in Oriental Philology (Arabic and Islamic Studies) at the Christian-Albrechts University in Kiel (1992 to 1998).

Considering the often difficult financial situation of today´s young academics, time and again he mentioned how thankful he was for his early job opportunities. All the more reason for him to want to undertake everything in his power to help promising younger scholars. Therefore, he also saw his position in Berlin as a

[2]See Ulrich Haarmann´s obituary about his ″Doktorvater″ (supervisor): ″Zum Gedenken: Hans Robert Roemer (18.2.1915-15.7.1997), *Die Welt des Islams* 38 (1998): 1-8.

chance to turn the ZMO into a place for advanced research on the Orient, where above all, postdocs would be invited as fellows. With regard to the overall conceptual framework of the ZMO, he always emphasized the importance of partnerships and cooperation with individuals and institutions, at regional as well as interregional levels. Haarmann believed the ZMO should act as an (inter)national mediator, bringing together various entities for the enhancement of Oriental Studies both within and outside Germany. The West, in his opinion, had neither an intellectual monopoly on research, nor on the art of mastering the future.

Contact with the Islamic world and its people was always important to Ulrich Haarmann. He personally knew the Arab countries—with the exception of Iraq and the Sudan—from long or short private trips, international congresses, and several research and teaching programs. For instance, in Cairo he was not only employed by the DAI, but also acted as a visiting professor at the American University in Cairo/Center for Arabic Studies (Spring 1971), as well as a lecturer at the University of Cairo (Spring 1977). The time he worked during the Lebanese civil war as Director of the Orient Institute of the Deutsche Morgenländische Gesellschaft/German Oriental Society (DMG) in Beirut (1978-1980) was an especially important experience for him. This task was particularly difficult for him personally, since his wife, his six-month-old daughter and his almost three-year-old son had to remain in Germany. The fact that he nevertheless completed this duty, with courage, was honored by the award of a Golden Medal for Education and Science by the Lebanese President on 15 November 1980. Finally, he kept in close contact with Kuwait ever since his discovery of the earliest naming of this state from the travel logs of Murtaḍá ibn ʻAlī ibn ʻAlwān.

Because of Ulrich Haarmann′s high reputation among his colleagues, many honorable tasks and duties were offered to him. From about 1976 to 1992, he was principal lecturer (″Vertrauensdozent″) at the Studienstiftung des Deutschen Volkes, and from 1981 to 1991 he was a member of the advisory body of the Institute for Oriental Studies at the DMG. From the winter term 1990/91 he worked as an expert on the Entrance Exam Committee of Princeton University (Alumni School Committee), and in 1995 the role of publishing the highly reputed *Bibliotheca Islamica* was assigned to him.[3] In addition to this, the DAI asked him to oversee the publication of *Quellen zur Geschichte des Islamische Ägyptens,* and in 1992 he acted as co-editor of Brill′s series *Islamic History and Civilization.* In 1994, the Academia Europaea nominated him as a member and one year later he was admitted into the Berlin-Brandenburg Academy of Science.

For a long time, Ulrich Haarmann′s wide-ranging interests focused on the various facets of Mamluk society. He, who was also talented at writing substantial

[3]In Spring 1999 he handed over this task to Prof. Dr. Tilman Seidensticker (Jena, Germany).

and well considered reviews, did a lot of thorough research in this field. In addition to the above-mentioned titles, his scholarly contributions on medieval Muslim perceptions of Pharaonic Egypt deserve to be highlighted: He introduced and critically edited the *Pyramidenbuch des Abū Ǧaʿfar al-Idrīsī (st. 649/1251),* and no student should miss the opportunity to read his well-written articles on this subject. Besides the difficult subjects of the interdependencies of the Arabic language and Muslim jurisprudence, and socio-political questions on the history of Muslim Central Asia—I will mention only his articles about Faẓl Allāh ibn Rūzbihān Khunjī (860-925/1456-1519), and on Transoxania in the sixteenth century—Ulrich Haarmann was generally interested in the social, cultural, and intellectual history of the medieval Near East as a whole.

One of Ulrich Haarmann′s lasting merits was editing the *Geschichte der arabischen Welt.* This work—already in its third edition—has become a classic not only among German students, but also among specialists. Through this inspiring and exemplary teamwork by German orientalists, many students are now able to acquire a very high level of understanding and deep insight into the confusing variety of the political and social systems in the different Arab regions.

Ulrich Haarmann had never been just a resident of the ivory tower. It was for him a basic necessity on suitable occasions—be it during lessons or public appearances, in conversation with amateurs of both religions, in discussion groups or lectures on specific topics—to emphasize the common roots of the Muslim and Christian world views. In his opinion, mutual acceptance and tolerance—with all of the necessary remaining unfamiliarities—were the keywords to opening the way to a multi-cultural society. In this regard, Berlin as a metropolis also seemed to him to be opening up to new perspectives.

After becoming Director of the ZMO, he started looking for new scholarly fields. With his typical curiosity, he quickly found his way into theoretical discussions within the humanities and social sciences. As time went on, he considered these new methodological approaches as being the core of all multi- and interdisciplinary projects. On these grounds, he believed that the identity-producing effect of historiography and the international ″contact areas″ of the Islamic world during the modern age (the Sahara, Central Asia, the Indian Ocean) would be interesting subjects for future projects. These undertakings were prevented, however, like so many other plans, by his sudden death. There were a lot of good things still to be expected from Ulrich Haarmann; instead there remains an impressive, but somehow brutally interrupted life. The contemporary German community of orientalists has lost a wonderful person and a very erudite scholar.

ROBERT IRWIN
LONDON, ENGLAND

Under Western Eyes: A History of Mamluk Studies

The exotic and savage Mamluks, the despotic sultans, their vast and extravagant harems, the political murders, the sanguinary punishments, the mounted skirmishes in the shadow of the pyramids, the moonlight picnics in the City of the Dead, the carnival festivities at the time of the flooding of the Nile, the wild dervish *mawlid*s . . . .

Is there not something paradoxical in the fact that the Mamluks owe their survival in modern memory to men (mostly) who were and are for the most part quiet and solitary scholars, much more familiar with the book than the sword? I have not punched anyone since I was a schoolboy. Yet, when, as a research student, I looked for a thesis topic, I was hooked by Steven Runciman's description of the sultan Baybars I. According to the doyen of Crusading history, Baybars "had few of the qualities that won Saladin respect even from his foes. He was cruel, disloyal and treacherous, rough in his manners and harsh in his speech. . . . As a man he was evil, but as a ruler he was among the greatest of his time."[1] (Peter Thorau, of course, has since offered a slightly more benign view.)

Many of those who have studied the Mamluks have not done so out of liking for them. Edward Gibbon, who was a contemporary of the Mamluks (or neo-Mamluks, if you prefer), put the case against them in his *Decline and Fall of the Roman Empire* (1776-78): "A more unjust and absurd constitution cannot be devised than that which condemns the natives of a country to perpetual servitude under the arbitrary dominion of strangers and slaves. Yet such has been the state of Egypt above five hundred years." Gibbon went on to contrast the "rapine and bloodshed" of the Mamluks with their "discipline and valour."[2]

[1]Steven Runciman, *A History of the Crusades,* vol. 3, *The Kingdom of Acre and the Later Crusades* (Cambridge, 1955), 348. This work is listed as no. 2158 in the Chicago *Mamluk Studies* bibliography. However, from this point on, since this article ranges so widely over the extensive range of Mamluk studies, references in my notes will usually only be given to works which, for one reason or another, have not been listed in the excellent *Mamluk Studies: A Bibliography of Secondary Source Materials* (Middle East Documentation Center, the University of Chicago, October 1998 and in progress).

[2]Edward Gibbon, *The Decline and Fall of the Roman Empire,* ed. J. B. Bury (London, 1912), 6:377-78.

Constantin-Francois de Chassebouef, comte de Volney (1757-1820), took a similarly bleak view of the Mamluk system as he knew it in his own time: ″how numerous must be the abuses of unlimited powers in the great, who are strangers both to forbearance and to pity, in upstarts proud of authority and eager to profit by it, and in subalterns continually aiming at greater power.″[3] Volney′s writings, his *Voyage en Égypte et en Syrie* (1787) and his *Les Ruines, ou méditations sur les révolutions* (1791), helped to direct predatory French interests in the direction of Egypt and are part of the background to Bonaparte′s expedition there in 1798. Famously (or notoriously, if one happens to be of Edward Said′s party) Bonaparte took a team of savants with him. Of course, the past which most attracted these scholars was the Pharaonic one. However, a few interested themselves in the history of the medieval Mamluks, if only for latter-day utilitarian reasons. Jean-Michel Venture de Paradis had helped Volney with his *Voyage en Égypte et Syrie.* Having come across a manuscript of Khalīl al-Ẓāhirī′s *Zubdat Kashf al-Mamālik* in Paris, he went on to produce a stylish, if erratic, translation of it. Venture de Paradis studied the Egypt of Barsbāy and Jaqmaq, the better to understand the same country under Murād and Ibrāhīm Bey, and he subsequently took part in the 1798 expedition to Egypt and took a leading role in the researches of the Institut d′Égypte.[4]

The French who landed in Egypt in 1798 and who went on to invade Palestine were intensely conscious of the fact that Frenchmen had been there before them. The history of the Mamluks was for a long time ancillary to the study of the Crusades and of the fortunes of France in the Levant. In the eighteenth century, religious scholars belonging to the Maurist order had played the leading role in editing documents relating to the history of France and therefore also relating to the history of French Crusades. In the course of the French Revolution, the Maurist Superior-General was guillotined and the order was dissolved. When monarchy was restored the Académie des Inscriptions et des Belles-Lettres was set up to continue the work of the Maurists. Quatremère and Reinaud, who had oriental interests, were both members of the founding committee of five. They, among other tasks, oversaw the publication of the *Recueil des historiens des croisades,* which, in its volumes devoted to *Historiens orientaux,*[5] offered translated extracts from chronicles by Abū al-Fidá and Abū Shāmah covering the early years of the

Baḥrī Mamluk Sultanate. However, the oriental volumes of the *Recueil* were overwhelmingly weighted to coverage of the edifying career of that chivalrous paladin, Saladin.

Even so, others were editing and sometimes translating texts which had a bearing on Mamluk history, such as Ibn ʿArabshāh′s *ʿAjā'ib al-Maqdūr.* Antoine Isaac Silvestre de Sacy (1758-1838) was the grandest and most influential orientalist of the eighteenth and nineteenth centuries. Before the Revolution he had worked for the Royal Mint and he had strong prejudices about money. It was, I think, because of this that in 1796 he published a translation of al-Maqrīzī′s *Shudhūr al-ʿUqud,* since, as Silvestre de Sacy saw it, the fifteenth-century Egyptian historian was an ally in the latter′s argument against contemporary French ministers and bankers, who were so foolish as to believe that there must be a fixed rate of exchange between gold and silver.[6] Silvestre de Sacy (who was a much more polemical orientalist than Said has allowed) also took up cudgels against Montesquieu′s account of oriental despotisms and the notion that there were no real property rights under such despotisms. In his exceedingly scholarly polemic, Silvestre de Sacy drew heavily again on al-Maqrīzī, making much reference this time to the *Khiṭaṭ*.[7] Furthermore the *Chrestomathie de la langue arabe* (1806) included biographical notices of al-Maqrīzī by al-Sakhāwī and Ibn Taghrībirdī.

Sylvestre de Sacy seems to have transmitted his enthusiasm for al-Maqrīzī to his distinguished pupil, Étienne-Marc Quatremère (1782-1857). Quatremère studied and taught Hebrew, Syriac, and Arabic, and he also had a strong interest in Coptic and Pharaonic Egyptian. Despite his wide range of interests and publications, he was the first to devote serious and sustained study to the Mamluks. His edition and translation of al-Maqrīzī′s *Kitāb al-Sulūk* under the title *Histoire des sultans mamlouks de l′Égypte*[8] is an example of text as pretext, being not so much a work of history as of philology. Although al-Maqrīzī is a useful source for his own lifetime, Quatremère, who was not primarily a historian, chose to translate the *Sulūk* for the early Mamluk period, since obviously the fortunes of Baybars, Qalāwūn and al-Ashraf Khalīl overlapped with those of the Crusaders. (The only reason that Quatremère did not start with al-Maqrīzī on the Fatimids and Ayyubids was because it was planned that those sections of the *Sulūk* should go in the

[8]Paris, 1837-45.

Receuil, though nothing ever came of this.) Quatremère had inherited his teacher′s passion for and mastery of philology and the inordinately lengthy footnotes to *Histoire des sultans mamlouks* are tremendous displays of erudition on the meanings of words for military offices, gypsies, polo balls, wardrobe-masters, heraldry, and much else. Those annotations were later heavily drawn upon by Dozy for his dictionary of post-classical Arabic. They also provided a starting point for later researches into institutions by Gaudefroy-Demombynes and Ayalon. They were industrious giants in those days and among Quatremère′s other publications was an edition of Ibn Khaldūn′s *Muqaddimah, Prolégomènes d′Ibn Khaldoun: texte arabe.*[9] As we shall see, Ibn Khaldūn was to do as much as anyone in shaping western historians′ perceptions of the Mamluks.

A student of Quatremère, Gustave Weil (1808-89) was the first scholar to provide a sustained, detailed, and referenced history of the Mamluks. Those were the days when one did not need a historical training to write history and Weil′s wide range of publications included a translation of *Alf Laylah wa-Laylah.* His history of the Mamluk period, *Geschichte des Abbasidenchalifats in Egypten,*[10] was a sequel to *Geschichte der Chalifen,*[11] and, like its precursor, it uncritically reproduced the material provided by sources such as al-Suyūṭī and Ibn Iyās.[12] William Muir′s *The Mameluke or Slave Dynasty of Egypt 1260-1517*[13] acknowledged a heavy debt to Weil′s ferreting among obscure manuscripts on the continent. Apart from Weil, Muir′s three main sources were al-Maqrīzī, Ibn Taghrībirdī and Ibn Iyās. Muir was a devout Christian and, as he made plain in his preface and introduction, the Mamluks′ chief importance was as adversaries of the Crusaders, as the Mamluks ″were finally able to crush the expiring efforts of that great armament of misguided Christianity.″ A few exceptional figures apart, Muir was not favorably impressed by the Mamluks: ″But the vast majority with an almost incredible indifference to human life, were treacherous and bloodthirsty, and betrayed, especially in the later days of the Dynasty, a diabolic resort to poison and the rack, the lash, the halter and assassination such as makes the blood run cold to think of. . . .″[14]

Max van Berchem (1863-1921), a Swiss archaeologist and epigrapher, established and worked on the *Matériaux pour un Corpus Inscriptionum Arabicarum* from 1903 onwards. This massive collaborative survey was designed to cover the inscriptions of Anatolia, Syria, Palestine, and Egypt. Van Berchem's team of collaborators included Sobernheim, Mittwoch, and Herzfeld in Syria and Gaston Wiet in Egypt. Van Berchem treated buildings as historical documents, or rather he actually considered them to be superior to documents as they could be used to check the accuracy of documents.[15] Van Berchem's work (small essays within the *Corpus*) on the names and entitulature featured in such inscriptions prepared the way for later work done by Gaudefroy-Demombynes, Sauvaget, Ayalon, and others on office holding and other institutional aspects of Mamluk society.

> They flee from me, that sometime did me seek
> With naked foot, stalking in my chamber.
> I have seen them gentle, tame and meek,
> That now are wild. . . .

. . . are the opening lines of a fine erotic poem by Sir Thomas Wyatt (ca. 1503-42). Gaston Wiet, though a French citizen, was directly descended from the Scottish poet. Van Berchem was the major influence on the youthful Gaston Wiet. Wiet was to publish a great deal on a wide range of topics relating to Mamluk history and culture. (Besides his narrative history, *L'Égypte arabe . . . 642-1517* [1937] in G. Hanotaux, *Histoire de la nation égyptienne,* these include a translation from Ibn Iyās, a digest of Ibn Taghrībirdī's *Al-Manhal al-Ṣāfī,* a book on Cairo's mosques, a translation of al-Maqrīzī's *Ighāthah,* extensive work on the same author's *Khiṭaṭ,* a little book on medieval Cairo, a catalogue of the Cairo Museum's holdings of glassware, etc., etc.) Nevertheless, though Wiet wrote frequently and at length on the Mamluks, he was not especially interested in them per se. He was just as interested in modern Egyptian novels, of which he translated several examples. The real focus of his enthusiasm was the city of Cairo, which he lived in and loved and finally departed from with the greatest reluctance.

Although Creswell was Wiet's furious enemy and rival, this was not really Wiet's fault, since what Creswell especially hated about Wiet was that the latter was French. Keppel Archibald Cameron Creswell (1879-1974) was like Wiet an admiring disciple of Van Berchem. Creswell's *The Muslim Architecture of Egypt*[16]

---

[15]On van Berchem, see K. A. C. Creswell, "In Memoriam—Max van Berchem," *Journal of the Royal Asiatic Society* (1963): 117-18; Solange Ory, "Max van Berchem, Orientaliste," in *D'un Orient l'autre: Les métamorphoses succesives des perceptions et connaissances* (Paris, 1991), 2:11-24.

[16]Oxford, 1952-59.

unfortunately goes no further than 1326. Although he planned to cover the last two centuries of Mamluk architecture, he never got to it. Creswell knew no Arabic and he concentrated rather narrowly on dating and surveying the buildings he studied, leaving a mass of theoretical problems to be tackled by later scholars such as Michael Rogers, R. S. Humphreys, and Jonathan Bloom.[17]

The Anglo-French colonial moment in the Near East from ca. 1918 until, perhaps, the 1950s, made it relatively easy for European scholars to study the buildings, archaeological sites, and town plans of the region. Many of the early leading figures in these fields were French. France's historic mission in the Orient drew upon the crusading past to justify its reoccupation of a Syria in which so many Frenchmen had fought and died in the twelfth and thirteenth centuries. From 1921 onwards France exercised a Mandate in Syria and set up an antiquities service which oversaw work done on both Muslim and Crusading architecture. Jean Sauvaget (1901-50) was the leading figure. "Beware of Sauvaget!" Creswell once warned Oleg Grabar. It was not just that Sauvaget was French (always a bad sign), but also that Sauvaget had ideas (also always a bad sign). The classic theory of the "Islamic city" was first developed by the French in Algeria, and then exported to Syria—where Sauvaget was its main exponent. Sauvaget was obsessed with the *Nachleben* of Antiquity. He wanted to find Rome in Damascus and in Lattakia and elsewhere. Naturally the main focus of his interest was in Umayyad Syria, but he was more generally interested in the notion of the "Islamic city." In his work on "the silent web of Islamic history," he treated buildings as texts (and really only as texts, for, like Creswell, he had a healthy dislike for art historians). As for texts, Sauvaget (like Claude Cahen a little later) placed great stress on understanding the sources of one's sources, or, to put it another way, it was not enough to parrot the information of late compilators like Ibn al-Athīr or al-Maqrīzī. Sauvaget also did a lot to draw local histories into consideration.

Sauvaget's main work, *Alep: essai sur le développement d'une grande ville syrienne des origines au milieu du xixe siècle,*[18] is the "sad" story of the late antique city's failure to preserve itself from later encroachments and its ultimate breakdown, into quarters based on tribes, crafts, and what have you. Although Aleppo experienced a partial revival in the Mamluk period, this could not be credited to the Mamluks. Rather, both Aleppo and Damascus owed their prosperity to their trade with Venice (as well as, perhaps, the collapse of Genoese trading operations in the Black Sea). Sauvaget was always conscious of the need to place his various urban studies in a broader Mediterranean context. His study of quarters

[17]*Studies in Islamic Architecture in Honour of Professor K. A. C. Creswell* (Cairo, 1955); Michael Rogers, "Creswell's Reading and Methods," *Muqarnas* 8 (1991): 45-54.
[18]Paris, 1941.

of Syrian cities led him to present a mosaic view of Islamic cities. He looked in vain for strong cohesive urban institutions. What little unity the Syrian cities possessed depended on the walls, the cathedral mosque, and the central souk.

Sauvaget's *La poste aux chevaux dans l'empire des mamelouks*[19] was a prime example of history with one's boots on and of matching buildings to documents. As Ayalon noted in his encomium of the work and the man, Sauvaget was attracted to the Mamluk period by the comparative wealth of sources which he described as "rich, variegated and dependable of such a kind that no praise of them can be too high." Ayalon commented on this observation of Sauvaget's, remarking that it was "no hyperbole to say that those sources make it possible to write scores, if not hundreds, of works of research of the highest order, on subjects concerning which, when other periods of Islam are in question, only a few sentences can be indited, and that after Herculean scientific labours."[20] (Following this last insight, it seems clear that Ayalon himself and other researchers in the history of Islamic institutions have pitched their research tents in Mamluk pastures because the sources are so rich. However much one might want to know about, say, the Abbasid *barīd* or the Umayyad fisc, it is really only in the Mamluk period that sufficient source material comes easily to hand.)

Maurice Gaudefroy-Demombynes (1862-1957), another of van Berchem's students, spread his researches quite widely (including a translation of a Maghribi version of *The One Thousand and One Nights*), but his main interests were philological and institutional and these preoccupations shaped his *La Syrie à l'epoque des mamelouks,*[21] in which he sought to set out the terminology of office holding and the formal functions of those offices as set out in the chancery treatises of the period. It would be left to Ayalon to flesh out Gaudefroy-Demombynes's account by drawing on chronicles and other sources in order to establish the real functions of officers whose formal duties had been set out by al-Qalqashandī and others and then annotated by Gaudefroy-Demombynes.

Early studies tended to be weighted towards the early Mamluk period, because this was when the Mamluks fought the Crusaders. But the gloomy paradox here is that people who studied the Baḥrī Mamluk period tended to use chronicles from the Circassian period, because the latter were more compendious. Popper's work in editing and translating the later sections of Ibn Taghrībirdī's *Al-Nujūm al-Zāhirah,* as well as his *Ḥawādith al-Duhūr* and related publications, ought to have had the effect of directing attention to the Circassian period. But it did not—at first at least. Even though William Popper (1874-1963) published a great deal on the

[21]Paris, 1923.

Circassian Mamluks, he was not a pure Mamlukist, for he had other interests and did major work on the Prophet Isaiah.

Hitherto the primary impetus in Mamluk studies had consisted of the amassing, translating, and editing of material bearing on the Mamluks. Israeli scholars pioneered a more interpretative approach. Some particularly bold interpretations of various features of Mamluk society were put forward by A. N. Poliak in his *Feudalism in Egypt, Syria, Palestine and Lebanon (1250-1900).* This short book was one of the most determined, but least successful, attempts to present the Mamluks as chivalrous feudatories. Amirs were ″knights,″ they were ″dubbed″ by the sultan or his vice-regent and they held ″fiefs.″ Error crowded upon misjudgment in Poliak′s dense pages. The sultan was elected by an electoral college.[22] The *al-ajnād al-qarānīs* were Caucasian noblemen who had not yet been dubbed amirs.[23] ″The feudal aristocracy″ settled their lawsuits according to rules based on the Great *Yāsa* of Chingiz Khan.[24] *Futūwah* was an order of knights devoted to Muḥammad′s posterity.[25] The ruler of the Golden Horde was the suzerain of the Mamluk sultan.[26]

Poliak′s various articles repeated these errors and disseminated new ones. For example, in an article on the impact of the Mongol *Yāsa* on the Mamluk Sultanate, Poliak suggested that Mongol immigrants to the Mamluk realm enjoyed an especially high status. Also that ″knights″ who had never been slaves held themselves to be superior to Mamluks. Also that the Mamluks′ subjects welcomed the Ottoman invasion, because it meant liberation from the yoke of the *Yāsa* and a return to *ʿadl*.[27] Much of Poliak′s work was carefully dismantled by Ayalon, who observed that the ″late P. had the genius of putting his finger on crucial problems. His solutions to these problems, however, which were guided more by quick intuition than by thorough and dispassionate examination of the source material, proved to be, unfortunately, too often, wide of the mark.″[28] Elsewhere Ayalon, writing about Poliak′s erroneous population estimates for the medieval Near East, described him

as ″a misguided genius.″[29] It is indeed rare to see a work of apparent scholarship become so thoroughly superseded.

Some of Poliak′s notions, particularly concerning Middle Eastern feudalism and the size of the population of Egypt and Syria, were uncritically echoed by Ashtor. Eliyahu Strauss, later Eliyahu Ashtor (1914-84), first worked on Mamluk manuscript sources in the Vienna library and, even before he left Austria at the time of the *Anschluss,* he had produced a dissertation on Baybars al-Manṣūrī and Ibn al-Furāt. In early articles on the Arabic historians who wrote in the Mamluk period, he compared their writings unfavorably to Europeans writing in a humanist tradition—such as Suetonius. However, Ashtor′s hatred was reserved for the Mamluks themselves—corrupt, backward, violent, parasitic feudatories. I do not know, but I wonder if he thought of the Mamluks as the Nazis of the medieval Near East.

By contrast, Ashtor identified first with the Middle Eastern bourgeoisie who struggled as best they could to get along under the alien oppressors and secondly he sympathized with the European, mostly Venetian, traders who came to do business with the Mamluks. In Ashtor′s vision of the social history of the region, there was a ″bourgeois moment″ around the second half of the eleventh century in such merchant republics as Tyre and Tripoli. Thereafter, however, the region was subjected to increasing militarization. Ashtor′s *A Social and Economic History of the Near East in the Middle Ages* presented a remarkably consistent picture of Syria and Egypt in this period as prey to the ravages of predatory feudatories and already (but surely prematurely?) part of the Third World. Every earthquake, flood, pestilence, and instance of banditry or unjust taxation was lovingly added to Ashtor′s gloomy record. (Inconsistently he also, following Poliak, treated the Baḥrī period as one of demographic growth and monetary stability.) The intervention of the military in industry and commerce stifled technological innovation. Their control of the cities prevented the development of urban autonomy and communal institutions of the ″proper″ sort that one found in medieval Europe. ″The flourishing economy of the Near East had been ruined by the rapacious military, and its great civilizing achievements had been destroyed through inability to adopt new methods of production and new ways of life.″[30]

In *Levant Trade in The Later Middle Ages*[31] Ashtor concentrated on the commercial and diplomatic toings and froings between the Mamluk Sultanate and

the Republic of Venice from the 1340s onwards. The two did not enjoy an easy relationship and recriminations were frequent. What is remarkable about Ashtor's account of the bickering is that in every single case he accepted Venetian complaints about Mamluk monopolies, corruption, etc., etc., while rejecting out of hand Mamluk complaints about Venetian short-changing, piracy, etc., etc. Another obvious criticism that can be made of Ashtor's commercial history is that he grossly underestimated the scale of Genoese trade with the Levant. Although Ashtor was certain that the Mamluk sultans' monopolies were a bad thing, some historians would argue that those monopolies explain the fifteenth-century revival of the sultanate—a revival which was invisible to Ashtor. Ashtor's views about the technological and industrial failure of the Mamluk Sultanate have received some support from the findings of art historians who have worked on glass and metalwork. Certainly it would seem that in the fifteenth century Venice was exporting to Egypt and Syria the sort of high-quality painted and enamelled glass which it had formerly imported from those regions.[32] However, the so-called "Veneto-Saracenic" ware has recently been firmly reascribed to Middle Eastern workshops.[33] But, to come back to *Levant Trade* itself, this and related articles by Ashtor did have the definite merit of stressing the economic importance of such local products as cotton, Syrian silk, sugar, and soap. Some earlier books had treated the sultanate as if it were a mere conduit for silks and spices from further East.

Ashtor's findings were much criticized in his lifetime and subsequently. Several scholars were unhappy with his handling of data and his fondness for tables of prices and salaries in which the unlike tended to be bundled in with the like. As we shall see, Jean-Claude Garcin was critical of Ashtor's view of Mamluks as agents of stagnation. Janet Abu-Lughod has had similar doubts about Mamluk monopolies causing technological stagnation. As she put it, Ashtor consistently "blames the victim."[34] Abu-Lughod and other economic historians have preferred to stress such factors as the cumulative impact of Venetian commercial aggression, the Black Death, and Tīmūr's invasion of the Near East. Moreover, though Ashtor blamed the Mamluk sultans, especially Barsbāy, for the extinction of the Kārimī corporation of spice merchants, Gaston Wiet's listing of known Kārimīs showed

that they were still trading in the fifteenth century. These and other criticisms notwithstanding, Ashtor was a considerable figure, not just in Mamluk studies, but also as an authority on the history of the Jews under Islam.

Ashtor's reputation in the field has, I guess, only been surpassed by that of another Israeli, the late, great David Ayalon (1914-1998).[35] Ayalon's earliest work was an important and still constantly used Arabic-Hebrew dictionary. In his later years he became fascinated by the history of terminology for eunuchs in the medieval Islamic lands. In the years between the dictionary and the eunuchs, however (from the 1950s onwards), he devoted himself obsessively to the military caste of the Mamluks in Egypt and Syria. He put the Mamluks on the historians' map. He has done more than anyone else to explain how the system worked and to demolish outdated misconceptions. From the beginning of his researches, Ayalon was aware of Ibn Khaldūn's view of the Mamluks and regarded it as cogent. While Ayalon was working on his doctorate, he had come across a key passage in the *Kitāb al-'Ibar,* in which Ibn Khaldūn discussed Turks and the mamluk institution. Ibn Khaldūn regarded the mamluk institution as a very good thing indeed: "This status of slavery is indeed a blessing . . . from Divine Providence. They embrace Islam with the determination of true believers, while yet retaining their nomadic virtues, which are undefiled by vile nature, unmixed with the filth of lustful pleasures, unmarred by the habits of civilizations, with their youthful strength unshattered by excess of luxury."[36] Time and again Ayalon returned to these Khaldunian themes: the resort to the import of mamluks as the salvation of Islam and most specifically the salvation of Egypt and Syria from the Mongols and Crusaders, the mamluks' retention of nomadic virtues, most notably that of *'iṣābah,* which in a mamluk context was replaced by the artificial bonding of *khushdashīyah,* and, finally, the effectiveness of the Mamluk system in breaking free from the otherwise doomed cycle of dynastic decay which Ibn Khaldūn had perceived as operating everywhere else in Islamic history.

Ayalon, impressed by Ibn Khaldūn, took a much more favorable view of the military elite than most of his precursors and contemporaries, but still not all that favorable. Although Ayalon agreed with Ashtor on very little, he did agree that their military and conservative cast of mind militated against innovation. This particularly comes out in *Gunpowder and Firearms in the Mamluk Kingdom: A Challenge to a Mediaeval Society*.[37] This book has had a massive influence on

historians working within and beyond the field—in shaping an image of hidebound chivalrous Mamluks doomed by new technology. But it is not his best work and recent studies by Carl Petry and Shai Har-El have chipped away at some of Ayalon's arguments. Har-El, in particular, has taken a more positive view of the Mamluks and their military response to the Ottomans. He argues that their main problem was lack of such resources as wood, iron, etc. Neither Petry nor Har-El seem to think that Mamluk defeat at the hands of the Ottomans was a foregone conclusion.

Ayalon's "Aspects of the Mamluk Phenomenon," published in *Der Islam* in 1977, stressed the essential continuity between the Ayyubid and Mamluk regimes, whereas the drift of R. S. Humpreys's "The Emergence of the Mamluk Army," which appeared in *Studia Islamica* in the same year, was to argue for distinct changes—for reforms taking place early on in the reign of Baybars. Ayalon was to reply to Humphreys in an article in the *Revue des études islamiques* in 1981. The heart of their disagreement concerned the specific problem of the continuity of the *ḥalqah* in any but a merely verbal form. There was also the issue of the chronology of the establishment of a three-tier officer class. Ayalon's arguments for continuity were detailed and ingenious and it is certainly true that if, say, Baybars carried out a sweeping program of reform, there is little direct evidence for it. Even so, I believe that Humphreys has carried the day, particularly on the decline of the *ḥalqah* from an Ayyubid elite force to a poorly rewarded kind of auxiliary arm of the Mamluk army.

In 1968 Ayalon published an article on "The Muslim City and the Mamluk Military Aristocracy." Although it was published the year after Lapidus's *Muslim Cities in the Later Middle Ages,* Ayalon's article had presumably been in press too long to take account of Lapidus's arguments. Certainly its conclusions were very different from those of Lapidus (to which we shall come). Ayalon placed heavy emphasis on the alienness and social isolation of the mamluks. The mamluks, immured in the Citadel, were more or less immune from contaminating and weakening contact with Cairo's citizens. Only in one very striking way did they involve themselves in the life of the city and that was in the endowment of mosques, madrasahs and *khānqāh*s. And here again Ayalon drew attention to Ibn Khaldūn's reflections on the matter. Ibn Khaldūn was inclined to see the buildings as the outcome of the amirs' desire to protect their wealth and to ensure its transmission to their descendants by creating *waqf*s. Having emphasized the isolation of the military from the civil, Ayalon did go on to note that Syria seemed to be different, but he left the matter there. He was never so interested in Syria as in Egypt, a bias which, to some extent, unbalances his presentation of the *ḥalqah* elsewhere. (While on the subject of the relative importance of Egypt and Syria, Garcin has argued, rightly I think, that whereas Syria was hardly more than

Egypt´s protective glacis in the late thirteenth and early fourteenth centuries, thereafter its economic and political importance increases vastly.[38] It is an argument which fits smoothly with Sauvaget´s findings about the revival of Damascus and Aleppo in the later Middle Ages.)

Ayalon had rightly stressed the urban nature of Mamluk power. Ashtor had asked himself why Middle Eastern cities were not successful in developing durable autonomous institutions. Both these matters were taken up in Ira Marvin Lapidus´s *Muslim Cities in the Later Middle Ages.*[39] Unlike most of its precursors and some of its successors in Mamluk studies, Lapidus´s book was problem-oriented and it addressed a wider audience than just Mamlukists. The Syrian cities of the thirteenth, fourteenth, and fifteenth centuries were special cases of the perceived problem of the ˝Islamic city˝—a problem which had attracted not only Sauvaget, but also Massignon and others earlier in the century. The ˝Islamic city˝ notoriously failed to preserve such features as the agora, the theaters, and the wide straight streets which had distinguished its antique precursor. Not only this but the ˝Islamic City˝ failed to grow up into something like a European city and free itself from feudal control. Lapidus´s version of how the Mamluks existed in the city contrasted quite strongly with that of Ayalon. Whereas Ayalon effectively imprisoned the military in the Citadel, Lapidus showed them intervening in every aspect of urban life. In large measure, the Mamluks oversaw the provisioning of the cities. More generally, they acted as mediators between town and countryside. And ˝the mamluk household was a means of transforming public into private powers and state authority into personal authority.˝[40] Mamluks were commercial entrepreneurs and the bourgeois who competed against them did so at a disadvantage. At another level the Mamluks opened their purses to such ruffian rabble as the *ḥarāfīsh*.

It was not only the *ḥarāfīsh* who were prepared to sell themselves for Mamluk *dīnār*s. The ulama did the same and much of *Muslim Cities* is devoted to this *trahison des clercs.* The book is above all a study in the power of patronage. The Mamluks, acting out of individual and corporate self-interest, set up *waqf*s for mosques, madrasahs, *khānqāh*s and similar institutions and the civilian elite competed for stipends at these places. Having sold themselves in this manner, the ulama then served as go-betweens or mediators between the military and the urban masses. Everybody lived cheek-by-jowl in these cities and, outside the army and palace, there was little in the way of formal hierarchy. Civic affairs were managed by means which were effective though informal, without recourse

[40] Ibid., 48-50.

to chambers of aldermen or guilds. *Muslim Cities* has been widely and rightly praised.

At the same time, it attracted criticism and debate. Lapidus had studied the Mamluk city rather than the Muslim city. As a heuristic device, Lapidus had constructed a Weberian ″ideal type″ of Islamic city in order to compare it with the European city. But one might as well compare the cities Lapidus had studied with Samarkand, Tabriz, and Fez in the same period, for there were many significant dissimilarities. It was not even clear to what extent Lapidus′s insights applied to Egyptian cities. He had sometimes had recourse to Egyptian data, but he did not come up with Egyptian conclusions. He had, on the whole, taken a synchronic approach to the subject, which meant that the book failed to register distinctly the impact on the Syrian cities of the Black Death or of the expansion of Venetian trade.

Lapidus (and others after him, including R. S. Humphreys) stressed the overwhelming role of Mamluk patronage. But it is natural for cultural historians to go looking for a role for the bourgeoisie here. (After all, most historians these days have bourgeois origins and therefore there is perhaps a certain *parti pris*.) Oleg Grabar has argued that what little evidence we have suggests that the bourgeois were the chief patrons of the illustrated *Maqāmāt*s which are such a feature of the age. Less plausibly, Grabar has assigned a role for the bourgeois in the construction of the Sultan Ḥasan Mosque. How, he asked, did such a very weak ruler as al-Nāṣir Ḥasan find the resources to build the greatest madrasah in Cairo? Grabar suggested that the grand bourgeoisie was the real builders. The Mamluks were in shaky control whereas the urban bourgeoisie ″had considerable financial and bureaucratic power within the state.″ (It is not an argument which has much in the way of evidence to recommend it.) Once built, the Sultan Ḥasan Mosque became a monument for popular piety and a focus for legend.[41]

In 1974 at the request of MESA, Albert Hourani prepared a report on ″The Present State of Islamic and Middle Eastern Historiography.″ Hourani′s *tour d′horizon* is full of interest, but I restrict myself here to what he said about Mamluk studies: ″for the Mamluks of Egypt even the basic institution, the military society, has not yet been studied, although Ayalon has laid very solid foundations and Darrag has studied one reign in depth.″[42] Hourani based himself on the *Gunpowder* monograph plus ″Studies in the Structure of the Mamluk Army″ and I rather feel he underestimated the scope of Ayalon′s publications. Additionally,

[41]Oleg Grabar in J. R. Hayes, ed., *The Genius of Arab Civilization: Source of Renaissance* (Cambridge, MA, 1983), 108.

[42]Albert Hourani, ″The Present State of Islamic and Middle Eastern Historiography,″ reprinted in idem, *Europe and the Middle East,* 176.

Lapidus′s *Muslim Cities* was referred to by Hourani in the context of urban studies and the study of ideal types in Islamic culture.

Well, that was how it looked in 1974. By then however important works on source criticism had already appeared, of which Hourani had taken no account: Donald Little′s *An Introduction to Mamluk Historiography*[43] and Ulrich Haarmann′s *Quellenstudien zur frühen Mamlukenzeit*.[44] Of course, a good deal of work on identifying, editing, and translating thirteenth-century sources had already been done by Claude Cahen. Cahen indeed criticized Little′s sampling method and the conclusions which Little derived from it regarding the alleged dependence of Yunīnī on al-Jazarī.[45] Indeed, quite how complex the relationship was between the two historians has been brought out by more recent research by Li Guo. But Little′s research led him on to wider issues than source dependence. His investigation of the varying accounts of the career of Qarāsunqur, the Mamluk defector to the Mongols, led him on to investigate other connections between the Mongols and the Mamluks. Little′s book was downbeat about history writing in the Mamluk period. We have copious chronicles, but they are carelessly put together, they plagiarize one another, and most of the time they are frankly dull.

I should like to linger on Ulrich Haarmann, whose *Quellenstudien* and whose articles—on the literarization of history writing, on the appearance of Turco-Mongol folklore in chronicles, on the culture of the amirs and of the *awlād al-nās*, and on Pharaonic elements in Egyptian culture—I personally have found the most stimulating things to have been produced in the field. (It is not easy for me to be stimulated in German, as the stimulation has to be mediated by a dictionary, even so . . .) I believe that Haarmann′s ideas on the literarization of chronicle-writing have influenced everyone who has since written on the historiography of the age. Even more important, his work on the libraries of the great amirs and on the civilian career-patterns of the *awlād al-nās* has permitted a more nuanced view of the ruling elite and softened the stark contrast between the Men of the Sword and the Men of the Pen. Haarmann′s researches into the literary attainments of the Mamluks and their children have been given further support in work done by, among others, Barbara Flemming and Jonathan Berkey. Haarmann′s work on source criticism was taken further by his own students, Samira Kortantamer, Barbara Langner, and Barbara Schäfer among them.

The beginning of the 1980s was when Mamluk studies really took off—and when non-Mamlukists started to take an interest. As William Muir had observed almost a hundred years earlier, the prolonged Mamluk domination of Egypt ″must

43Wiesbaden, 1970.

44Freiburg im Breisgau, 1969.

45In a review published by Cahen in *JESHO* 15 (1972): 223-25.

still remain one of the strange and undecipherable phenomena in that land of many mysteries."[46] In the 1980s several scholars tried their hand at cracking the mystery. In *Slaves on Horses: The Evolution of the Islamic Polity,*[47] Patricia Crone, having argued that the mamluks were a distinctively Islamic phenomenon, went on to ask why this was the case. Her (somewhat moralistic) conclusion was that the mamluks were the product of the failure of the Islamic *ummah* to arrange its affairs according to the ideal program of the shari'ah. The mamluks were a kind of punishment for political sin. In the *Muqaddimah,* Ibn Khaldūn had argued that Muslims had failed to follow the shari'ah perfectly and their political regimes thereby become prey to cyclical decline and fall. The influence of Ibn Khaldūn pervades *Slaves on Horses*. Crone was trying to explain the general phenomenon of the slave soldiers throughout Islamic history. However, she did note the special features of the Mamluk regime in Egypt and Syria. She took the (surely exaggerated) view that the Egyptian Mamluk system only worked when there was an external threat; otherwise it degenerated into a civil war. The Mamluks were predatory shepherds. (The shepherd image comes, I think, from Ottoman political theory.) Finally Crone stressed the comfortable symbiosis between Mamluks and ulama and how the Mamluks were seen by their subjects as the providential protagonists of the jihad—again very Khaldunian.

Daniel Pipes' *Slave Soldiers and Islam: The Genesis of a Military System*[48] appeared just a year later. Pipes' view of the problem was similar, though different. Mamluks and other marginal troops rushed in to fill a politico-military vacuum, that vacuum having been created by the withdrawal from public affairs of other Muslims. The withdrawal from public affairs of these *fainéant* Muslims was the product of their disillusion at their failure to implement the Islamicate ideal. As the use of "Islamicate" indicates, Pipes was somewhat influenced by Marshall Hodgson. Ibn Khaldūn's influence is equally evident, but, whereas Ibn Khaldūn had argued that renewed imports of mamluks served to infuse the ruling regime with fresh nomadic vigor, Pipes argued that it was because of the unreliability of such troops that they kept having to be replaced. The notion of Mamluks as a punishment for perceived failure to live up to Islamic ideals is a curious one. Papal and Imperial theorists in Christendom also had unreal and idealistic notions of government—and most Christians probably did not care about those ideals nor did they wish to be involved in politics. But only the medieval German *ministeriales* look anything like mamluks.

---

[46]Muir, *The Mameluke or Slave Dynasty,* 221.
[47]Cambridge, 1980.
[48]New Haven, 1981.

Garcin took a particularly critical view of Pipes′ ideas (and come to that, of Ashtor′s as well) concerning the Mamluks as a response to failure of civil society and as agents of a technical and cultural ″blockage″ in the Middle East. He was sceptical too about Crone′s condemnatory view that the mamluk institution ″bespeaks a moral gap of such dimensions that within the great civilizations it has been found only in one.″[49] Garcin was disinclined to indict the Mamluks as agents of ″blockage.″ Instead he adduced such factors as demographic decline and lack of resources. He also gave consideration to the possible role of the Bedouin in the ″blockage.″ Garcin′s contrasting perspective derived from his previous research on Upper Egypt and his *magnum opus, Un centre musulman de la Haute-Égypte médiévale: Qūṣ*.[50] The latter is a grand work in the *Annales* tradition, an *oeuvre de longue haleine,* which drew on a remarkably wide range of sources and which gave full weight to topographic, demographic, economic, tribal, and even folkloric matters. Garcin viewed the politics of the Cairo Citadel from the perspective of the provinces. As an *Annales* historian, he paid far more attention to long-term trends, demographic factors, and shifts in trade routes than he did to personalities and dramatic incidents. Like the citizens of medieval Qūṣ (I guess) he was inclined to see the Bedouin as more of a problem than the Mamluks, though, of course, the Bedouin were also integral to the economy of the region. It seems likely that al-Suyūṭī played a larger role than Ibn Khaldūn in forming Garcin′s idea of the Mamluks.

As already noted, the early 1980s were the time when Mamluk studies really accelerated. The Washington exhibition of Mamluk art in 1981 provided some of the stimulus for this lift-off. Esin Atıl produced an admirable catalogue for the exhibition —admirable, that is, except for the title: *Renaissance of Islam.* The notion that one is dealing with a ″rebirth″ in this context is quite strange. True, it is possible to find antiquarian features, or backward-looking references, in certain Mamluk buildings and artifacts. (For example, Jonathan Bloom has shown how the Mosque of Baybars harks back to that of the Fatimid caliph al-Ḥākim bi-Amrillāh, while Bernard O′Kane has argued that some Mamluk buildings were built in conscious emulation of Abbasid precursors.) In general, however, it is striking how Mamluk art broke with past precedents and even with the immediate precedent of Ayyubid art. Thus it is usually easy to distinguish Mamluk metalwork from Ayyubid metalwork. In architecture, to take another example, Mamluk patrons eschewed the Ayyubid preference for the free-standing mosque. The carving up of

---

[49]Garcin, ″The Mamluk Military System and the Blocking of Medieval Moslem Society,″ in Jean Baechler, John A. Hall, and Michael Mann, eds., *Europe and the Rise of Capitalism* (Oxford, 1988), 113-30.
[50]Paris, 1976.

art history on dynastic lines may be questionable, but in the particular case of the Mamluks it may be justified, because the patronage and taste of the court and those in the immediate service of the court seem to dominate the work produced.

Atıl´s catalogue was not the only fruit of the Washington exhibition. There was also a concurrent conference, the first conference ever to be devoted to the specific topic of the Mamluks. Its proceedings were published as a special issue of *Muqarnas*.[51] The *Muqarnas* papers were topped and tailed by the broad-sweep papers of Grabar and Lapidus. The former reflected on the cohesiveness of Mamluk art, while the latter´s manifesto urged historians of Mamluk art to snatch leaves from Michael Baxandall´s certainly quite wonderful *Painting and Experience in Fifteenth-Century Italy*.[52] As Lapidus noted, Baxandall´s was ″an approach to art history that seeks out the mentality and culture of peoples from a study of their art.″ It drew on a remarkably wide range of sources, including dance manuals and treatises on barrel-gauging, in an attempt to establish how fifteenth-century Italians looked at paintings, how they verbalized their responses, and the mechanics of how artists actually set about their work. It is an inspiring book, but, alas, I do not think that it has yet inspired anyone working on the arts under the Mamluks.

My own view is that art history and socio-political history are false friends, in the sense that they have not yet given each other much assistance. Take the Saint Louis Baptistery, which, with its wealth of iconographic detail including heraldry, should be easy to date. In a meticulous yet probably mistaken study, David Storm Rice assigned the Baptistery to the patronage of the amir Salār, ca. 1290-1310. Rice´s dating has recently been hesitantly accepted by Bloom and Blair and they argue that it could not have been made for the open market. However, Elfriede R. Knauer contends that the Baptistery was made in the reign of Baybars, and so does Doris Behrens-Abouseif, although she adduces different arguments for this dating. However, Rachel Ward is about to demonstrate (I think) that it was made late in the reign of al-Nāṣir Muḥammad for the European export market. Arguments about the date and provenance of the Baptistery and other objects rely in part on blazons. In Rice´s time the way Mamluk heraldry worked was poorly understood. Since then, thanks to articles by Michael Meinecke and Estelle Whelan, we now have a much better notion of how Mamluk heraldry worked.

To take another example, Mamluk carpets are among the most controversial objects in the field of Islamic art. These exquisite textiles seem to have no real precursors in medieval Egyptian art and there is hardly any textual evidence. There is no consensus about where the carpets were made, when they were made, or why they were made. Although many scholars believe that they were woven in

[51]Vol. 2 (1984).
[52]Oxford, 1972.

Cairo under the patronage of the Mamluk sultans, others have argued that these carpets may have been produced in North Africa, Syria, or Anatolia. Some believe that production started in the late fifteenth century (and hence the appearance of Qāytbāy´s blazon on one of them), but others argue that they only begin to be produced after 1517. They may have been produced for the Mamluk court; then again it is possible that they were chiefly exported to the west. The significance of the elaborate octagonal design is inevitably also controversial. The carpets were manufactured while the chroniclers´ backs were turned and out of sight of the eyes of European visitors.

There are exceptions to the lack of success in matching objects to documents—Nasser Rabbat´s recent monograph on the Citadel makes exemplary use of both documentary and non-documentary sources. In general, Mamluk architectural history is relatively well mapped. In Cairo, this has been the work first of Creswell and his student Christel Kessler and more recently the work of Michael Meinecke (d. 1995), as well as the work on domestic architecture by Garcin, Jacques Revault, and Bernard Maury. Consequently, Cairo is the most thoroughly studied of all Muslim cities. Jerusalem has also benefited from a meticulous survey by Michael Burgoyne and historical research by Donald Richards. Yet, despite their work and despite the work of Donald Little on the Ḥaram documents, it is curious and even a little dispiriting to consider how many gaps there are in the record of Mamluk Jerusalem. More theoretical and evaluative approaches to Mamluk architecture have tended to stress the importance of procession and ceremony, of boastfulness and statements of legitimation through the prosecution of the jihad in determining the forms of the grand Mamluk foundations. This sort of approach parallels work being done on Fatimid architecture and ceremonial. Examples for the Mamluk period include articles by Humphreys, Bernard O´Kane, and Doris Behrens-Abouseif. The scale of the Sultan Ḥasan Mosque and its possible models have attracted much attention (from Rogers, O´Kane, and others)—as has the financing of its building. Did ˝the inheritance effect,˝ a hypothetical consequence of the Black Death, fund this massive architectural project? And, to look at another aspect of funding, did the building mania of al-Nāṣir Ḥasan and al-Nāṣir Muḥammad before him seriously contribute to the decline of the Mamluk Sultanate?

Mamluk madrasahs have inevitably attracted a lot of attention. There were after all so many of them. Some have followed Ibn Khaldūn in stressing the patronage of such institutions as a way for amirs to protect their incomes in the guise of *waqf*. However, Robert Hillenbrand´s observation that the Ayyubids and Mamluks were, like the Pharaohs, obsessed with death is a fruitful one.[53] With this

[53]Robert Hillenbrand, *Islamic Architecture: Form, Function and Meaning* (Edinburgh, 1994),

death-consciousness in mind, Hillenbrand has presented madrasahs as primarily ways of ″laundering″ mausolea. That is to say the endowment of a religious college legitimized the placing of the patron′s tomb within a religious enclosure. While on the subject of the purpose of madrasahs, there has also of course been debate on the importance or not of the teaching carried out in these institutions. It is possible to view the curriculum of the madrasah as a way of promoting and controlling Sunni orthodoxy and, also, as perhaps offering training of a sort to Arabs, some of whom would later enter state service. However, Michael Chamberlain in particular has argued that the madrasahs were primarily ways of managing property and money, and that teaching was carried out everywhere and anywhere, informally, without significantly depending on structured madrasah courses. It is possible that each madrasah will have to be studied on an individual basis, for some performed quite unexpected functions. Berkey noted that al-Ghawrī′s ″madrasah″ had no teaching facilities at all and Hillenbrand has pointed out that the Mosque-Madrasah of Qarāsunqur was used by *barīd* couriers as a hostel en route to and from Syria.

Another major area of interest has been the role of immigrant craftsmen and the imitation of foreign models in both the architecture and the arts of the Mamluks. There are occasions when it would make more sense to reclassify ″Mamluk art″ as Saljuq, or Mosuli, or Ilkhanid, or Qaraqoyunlu art. Creswell, in particular, was fond of explaining developments in Egyptian architecture in terms of disasters elsewhere and the consequent incoming waves of refugee architects and craftsmen. There is plenty of evidence for the influence on Mamluk architecture of buildings in Anatolian towns as well as in Ilkhanid Sulṭānīyah and Tabriz. In other art forms, it is difficult to separate out Ilkhanid Mongol from Chinese influence (for example, the lifting of motifs from textiles imported from China). The question of Mongol influence on the arts shades into the question of Mongol influence on the Mamluks more generally—covering such matters as large-format Qurans, dress, folklore, the courier system, haircuts, the code of the *Yāsa*. The subject got off to a poor start with Poliak′s essay. However, matters have since been put on a sounder footing by Michael Rogers, Ulrich Haarmann, Donald Little, and David Ayalon. Ayalon′s articles on the Mongol *Yāsa* and related matters are fundamental. The weight of the evidence now suggests that the cultural influence of the Mongols on the Mamluk Sultanate was not a significant factor until the third reign of al-Nāṣir Muḥammad.

The civilian elite has been another major focus of research—inevitably, since the sources are so rich (the civilian elite was very good at celebrating itself). Carl

---

316.

Petry′s *The Civilian Elite of Cairo in the Later Middle Ages*[54] has taken apart the notion that there was a single civilian elite. Rather there was a threefold division into first, bureaucrats—often from Syria; secondly, jurist-scholars —from all over the Islamic world; and, thirdly, religious functionaries, who tended to come from Cairo and the Delta. As for Joseph H. Escovitz′s *The Office of Qāḍī al-Quḍāt in Cairo under the Baḥrī Mamluks,*[55] it of course says many things, but the main thing I got from reading it was that it poured cold water on the notion of the qadis as spokesmen for the subjects of the Mamluks. The qadis accommodated themselves to the Mamluk regime and they handed down its decrees. They defended the interests of the civilian elite as best they could, but were on the whole oblivious to wider needs. Jonathan Berkey′s survey of teaching establishments, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education,*[56] used both chronicles and *waqfīyah*s to study the way that the religious sciences were taught and showed how they were taught on an informal and personal basis. I have already mentioned Michael Chamberlain′s view, put forward in *Knowledge and Social Practice in Damascus 1190-1350,*[57] that the madrasah was a conduit for managing property and paying stipends. Chamberlain has studied how a medieval society, by and large, managed without documents and, like Lapidus, he has emphasized how informal ways of getting things done compensated for a relative lack of hierarchy and formal institutions. However, Chamberlain does not believe that madrasahs were endowed in an effort to buy the ulama. In this he differs from, say, Fernandes, whose *The Evolution of a Sufi Institution in Mamluk Egypt: The Khānqāh*[58] argued that *khānqāh*s were a way of, as it were, buying Sufis and controlling Sufism. One problem with all this research on the civilian elite is that only civilians of a certain class got into the biographical dictionaries of Ibn Ḥajar and al-Suyūṭī. Such works tell us very little indeed about merchants, poets, sorcerers, and most of the *awlād al-nās.*

The golden prime of the Mamluks in the late thirteenth century and their wars against the Crusaders and Mongols seems to be relatively uncontentious territory. The same cannot be said of the decline of the Mamluks and there is no agreement yet on when or why or even if the Mamluk Sultanate started declining. Ayalon′s ″The Muslim City and the Military Aristocracy″ blamed it on decadent al-Nāṣir Muḥammad, the expensive and capricious harem, the failure to keep proper military discipline, and extravagant expenditure on building projects. This kind of approach

has been echoed and underlined by Amalia Levanoni in her *A Turning Point in Mamluk History: The Third Reign of al-Nāsir Muḥammad Ibn Qalāwūn 1310-1341*.[59] She similarly found seeds of decline in the third reign of al-Nāṣir Muḥammad, though there are points of difference between her and Ayalon. Levanoni places less stress, I think, on the personal failings of the Qalawunid sultans. However, I think if one is looking for the causes of Mamluk collapse in the sixteenth century, then the 1330s is too early to start looking for it. It also seems rough to blame any of it on the royal princesses. I doubt if the cost of their dresses contributed much to the decay of one of the world's great medieval empires and I do not think we should encourage al-Maqrīzī and al-Suyūṭī in their misogyny.

Others have been disinclined to blame al-Nāṣir Muḥammad's alleged fecklessness and extravagance and they have looked for broader causes. For example, Rabbat's book on the Citadel suggests a more positive approach to the sultan's public works and attributes decline to international economic factors.[60] Similarly, Garcin, in his contribution to *Palais et maisons du Caire,* does not find fault with the sultan. Moreover, it must be asked, could things ever have gone all that well with the sultanate after the onset of the plague epidemics from 1347 onwards? Ayalon, himself, was the pioneer on the subject of the plague—in the first study he published in English on the Mamluks in the *Journal of the Royal Asiatic Society* in 1946. Ayalon's article suggested that the declining quality of mamluk training and the breakdown in discipline were in large part a product of the need to recruit and train soldiers faster, because of losses due to plague. The few pages in A. L. Udovitch's incisive little essay "England to Egypt" devoted to the demographic and economic effects of the plague are hard to beat, as they demonstrate how demographic decline explains military rapacity, Bedouin incursions, and most of the rest of the problems of the later sultans. Subsequently Udovitch's student, Michael Dols, published *The Black Death in the Middle East*.[61] Dols, like Lapidus, was preoccupied by comparisons with Europe and he, as it were, constructed an ideal type of bubonic plague, in order to assess how Egypt's plague matched up with those of England and Italy. Anybody who might conceivably have been seduced by Poliak's notion that Egypt experienced a slow but steady demographic increase after 1348 would have been firmly disabused by Dols. And finally on plagues, Lawrence Conrad's more literary approach to chronicles which reported on them provides a necessary caution against believing that everything one reads

on this matter is documentary fact.[62] Similarly Adel Allouche′s introduction to his translation of the *Ighāthah* in *Mamluk Economics: A Study and Translation of al-Maqrizi′s Ighāthah*[63] cautions against taking al-Maqrīzī to be an unprejudiced and reliable source on money matters. Religion took precedence over monetary theory in his muddled brain.

From decline one proceeds to doom. Until recently there was hardly anything to read on the last days of the sultanate. (Well, there was Stripling′s old book.) Now we have Petry′s two books, one by Har-El, and a number of other more specialized studies (for example, James B. Evrard′s *Zur Geschichte Aleppos und Nordsyriens im letzen halben Jahrhundert der Mamlukenherrschaft (872-921 A.H), nach Arabischen und Italeinischen Quellen*[64]). Petry has emphasized the contrasting personalities of Qāytbāy, the dignified conservative, and Qānṣuh al-Ghawrī, the ruthless innovator. In some ways Petry is very hard on al-Ghawrī (for I think that anyone who has heard the penultimate sultan talking—as he does in the *Majālis* and the *Kawkab al-Durrī*—must admire him). But Petry′s approach to al-Ghawrī is a useful corrective to Ayalon, who overdid the image of the last Mamluks as blinkered, chivalrous reactionaries. Petry′s earlier article ″A Paradox of Patronage during the Later Mamluk Period″ on the coexistence of financial crisis and royal magnificence under Qāytbāy is cogent, for the question is well-put and persuasively answered. The trouble with studying the very last days is the paucity of Arabic sources. The way forward will, I think, depend on increasing use of European sources. Ulrich Haarmann′s important recent article ″Joseph′s Law″ makes strikingly effective use of Western sources. Evrard has similarly used Italian sources.

So now, what of the future? I think the main thing is to get away from the activity of studying whatever it is that the obvious sources (mostly chronicles and biographical dictionaries written by ulama) want to tell us. One way of doing this is by use of archives, but I am not clear how much more the Geniza and the Ḥaram al-Sharīf documents have to tell us. There is clearly more material in *waqfīyah*s to be worked on. Even so there are limits to this sort of evidence and several architectural historians have noted mismatches between an endowment′s specifications and the building as actually built. Also, I feel that the study of *waqfīyah*s tips Mamluk studies even further in the direction of becoming ulama studies, at the expense of looking at the secular aspects of the age.

One way of getting away from the pious mutterings of the turbaned elite is to focus properly on the amirs. Reuven Amitai has already produced a prosoprographic

essay on the Ẓāhirī and Ṣāliḥī amirs and I have great expectations concerning the similar research he has in progress on Manṣūrī amirs and mamluks. Another way is to redirect attention to the marginals in Mamluk society. Paul Kahle, an obsessive collector of shadow-puppets, was a pioneer in this sort of territory, with his articles on shadow theatre and on gypsies. Poliak wrote on popular revolt and Brinner on the mysterious *ḥarāfīsh*. Much more recently we have had Boaz Shoshan on popular culture in general, Shmuel Moreh on live theatre, Carl Petry on crime, Everett Rowson on gay literature, and G. J. H Van Gelder on *Ḥalbat al-Kumayt* (an *adab* treatise on wine-drinking). Perhaps the biggest problem in dealing with popular culture is clearly separating it out from high culture. Consider the cult of the criminal and the mendicant among the literary elites in Abbasid and Buyid times. Where should one place Ibn Dāniyāl, the friend of the sultan and the amirs, but also the author of low-life shadow plays? Where should one place those wild Sufis with a following of riffraff, but who nevertheless found patronage and protection in the highest places? While on the subject of people who were neither amirs nor ulama, Huda Lutfi's "Manners and Customs of Fourteenth-Century Cairene Women: Female Anarchy versus Male Shar'i Order in Muslim Prescriptive Treatises" has shown how much interesting material about antinomian behavior can be derived from just Ibn al-Ḥājj's *Madkhal* alone. And, of course, we are likely to see a lot more published about Mamluk women in the near future.

A reasonable amount has been produced fairly recently on popular literature. There is more written on *The Thousand and One Nights* than one can shake a stick at. Malcolm Lyons, Remke Kruk, Harry Norris, and others have produced important works on the popular epics. However, as I see it, far too little work is being done in America or Europe on the high literature of the late Middle Ages—the *adab* and poetry. Emil Homerin is practically unique, as far as I know. Nothing is more likely to transform our perceptions of the Mamluk age than a detailed study of the belles-lettres of the period. But perhaps a forthcoming volume of the *Cambridge History of Arabic Literature* will encourage researchers to venture into the *terra incognita* of Mamluk *adab*. And with reference to *terrae icognitae*, what about the Mamluks in the scramble for Africa? André Raymond has shown how much Cairo's prosperity under the Ottomans depended on trade with Black Africa—on the commerce in black slaves, gold, and other commodities.[65] It is also plausible then that the African trade may have been important in the Mamluk period also. On the subject of commerce and slave imports, I find it astonishing how little reference is made by Mamlukists to Charles Verlinden's various publications on the European trade in white slaves.[66]

---

[65]Raymond, *Artisans et commerçants au Caire au XVIIIe siècle* (Damascus, 1974).

[66]See especially Charles Verlinden, *L'Esclavage dans l'Europe médiévale* (Ghent, 1977).

I have not discussed scholars working and publishing in the Arab world (though the names of Hassanein Rabie, Aḥmad ʻAbd al-Rāziq, Muḥammad Zaghlūl Sallām, Ayman Fu'ād Sayyid, Muḥammad Muḥammad Amīn, and others come to mind). In sad practice, so much of Western research is conducted without reference to Arab work. This should change. But I have gone on long enough as it is. When I started as a student, there was hardly anything to read on the Mamluks, except what had been produced by the Israelis. Really one could read one′s way through the field in a week. Now, though, there is a lifetime′s reading awaiting your students. (Aren′t they the lucky ones!) Israel is still an important place for Mamluk studies, as are Germany and France, but most of the work in the field is now being done in America. Compared with Fatimid, Saljuq, or Ayyubid studies, Mamluk studies is in great shape. It has its set-piece controversies, its website, its journal. You here at Chicago, at the center of Mamluk studies, should feel particularly cheerful. Even so most of one of the world′s great empires still remains mysterious. ″So we beat on, boats against the current, borne back ceaselessly into the past.″

Storytelling, Preaching, and Power in Mamluk Cairo*

I

As with many other Islamic institutions, the origins of the *qāṣṣ* (storyteller) and the *wāʿiẓ* (preacher) are obscure.[1] However, from an early point in the Islamic period, storytellers and popular preachers became the principal channel of instruction for the common people, those not engaged in a rigorous course of study of the religious sciences under the supervision of one or more scholars.[2] By the sixth/twelfth century, the Hanbali jurist and theologian Ibn al-Jawzī, whose famous treatise on the storytellers, *Kitāb al-Quṣṣāṣ wa-al-Mudhakkirīn* (″The Book of Storytellers and Those Who Remind [People of God′s Blessings]″), sought to rein in their excesses and set proper bounds for the material which they related, acknowledged their important role in the transmission of religious knowledge to the common people *(al-ʿawāmm).* Drawing on the ethical injunction related in the Quran in surah 3, verse 104 and elsewhere, he remarked that God had sent prophets ″to draw people to the good and warn them against evil,″ and after them the ulama who are distinguished by their learning *(ʿilm).* ″Moreover,″ he said, ″the storytellers and the preachers were also given a place in this order *[amr]* so as to exhort *[khiṭāb]* the common people. As a result, the common people benefit from them

*This article is based upon material in my forthcoming book, *Popular Preaching and Religious Authority in the Medieval Islamic Near East.* My thanks to the University of Washington Press for permission to reproduce it here.

[1]Much of the earlier secondary material dwelt upon this issue; see now Khalil ′Athamina, ″Al-Qasas: Its Emergence, Religious Origin and Its Socio-Political Impact on Early Muslim Society,″ *Studia Islamica* 76 (1992): 53-74.

[2]Preaching of course took place on a variety of different levels. At one end of the spectrum, the activity included delivery of a formal sermon *(khuṭbah)* at noon on Fridays. Beyond that, however, there was considerable scope for less formal exhortation. The Muslim masses might attend formal Friday services, but might also hear sermons or edifying stories read in other venues as well. In these settings, the individual delivering the sermon or reciting the tale was usually referred to as a *wāʿiẓ* (preacher) or *qāṣṣ* (storyteller). The medieval sources use the terms *wāʿiẓ* and *qāṣṣ* more or less interchangeably to refer to individuals engaged in the delivery of exhortations and the transmission of religious knowledge to the common people. See, for example, Ibn al-Jawzī, *Kitāb al-Quṣṣāṣ wa-al-Mudhakkirīn*, ed. Merlin Swartz (Beirut, 1986), 11 (Eng. trans., 97-98).

in a way that they do not from a great scholar."[3] At another point, he was more precise. "The preacher brings to God a great number of people, while a jurist *[faqīh]* or a traditionist *[muḥaddith]* or a Quran reader *[qāri']* cannot bring [to God] a hundredth of that number, because [the preacher's] exhortations are addressed to both the common people and the elite *[lil-'āmm wa-al-khāṣṣ],* but especially the common people, who only rarely meet a jurist, so they discuss things with [the preacher]. The preacher is like the trainer of animals, who educates them, reforms them and refines them."[4]

Despite their important role, popular preachers and storytellers were subjected to vigorous and sustained criticism throughout the Middle Period. One of their most persistent critics was Ibn al-Jawzī himself. His attack on the lies preached by storytellers to their credulous listeners pulled no punches. What earned the disapprobation of Ibn al-Jawzī and others was not preaching per se, nor reciting to gullible crowds stories about the Hebrew prophets or other topics of sacred history, projects which are an integral feature of Islam as experienced in most times and places; rather, it was certain practices, and excesses, of those who engaged in these activities. The attack came from various quarters. Interestingly, in light of the later history of storytelling and popular preaching, many of the earliest critics were mystics. But traditionists and jurists such as the late Mamluk scholar Jalāl al-Dīn al-Suyūṭī (d. 911/1505) were also sharply critical of certain features of the storytellers' craft, and it was their objections which formed the central themes of the polemic against storytellers and preachers. Many of those who denounced the storytellers or their excesses were themselves prominent transmitters of Prophetic traditions, or adherents of a stridently traditionalist religious viewpoint, such as Ibn al-Jawzī, the Maliki jurist Ibn al-Ḥājj (d. 737/1336), and the irrepressible Hanbali scholar Ibn Taymīyah (d. 727/1328). Since much of what the preachers and storytellers recited took the form of hadiths, the concerns of their critics focused on the untrustworthy character of the material they transmitted. Ibn al-Jawzī worried that false hadiths *(mawḍū'āt)* formed the stock-in-trade of many storytellers, and that the common people to whom they related them transmitted the unsound traditions to others, thereby compounding the damage.[5] In Ibn al-Ḥājj's opinion, the fundamental error of the *quṣṣāṣ* was that they transmitted "weak sayings and stories" *(al-aqwāl wa-al-ḥikāyāt al-ḍa'īfah)*.[6] Ignorance was no excuse, but al-Suyūṭī was especially critical of storytellers and preachers who transmitted hadith which

[4]Ibid., 230 (Eng. trans., 144).

[5]Abū al-Faraj 'Abd al-Raḥmān Ibn al-Jawzī, *Kitāb al-Mawḍū'āt*, ed. 'Abd al-Raḥmān Muḥammad 'Uthmān, 2nd ed. (Cairo, 1983), 1:29, 32.

[6]Muḥammad Ibn al-Ḥājj, *Madkhal al-Shar' al-Sharīf* (Cairo, 1929; reprint, Beirut, 1981), 2:14.

they knew, or had reason to suspect, were false.[7] And the scope for error was enormous: some credited ″heretics″ *(zanādiqah)* with falsely attributing to the Prophet more than 12,000 traditions.[8]

A more biting and formal criticism, and one that was repeated over the centuries, was that storytelling itself was in some way an ″innovation″ *(bid'ah),* and therefore suspect and dangerous. This concern is implicit already in certain traditions about the origins of the practice, such as those which depict the pseudo-legendary Tamīm al-Dārī as pestering the caliph 'Umar to condone a novel practice.[9] Sometimes the scholars′ anxieties focused on particular practices associated with the *quṣṣāṣ,* such as their singing verses of the Quran ″beyond the proper bounds″ *(al-qirā'ah bi-alḥān al-khārijah 'an al-ḥadd al-ma'lūf),* or their transmission of heretical innovations in the form of what they claimed were hadith.[10] But others saw the practice generally as an illicit innovation. Thus, for example, al-Suyūṭī pointedly began his treatise against the ″lies of the *quṣṣāṣ*″ by citing a hadith in which the Prophet condemned innovations, while rigorous Maliki critics such as Ibn al-Ḥājj saw the practice of storytelling itself as novel and a threat to the Islamic social order.[11]

The polemical discourse over preachers and storytellers is dominated by their critics, but these transmitters of religious lore and knowledge to the common people were not without their defenders. One treatise written to justify them is *al-Bā'ith 'alá al-Khalāṣ min Sū' al-Ẓann bi-al-Khawaṣṣ* (″The Enciter to Liberation from the Low Opinion of the Elites″—i.e., the elite scholars who scorned popular preachers and storytellers), a work which exists in a single anonymous manuscript in the British Library.[12] This treatise contains a point-by-point response to a critical tract (now apparently lost) penned by Zayn al-Dīn 'Abd al-Raḥīm al-'Irāqī (d. 806/1404), a Shafi'i jurist and traditionist who lived most of his life in Egypt.

On the innovation of chanting the Quran, see Abū Bakr Muḥammad al-Ṭurṭushī, *Kitāb al-Ḥawādith wa-al-Bida',* ed. A. M. Turki (Beirut, 1990), 183-93, and Maribel Fierro, ″The Treatises Against Innovations *(kutub al-bid'a),*″ *Der Islam* 69 (1992): 211-13.

[11]Al-Suyūṭī, *Taḥdhīr al-Khawāṣṣ*, 3; Ibn al-Ḥājj, *Madkhal,* 2:144f.

[12]British Library MS Or. 4275; see Charles Rieu, *Supplement to the Catalogue of the Arabic Manuscripts in the British Museum* (London, 1894), 155 (no. 239). This treatise has not, to my knowledge, been the subject of close scholarly scrutiny. Louis Massignon mentioned it briefly in his *Essai sur les origines du lexique technique de la mystique musulmane* (Paris, 1954), 254-55, as did Merlin Swartz in the introduction to his edition of Ibn al-Jawzī, *Kitāb al-Quṣṣāṣ,* 59n.

Al-ʻIrāqī cut a prominent figure among the ulama of late eighth/fourteenth-century Cairo.[13] As a youth, he studied the variant Quran readings, jurisprudence and its methodology, but above all hadith; his father was careful to ensure that his son received *ijāzah*s (licenses) attesting that he had studied hadith with and received permission to transmit traditions from the leading authorities of the day. His academic record reads like that of a model late medieval religious scholar. He travelled widely and frequently, for instance, to study with the ulama of Syria and the Hijaz, his efforts made more efficacious by the fact that he had a prodigious memory, and was able to memorize up to four hundred lines of text per day. He held a number of teaching posts in the leading academic institutions of Cairo, and served as both judge and Friday preacher in Medina. His interlocutor, by contrast, was apparently one of the leading mystics in Cairo at the end of the fourteenth and beginning of the fifteenth century. For reasons which I have given elsewhere, the author of the anonymous treatise rebutting al-ʻIrāqī´s criticisms was almost certainly ʻAlī ibn Muḥammad ibn Wafā’ (d. 807/1404), the son of the founder of the Wafā’ī order of Sufis. ʻAlī was one of the most popular and influential mystics and preachers in Egypt at the turn of the ninth/fifteenth century.[14] The dispute between these two men, as well as the broader polemical tradition represented by individuals such as Ibn al-Jawzī and Mamluk-era scholars such as Ibn Taymīyah, Ibn al-Ḥājj, and al-Suyūṭī, should help us to understand the social and political context in which both popular preaching and scholarly condemnations of it took place.

II

Preaching, of course, was nothing new in Mamluk Cairo. Returning to his home in eastern Iran after performing the pilgrimage in the year 486/1093, a preacher named Ardashīr ibn Manṣūr al-ʻAbbādī stopped in Baghdad, and began to deliver sermons in the great Niẓāmīyah madrasah in that city. The sessions, which Abū

Amīn (Cairo, 1984-), 7:245-50; Muḥammad ibn ʻAbd al-Raḥmān al-Sakhāwī, *Al-Ḍaw’ al-Lāmiʻ li-Ahl al-Qarn al-Tāsiʻ* (Cairo, 1934), 4:171-78; Ibn al-ʻImād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Cairo, 1931-32), 7:55-56.

[14]On ʻAlī ibn Muḥammad ibn Wafā’, see Ibn Ḥajar, *Inbā’ al-Ghumr,* 5:253-56; al-Sakhāwī, *Al-Ḍaw’ al-Lāmiʻ*, 6:21-22; ʻAbd al-Wahhāb al-Shaʻrānī, *Al-Ṭabaqāt al-Kubrá* (Cairo, 1965), 2:20-60; Ibn al-ʻImād, *Shadharāt al-Dhahab*, 7:70-72. For the argument regarding the authorship of British Library MS Or. 4275, see my forthcoming work *Popular Preaching and Religious Authority*.

Ḥamīd al-Ghazālī attended, were extremely popular. According to Ibn al-Jawzī, the number of attendees grew with each meeting, until the congregation filled the courtyard, the building's upper rooms, and its roof. Judging by their relative numbers, women apparently were even more strongly drawn to the shaykh than were men. Eventually, according to the historian, the number of attendees reached 30,000. Al-ʻAbbādī apparently commanded his audience through a profound dramatic sense, since his sermons were punctuated by long and effective silences: "this man," reported Ibn al-Jawzī, "was more silent than not." His power over his audience soon grew obvious. In response to his preaching, attendees would shout aloud; some abandoned their worldly occupations in order to take up the shaykh's call to piety and pious action. Young men shaved their heads and began to spend their days in mosques, or roamed through the city's streets spilling jugs of wine and smashing musical instruments.[15]

Al-ʻAbbādī drove his audience, or at least some members of it, to live a more pious life, or to implement, sometimes violently, the injunctions of the sharīʻah. Other preachers were able to manipulate their audiences to more explicitly political ends. For example, a preacher named Abū ʻAbd Allāh Muḥammad ibn Aḥmad al-Shīrāzī (d. 439/1047-48) came to Baghdad and there "spoke to the people in the language of exhortation *[lisān al-waʻẓ]*." Attracted by his reputation for asceticism—"seduced" *(iftatana),* said the biographer al-Khaṭīb al-Baghdādī—uncounted numbers attended his preaching sessions (although after acquiring a certain degree of wealth, he abandoned his rags in favor of more splendid garments). With his following intact, he turned his attention to holy war *(ghazw),* to the frontier skirmishes which were intensifying in the early fifth/eleventh century. A large group of his followers assembling outside the city, they banged drums and set off to the north, toward the frontier. Some apparently lost their zeal, for they abandoned their march around the northern Mesopotamian city of Mosul, but Abū ʻAbd Allāh himself carried on, ultimately reaching Azerbaijan.[16]

Whatever their purposes, preachers like al-ʻAbbādī and al-Shīrāzī potentially exerted a considerable degree of power over their audiences. Ibn al-Jawzī recognized this, and understood that the root of the preachers' power lay in their exposure to and following among the common people. To complicate matters further, however, it should be remembered that power in preaching and storytelling circles flowed in both directions. Preaching was not a simple, didactic affair, in which one individual, whatever his standing and reputation, delivered his message to a passive audience. Of course, the reaction of a congregation to a sermon delivered or a

story recited some five, six, or seven centuries ago is the most fleeting aspect of the problem, at least from the standpoint of the texts on which the historian must rely, and consequently the most difficult facet of the social context of preaching to reconstruct. But our understanding of the phenomenon would be incomplete if we did not assume that those who listened to preachers and storytellers had minds of their own, and somehow collectively expressed their own expectations of what they should be hearing.[17] From a broader perspective, the common people were capable of influencing the consensus of the Muslim community as to what was and was not legitimately Islamic.[18] They were capable, too, of expressing quite vociferously their opinion of one preacher or storyteller or another, as al-Suyūṭī discovered to his chagrin. His treatise *Taḥdhīr al-Khawāṣṣ* in fact was occasioned by an altercation between himself and a storyteller who recited false hadith. After al-Suyūṭī had condemned the man, the *qāṣṣ* reacted angrily, and spurred on his audience (the ″common people″ [*al-ʻawāmm*], al-Suyūṭī calls them) until they cursed and threatened to stone the scholar.[19] Even ʻAlī ibn Wafā', the great defender of the popular storytellers, worried that individuals who preached correctly—i.e., ordering that which was good, and warning against evil behavior—risked destruction at the hands of the ″rabble″ (*raʻāʻ*).[20] A Hanbali scholar and preacher named Shihāb al-Dīn ibn ʻAlī al-Shīshīnī (fl. late ninth/fifteenth century) ″concerned himself with reading to the common people from works of exegesis and hadith,″ and ″was in much demand among them for that.″ Later, however, after he had expressed in writing his approval of the sultan′s efforts to raise an extraordinary tax, the people turned against him, and ″despised him for this and loosed their tongues in both verse and prose,″ and even tried to kill him and burn down his house.[21] There exists no fury, it seems, like that of a congregation scorned.

Consequently the fundamental issue surrounding preachers and storytellers was one of control: who was to control their activities, their words and their message, and how was such control to be exercised? This was already an issue at an early date, since it forms the subject of several important reports about the origin of the practice of storytelling—for example, the hadith asserting that ″only three kinds of persons narrate stories: one who commands *[amīr],* someone specially

[17]Peter Heath makes a similar point regarding public performances of epic narratives such as the *Sīrat ʻAntar* in *The Thirsty Sword: Sīrat ʻAntar and the Arabic Popular Epic* (Salt Lake City, 1996), 41. commissioned for that purpose *[ma'mūr],* or a hypocrite *[murā'ī],"* as well as the various stories about early storytellers, such as Tamīm al-Dārī seeking the permission of the caliph to practice their art.[22] Ibn al-Jawzī, commenting on the hadith, defined "*amīr*" as referring to those "on whom rests the responsibility for giving the *khuṭbah*, and so they exhort the people and admonish them."[23]

What we are encountering here is the complex of issues surrounding the fact that Islam, unlike for instance the Roman Catholic church, has no specific institutional structure for settling controversies of an ideological or doctrinal nature. This is a point which has been recognized for some time, and despite the perhaps natural tendency of Western scholars to fall back upon unfortunate terms such as "orthodoxy" and "heresy," it is one that seems to be relatively well-settled.[24] On the other hand, the absence of a formally-constituted decision-making body does not mean that it is fruitless to attempt to define an "Islamic tradition," nor that that tradition has not experienced the necessity of setting, or attempting to set, boundaries to what constitutes permissible thought and behavior. Islamic rulers have been capable of instituting very precise limits to the theological positions which could be publicly expounded, as during the third/ninth-century *miḥnah* (sometimes translated as "inquisition") set in motion by the Abbasid caliph al-Ma'mūn. Less formally, the doctrine of "consensus" *(ijmā')* has given the ulama an instrument, however unwieldy, which can be used to define what is and is not acceptable, particularly in the area of ritual and behavior. But inevitably, the process of defining what is "Islamic" has been a flexible one, and one subject to a variety of internal and external pressures.[25]

This was certainly the case in the city of Cairo under the Mamluks, the forum in which Zayn al-Dīn al-'Irāqī and 'Alī ibn Wafā' waged their polemic over the storytellers. The Mamluks were perfectly willing to intervene in religious matters when a dispute threatened directly to disrupt the social order, or when doing so would strengthen their own political position. Sultan Qaytbāy, for instance, stepped into the simmering controversy over the verse of the Sufi poet Ibn al-Fāriḍ, firmly aligning himself with those scholars who considered it religiously unobjectionable, when doing so enabled him to realign the power structure within the ulama hierarchy

in such a way as to consolidate his own authority and that of his Mamluk supporters.[26] More generally, the Mamluk practice of building and endowing religious and academic institutions should be read in part as an effort to bring the ulama and the religious sphere under some degree of influence and control.

But the Mamluks had little interest in taking up the daunting task of systematically policing popular preachers and storytellers; neither, for that matter, had most previous governments in the Islamic Near East. Al-ʻIrāqī objected that the storytellers of his day did not bother to seek the permission of those in a position to judge whether or not they were sufficiently trained and knowledgeable to practice their art—in the absence of qualified rulers such as the ″rightly-guided caliphs″ *(rāshidūn),* al-ʻIrāqī mentioned somewhat vaguely ″those who govern″ *(al-ḥukkām)* and, more pointedly, the ulama themselves. In this they compared unfavorably even with Tamīm al-Dārī, who at least sought the permission of the caliph ʻUmar before he began to recite his stories. ʻAlī ibn Wafāʼ responded that nothing in the report about Tamīm indicated that one is always *required* to seek the permission of those in authority in order to recite stories, only that Tamīm had once done so; perhaps, ʻAlī suggested, he had done so out of respect for the pious and esteemed caliph ʿUmar, as if to remind al-ʻIrāqī that, in political terms, the eighth century after the Hijrah was very different from the first.[27] But ʻAlī also went beyond the formal question of permission. The hadith limiting ″storytelling″ *(al-qaṣaṣ)* to those who command *(al-amīr)* or who are granted permission *(al-maʼmūr)* was directed specifically, said ʻAlī, at the delivery of the formal Friday sermon *(khuṭbat al-jumʻah),* which, since it had an explicitly political purpose, was indeed to be delivered by those in authority *(al-umarāʼ)* or their substitutes *(nuwwāb).* Alternatively, he argued, the storyteller criticized in the tradition was one who did not ″command the good and forbid the evil,″ or whose intentions in delivering his sermon were not pure. As long as the storytellers told tales which incline their listeners to that which is good and drive them away from the wicked, or which in some way ″elucidate the book of God,″ in ʻAlī′s opinion they had already been granted ″permission″ by God and His Prophet *(maʼmūr bi-dhālika min Allāh wa-rasūlihi).*[28]

Such license posed any number of dangers. On the one hand, it threatened to make the definition of what constituted legitimate religious knowledge far too open and uncritical.[29] It also opened the door to quacks and unscrupulous and

venal profiteers—individuals who resorted to various tricks to delude their gullible audiences, to convince them of the false preachers′ sincerity and so to elicit from them generous financial contributions.[30] But the problem must also be seen against the background of the power wielded, or potentially wielded, by preachers and storytellers, because of their deep and privileged connections to the common people. Both al-ʻIrāqī and Ibn al-Jawzī understood the danger posed by the preachers and storytellers in social terms. According to a tradition cited by al-ʻIrāqī, and one which should perhaps be seen against the background of the broader concern that the Muslim community would share the unhappy fate of the earlier chosen peoples, the Banū Isrā'īl had *quṣṣāṣ,* and this was a cause of their destruction.[31] He also recounted a tale about the first Umayyad caliph, Muʻāwiyah, encountering and condemning a storyteller who preached without permission, and then himself preaching a sermon suggesting that freelance preaching had contributed to the hateful fissiparousness of the Jews and Christians. Could its consequences be any different for the Muslim community?[32]

All sermonizing took place in a social and even political context, but the connection between storytellers and preachers and the ruling order was problematic and fraught with tension. As George Makdisi has shown, preaching played an important role in the revival of Sunni power and the articulation of a more precisely defined Sunnism in Baghdad in the fifth/eleventh century.[33] During the Crusades, too, Muslim rulers employed preachers to instill the spirit of jihad into their soldiers and subjects.[34] Such preaching worked to the advantage of the secular authorities, but possessed a power and momentum of its own, which at times threatened to spiral out of hand. In the early sixth/twelfth century, for example, a jurist named Ibn al-Khashshāb whipped an Aleppan crowd into a frenzy with his denunciations of the Franks for their profaning of Muslim shrines in Jerusalem,

and then by way of revenge led them in a march to forcibly convert several Christian churches into mosques.[35]

Clearly, some preachers drew their standing and influence from their close connection to those in authority. Such individuals were, of all possible types of preachers, perhaps the most likely to catch the eye of biographers such as Ibn al-Jawzī, who both sought to record an accurate account of the leading men and women of their day, and also hoped to help set standards for the preaching profession. For example, the son of Ardashīr al-ʻAbbādī, Abū Manṣūr al-Muẓaffar (d. 547/1152) (an even more famous preacher than his father), whose sermons in Baghdad were widely attended, developed an especially close relationship with the caliph al-Muqtafī, whose trust extended to sending the preacher on diplomatic missions.[36] Given the tense but symbiotic ties which bound religious scholars and the ruling military elites together during the Middle Ages, it is not surprising that some preachers developed close relationships with the predominantly Turkish rulers, and even profited from them. The Egyptian Aḥmad ibn Muḥammad ibn al-Qurdāḥ (d. 841/1438), for example, a noted *wāʻiẓ,* musician, and student of astronomy, had the good graces of Mamluk sultans and the leading amirs, connections which allowed him to die a wealthy man.[37]

Others preachers, however, derived their reputations directly from their oppositional stand, from setting themselves against those in positions of power. Despite the formal connection between Friday sermons and political legitimacy, such opposition was quite natural to a preaching tradition which frequently stressed the ephemeral, even diseased, character of worldly success, wealth, and power, and indeed forms a sort of trope of literary accounts of famous preachers. What was required in a preacher was courage sufficient to preach a sermon capable of making the high and mighty weep, as Manṣūr ibn ʻAmmār did in preaching before Hārūn al-Rashīd.[38] The famed Hanbali mystic and preacher Ibn Samʻūn (d. 387/997), for example, ignored a prohibition on preaching promulgated by the Buyid amir ʻAḍuḍ al-Dawlah in an effort to suppress the communal violence between Hanbalis and Shiʻis which plagued Baghdad in the fourth/tenth century. Called before the amir, Ibn Samʻūn continued to preach, and according to a report recorded by Ibn al-Jawzī, moved the sovereign to tears.[39] The *wāʻiẓ* Abū Saʻd al-Muʻammar ibn

ʿAlī Ibn Abī Imāmāh (d. 506/1112-13), who had ″a sharp mind and a Baghdadi intellect,″ was by all repute fearless in preaching to kings and princes, whether the caliph al-Mustaẓhar billāh or the famous vizier Niẓām al-Mulk. Once, according to Ibn al-Jawzī, he delivered a sermon to the latter in a mosque in Baghdad, addressing him directly as the ″hireling of the Muslim community″ *(ajīr al-ummah),* and reminding him in no uncertain terms that his duty consisted in looking after the well-being of the Muslims, and that God would demand of him an accounting of how he had discharged that responsibility. At its conclusion, Niẓām al-Mulk was so moved to tears that he handed Abū Saʿd 100 dinars, which the preacher piously refused, instructing the vizier instead to distribute the money to the poor.[40] Just so, a preacher named Abū ʿUmar al-Ḥasan Ibn al-Filw (d. 426/1035) composed a poem in honor of himself and his preaching to an unnamed sultan: ″I went in to the sultan in the palace of his majesty / In poverty—I did not make noise with horses or foot soldiers *[wa-lam ujlib bi-khayl wa-lā rajil]* / —And I said: ′Look! Between my poverty and your wealth / is the distance between sainthood and separation [from God].′″[41]

Not every ruler was as pious and god-fearing as the sources portray Hārūn al-Rashīd or Niẓām al-Mulk, and even Ibn al-Jawzī urged circumspection. Those who preach to sultans, he warned, should exercise extreme caution *(ghāyat al-taḥarruz),* for sultans reserve to themselves a monopoly on the use of force, and a sharp reprimand *(tawbīkh)* may appear to them as an intolerable public humiliation *(idhlāl).* Ibn al-Jawzī shared the common medieval attitude that manners and morals were in steep decline. Rulers such as Hārūn used to listen attentively to sermons, but now times have changed: rulers are arrogant, and corrupt ulama seek to flatter them. ″In these times,″ said Ibn al-Jawzī, ″it is preferable [for the honest preacher] to distance himself from such people, and to avoid preaching to them, for that is the safer approach.″ If a preacher is forced to speak before men of authority, he should take an indirect approach: he should preach by way of allusion *(ishārah),* or direct his remarks to the people generally *(ʿawāmm),* and mix his exhortation with statements about the nobility of rulership and remind his audience of the comportment of the just rulers of earlier days.[42]

Ibn al-Jawzī′s personal circumstances—an enormously popular and well-respected preacher in twelfth-century Baghdad—made him especially aware of the complex nexus of preaching and power. Some members of the ulama no doubt played the sycophant to those who wielded the sword, but the rulers, too, were

cognizant of the power of the preachers′ word, and so, he implies, feared it. Consequently, despite his warning, the ideal of the confrontational stance remained popular with preachers throughout the later Middle Ages, and instances in which individuals lived up to the ideal were carefully noted by their biographers. In 638/1240, the famous preacher ʻIzz al-Dīn Ibn ʻAbd al-Salām al-Sulamī (d. 660/1262) quarreled with the Ayyubid sultan of Damascus, al-Ṣāliḥ Ismāʻīl, over the latter′s treaty with the Crusaders by which he surrendered to them a number of fortresses and the town of Ṣafad. To chastise the sultan for his cowardice in dealing with the infidel Franks, Ibn ʻAbd al-Salām refused to pray for him and dropped his name from the official Friday *khuṭbah*, as a result of which al-Ṣāliḥ Ismāʻīl exiled the preacher to Cairo, where his nephew and rival al-Ṣāliḥ Ayyūb was happy to appoint the famous man to the pulpit of the mosque of ʻAmr.[43]

The Mamluk sultans and amirs provided the more intrepid among late medieval preachers with ample opportunities to chastise those in power. ʻAbd al-Raḥmān ibn Muḥammad Ibn al-Naqqāsh (d. 819/1416), a popular preacher who was appointed *khaṭīb* at the large congregational mosque of Ibn Ṭūlūn south of Cairo, was respected for ″his severe and sharp ordering of the good and in his preaching *[waʻẓ],* both in his Friday sermons and his storytelling *[fī khuṭabihi wa-qaṣaṣihi],* so that he came to have high standing among both the elite and the common people″; more particularly, he was credited with a willingness to condemn whatever evildoing he witnessed or heard about, even if it embroiled him in controversy with the ruling Turkish authorities.[44] Shams al-Dīn Muḥammad al-Dayrūṭī (d. 921/1515), a famous preacher at the end of the Mamluk period, was respected and feared, according to the Sufi biographer al-Shaʻrānī, by sultans and amirs, as well as by those of lesser station. Many of the leading figures of state attended his sessions; all left humbled.[45] Zakarīyā al-Anṣārī (d. 926/1520), by his own account, was fearless in preaching to the awesome but pious sultan Qāytbāy. ″If I was unable to speak to him directly,″ he recalled, ″I would give him my advice in a sermon *[khuṭbah],* and he would grasp my meaning; and if I then greeted him at Friday prayers, he would come up to me to greet me and say: ′May God reward you for your faithful advice to us.′″ The envious, he said, sought to turn the sultan

against him, and encouraged the sultan to forbid al-Anṣārī to preach to him in a disrespectful manner. But Qāytbāy responded: ″What [would you have me] say to someone who has opened my eyes to my own faults and has given me good advice?″ Summoning up all the rhetorical weight of the Islamic preaching tradition and applying it directly to the Mamluk system itself, al-Anṣārī was able to drive this sultan to tears. ″One day I said to him in a sermon *[khuṭbah]:* ′Awake, O you whom God has put in charge of His servants, and think of your origins, and of your condition today. Once you did not exist, and now you do; once you were an unbeliever, and now you are a Muslim; once you were a slave, and now you are free; once you were ordered *[ma'mūran],* and now you give orders *[amīran];* once you were an amir, and now you are a sultan. Do not accept these blessings with vainglory and pride, and [do not] forget your beginning and your end: for your nose will be ground in the dust when you die, and the worms will eat [you] and you will become dust.′ Then the sultan wept and said to those amirs around him: ′If I were to send this one away, who would preach me such a sermon *[wa'ẓ]?*′″[46]

Given the influence which preachers at least potentially wielded, the issue of control was especially problematic. Direct control of course was impossible, given the absence of a formal ecclesiastical structure. Further complicating the situation, much sermonizing and storytelling took place in settings which even the informal sinews of Islamic religious authority found it difficult or inexpedient to police, such as the vast cemeteries outside Cairo. Ibn al-Ḥājj, for one, harbored a particular concern that unscrupulous storytellers and preachers would ply their trade to gullible audiences in the shadowy warrens of the Qarāfah.[47] Moreover, many preachers and storytellers were peripatetics, traveling through the Islamic world, sometimes on pilgrimage, and practicing their art before always new and different audiences. Such wanderers already provided a stock character for al-Ḥarīrī′s fifth/eleventh century *Maqāmāt,* where one tale describes the rascally hero Abū Zayd as appearing in ″the equipment of pilgrimage″ and preaching to the people of the Yemeni city of San'ah.[48] Not infrequently, such individuals acquired a good deal of contemporary fame: so, for example, al-Sayyid 'Alī ibn Ya'lá (d. 527/1133), a famous preacher from Khurasan, roamed through Iran and Iraq, receiving the enthusiastic approbation of the people *(wa-ẓahara lahu al-qabūl al-tāmm min al-nās),* finally arriving in Baghdad where he received the welcome of both the

elite and the common people.[49] The Sufi preacher known as al-Shābb al-Ṭā'ib (d. 832/1429), who held preaching and instruction sessions ″in the manner of the Shādhilīyah,″ circulated widely among the common people: he was born and educated in Cairo, but visited Yemen, the Hijaz, Iraq, and Syria, most of them several times, and ″constructed a number of *zāwiyah*s in the various countries″ in which to ply his trade.[50]

Given the fluidity of the situation, one can understand the bitterness of scholars such as al-Suyūṭī who perceived the power and influence of the preachers and storytellers, and who worried that their discourses were not always, as it were, kosher. A treatise such as Ibn al-Jawzī′s *Kitāb al-Quṣṣās* or al-'Irāqī′s polemic against the storytellers was fundamentally an effort to assert control over what its author perceived to be a lawless activity, or, perhaps more accurately, a cry of frustration that wicked and ignorant practitioners of the craft operated without any effective restraints. But in fact the predicament was not so stark as the scholars believed. The issue of authority and control, in relation to the activity of popular preachers and storytellers, was extraordinarily complex, as it was in all aspects of medieval Islamic religious life. There were at least sporadic, and not altogether unsuccessful, efforts to exert formal, if not systematic, control. More importantly, the preaching tradition itself set certain boundaries which prevented a degeneration into wholesale anarchy. Those boundaries were reinforced by the symbiotic, if sometimes tense, relationship between popular preaching and storytelling and the more disciplined transmission of religious knowledge represented by scholars such as Ibn al-Jawzī, al- 'Irāqī, and al-Suyūṭī, and also by the thematic content of the preaching tradition itself.

The prospect of some form of direct control of preachers and storytellers by the ruling authorities was an old one, which at least in theory stretched back to the caliph 'Umar′s ambivalent attitude toward the *qāṣṣ* Tamīm al-Dārī. Al-Suyūṭī peppered his polemic against the storytellers with narratives from the early decades of Islamic history about the *ṣāḥib al-shurṭah* (indicating some high-ranking officer charged with policing responsibilities) taking action to prevent unauthorized *quṣṣāṣ* from practicing their art.[51] Those who dare to transmit false stories about the Prophet, he indicated, deserve to be whipped and threatened with even worse punishments; in these matters, said al-Suyūṭī, the ruler *(al-ḥākim)* should be appealed

to for help.[52] Such arguments and anecdotes may be read most accurately as expressions of a pious hope and of the widespread pessimistic conviction that Muslim society no longer operated as it once had, and as it should, rather than as an accurate memory of a formerly consistent pattern. On occasion, however, rulers had complied, as when the caliph al-Muʻtaḍid ordered the storytellers (along with astrologers and diviners) swept from the streets of Baghdad in 279/982.[53] Several decades later, the vizier Ibn al-Muslimah ordered preachers and sermonizers, both *khuṭabāʼ* and *wuʻʻāẓ,* not to recite hadiths in their sermons without first checking their authenticity with the traditionist al-Khaṭīb al-Baghdādī.[54] The assertion by Ibn al-Ukhūwah (d. 729/1329), in his manual of instruction for the *muḥtasib* (roughly, ″market inspector″), that individuals who were not qualified to preach should be forbidden from doing so, and that those who did so anyway should be punished, would seem to indicate that this official appointee of the sultan held, at least formally, some right of supervision over the activities of preachers.[55]

It is difficult to determine whether medieval ruling authorities followed the advice of Ibn al-Ukhūwah and al-Suyūṭī and systematically supervised the activities of popular storytellers and preachers, since routine matters often escaped the notice of chroniclers and biographers. Authority to regulate their activities was diffuse, and shared by numerous individuals. Sultans, of course, held rights of appointment over preachers in the Friday congregational mosques, or at least some of them, and when an official *khaṭīb* preached a sermon which challenged the political order, he could find himself dismissed, as Ibn ʻAbd al-Salām al-Sulamī discovered. But al-Qalqashandī noted in his eighth/fourteenth-century reference manual for scribes and bureaucrats that in practice, the ruler′s prerogatives were limited. He identified the official Friday preaching post *(khiṭābah)* as ″in truth, the most powerful [religious] post and most exalted in rank,″ since the Prophet himself had undertaken it. By his day, however, there were ″countless″ such positions all over Egypt, so that the sultan did not routinely concern himself with any but the most important, such as that in the congregational mosque in the Citadel of Cairo, or those in which, by the terms of their endowment, he held the right of supervision.[56]

Preachers in less visible positions must have been subject to even looser control. On the other hand, occasionally matters did reach a point where secular

and/or religious authorities found it expedient to intervene, as did the Saljuq Sultan Masʿūd in forbidding ʿAlī ibn al-Ḥusayn al-Ghaznawī (d. 551/1156) from preaching, after the latter began to incline toward Shiʿism.[57] Occasional anecdotes in the chronicles and biographical dictionaries give us some sense of how the mechanisms of control might operate. The Sufi ʿAbd al-Wahhāb al-Shaʿrānī recounted a wonderful tale about Ibrāhīm ibn Miʿḍād al-Jaʿbarī (d. 687/1288), a charismatic Cairene preacher. According to al-Shaʿrānī, the qadis held a council in order to condemn al-Jaʿbarī's preaching, and in particular his ungrammatical singing of the Quran. After the council meeting, the Maliki qadi issued a *fatwá* forbidding al-Jaʿbarī to preach, but shortly thereafter fell from a gate of Cairo's citadel and broke his neck; chastened by this expression of God's judgment, the other qadis threw themselves at al-Jaʿbari's feet and begged his forgiveness. Triumphant, the preacher told them that it was not he who had recited improperly, but their ears which were at fault.[58] This story, and a parallel one in which, after condemning the preacher, the leading ulama of Cairo suffered from the painful retention of urine, clearly contain apocryphal elements, but the essence of the story is confirmed by the earlier and far more sober biographer, Tāj al-Dīn al-Subkī. He reports the council of qadis and their condemnation of al-Jaʿbarī, although in his account the accusing jurist fell, more prosaically, from his mule, and broke his wrist, rather than his neck. He indicates that others, too, had condemned his preaching, but that al-Jaʿbarī had persisted nonetheless and proved "his innocence and the correctness of his belief."[59] What is of interest in both of these accounts is the interactive pattern of control and resistance: of a council of qadis and jurists seeking to restrain a popular and charismatic preacher of suspect convictions or dubious intellectual competence, and his assertion of an independent right to preach. No doubt al-Jaʿbarī felt, as ʿAlī ibn Wafāʾ might say, that he had been granted permission to preach by God and His Prophet.

Sometimes the qadis sought to involve the sultan in an effort to give their interdictions more force. Al-Shaʿrānī records another imaginative tale about Ḥusayn al-Jākī, a pious preacher who died in 730/1329-30, who like al-Jaʿbarī was accused of mispronouncing the Quran. Again a council was held, this one presided over by the sultan, as a result of which al-Jākī was forbidden to preach. The *wāʿiẓ* complained to his shaykh, Ayyūb al-Kannās ("the sweeper"), who arranged a trick. After the sultan had entered a toilet, Ayyūb appeared to him, emerging through a wall, with a broom in his hand. The sultan mistook him for a lion, and, afraid that the cat was about to swallow him up, fell down trembling. Ayyūb then ordered the sultan

to issue an edict allowing al-Jākī to preach; the sultan having done so, the shaykh then slipped back through the wall.[60] The colorful ending of this story aside, its central drama—the qadis and sultan, in council, examining and condemning a popular preacher—was not unique. The jurist, exegete, and preacher Ibn al-Labbān (d. 749/1349), who was criticized for weaving monism and other suspect doctrines into his sermons, was condemned by the Shafiʿi chief qadi Jalāl al-Dīn al-Qazwīnī and forbidden to preach at the insistence of a group of legal scholars, but not before the sultan and a group of amirs had become involved, the latter apparently interceding to seek his repentance.[61]

It would be wrong, however, to view the situation as one that uniformly pitted qadis and senior scholars, allied with sultans or other ruling authorities, representing a kind of quasi-official religious establishment, against more free-wheeling preachers and storytellers catering to a popular constituency. There was considerable overlap between the different groups and the perspectives they represented. The various individuals of the Bulqīnī family, for example, ranked among the most accomplished and respected members of the learned elite of Cairo; but in addition, they held popular preaching sessions, in mosques and madrasah*s*, large and small, throughout the city. Here, too, the fundamental similarity of the material which formed the subject of class sessions, official Friday sermons, and popular preaching and storytelling is important. Tales of the prophets were to be found in rigorous and esteemed exegetical works, as well as in more popular circles, and hadiths of course were a fundamental component of religious discourse at any level.

As a result, the storytelling and preaching tradition generated its own informal mechanisms of control, mechanisms built largely upon reputation and the moral force wielded by particularly respected preachers. Ṣalāḥ al-Dīn Muḥammad al-Kallāʾī (d. 801/1398), a Shādhilī Sufi, began his career as an official notary (*shāhid*) in a shop outside Bāb Zuwaylah in Cairo, but later became the companion of the shaykh and preacher Ḥusayn al-Khabbāz, and in fact took up the latter's preaching duties in his *zāwiyah* after his death.[62] Al-Kallāʾī seems not to have

been a shining example of the preaching tradition: the sources report that he made glaring errors and carelessly mispronounced God′s word, and that his sermons contained misguided and unjustified exegeses of Quranic texts. His errors came to the attention of the aged Sirāj al-Dīn al-Bulqīnī (d. 805/1403), who took it upon himself to prohibit him from ″speaking to the people″ *(al-kalām ʻalá al-nās).* In essence, al-Bulqīnī′s reprimand was that of a widely admired scholar and preacher directed against an individual whose incompetence threatened to undermine the authority of all those who preached.

Practitioners of the art of preaching and storytelling might close ranks in order to silence a particularly dangerous individual. In response to al-ʻIrāqī′s repetition of the tradition that ″the storyteller can anticipate only God′s wrath,″ ʻAlī ibn Wafā' agreed—if, that is, the storyteller preached that which contradicted the shariʻah. Such an individual should indeed worry about the retribution he will face on the Day of Judgment.[63] But in fact even the Wafā'īs did not rely entirely on conscience to ensure the integrity of their preaching. Take, for example, the case of ʻAbd al-Qādir ibn Muḥammad al-Qāyātī al-Wafā'ī (d. 873/1469), a member of the order who was originally trained to be a muezzin, but who was drawn to preaching because of the ″power, fame, and reputation″ it brought him. ʻAbd al-Qādir, it seems, was something of an imposter, reciting poetry which he falsely claimed was his own, and impersonating more famous scholars: once, while on the pilgrimage, he claimed to be Walī al-Dīn al-Bulqīnī (d. 865/1461), and led preaching sessions in his name. His ensuing altercation with Walī al-Dīn, who was described as having preached ″in the manner of the Banū al-Wafā',″[64] seems in some way—the biographer al-Sakhāwī is sparse with details—to have led to a falling out between ʻAbd al-Qādir and the Wafā'ī order. As a result, some wags gave him the *nisbah* ″al-Jafā'ī,″ i.e., ″one who is alienated,″ or ″one who is treated with distaste.″ The order, that is, took it upon itself to ostracize a member whose misdeeds embarrassed it in front of a family known for its concern for preaching and the transmission of knowledge to the common people.[65]

In the end, the nature of the preaching tradition, and the character of the sermons and tales which formed the bulk of the material transmitted in storytelling circles, themselves acted to blunt the hard edge of the power potentially wielded by religious figures with close ties to the common people, and to minimize the threat which they presented to the social and political order. Generalizations are dangerous, since we can know so little about the particular circumstances in

which sermons and stories were recited, and still less about the audiences′ reaction to them. However, we can be certain that popular sermons typically focused on sin, suffering, and death, on poverty and its endurance, on the trials and tribulations of this world, and in particular on the promise of personal (as opposed to social) salvation. The root meaning of the verb *wa'aẓa,* after all, is ″to admonish,″ ″to warn.″ Meditation upon the misery to which humans are subjected in life, the horrors of death, and the promise of release to those who are God-fearing, was a staple of medieval sermonizing. It finds reflection in a variety of sources: in collections of sermons by well-known figures such as Ibn al-Jawzī and Ibn Nubātah al-Fāriqī (d. 374/984-85); in a compendium of hadith in use among the storytellers, as compiled by Ibn Taymīyah; and in the sermons and tales recounted by popular preachers such as the Sufi Shu'ayb (or 'Ubayd) al-Ḥurayfīsh.[66] Popular preachers such as al-Ḥurayfīsh laid special emphasis on patience in the face of adversity. So, for example, he elucidated for his audience the saying that ″the poor man is doctor of the sick, and his bleacher″: if a rich man is ill, and gives alms, and a poor man prays for him, he will be cured; and if a rich man gives alms to the poor, and the poor man prays for him, the rich man will be cleansed of his sins.[67] Such a sermon grants the poor a certain power, it is true, but it is a power which manifests itself in the next world, and not in this.

Accordingly, popular sermons must surely in many instances have acted as a kind of social safety valve, deflecting and deflating the various pressures experienced by those medieval Muslim men and women who listened to the preachers and storytellers. The excessive weeping which disturbed Ibn al-Jawzī, and which was noted by many medieval observers of preachers and preaching circles, played the social role of internalizing the despair, anger and angst of listeners. The suspicion of and hostility toward the world which were characteristic of sermons hardly amounted to a call to arms against those who benefitted from the established social order. On the contrary, the spirit of penitence which sermons sought to induce, the copious weeping, and all the reminders of our frailty and sin and the hopelessness and injustice of the present world, reminded listeners that true justice would be found only in eschatological time. Al-Ḥurayfīsh and his listeners drew comfort from the Prophet′s observation that of the eight doors to paradise, seven are reserved for the poor, while six of seven entrances to hell are set aside for the rich.[68] Social distinctions will be set aside at the end of time—God created heaven

for those who obey him, ″even a black Ethiopian slave,″ and hell for those who do not, ″even a Qurayshī *sharīf*″[69]—but in the meanwhile, the underlying hierarchies went unchallenged. Ibn Abī Imāmah preached fearlessly to Niẓām al-Mulk, so vigorously and forthrightly reminding him of his duties in this world and the punishment which threatened him in the next that the vizier, under the preacher′s instructions, distributed a sum to the poor of Baghdad—but Niẓām al-Mulk remained vizier, of course, and the social and political order unchanged. Qāytbāy appreciated being reminded of his sins and the frailty of his soul, but for all his piety thoroughly understood the modalities of raw political power in which he operated. In one of the few records we have of an actual medieval preaching circle, the preacher observed that on the Day of Judgment, our lots in life will be reversed. Ascetics *(zuhhād)* and those who serve God *(ʻubbād)* will, in paradise, have plenty to eat and drink, and live in large palaces, and be served by houris, as do the profligate *(fujjār)* and dissolute *(fussāq)* in this world. By contrast, the profligate will, after the judgment, suffer the lot of those who scorn (or who are denied) the joys of this life: they will be poor, sad, and afflicted by trials and tribulations.[70] But such a sermon postpones the social revolution beyond the limits of history.

Through mechanisms such as these, the social and even political power latent in the tradition of Islamic preaching, and in the ties which bound preachers to their audiences, was softened, its disruptive potential muted. The activities of popular preachers and storytellers remind us of the complex nexus of political and religious power which characterized the society of Mamluk Egypt, as well as that of other military regimes in the medieval Islamic world. The Mamluks stood in an ambivalent and problematic relationship to the Muslim Egyptians over whom they ruled: religious identity and commitment always represented a potential threat, but could also, under certain circumstances, be harnessed to lend prestige and credibility to their regime. It is in such light, of course, that the decision of individual Mamluks to construct and endow religious institutions should be understood. As it turned out, however, many leading religious scholars themselves perceived an ambivalence in certain popular religious phenomena, such as the sermons and recitation of tales which form the subject of this article. The *quṣṣāṣ* and *wuʻʻāẓ* held a privileged position in the transmission of religious knowledge to the Muslim masses, but were also perceived as a threat by senior scholars and representatives of the faith, men such as al-Suyūṭī and Ibn al-Ḥājj. Religious power in Mamluk Egypt did not emanate from individuals or institutions as much as it flowed in circles around them. It could be tapped to support the social and political hierarchies, but at the same moment could undermine them. In this way it

Silver Coins of the Mamluk Sultan Qalāwūn (678-689/1279-1290) from the Mints of Cairo, Damascus, Ḥamāh, and al-Marqab

This article is an amendment to the pertinent chapters of Balog's[1] standard work on Mamluk coins and an article on Mamluk *dirham*s by Helen W. Mitchell.[2] The basis of the research presented here consists of 121 silver coins of Sultan Qalāwūn minted in the period between the years 680 and 689. As I have mentioned elsewhere,[3] they are part of a collection of approximately 700 Mamluk silver coins which came to Europe from Aleppo about a dozen years ago. Although it is not a hoard in the proper sense, about three quarters of the coins stem from the Baḥrī Mamluks.

Coins provide excellent witness to the specific political and economic circumstances of a certain region at a particular moment in history. Therefore it seemed necessary to gain as much information as possible from the newly acquired corpus. The most important prerequisite to this kind of work turned out to be drawings of the coins, which enabled the reconstruction of dies and the research on die linkages. Quite a few questions raised by Balog and Mitchell were thus solved. An unknown silver coin struck at the stronghold of al-Marqab is of special historical interest, because it is not only a document for Qalāwūn's important conquest but allows for some conclusions about changes in his monetary policy. It is described in the appendix to this article.

Apart from their worth as objects of documentary value, these coins constitute works of art on a minimal surface and thus their calligraphy as well as their scriptural and ornamental inventory are described in detail. Mamluk coins, in this respect, do not easily disclose their aesthetic charm. While the mosques, madrasahs and mausoleums erected during the reign of Qalāwūn or other Mamluk sultans

are of unprecedented beauty and perfection, their respective coinage is of a rather unpleasant appearance. Practically every coin is of irregular shape and off center, while the inscription is hard to decipher because of the weak and defective impression of the die on the flan. As will be shown, it is only by reconstructing the dies and types that the originally intended coin designs can be resurrected, revealing, more often than not, unexpected artistic qualities in calligraphy and ornamentation. Therefore, it seemed appropriate to illustrate the description of the coin types not with photographs but rather with line drawings.

Line Drawing of Coins

The coins were drawn with the aid of a device constructed by my husband Gerd-R. Puin. The coin is placed on a revolving stand below a semi-transparent mirror which throws the concentrated beam of a lamp onto the coin vertically. From there the reflected light passes through the mirror in a vertical direction; a lens above the mirror serves for projecting the coin image onto a transparent paper laid on a pane of glass. This arrangement allows for the convenient drawing of an enlarged natural picture of the coin, and accidental defects like scratches or holes etc. are easily disregarded. Subsequently, these drawings are either reduced on a copy machine or by a computer program until the ultimate scale of exactly 2:1 or 1:1 is achieved. Bob Senior, in his article ″Line Drawing the Easy Way,″ provided a description of his similar computer-aided procedure. He scanned the coin directly, then drew the contour of its features on the monitor and finally reduced the resultant drawing to the scale of 1:1 for print.[4]

Admittedly, the drawings do not convey the appearance of the coins as authentically as photographs would, yet they are, in our case, easier to make than photographs, considering the weaknesses of the coins already mentioned. Line drawings are, moreover, easier to reproduce in print, which allows for their exhaustive representation and insertion in the text at any place. However, the main advantage achieved by this kind of drawings lies in the possibility of offering a more profound evaluation of the coins, especially in such cases as this, when the ″hoard″ at hand is big and homogeneous.

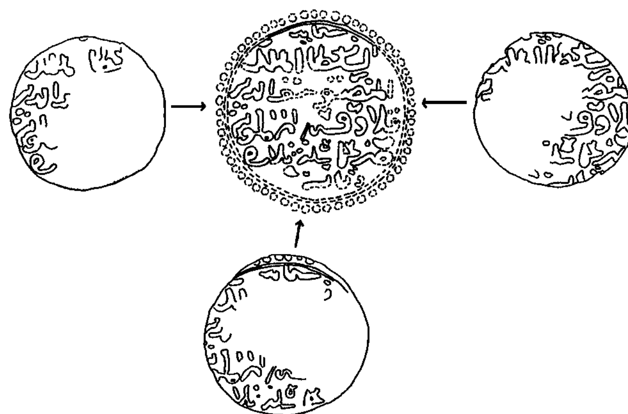
Die Linkages

By laying one drawing of an obverse (or reverse respectively) upon another it is immediately evident whether both coin sides were struck with the same die or not. After comparing all the drawings with each other it is clear how many obverse and reverse dies were used for the production of this coin corpus. In this respect, the minting places of Qalāwūn′s coins show surprisingly different patterns.

---

[4]ONS Newsletter no. 151 (Winter 1997): 8 ff.

Regarding the Cairo and Damascus mints, the number of obverse dies approximately equals the number of reverse dies, while of the Ḥamāh coins, 22 reverse dies are linked with only eight obverse dies. Although the number of coins is not sufficient to allow for a generalization, neither is the difference merely fortuitous. Evidently, but for no discernible reason, the reverse dies in the Ḥamāh mint became worn out much earlier than the obverse dies and had to be exchanged for new ones more frequently.



The combination of one particular obverse with one particular reverse on one coin is a die linkage. Coins closely related to each other show patterns of die linkages which can be represented in a tabular arrangement. On the charts at the end of each section (below) every single combination of obverse and reverse dies is represented by one line connecting the drawings of the obverses (1, 2, . . .) and the reverses (A, B, . . .) with each other. The number of lines emanating from one obverse number equals the number of coins representing this particular obverse die and shows, moreover, its pattern of combination with the reverse dies. Thus it is possible to visualize whether the combination of a pair of dies is singular only, or whether there are groups of dies in combination (represented on the charts by intersecting lines). In some cases it was possible, by this method, to determine the chronological details of a coin devoid of a date. If the dies used for striking such a coin were also used in combination with dies used for striking other coins, then all these dies (and coins) are necessarily contemporary. And if one exemplar from this group of coins shows an explicit date, this will be, with high reliability, the dating of the whole group, too. As an example we take the coins from Damascus, type I (see below): on two of the coin specimens the reverse #G is clearly dated 682. This die occurs linked with the obverses #6 and #7; now these two obverses are also combined with three other reverses (#F, #H, #J) all of which lack the year of strike. Yet, as all of these reverses belong to the same linkage group they necessarily belong to the same period.

The linkage patterns, too, can differ from one mint to another. The coins from Cairo and Ḥamāh were only struck by specific combinations of obverse and reverse dies—every obverse die is linked to only one reverse die. In the Damascus mint, however, groups of coins were struck by varying combinations of dies, i.e., simultaneously. This is certainly due to a difference in the organization of the minting work. Unlike the habit observed in the Cairo and Ḥamāh mints, it can be concluded that in the Damascus mint the dies were not kept in fixed pairs, but rather the obverse dies were stored together, apart from the reverse dies. The next ″shift″ would then combine the pairs of dies at random.

DIE RECONSTRUCTION

Apart from the advantages of line drawing thus far put forward, its main importance is that it enables the reconstruction of the dies with which the coins were struck. No single Mamluk silver coin ever shows the complete impressions of its dies! In the case of the Qalāwūn silver coinage the average diameter of the coins is only around 20 mm, whereas their dies measure between 23 and 28 mm, which implies that no coin can possibly show more than part of the die(s). Moreover, the impression on the coin is mostly very weak and even leaves part of the flan completely blank, thus reducing again the visible print of the die(s). The only way to find out the size and the calligraphic/ornamental concept of the dies is to make use of as many coins as possible stemming from the same die. The more coins you have at hand, and the more they are off-centered the more completely the reconstruction of a die will succeed. While the well-centered coins are usually of interest for collectors, for our purpose those coins which extend to the very margins are of importance, for they yield the complete legend and even the border line! Any accidental defect on the real coins (e.g., scratches, double strike, weak or blundered writing) may undergo tacit correction. In those cases where a certain (sub-) type cannot be associated exclusively with one specific year, the type drawings leave out the variable parts of the date. If only a few details remain missing from the reconstruction, these details can be safely taken from drawings of other coins from the same (sub-) type.

An example illustrates the procedure: by closely comparing the drawings of individual coins from Ḥamāh it became evident that the obverses of three specimens (#3 on the die linkage chart below) were struck by the same die. Every coin, however, and thus every drawing, shows a different part of the die. Through accumulation of the drawings, the largest part of the die reappears and can be drawn, yet lacunae remain in the center as well as towards the lower edge. These can be amended, however, by inserting the missing details from the drawing of obverse #2 on the one hand, as well as by completing the visible lines of *thamānīn* at the bottom, in accordance with the prevalent width of the strokes used for the script of the legend. Although these amendments are founded on safe grounds, they are, nevertheless, marked in the illustrations by dotted lines.

By this method many dies from Damascus and Ḥamāh can be reconstructed either completely or at least partially. Thus, even for the many coins with the date off-flan the year could be determined if they were derived from a die whose reconstruction included the minting year. E.g., although only one out of nine specimens from Ḥamāh struck with the obverse die #5 shows the date 687, it is evident by the reconstruction that all of the other eight specimens were struck in the same year.

Typology

The concept of ″type″ and ″sub-type″ applied in this article certainly differs from that of conventional usage. It emerged as the result of an ″inductive″ process while classifying an unusually high number of coins at hand, with side-glances at Balog′s book. An obverse or reverse die is here defined as belonging to the same obverse or reverse *type,* if the same text is arranged in the same way, except for the variable wording of the year. In this respect, it is only the disposition of the units, tens, and hundreds on the coin that is decisive, because one type may have been in use for a longer time than one year. A *sub-type* of an obverse or reverse die still has the same text and the same disposition, but varies regularly in certain details regarding, for instance, calligraphic execution or ornamentation. Finally, a *coin type* is defined by the regular linkage of an obverse die type to a reverse die type.

Sometimes, however, the decision whether to distinguish between two separate types or simply two sub-types of a same type is difficult. The types I and II from Damascus are an example of such a dilemma. Neither their general concept, their texts nor their dispositions differ, whereas their ornamentation as well as their calligraphic realization does. Essentially the obverses (*Obverse I 1* to *Obverse II*) and the reverses (*Reverse I 1* to *Reverse II*) are all variants of the same obverse and reverse types. Not every ″variant″ is found freely combined with other ″variants,″ however. *Obverse II* is, for instance, regularly linked with *Reverse II* and vice versa. Thus it seems reasonable to define this linkage as a coin type of its own. Slightly different is the problem of Damascus type I: there are two obverse variants (*Obverse I 1, 2*) and three reverse variants (*Reverse I 1, 2, 3*); *Reverse I 1* is exclusively linked with *Obverse I 1*, as is *Reverse I 3* with *Obverse I 2*. Each of the obverse variants, however, is also linked with the third variant of the reverse, *Reverse I 2*. Thus, in contrast to the first example, it does not seem wise to split them up into two separate types.

As for the practical side of making type drawings, it must be borne in mind that they are *derived from* the die reconstructions and do not represent individual dies, but constitute the fundamental appearance of (normally) a group of dies bearing the same legend in the same arrangement, as mentioned already. As type

drawings no longer represent individual coins or dies, there is no need to distinguish between ″original″ and ″amended″ features. The basis of the type drawing is the drawing of the most completely reconstructed die; still missing details are then taken from the drawings of one or several closely related die reconstructions. This procedure is similar to the way in which the die reconstructions were gained from several coins, yet the degree of abstraction is now one level higher. It is even possible to prepare a type drawing on the basis of one single coin, on the condition that it shows an adequate number of characteristic (″typical″) elements, and that the missing details are not only known in principle, but are available as drawings from related coins. A good example of this is the gradual development of the type drawing from the single known specimen of the al-Marqab mint (see Appendix): it shows the essential parts of the legends and ornaments including parts of the edges on both sides, so that the missing details can safely be amended by referring to the drawings of similar types from Cairo and Damascus.

Mode of Presentation

In this article the coin types are quoted by Roman numerals, e.g., Type III. Obverse or reverse types appear as *Obverse I* or *Reverse II*; the sub-types of these are differentiated by the addition of Arabic numerals, e.g., *Obverse I 2* or *Reverse II 1*. Individual dies, like those displayed on the die linkage charts, bear numbers for the obverse dies or capital letters for the reverse dies, such as 1, 2, 3 or A, B, C. If these dies are quoted within the text, the numerals or letters are written #1 or #F.

The sections deal with the mints of Cairo, Damascus, and Ḥamāh. After starting with a few statistics, each section proceeds to a type chart, where the drawings in 1:1 scale of the occurring obverse and reverse types are arranged in such a way that they constitute a synoptical preview of the detailed description of types and sub-types to follow. These descriptions are illustrated by 2:1 enlarged outline type drawings in which the features decisive for the definition of this particular (sub-) type in contrast to the previous one(s) are filled out in black. There is a further section devoted to the metrological evaluation of the corpus. The unique coin from the mint of al-Marqab is dealt with in the Appendix.

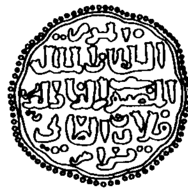
Silver Coins of Qalāwūn from Cairo

Statistics

Number of specimens:	32
Coin diameter:	19 to 22 mm
Die diameter:	24 to 25 mm
Average weight:	2.77 g; for details see below

28 obverse dies:

Obverse I 1:	9 dies on 9 specimens: #1-9 (1x each)
Obverse I 2:	8 dies on 11 specimens: #10 (2x), #11 (1x), #12 (2x), #13-14 (1x each), #15 (2x), #16-17 (1x each)
Obverse II:	11 dies on 12 specimens: #18 (1x), #19 (2x), #20-28 (1x each)



30 reverse dies:

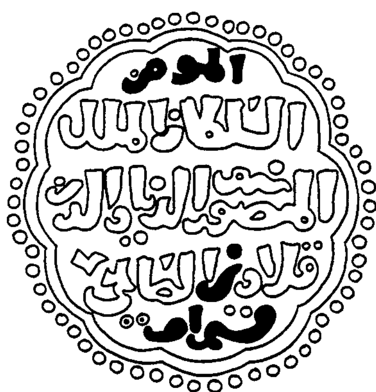
Reverse I:	30 dies on 32 specimens: #A-J (1x each), #K (2x), #L-P (1x each), #Q (2x), #R-E´ (1x each)

CAIRO TYPE CHART

Type I, here years 680, 685, 686, 68x, 6x9; on reverse void left for units of minting year.

Obverse I 1

Obverse I 2*



Obverse II

Reverse I

Obverse I 1 and *Obverse I 2* correspond to Balog´s type *B* (Balog no. 126), while *Obverse II* corresponds to his type *A* (Balog nos. 121-25). As the reverse type is always identical it seems appropriate to regard all combinations as forming one single coin type consisting of three different obverse variants.

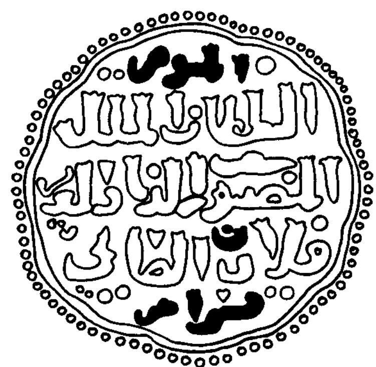
DESCRIPTION OF CAIRO TYPE I (enlargement of drawings 2:1; on reverse void left for units of years)

Obverse I 1

Central inscription in three lines:

(1) السلطان الملك

(2) المنصور سيف الدنيا والدين

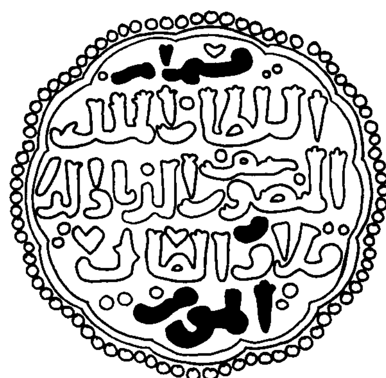


(3) قلاون الصالحى

Specific to line (2): سـيـف is placed above المنصـور, while the يـن of الديـن is above the *dāl*.

Characteristic feature as distinct from *Obverse II*, in the drawing set off in black: completion of text in bottom (قسيم امير) and top (المومنين) segments.

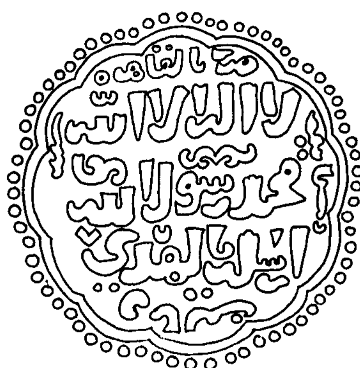
Characteristic feature as distinct from *Obverse I 2* and *Obverse II*, in the drawing set off in black: the *nūn* of قلاون is placed on the line.



Obverse I 2

Characteristic feature as distinct from *Obverse II*, in the drawing set off in black: completion of text in bottom (قسيم امير) and top (المومنين) segments.

Characteristic feature as distinct from *Obverse I 1*, in the drawing set off in black: the *nūn* of قلاون is placed above the *wāw*.



Obverse II

Characteristic feature as distinct from *Obverse I 1* and *Obverse I 2*, in the drawing set off in black: completion of text in bottom (قسيم امير) and top (المومنين) segments.

Characteristic feature as distinct from *Obverse I 1*, in the drawing set off in black: the *nūn* of قلاون is placed above the *wāw*.

Reverse I

Central inscription in three lines:

(1) لا اله الا الله

(2) محمد رسول الله

(3) ارسله بالهدى

Circular legend: ضرب بالقاهرة (top; *tā' marbūṭah* mostly lacking), [. . ./تسع/ست/خمس] سنة (left), وثمانين (bottom), وستماية (right).

GENERAL FEATURES OF CAIRO TYPE I

Border on both sides: linear dodecalobe in dodecalobe of dots. This kind of border is typical for the Qalāwūn coins of Cairo (versus Balog, *MSES,* 114, where the border is described as ″dodecalobe of dots between two linear dodecalobes,″ like the coins from Damascus).

Style of writing: *naskhī.* The *hastae* taper from top to bottom and often show a more or less tight lacing below the tops. Some dies have *hastae* with flat tops, others are bicuspid or multicuspid, which contributes to a cauliflower-like appearance, looking, at times, rather frayed and unbalanced.

Diacritical points occur occasionally with the *bā'* of بالهدى, the *fā'* of سيف, the *qāf*s, the *nūn*s (in case of the name قلاون the point of the *nūn* is sometimes substituted by a V-shaped angular *muhmal* mark, cf. below), and the *yā'*s.

Muhmal marks:

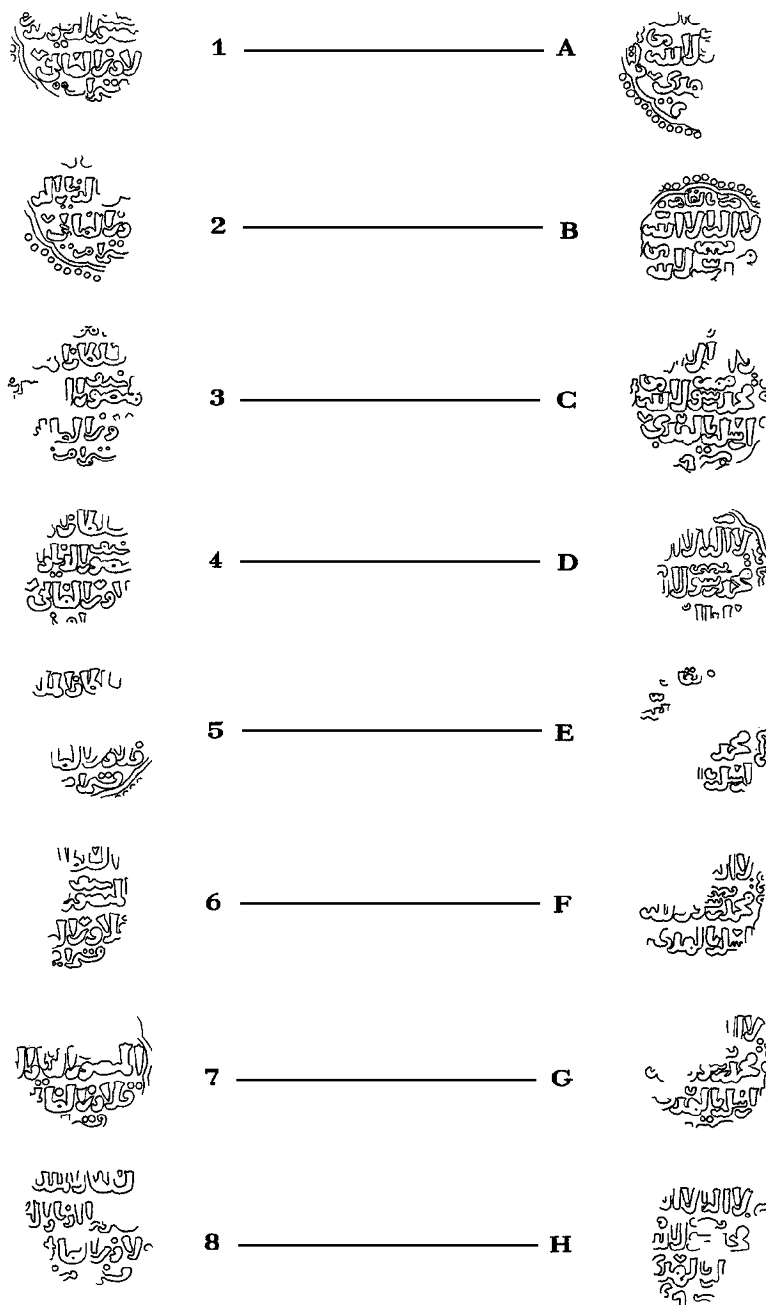
V-shaped angle: on top of some letters a V-shaped angle or a truncated bifoil is placed. This sign is the *muhmal* mark لا which has probably been developed from the abbreviation of لا وقف "no pausal reading." It informs the reciter that stopping at this place would have a detrimental effect on the true sense of the passage. In epigraphic usage the *muhmal* mark has lost its original meaning; it rather serves to indicate a letter which, in ordinary script, bears no diacritical point—in a way it is a diacritical mark although its meaning is something like لا نقطة عليها "without diacritical point." Occasionally, however, it is, like other *muhmal* marks, simply used to fill void spaces between and above any letter.[5] On the Cairene coins the V-shaped *muhmal* marks are observed above the *sīn*s of قسيم and ارسله, the *ṣād* of الصالحى (occasionally a circle instead), and the final *yā's* of الصالحى and بالهدى.

circle sometimes with a cleft on top, above the *hā'* of بالهدى (occasionally a V-shaped angle instead), above the *qāf* of قلاون and the *ṣād* of الصالحى.

vertical wedge above the *sīn*s of السلطان and ارسله, and the *ṣād* of الصالحى (occasionally a circle with cleft on top instead).

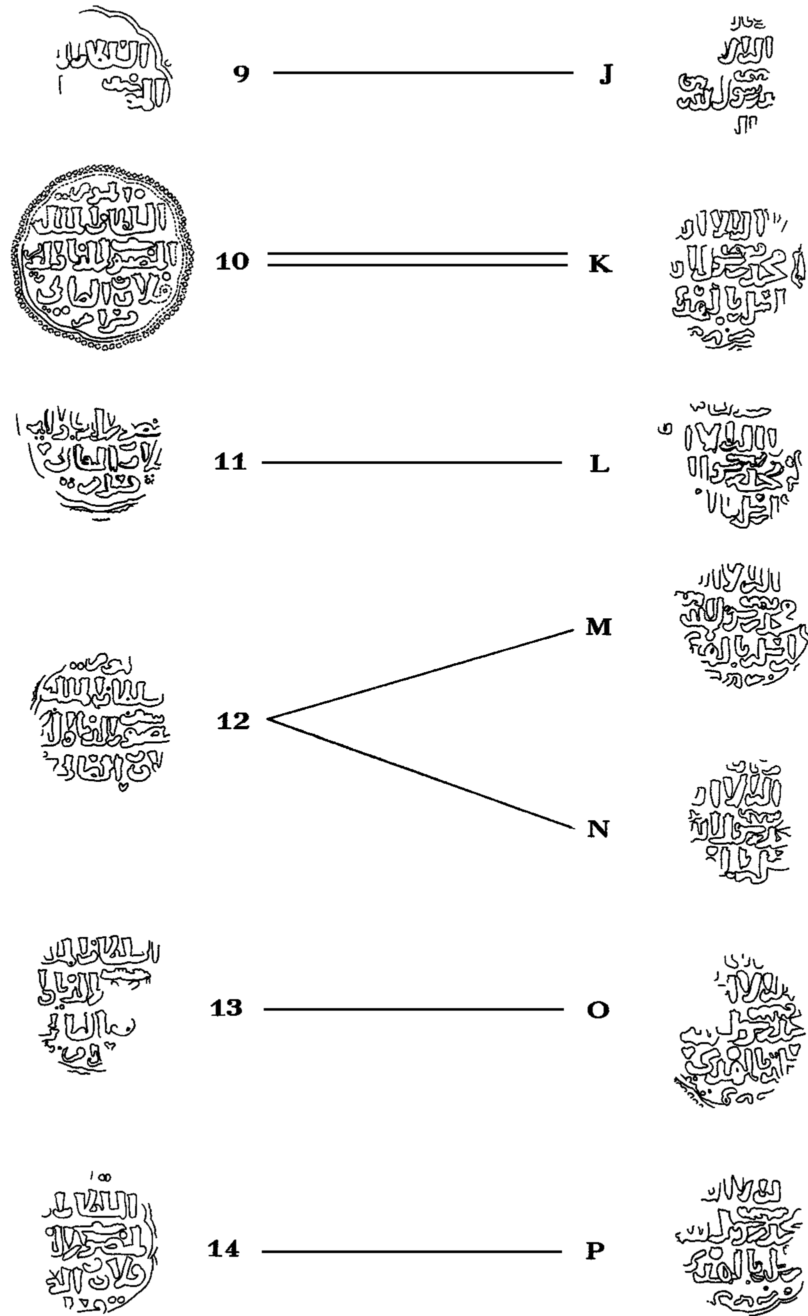
"*shaddah*" on top of the first الله (reverse, first line).

Pausal indicators: occasionally the lines in the top or bottom segments are framed by one dot or a pair of dots.



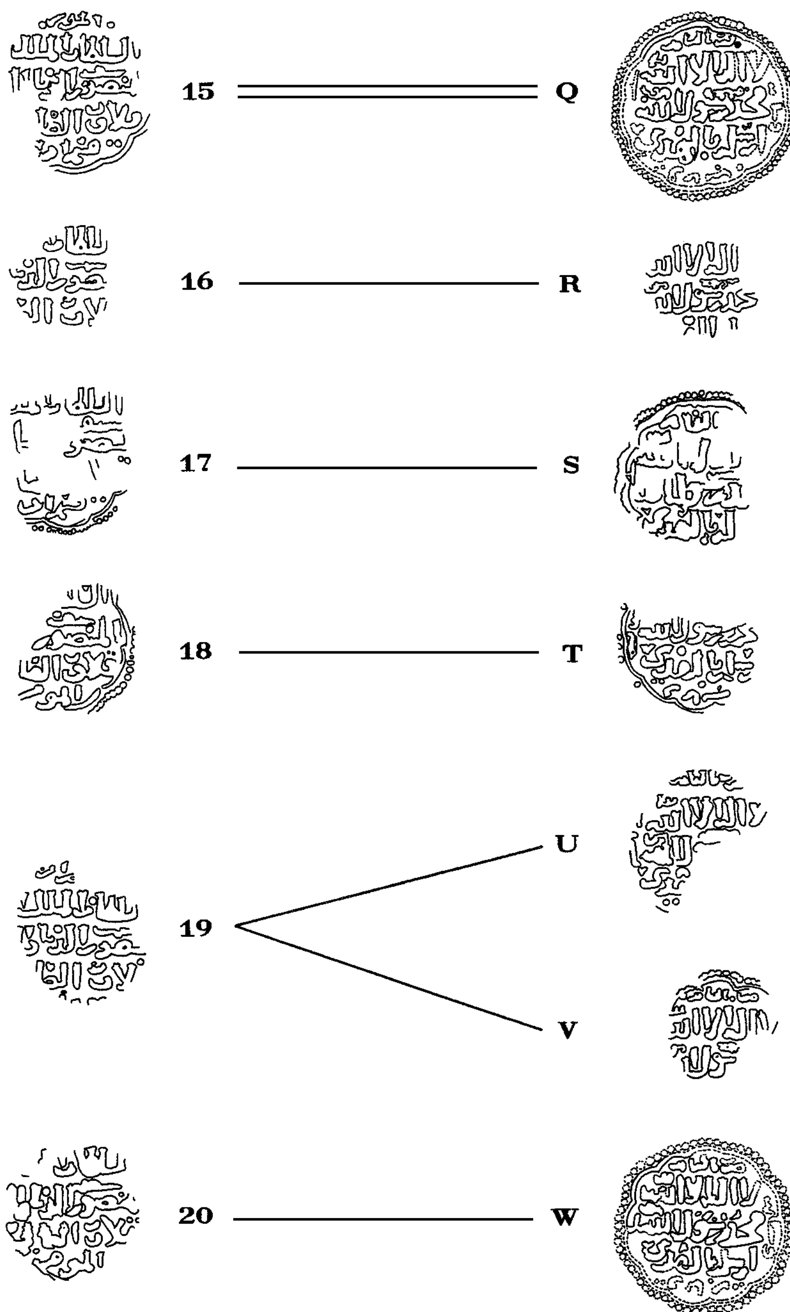
Ornaments:

symmetrical scroll ornament on top of رسول. The same ornament occurs, in the same position, on coins of the Damascus III type, although the execution is mostly neater. Close to these is the scroll ornament on the coins of the Ḥamāh III type which, however, always occurs in combination with a V-shaped *muhmal* mark. Thus, Balog's view *(MSES,* 115) that this ornament is specific to the Cairene coins of Qalāwūn is



[5] Adolf Grohmann, *Arabische Paläographie,* part 2, Österreichische Akademie der Wissenschaften, Philosophisch-Historische Klasse, Denkschriften, vol. 94 (Vienna, 1971), 43-44.

not tenable any more; the rule can only be maintained if other criteria of Cairene coinage are fulfilled.



asymmetrical scroll ornament on top of the second الله (reverse, second line).

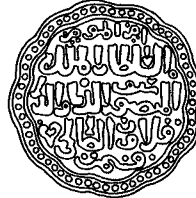
Silver Coins of Qalāwūn from Damascus

Statistics

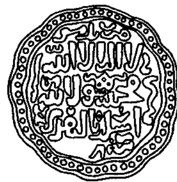
Number of specimens:	53
Coin diameter:	19 to 22 mm; one (light-weight) specimen 13 mm
Die diameter:	24 to 26 mm
Average weight:	2.87 g; for details cf. below

27 obverse dies:



Obverse I 1:	6 dies on 10 specimens: #1-2 (2x each), #3 (1x), #4 (2x), #5 (1x). #6 (2x)
Obverse I 2:	7 dies on 12 specimens: #7 (3x), #7´ (2x), #8 (1x), #9 (2x), #10-11 (1x each), #12 (2x)
Obverse II:	11 dies on 27 specimens: #13 (1x), #14 (3x), #15 (2x), #15´ (2x), #16 (9x), #17 (1x), #18 (4x), #19 (2x), #20-22 (1x each)
Obverse III 1:	2 dies on 2 specimens: #23 (1x), #25 (1x)
Obverse III 2:	1 die on 2 specimens: #24 (2x)

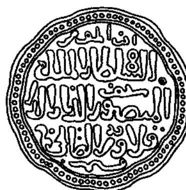
27 reverse dies:



Reverse I 1:	5 dies (+ possibly 1 additional die) on 6 (+ possibly 2) specimens: #A (1x), #B (1x), #C (2x), #D (1x), #F (1x), [#G (2x)]
Reverse I 2:	3 dies on 6 specimens: #E (3x), #H (1x), #J (2x)
Reverse I 3:	4 dies (+ possibly 2 additional dies) on 5 (+ possibly 2) specimens: #K (1x), #L (2x), #N (1x), #O (1x), [#M (1x), #P (1x)]
Reverse II:	9 dies on 27 specimens: #Q (2x), #R (6x), #S (1x), #T (7x), #U (6x), #V (2x), #W-Y (1x each)
Reverse III 1:	2 dies on 3 specimens: #Z (1x), #A´ (2x)
Reverse III 2:	1 die on 1 specimen: #B´ (1x)

DAMASCUS TYPE CHARTS

Type I, here years 680, 681, 682, 683, 684, 68x, 6xx; on reverse void left for units of years.



Obverse I 1 *Obverse I 2*

*Reverse I 1 * *Reverse I 2* *Reverse I 3

Type II, here years 685, 686, 68x, 6xx; on reverse void left for units of years.

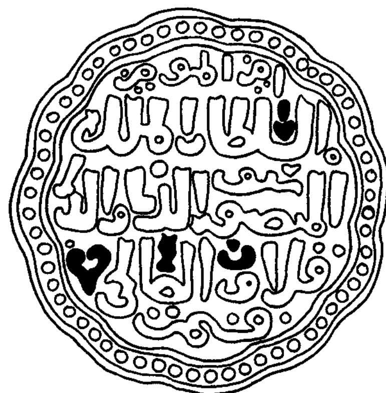
Obverse II *Reverse II*

Type III, here years 688, 689, 68x

Obverse III 1 *Obverse III 2* *Reverse III 1* Reverse III 2*

DESCRIPTION OF DAMASCUS TYPE I, here years 680, 681, 682, 683, 684, 68x, 6xx (enlargement of drawings 2:1; on reverse void left for units of years)

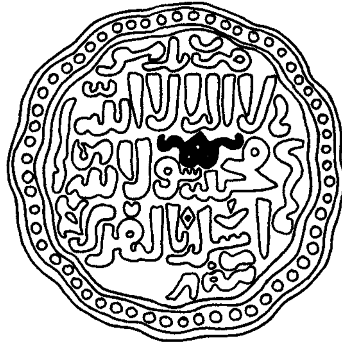
Obverse I 1



Central inscription in three lines:
(1) السلطان الملك
(2) المنصور سيف الدنيا والدين
(3) قلاون الصالحى

Completion of text in bottom (قسيم) and top (امير المومنين) segments.

Specific to line (2): سيف is placed above المنصور, while the ين of الدين is above the *dāl*.

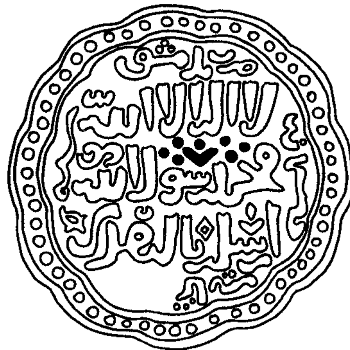


Characteristic features as distinct from *Obverse I 2*, in the drawing set off in black: the *nūn* of قلاون is placed on the line; rhomboid knot above the *sīn* of السلطان; heart-shaped knot concluding the last line; rhombus over triangle above the *ṣād* of الصالحى.

Obverse I 2

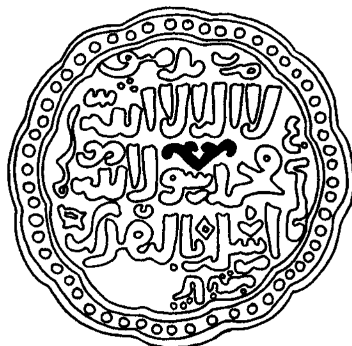
Characteristic features as distinct from *Obverse I 1* and *Obverse II*, in the drawing set off in black: the *nūn* of قلاون is placed above the *wāw;* V-shaped angle with wedge between the sides above the *sīn* of السلطان; bifoil concluding the last line; rhomboid knot on top of the *ṣād* of الصالحى.

Reverse I 1



Central inscription in three lines:
(1) لا اله الا الله
(2) محمد رسول الله
(3) ارسله بالهدى

Circular legend: ضرب بدمشق (top), سنة (left), ثمانين [. . ./اثنى/اربع] (bottom), وستماية (right).



Characteristic feature as distinct from *Reverse I 2* and *Reverse I 3*, in the drawing set off in black: heart-shaped knot above رسول.

Reverse I 2

Characteristic feature as distinct from *Reverse I 1* and *Reverse I 3*, in the drawing set off in black: V-shaped angle with three dots on either side and, occasionally, one dot between the sides above رسول.

Reverse I 3

Characteristic feature as distinct from *Reverse I 1* and *Reverse I 2*, in the drawing set off in black: V-shaped angle above رسول branching out in bifoil shape.

GENERAL FEATURES OF DAMASCUS TYPE I

Border on both sides: dodecalobe of dots between two linear dodecalobes.

Style of writing: *thulth*/*naskhī*. The *hastae* taper from top to bottom, frequently having a bicuspid or tricuspid top; the *kāf* of الملك often ends up in the shape of a leaf, a bifoil, or a trifoil.

Diacritical points frequently occur with the *thā'* of ثمانين, the *shīn* of بدمشق, the *fā'* of سيف, the *qāf*s of قلاون and قسيم, the *nūn*s of السلطان, المنصور, الدنيا, قلاون, المومنين, and ثمانين, the *yā'*s of سيف, قسيم, امير, المومنين, and ثمانين.

Muhmal marks:

- frequently V-shaped angle above the *sīn* of سيف.
- V-shaped angle with dot or small wedge between the sides, above the *sīn* of ارسله.
- circle , sometimes with a cleft on top , above the *hā'* of بالهدى and the *dāl* of الدنيا, occasionally dot instead.
- rhombus , frequently on top of the *hā'* of بالهدى.
- rhomboid knot above the *sīn* of السلطان (on *Obverse I 1* only) and on top of the *ṣād* of الصالحى (on *Obverse I 2* only).
- big V-shaped angle, with wedge between the sides , on top of the *sīn* of السلطان (on *Obverse I 2* only).
- rhombus over triangle above the *ṣād* of الصالحى (on *Obverse I 1* only).

"shaddah" on top of the first الله (reverse, first line).

Pausal indicators:

inverted heart-shaped knot above the *yā'* of الصالحى, mostly in conjuncture with a dot on either side of its top, concluding the text (on *Obverse I 1* only).

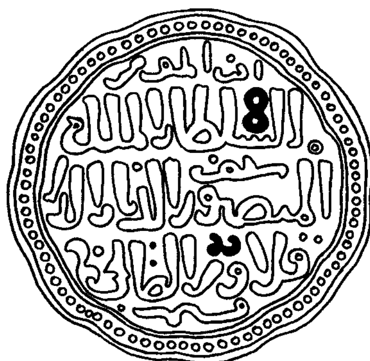
bifoil, in the same position as before (on *Obverse I 2* only).

bifoil or trifoil above the *yā'* of بالهدى, concluding the reverse text.

group of three dots in triangle formation, framing the lines of the circular reverse legend.

Ornaments:

asymmetrical scroll ornament on top of the second الله (reverse, second line).



inverted heart-shaped knot with protruding curved ends above رسول (on *Reverse I 1* only).

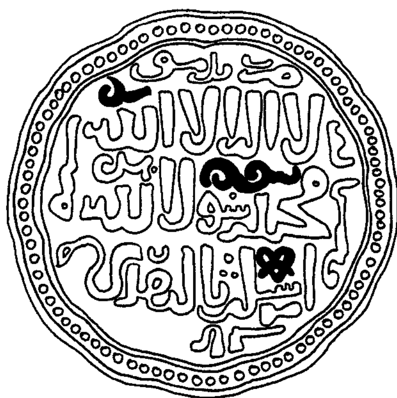
wide V-shaped angle with three dots on either side and occasionally with an additional dot between the sides, in the same position as before (on *Reverse I 1* only).

wide V-shaped angle branching out in bifoil shape on either side, in the same position as before (on *Reverse I 3* only).

DESCRIPTION OF DAMASCUS TYPE II, here years 685, 686, 68x (enlargement of drawings 2:1; on reverse void left for units of years)

Obverse II

Central inscription in three lines:
(1) السلطان الملك
(2) المنصور سيف الدنيا والدين
(3) قلاون الصالحى



Completion of text in bottom (قسيم) and top (امير المومنين) segments.

Specific to line (2): سيف is placed above المنصور, while the ين of الدين is above the *dāl*.

Specific to line (3): the *nūn* of قلاون is placed on the line.

Characteristic features as distinct from *Obverse I 1* and *Obverse I 2*, in the drawing set off in black: 8-shaped *muhmal* mark above the *sīn* of السلطان; asymmetrical scroll ornament above the last two characters of قلاون; dots above the *ṣād* of الصالحى.

Reverse II

Central inscription in three lines:
(1) لا اله الا الله
(2) محمد رسول الله
(3) ارسله بالهدى

Circular legend: ضرب بدمشق (top), سنة (left), ثمانين [ست/. . .] (bottom), وستماية (right).

Characteristic features as distinct from *Reverse I 1*, *Reverse I 2*, and *Reverse I 3*, in the drawing set off in black: asymmetrical scroll ornament above رسول; heart-shaped knot above the *sīn* of ارسله (occasionally V-shaped angle with dot between the sides instead); asymmetrical scroll ornament above the first الله (reverse, first line).

GENERAL FEATURES OF DAMASCUS TYPE II

Border on both sides: dodecalobe of dots between two linear dodecalobes.

Style of writing: *thulth*/*naskhī*. The *hastae* taper from top to bottom and frequently have bicuspid or tricuspid tops; often the *yā*'s of الصـــالحى and of بـالهدى as well as, occasionally, the *kāf* of الملك, end in the shape of a leaf.

Diacritical points occur occasionally with the *fā'* of ســيف and the *qāf*s of قلاون and قسيم.

Muhmal marks:

V-shaped angle occasionally above the *sīn* of سيف.

V-shaped angle with dot between the sides occasionally above the *sīn* of ارسله.

circle with a cleft on top above the *hā'* of بـالهــدى and the *dāl* of الدنيا, occasionally with dot instead.

one point or a colon above the *ṣād* and, occasionally, above the *yā'* of الصالحى.

a group of three dots in triangle formation occasionally above the *hā'* of ارسله.

a big ″eight″ 8 or 8 above the *sīn* of السلطان.

No pausal indicators.

Ornaments:

asymmetrical scroll ornament above رسول.

heart-shaped knot, frequently inverted, above the *sīn* of ارسله; occasionally V-shaped angle with dot between the sides instead.

asymmetrical scroll ornaments on top of both occurring اللهs (reverse, first and second line).

asymmetrical scroll ornament above the last two characters of قلاون.

DESCRIPTION OF DAMASCUS TYPE III (corresponds to Balog´s type *B),* here years 688, 689, 68x (enlargement of drawings 2:1; on reverse void left for units of years)

Obverse III 1

Central inscription in two lines:
(1) السلطان الملك
(2) المنصور سيف الدنيا والدين

Completion of text in bottom (قـــلاون) and top (الصالحى) segments.

Specific to line (2): ســـيـف is placed above المـنصــور, while the يـن of الديـن is above the *dāl*.

Characteristic feature as distinct from *Obverse III 2*, in the drawing set off in black: the *nūn* of السلطان is laid over the second *lām*.

Obverse III 2

Characteristic feature as distinct from *Obverse III 1*, in the drawing set off in black: the *nūn* of السلطان is placed on the line.

Reverse III 1

Central inscription in three lines:
(1) لا اله الا الله
(2) محمد رسول الله
(3) ارسله بالهدى

Circular legend: ضرب بدمشق (top), سنة ثمان (left), وثمانين (bottom), وستماية (right).

Characteristic features as distinct from *Reverse III 2*, in the drawing set off in black: *muhmal* mark in the shape of a V-angle or a truncated bifoil above رسول; year ″688.″

Reverse III 2

Characteristic features as distinct from *Reverse III 1*, in the drawing set off in black: symmetrical scroll ornament above رسول; year ″689.″

GENERAL FEATURES OF DAMASCUS TYPE III

Border on both sides: dodecalobe of dots between two linear dodecalobes.

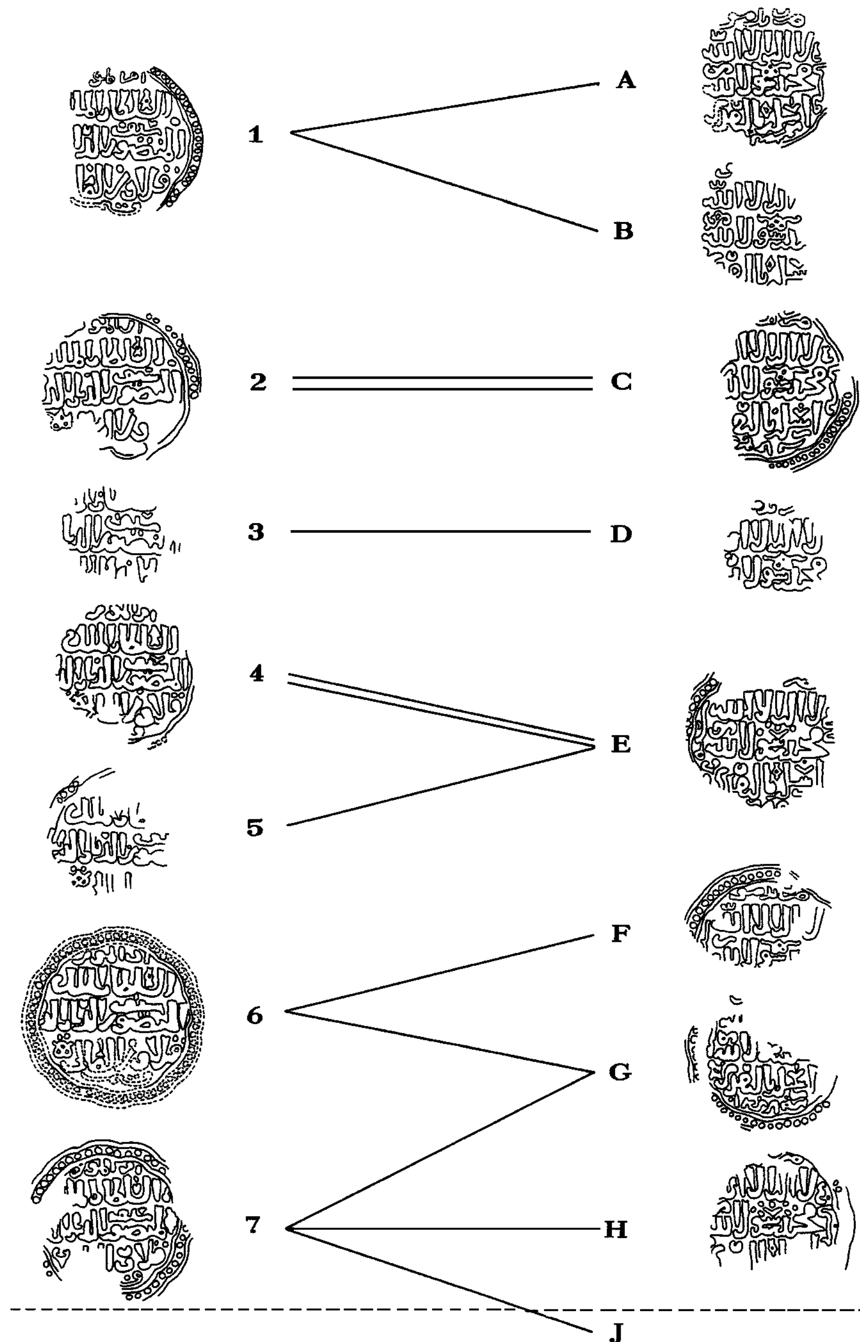
Style of writing: *thulth*/*naskhī*. In distinction from all other coin types of Damascus, this type is characterized by its extraordinarily elegant calligraphy. The *hastae* taper from top to bottom and often have bicuspid or tricuspid tops; the *yā'* of بالهدى ends in the shape of a bifoil.

Diacritical points occur with the *qāf* of قلاون, the *yā'* s of ثمانين and ستماية, the *tā'* of ستماية, the *nūn*s of ثمانين, قلاون, and الدين, and the *fā'* of سيف.

Muhmal marks:

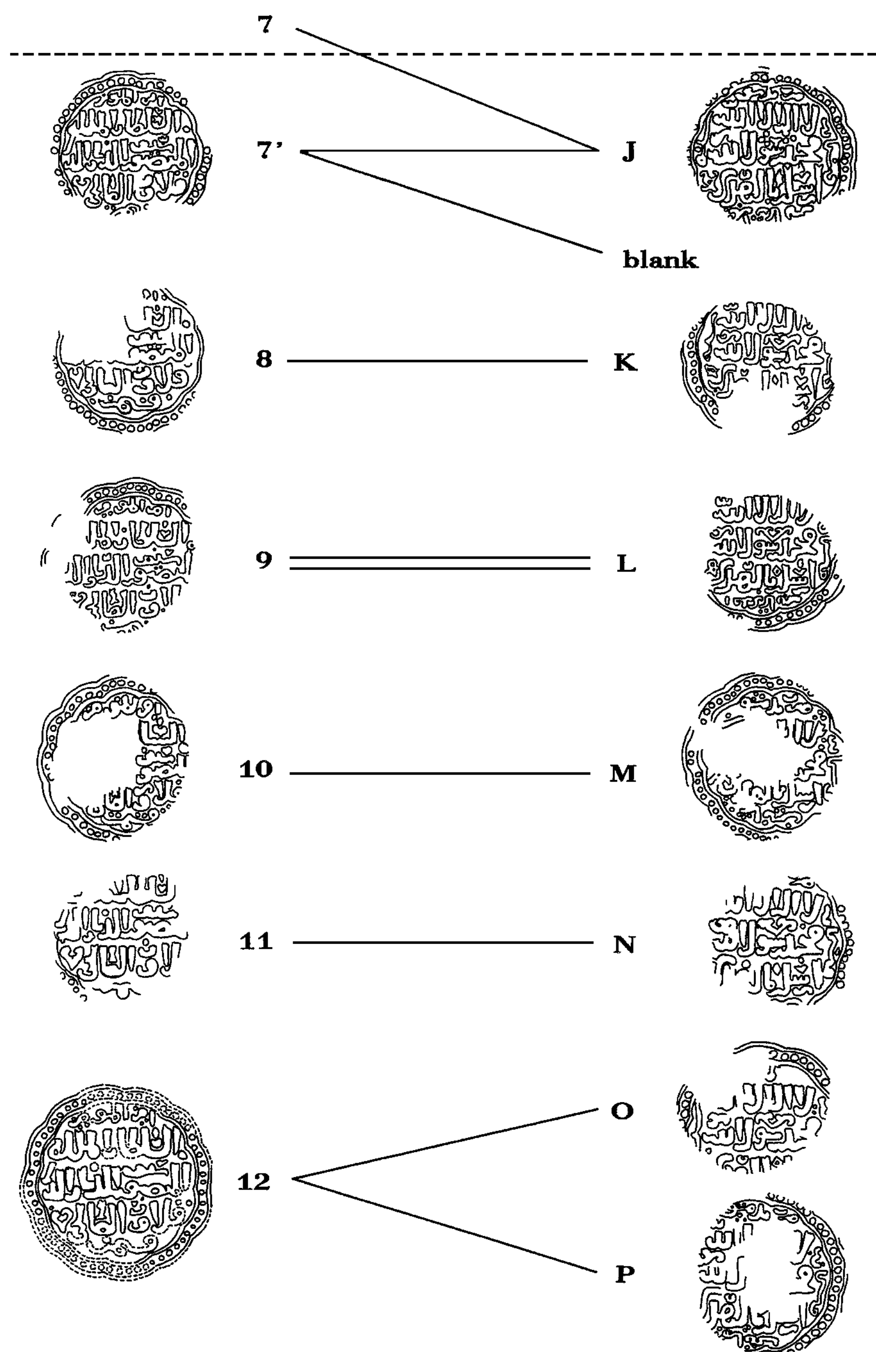
V-shaped angle or truncated bifoil above the *sīn*s of رسـول (on *Reverse III 1* only) and ارسـلـه, as well as, occasionally, above سـيـف and سـتـمـايـة.

circle with cleft on top above the *dāl* of مـحـمـد and above the *hā'*s of both occurring اللهs (reverse, first and second line).



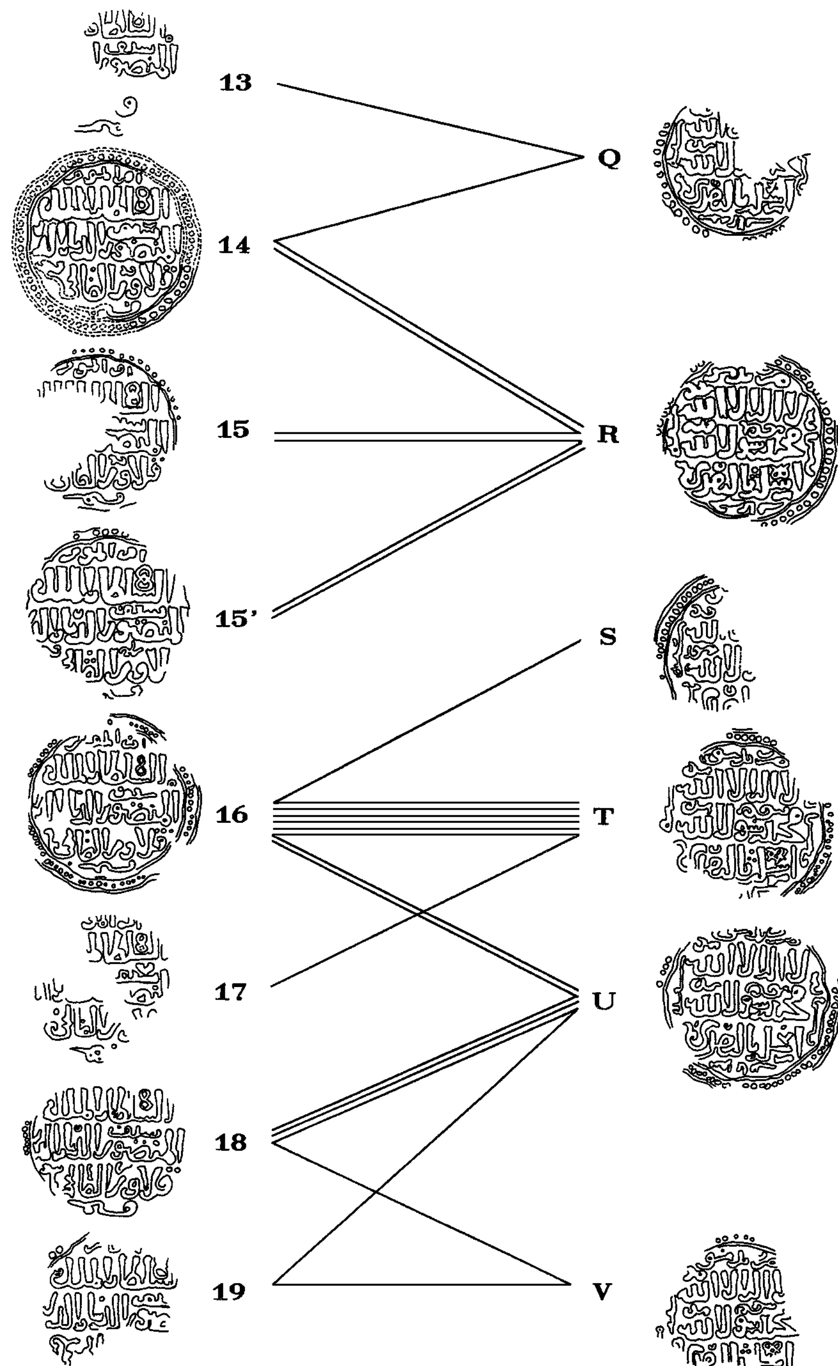
circle with cleft on the left side above the *hā'*s of ارسـلـه and بـالـهـدى.

"shaddah" above the *ṣād* of الصـالحى, occasionally with *fatḥah*-like dash on top, above both occurring اللهs (reverse, first and second line), and above the *sīn* of السلطان.



Pausal indicators:

to the right of الصـالحى, opposite ornaments on either side of the name قلاون.



Symmetrical scroll ornament above رسـول (on *Reverse III 2* only).

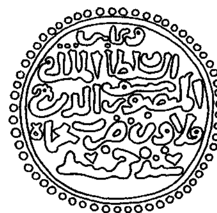
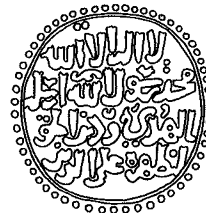
Type I (here year 683)



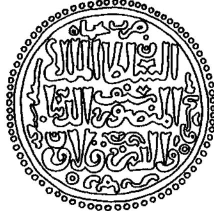
Obverse I



Reverse I

Type II (here year 685)

Obverse II



Reverse II

[6]Only after the completion of this article did the special publication by Lorenz Korn on the coins of Ḥamāh come to my notice: *Sylloge Numorum Arabicorum Tübingen. Ḥamāh IV c Bilād aš-Šām III* (Berlin, 1998). Korn examined 56 silver coins of Qalāwūn from Ḥamāh. His findings generally confirm my own, adding the minting years 679 to my Type I, and 688 to my Type III. The completion of the text by the word *kullihi* on the reverse of my Type II is in the bottom segment. Another type, which is not represented in my corpus, is recorded for the year 684.

Type III (here years 687, 689)

Obverse III 1

Obverse III 2

Reverse III 1

Reverse III 2

DESCRIPTION OF ḤAMĀH TYPE I (corresponds to Balog´s no. 135 B), here year 683 (enlargement of drawings 2:1)

This *dirham* is two years older than the Ḥamāh type II coin of 685, which was published by Helen W. Mitchell[7] (see below). A coin of this type I has been dated 678 or 688 by Balog,[8] possibly due to mistaking the initial characters of ثلاثة to mean ثمانية; moreover, he evidently misreads the decade ثمانين in the bottom segment to be the word for the century ستماية. If my reading is correct, then this type was minted exclusively in the year 683.

On the Ḥamāh types I and II the naming of the mint and the year of coinage appear as parts of the field inscription, unlike the disposition found on the Cairene and Damascene coins as well as on the Ḥamāh type III. This particular distribution of the legend is typical for many coins of the Ḥamāh mint. It appears for the first time in 658 on Mongol coinage; it was maintained by Baybars on his Ḥamāh coins after he had introduced the *dirham ẓāhirī* and thereafter.[9] It seems to be a peculiarity of Qalāwūn´s Ḥamāh types I and II that the mint and the year are part of the *obverse* inscription, while the same feature occurs on the *reverses* of Ḥamāh coins prior to Qalāwūn´s reign (Hūlāgū 658, Baybars 660 and following) as well as later, e.g., under al-Nāṣir Muḥammad in 715.[10]

[8]"Additions," 122, no. 135 B.

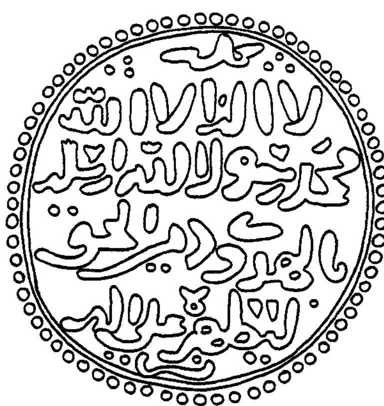
[9]For more details and photographs of the coins cf. Stefan Heidemann, *Das Aleppiner Kalifat (A.D. 1261): Vom Ende des Kalifates in Bagdad über Aleppo zu den Restaurationen in Kairo,* Islamic History and Civilization. Studies and Texts 6 (Leiden, 1996), 282-90, 360-61.

[10]Ibid., 282-90; Balog's nos. 64-66, 204.

Obverse I

Central inscription in four lines:
(1) السلطان الملك
(2) المنصور سيف الدين
(3) قلاون قسيم امير المومنين
(4) ضرب بحماة سنة ثلاثة

Completion of the date in bottom (وثمانين) and top (ستماية) segments versus Balog, "Additions," 122, where the decade وثمانين in the bottom segment is mistaken for the century ستماية.



Specific to line (1): the *nūn* of السلطان overlays the second *lām*.

Specific to line (2): the *rā'* of المنصور is placed above the *ṣād*.

Specific to line (3): the *nūn* of قلاون is placed above the *wāw*, and the منين of المومنين is above the *wāw*.

Specific to line (4): the *bā'* of ضرب is placed above ضر, and the *hā'* of بحماة is above the *sīn* of سنة.

Reverse I

Central inscription in four lines:
(1) لا اله الا الله
(2) محمد رسول الله ارسله
(3) بالهدى ودين الحق
(4) ليظهره على الدين

Completion of text in the top segment: كله.

Specific to line (3): the *yā'* of بالهدى is written retroflex and placed above the *dāl*.

On some specimens the inscription protrudes slightly beyond the marginal circle, cf. drawing of die #D here:

GENERAL FEATURES OF ḤAMĀH TYPE I

Border on both sides: circular line in circle of dots. Contrary to Balog, "Additions," 122, where the borders are described as ″circular line,″ this marginal design seems to be typical for the Qalāwūn coins from Ḥamāh.

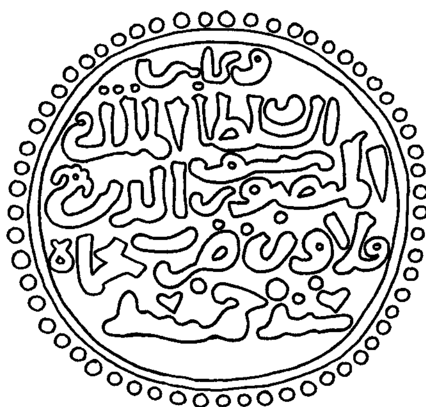
Style of writing: *naskhī.* In distinction from the other Qalāwūn coin types the tops of the *hastae* are not flat or bicuspid but rounded; the calligraphic standard is rather poor.

Diacritical points occur with the *nūns* of السلطان and المنصور, the *fā'* of سيف, the *qāf*s of قلاون and الحق, the *ḍād* of ضرب, and the *yā'* of الدين. There is a confusing multitude of other dots of only decorative purpose.

Muhmal marks:

V-shaped angle above the *sīn*s of سيف, رسول, ارسله, and, occasionally, of قسيم. occasionally ″*shaddah*″ on top of both occurring اللهs.

Pausal indicators: group of three dots in triangle formation occasionally at the outset and at the end of the line in the top segment (reverse).



No ornamentation.

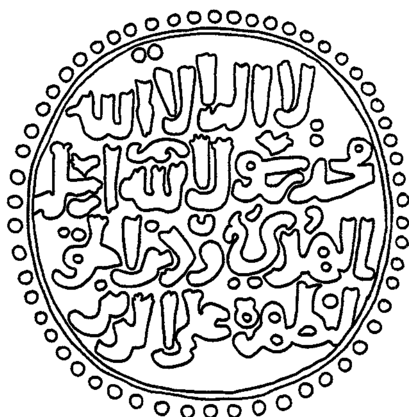
DESCRIPTION OF ḤAMĀH TYPE II (corresponds to Balog′s no. 137 A), year 685 (enlargement of drawings 2:1)

Helen W. Mitchell[11] has studied a coin of this type and of the same year, although on hers mint and date were missing. It can be confirmed here that the coin is of Syrian provenance, as she surmised. She is also right in interpreting the last distinguishable character on her coin to be read as the *khā'* of the date خمسة. Thus it is indeed ″an early example of the date appearing as part of the field inscription.″ However, it is not the earliest occurrence of that phenomenon, as she states. It can be found on coins from the Ḥamāh mint as early as 658, although these earlier coins from Ḥamāh have the mint and the year on the reverse, as those above.

[11]"Mamlūk Dirhems," 180, no. 6.

Obverse II

Central inscription in four lines:
(1) السلطان الملك
(2) المنصور سيف الدين
(3) قلاون ضرب بحماة
(4) سنة خمسة



Completion of date in the top segment: وثمـــانـين. If, however, this word is read as وسـتـمـايـة, which is possible, then the decade وثمانين has its place at the very bottom.

Specific to line (1): the *nūn* of السلطان is placed above the *sīn*.

Specific to line (2): سيف is placed above المنصور.

Specific to line (3): the *bā'* of ضرب is placed over the *rā'* .

Reverse II

Inscription in four lines:
(1) لا اله الا الله
(2) محمد رسول الله ارسله
(3) بالهدى ودين الحق
(4) ليظهره على الدين

Probable completion of the text by كله in top segment, if the two dots there are rightly interpreted as pausal indicators.

General Features of Ḥamāh Type II

Border on both sides: circular line in circle of dots.

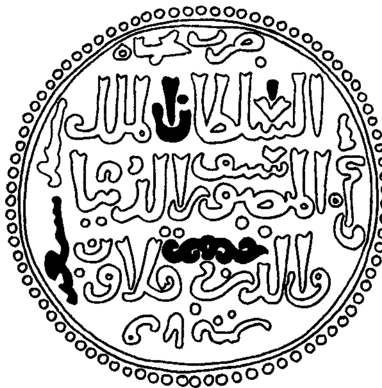
Style of writing: *naskhī*. The *hastae* taper from top to bottom and frequently have bicuspid or multicuspid tops. This feature contributes to a cauliflower-like appearance which is accentuated by scroll ornaments and floriated characters: the *nūn* of الدين ends in a blossom, the *yā'* of بالهدى in the shape of a bifoil.

Diacritical points occur with the *nūn*s of قلاون, of سنة, and of دين, the *ḍād* of ضرب, the *khā'* of خمسة, the *qāf* of الحق, and the *ẓā'* of ليظهره.

Muhmal marks:

V-shaped angle above the *sīn*s of سنة, of رسول, and of ارسله.

circle with a cleft on top or on the left side above the *wāw* of ودين and the *hā'* of بالهدى.



occasionally *"shaddah"* above the first الله (reverse, first line).

Pausal indicator: three dots in horizontal alignment concluding the text in the top segment (obverse).

Asymmetrical scroll ornament on top of the second الله (reverse, second line); occasionally *"shaddah"* instead.

DESCRIPTION OF ḤAMĀH TYPE III (corresponds to Balog's no. 135 C), here years 687 and 689 (enlargement of drawings 2:1)

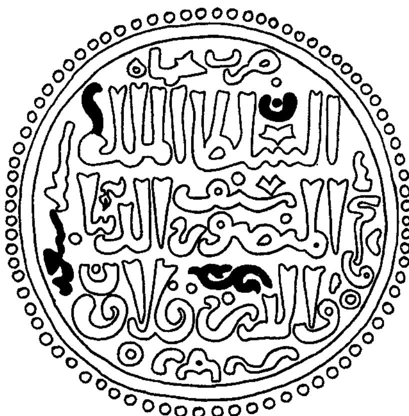
Obverse III 1

Central inscription in three lines:

(1) السلطان الملك

(2) المنصور سيف الدنيا

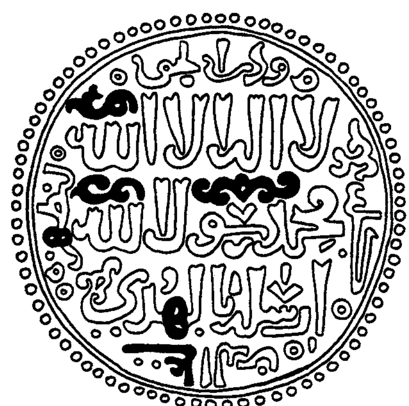
(3) والدين قلاون



Circular legend: ضرب بحماة (top), سنة تسعة (left), وثمانين (bottom), وستماية (right).

Specific to line (2): سيف is placed above المنصور.

Specific to line (3): The *nūn* of قلاون is placed above the *wāw*.

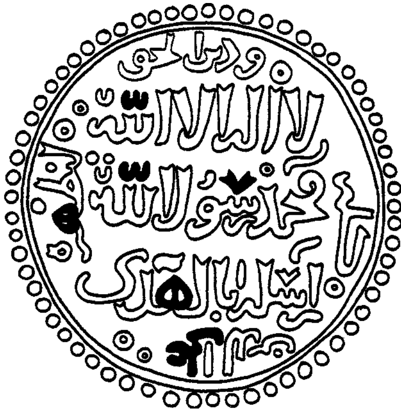


Characteristic features as distinct from *Obverse III 2*, in the drawing set off in black: all known coins of this (sub-) type are dated 689, as far as visible (cf. Balog, "Additions," 122); the *nūn* of السلطان is placed on the line, and the *alif* of الملك is above the *nūn*; the space above دين قـ (obverse, last line) is filled up by a roughly symmetrical scroll ornament; between the sides of the angle above السلطان there is a vertical wedge.

Obverse III 2

Characteristic features as distinct from *Obverse III 1*, in the drawing set off in black: the date is 687; the word سبعة has a diacritical point below the *bā'*; the *nūn* of السلطان is placed above the *sīn;* the *kāf* of الملك ends in a scroll; the space above دين قـ is filled up by an asymmetrical scroll ornament.

Reverse III 1



Central inscription in three lines:
(1) لا اله الا الله
(2) محمد رسول الله
(3) ارسله بالهدى

Circular legend: ودين الحق (top), ليظهره (left), على الدين (bottom), كله (right).

Specific to line (3): the *yā'* of بالهدى ends up in a trifoil.

Characteristic features as distinct from *Reverse III 2*, in the drawing set off in black: symmetrical scroll ornament above a V-shaped angle on top of رسول, rarely just the angle; asymmetrical scroll ornaments on top of both occurring اللهs; the loops of the medial *hā'*s in بالهدى and ليظهره are written vertically above each other; the *yā'* of على is written retroflex.

Reverse III 2

Characteristic features as distinct from *Reverse III 1*, in the drawing set off in black: V-shaped *muhmal* mark above رسول, without scroll ornament; *"shaddah"* above both occurring اللهs; the loops of the medial *hā'*s of بالهدى and ليظهره are written in juxtaposition forming a symmetrical pointed arch on the line; the *yā'* of على is not retroflex.

Only the discovery of a better specimen could clarify the specific variant of the *yā'* in بالهدى and how the space before على and after كله was used.

GENERAL FEATURES OF ḤAMĀH TYPE III

Border on both sides: linear circle in circle of dots.

Style of writing: *thulth,* of high calligraphic standard. The *hastae* taper from top to bottom and have bicuspid or multicuspid tops, which contributes to a cauliflower-like appearance, accentuated by scroll ornaments (cf. below).

Diacritical points occur with the *nūn*s*,* the *qāf*s*,* the *yā'* of الدنيا (on *Obverse III 1* only), the *fā'* of سيف (on *Obverse III 2* only), the *bā'* of سبعة in the circular legend (on *Obverse III 2* only), and the *ẓā'* of ليظهره.

Muhmal marks:

V-shaped angle above every *sīn* of the central inscriptions on obverse and reverse.

V-shaped angle with wedge between the sides above the *sīn*s of السلطان (on *Obverse III 1* only) and occasionally above ارسله.

circle with a cleft at the bottom above the *nūn* of الدنيا.

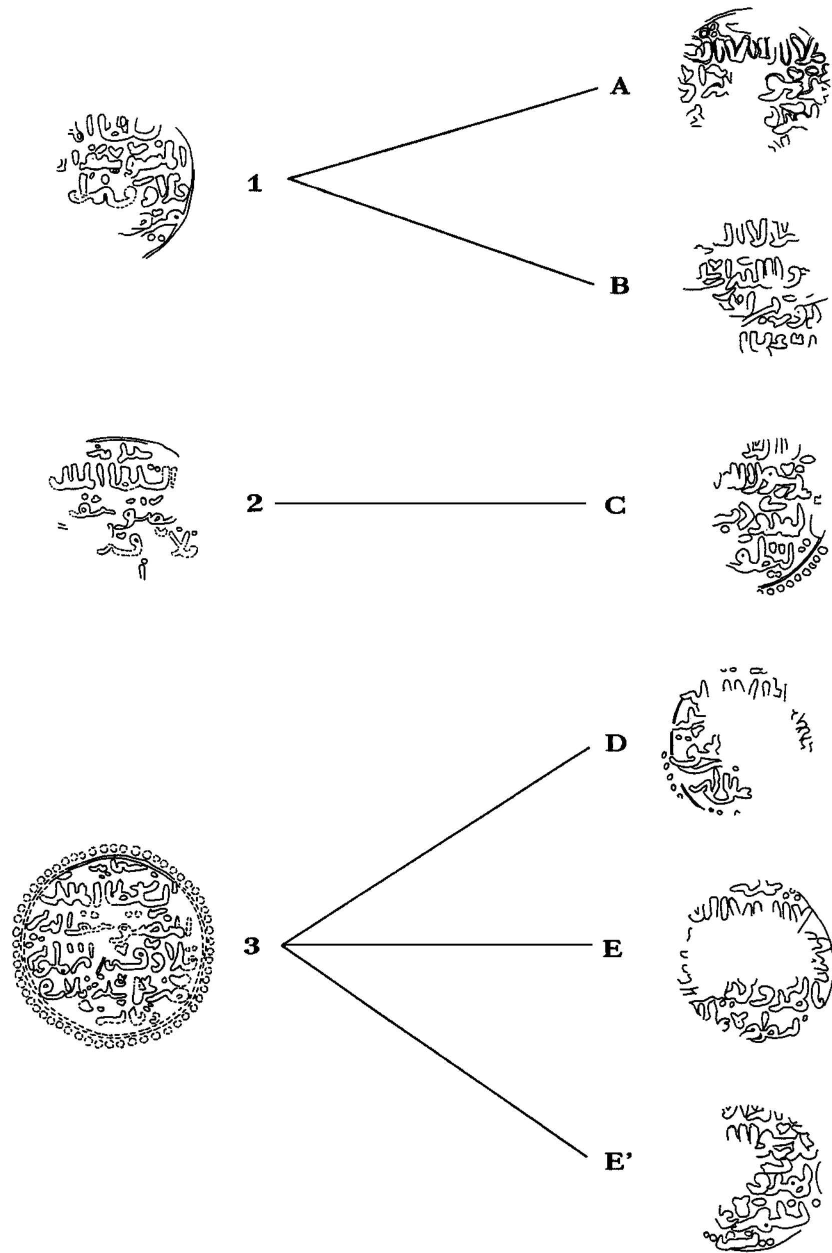
circle with a cleft on the left side above the *dāl* of الدنيا (on *Obverse III 1* only), the *hā'* of بالهدى, and occasionally above the *wāw* of رسول; circle with a cleft on top above the *hā'*s of both occurring اللهs (on *Reverse III 2* only).

"shaddah" on top of the *lām*s of both occurring اللهs (on *Reverse III 2* only).

Pausal indicators:

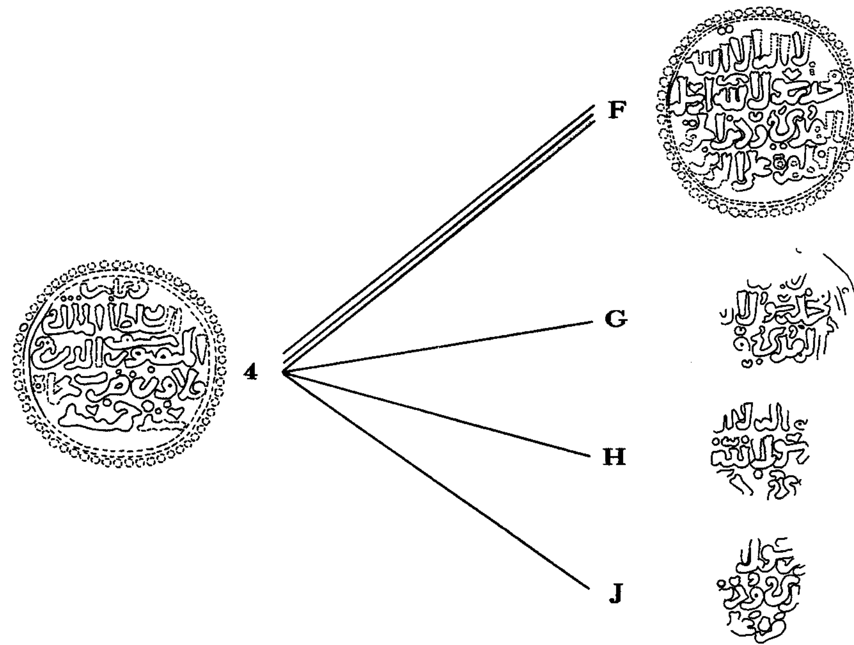
frequently circles framing the lines of the circular legends.

asymmetrical scroll ornament concluding the circular legend on reverse.



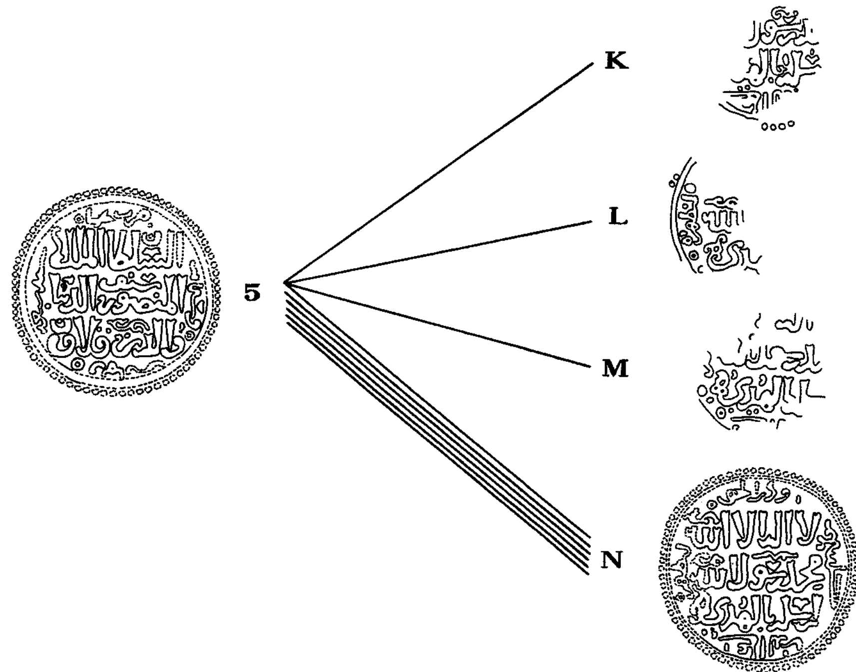
Ornaments:

approximately symmetrical scroll ornament above الـديـن (on *Obverse III 1* only)



asymmetrical scroll ornament above الـديـن (on *Obverse III 2* only)

symmetrical scroll ornament above the V-shaped *muhmal* mark or above رسـول (on *Reverse III 2* only)



asymmetrical scroll ornaments above both occurring اللهs (on *Reverse III 1* only).

METROLOGY

The following frequency table of the Qalāwūn corpus in question serves to clarify its composition according to the three minting sites represented, but at the same time aims at linking its metrological properties to the meticulous findings of Warren C. Schultz.[12] Every coin is symbolized by a circle (**o**). The weight range of 0.1 g was chosen for compatibility with Schultz′s statistics. The extremely wide variation of weight observed among the coins supports his conclusion that the individual specimens did not represent a prescribed value but only the intrinsic value of their silver content.

[12]Warren C. Schultz, ″Mamluk Money from Baybars to Barqūq: A Study Based on the Literary Sources and the Numismatic Evidence,″ Ph.D. diss., University of Chicago, 1995. In addition to appreciating his dissertation I gratefully acknowledge his help in rendering my initial version of this article into clear English.

Weight range	Cairo 32 coins	Damascus 53 coins	Ḥamāh 35 coins	specimens 120
1.20-1.30 g		**o**		1*
2.00-2.10 g	**o**			1
2.10-2.20 g				0
2.20-2.30 g	**oo**	**o**	**o**	4
2.30-2.40 g	**o**		**o**	2
2.40-2.50 g	**ooo**	**oooo**	**o**	8
2.50-2.60 g	**ooooo**	**ooo**	**oo**	10
2.60-2.70 g	**o**	**ooooooo**	**o**	9
2.70-2.80 g	**ooooo**	**oooooo**	**oooooo**	17
2.80-2.90 g	**oooo**	**oooooo**	**ooo**	13
2.90-3.00 g	**o**	**ooooooooooo**	**ooooooo**	19
3.00-3.10 g	**oo**	**o**	**oooooooo**	11
3.10-3.20 g	**ooo**	**ooooo**	**ooo**	11
3.20-3.30 g	**o**	**oooo**	**o**	6
3.30-3.40 g	**oo**	**ooo**	**o**	6
3.40-3.50 g		**o**		1
3.50-3.60 g				0
3.60-3.70 g	**o**			1
Average	2.77 g	2.87 g	2.89 g	

*Due to its extreme light weight, this coin is excluded from the determination of the average weight.
Note: The unique coin from al-Marqab (see Appendix) has the weight of 2.47 g.

APPENDIX: A SILVER COIN OF QALĀWŪN FROM AL-MARQAB, 685

Among the coins of Qalāwūn described in the previous article there was one specimen minted in al-Marqab, a fortress on the Mediterranean coast of Syria which was not previously known to have been a mint. In this appendix, a description of the coin is presented as well as photographs and drawings in 1:1 and 2:1 scale. As is usual with Mamluk coins, only part of the dies′ designs are visible on the flan. For this reason it was advisable to reconstruct the original dies in three steps. First, a line drawing of the two sides was made showing every single discernible detail. Due to an absence of other examples, the second step consisted of amending the off-flan details by referring to the ″closest relatives″ of the coin, i.e., contemporary coins from Damascus and Cairo for which type drawings have already been established in the previous article. At this stage the accidental defects on the coin like the hole and the slight double strike on the reverse (bottom left) were rectified. In the drawings which follow, all reasonable amendments have been characterized by dotted lines. The final drawing was achieved by converting these dotted lines into ordinary ones in order to give an impression of how the complete dies would most probably have appeared.

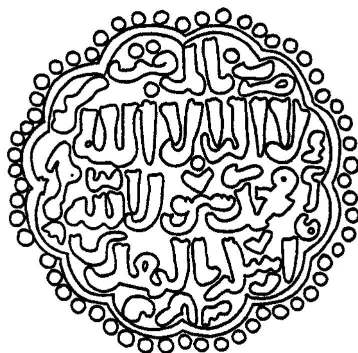
DESCRIPTION OF THE AL-MARQAB TYPE (enlargement of drawings 2:1)

Obverse



Central inscription in three lines:
(1) السلطان الملك
(2) المنصور سيف الدنيا والدين
(3) قلاون الصالحى

Completion of text in bottom (قسيم) and top (امير المومنين) segments.

Specific to line (2): سيف is placed above المنصور.

Specific to line (3): the *nūn* of قلاون is placed on top of the *wāw*.

Reverse

Central inscription in three lines:
(1) لا اله الا الله
(2) محمد رسول الله
(3) ارسله بالهدى

Circular legend: ضرب بالمرقب (top), سنة خمسة (left), وثمانين (bottom), وستماية (right).

Specific to line (2): The *rā'* of رسول is placed above the *dāl* of محمد.

GENERAL FEATURES OF THE AL-MARQAB TYPE

Border on both sides: linear dodecalobe in dodecalobe of dots.

Style of writing: *thulth*/*naskhī*. The *hastae* taper from top to bottom; the tops of the *hastae* and of other characters are bicuspid or multicuspid as with almost all silver coins of Qalāwūn, which contributes to a slightly cauliflower-like appearance.

Diacritical points occur with the *nūn* of الدنيا, the *qāf*s of قلاون and بالمرقب, and the final *bā'* of بالمرقب.

Muhmal marks:

V-shaped angle above the *sīn* of ارسله.

V-shaped angle with dot between the sides above the *sīn* of رسول.

V-shaped angle with vertical wedge between the sides above the *sīn* of السلطان.

vertical wedge above the *ṣād* of الصالحى.

"*shaddah*" above the second الله (reverse, second line).

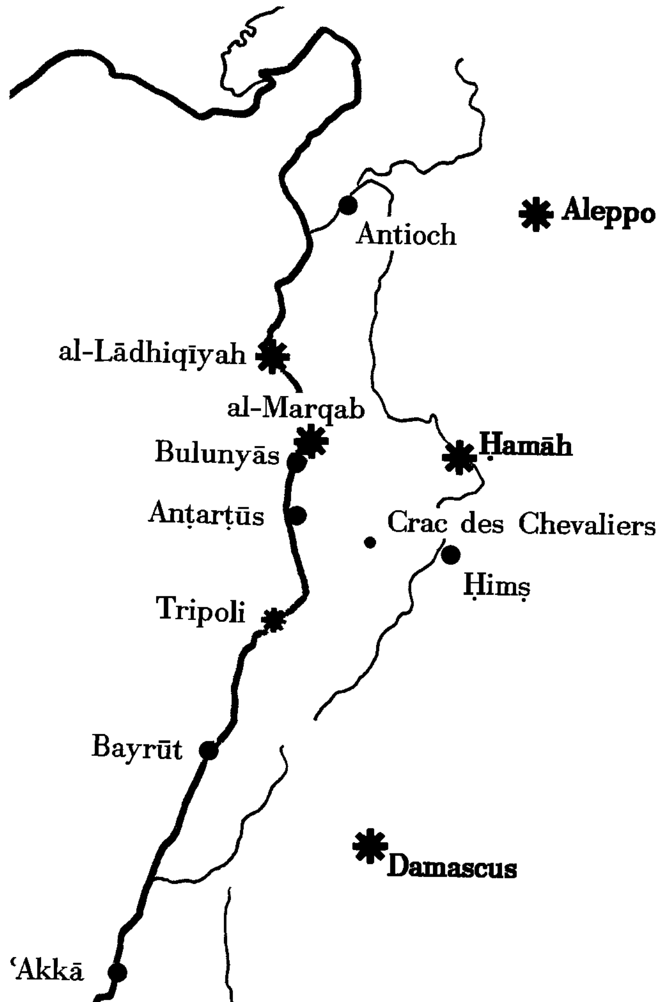
No pausal indicators, as far as visible.

No ornaments, as far as visible.

As a coin of Syrian provenance, its closest resemblance is with the contemporaneous types I and II of the Damascene mint. Both the text of the central inscriptions and their disposition, as well as the completion امير/قسيم المومنين in the bottom and top segments of the obverse, are identical with the respective features on the Damascus coins. Additionally, the al-Marqab coin and Damascus *Obverse I 2* have in common the *muhmal* mark above the *sīn* of السلطان and the position of the *nūn* on top of the *wāw* of قلاون. Nevertheless, there are a few differences in conception: The border (linear dodecalobe in dodecalobe of dots) as well as the disposition of the date (unit خمسة following سنة immediately) correspond with the Cairo type, but not with the Damascus coins. While the contemporary Damascus and Cairo coins have an asymmetrical scroll ornament above the second الله (reverse, second line), the al-Marqab coin, in the same position, has a "*shaddah*". (A "*shaddah*" in this position only occurs later on Damascus type III, dated 687, cf. Balog no. 132.) Another peculiarity of the al-Marqab coin consists in the positioning of the *rā'* of رسول above the *dāl* of محمد; all other coin types have the *rā'* below the *sīn* of رسول. And it is only on the al-Marqab coin that the space above the *sīn* of رسول is filled with a V-shaped *muhmal* mark with a dot between the sides.

Thus, although its Syrian appearance is obvious, the al-Marqab coin is not a simple copy of one of the Damascene die designs in use, bearing only a different mint name. On the contrary, it constitutes a type of its own, including features of Damascene coins (especially on the obverse) and, to a lesser extent, coins from the Cairo mint.

THE HISTORICAL SETTING



The discovery of the new mint is surprising in so far as al-Marqab was not an important town like the other minting cities but a mere stronghold with only a few villages in the vicinity. The fortress of al-Marqab (Arab authors also call it Qalʿat Marqab or Ḥiṣn Marqab*;* western works have various other spellings like Markappos, Markab, Margat or Margant) was situated near the harbor of Bulunyās (occasionally called Banyās) (Valania) on the Syrian coast, roughly half way between Anṭarṭūs (Tortosa) in the south and al-Lādhiqīyah (Latakia) in the north. It was erected on the spur of a ridge which ends close to the coastline. This position not only offered a view over the hinterland in the east but also control of the coastal plain and the sea-side towards the west. Until its fall it was believed to be impregnable, and was thus of strategic value, though not of commercial importance. Nevertheless, the opening of a mint at this place by Sultan Qalāwūn may be interpreted as an indication of his special regard for the fortress, which is connected with his part in the history of the place.[13]

The construction of the castle by the Muslims in 454/1062 was intended to block intrusion into the south by the Byzantines, who at that time controlled the province of al-Anṭākiyah (Antioch). After the Byzantines had been driven away by the Muslims, who subsequently were driven away by the Franks, and after the county of Ṭarābulus (Tripoli) had been founded as the last of the Crusader states, the heights of al-Marqab marked the frontier between the principality of Antioch (towards the north) and Tripoli (towards the south). In 511/1117 the Muslim master of al-Marqab was obliged to leave the fortress—in exchange for other landed properties—to Renaud Mazoyer, Frankish master of Bulunyās and (subsequent) High Constable of the principality of Antioch; in 581/1186 the house of Mazoyer ceded al-Marqab with all its territories and dependencies to the Grand Master of the Knights Hospitallers.

In 1187 the Ayyubid Sultan Saladin (Ṣalāḥ al-Dīn, 566-589/1171-93) went to war against the Franks. Within a few months, he was successful in destroying the Crusader kingdom of Jerusalem and in taking much of the territory surrounding

[13]For the history see N. Eliséeff, "al-Markab," *Encyclopaedia of Islam,* 2nd ed., 6:577-83. A description of the site is in Wolfgang Müller-Wiener, *Burgen der Kreuzritter im Heiligen Land, auf Zypern und in der Ägäis: Aufnahmen von A. F. Kersting* (Munich, Berlin, ca. 1960), 58-60 (with layout plan), photographs 52-61.

the two Crusader states of Antioch and Tripoli towards the north. Of the Crusader county of Tripoli, only the city of Tripoli itself and the fortress of al-Marqab remained in the hands of the Christians. The Hospitallers improved the citadel and thus the castle remained one of the Crusaders′ foremost strong points in the defensive fortifications against Muslim encroachment. Towards the middle of the seventh/thirteenth century, al-Marqab even became the official residence of the bishop of Bulunyās.

In 601/1204 al-Malik al-Ẓāhir Ghāzī, Ayyubid governor of Aleppo, tried to take the castle, but his army withdrew when its leader was killed. The next Muslim leader to attack al-Marqab was Sultan Baybars, who had launched offensives against the Hospitallers since 659/1261 and succeeded in throwing them back to a small coastal strip; nevertheless he failed twice to capture the fortress. Finally, after the capture of Ḥiṣn al-Akrād (Crac des Chevaliers) by Baybars in 669/1273, the Order was left with only the stronghold of al-Marqab. Subsequently, the Grand Master was able to obtain a truce of ten years and ten days in exchange for the cession of part of the territories surrounding al-Marqab and on condition that no new fortifications be established.

In 676/1277 Baybars died. He was succeeded by his son Barakah Khān for a reign of about two years; after him Baybars′ seven-year-old son Salāmish ruled for a mere three months. Then Qalāwūn, who had been the most important of the amirs and the real ruler behind Salāmish, became sultan in 678/1279. He followed

the example of Baybars in pursuing the war against the Crusaders in Syria. In the same year, the Hospitallers took advantage of unrest in Syria and moved forth against Buqayʿah, but withdrew when attacked by the Muslims. On reaching the coast, they turned and routed the Muslims. Qalāwūn in 679/1281 ordered the siege of the fortress of al-Marqab in a counterattack, but the Hospitallers made a sortie and repelled the Muslims, inflicting heavy losses. On 22 Muḥarram 680/13 May 1281, a truce of ten years and ten months was concluded between Qalāwūn and Nicolas Lorgne, the Grand Master of the Order. Nonetheless a few months later, in autumn 680/1281, the latter appealed for help from Edward I, King of England, and simultaneously sent a contingent to aid the Ilkhān during a Mongol invasion of Syria. Qalāwūn succeeded in repelling the Mongols near Ḥimṣ, but now no longer felt obliged to maintain the conditions of the peace treaty. In 684/1285, the sultan sought to punish the Hospitallers of al-Marqab for the assistance they had provided to the Mongols, driving them out of the ″impregnable″ fortress for good.

At Damascus, in great secrecy, Qalāwūn concentrated a considerable quantity of siege materials assembled from all over Syria and even from as far as Egypt. Experts in the art of siege warfare were engaged and catapults were brought up from the surrounding strongholds. Qalāwūn himself appeared before al-Marqab on 10 Ṣafar 684/17 April 1285. As the siege began, miners set about digging numerous tunnels under the walls. As soon as one of the mines was in good position, it was filled with wood and set on fire on Wednesday, 17 Rabīʿ I/23 May. When the fire reached the southern extremity of the walls, right under the Ram Tower, the Muslims attacked, trying to climb the tower, but to no avail. In the evening, the tower collapsed, but the rubble rendered any further assaults difficult. The catapults had become useless and all possibilities of undermining were exhausted. That night the Muslims were at the point of giving up. When the Hospitallers discovered that a number of tunnels were reaching their ramparts at various places, however, they lost courage and surrendered under condition of safe-conduct. The *amān* was granted by the Amir Fakhr al-Dīn Muqrī, on 19 Rabīʿ I/25 May, and the Knights were conducted under escort to Tripoli. They were not allowed to take anything with them except for their personal belongings. Their weapons as well as all of the equipment fell into the hands of the sultan.

Aware of the strategic importance of al-Marqab, the sultan decided not to raze the fortress but to repair the damages. Qalāwūn installed a well-armed garrison there, 1000 foot-soldiers and 150 Mamluks. The chronicler of these events, Ibn

ʿAbd al-Ẓāhir,[14] however, does not mention that coins were minted there. In 688/1289 Qalāwūn conquered Tripoli and shortly thereafter the rest of the principality of Antioch came to an end. Only two years later, ʿAkkā (Acre, St. Jean d′Acre) was conquered by Qalāwūn′s son al-Ashraf Khalīl, and the last Franks left the country.

For Qalāwūn the conquest of al-Marqab was his first real victory over the Franks. It proved his ability as a warrior no less successful in warfare than his predecessor Baybars, particularly because he was able to recover the country from the foreign rule of the Christians. Moreover, the sultan′s victory, which was due to God′s intervention, as the chronicler states, had a major effect on the political legitimacy of his rule, since he had ousted Baybars′ two sons from the sultanate.

Historical Evaluation of the Coin

Thanks to Michael L. Bates (American Numismatic Society, New York), Stefan Heidemann (Jena) and Lutz Ilisch (Tübingen), discussion about the mint of al-Marqab started before the coin was presented to the meeting of the Oriental Numismatic Society at Tübingen in April 1998, where the debate was continued by the audience. Several possible explanations were proffered. One was that Qalāwūn celebrated his important victory by striking coins bearing the name of al-Marqab for commemorative, propagandistic reasons. Yet, considering the fact that all coins only show part of the dies and that most of the Mamluk coins only mention the mint in the margin, the name of al-Marqab could only rarely have appeared on a coin. Such coins can hardly claim to be efficient mass media! (However, the Ottomans established mints at newly conquered places, although their coinage only rendered part of the legend as well). Another reason for minting coins in al-Marqab could have been the fact that among the Knights′ equipment left behind in the fortress the Mamluks found quite a lot of treasure. Then they could have brought minters there to transform the treasure into *dirham*s, perhaps as payment for those troops who had participated in the conquest.

Both motives may have played a role, but they are not sufficient to explain the existence of al-Marqab′s mint. Our coin does not bear the year of the conquest but of the year after. If propaganda and/or the conversion of a treasure had been the only reasons, the activity of the mint would certainly have been limited to the year 684. However, the fortress was taken during the third month of the Islamic year, and it was advisable, for the sake of security, to mint the bullion as soon as

---

[14]Muḥyī al-Dīn ibn ʿAbd al-Ẓāhir, *Tashrīf al-Ayyām wa-al-ʿUṣūr fī Sīrat al-Malik al-Manṣūr,* ed. Murād Kāmil (Cairo, 1961), 77-81. Our report of the conquest of al-Marqab is directly based on his account.

possible. It can be imagined that the overland transport of the silver into one of the established minting places would have been a dangerous enterprise. This is why it seems more likely that a workshop was in fact established in al-Marqab. Furthermore, if this was not the case, we would have to explain why, for instance, the Damascus mint should have produced coinage in the name of al-Marqab. At that time, the opening and operation of a mint was not complicated at all—only a few tools and workmen were needed—and it was certainly not a condition for starting production that the fortress be completely repaired. Likewise, the cutting of a die was an affair of only a few hours. Yet the design of the coin does not suggest that the dies were prepared by a simple blacksmith who happened to work in the region but rather by an experienced die-sinker, possibly from Damascus. Even if the transfer of a workshop and of the dies from, for instance, Damascus would have taken a few months′ time, the minting activity would have surely started during the year 684. But could the treasure have been so substantial that coins were minted from its silver even in 685? Probably not—which implies that bullion was fetched to al-Marqab for minting after the (hypothetical) initial treasure was exhausted.

These considerations lead to the conclusion that the coin is to be interpreted as an indication of the Mamluks′ attempt to integrate the administration and economy of the regained coastal region by founding a new mint there. As mentioned above, our coin was only minted in the year after al-Marqab′s conquest; thus, coins might eventually show up from 684 and possibly even from the years after 685. Nevertheless, in view of the uniqueness of this coin among hundreds of others, it can be taken for granted that the mint of al-Marqab did not produce coins in the quantities of the traditional minting places. Perhaps the establishment of a mint in a relatively remote area proved to be too ambitious, and was abandoned because the mint of Damascus was able to supply the coastal region.

Another explanation for the closure of the al-Marqab mint after a short working period may be derived from subsequent developments in the region. Only two years after the fall of al-Marqab, Qalāwūn succeeded in conquering the seaport and commercial center of al-Lādhiqīyah in 686/1287, and again two years later, in 688/1289, the capital of the county of Tripoli fell into the hands of Qalāwūn. This bustling port was one of the most important towns in Syria and one of the earliest conquests of the Franks, as well as their last major resort in the Holy Land. For political and economic reasons, both newly captured towns were much better situated for the founding of a mint than the fort of al-Marqab, which lost its

strategic importance as a result of the expansion of Mamluk territory.[15] From this time onwards, until the middle of the ninth century, Mamluk coins are known to have been regularly produced in Tripoli.

[15]In fact, only a short time after Qalāwūn's death (689/1290), the first coins were minted in both coastal towns. The first dated silver coin known from Tripoli was struck in 709 by al-Muẓaffar Rukn al-Dīn Baybars II (708-9/1308-10, cf. Balog's no. 172), along with a copper coin (Balog's no. 175). A few coins from al-Lādhiqīyah exist from the third reign of one of Qalāwūn's sons, al-Nāṣir Muḥammad (709-41/1310-41) (Lutz Ilisch and Stefan Heidemann, personal communications).

Nile Floods and the Irrigation System in Fifteenth-Century Egypt

Of all of the chronicles that survive from the Mamluk period, al-Maqrīzī's *Khiṭaṭ* is no doubt the most renowned and familiar source for historians. Yet near the beginning of his text, he voices concern about an issue that has thus far remained unexplained and unaccounted for. "The people used to say," al-Maqrīzī writes, "'God save us from a finger from twenty,'" meaning 'please, God, don't let the Nile flood reach the height of twenty cubits on the Nilometer!'" For, he explains, this dangerously high flood level would drown the agricultural lands and ruin the harvest. Yet in our time, the chronicler bemoans, the Nile flood approaches twenty cubits and this high flood level—far from drowning Egypt's arable land—doesn't even suffice to supply them with water.[1] Al-Maqrīzī associates this phenomenon with various problems in the social structure and the economy—including the breakdown of the irrigation system.[2]

The story behind this tale of misery, echoed by other chroniclers, is both more complicated and more revealing than appears at first sight. For not only is al-Maqrīzī correct in his assertion, but—as a seemingly strange coincidence—the Nile floods during his time are in fact much higher than they had ever been before. Was nature conspiring with the economic woes of this period to create this bizarre situation?

I would like to offer a theory that will explain this puzzling coincidence, link it to the catastrophic period of bubonic and pneumonic plague epidemics that started with the Black Death in 1348-49,[3] and give us a sense of the quantitative scale of the breakdown in the irrigation system.

Egypt's basin irrigation system was the mechanism by which the Nile's annual flood provided for the winter harvest. As the summer monsoon in Ethiopia swelled

[1]Al-Maqrīzī, *Kitāb al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (hereafter *Khiṭaṭ*) (Cairo, 1270/1853-54), 1:60.

[2]Ibid.

[3]The Black Death actually began in Egypt in late 1347, when a ship arrived in Alexandria with all but a few of its crew and passengers dead—the few survivors died shortly thereafter. The plague then spread rapidly throughout the city (this story of corpse-ridden ships arriving from ports in the Black Sea and Constantinople is repeated by various sources throughout the Mediterranean world). But the main years for mortality from the Black Death were 1348 and 1349.

the level of the Blue Nile and Atbara rivers, the Nile in Egypt would rise by an average of some 6.4 meters. The system used canals of various sizes to draw this water off the Nile into basins along the Nile Valley and in the Delta. Dikes were then employed to trap the water and allow moisture to sink into the basins (Fig. 1). The alluvium washed down from Ethiopian topsoil also settled on the fields and provided a rich fertilization that guaranteed annual seed-to-yield ratios of up to 1 to 10 for the winter crop.[4]

Yet the irrigation system was very maintenance-intensive. It required constant dredging of canals and shoring up of dikes in order to work efficiently. Failure to do so would mean that the Nile flood would wash in and out of the basins without providing enough moisture or fertilizer.[5]

Before discussing the hydraulic dynamics of the basins, we need to look at the Nilometer itself and the dynamics of measurement and sedimentation (Fig. 2). The Nile was at its minimum around the beginning of June and would rise and then reach its maximum level around the end of September. Over the course of centuries—from the time of the construction of the Roda Nilometer to the early Mamluk period—the levels of the minimum and maximum increased at a steady rate. This was because the Nile alluvium from the Ethiopian topsoil left a small amount of sediment on the bed of the Nile each fall (as it had done since the end of the last ice age). So as the river bed rose—at the rate of about 10 centimeters per century—so did the June minimum and September maximum.[6]

Between 750 and 1260, the rising layer of sediment pushed up the level of the river bed, the June minimum, and the September maximum. All three rose at

roughly the same rate—between .5 and .6 meters total, or an average of slightly more than 10 centimeters per century.[7]

Contemporary observers knew about the buildup of alluvium on the Nile river bed and they report that the ideal level of the September maximum in the thirteenth and early fourteenth centuries was about 17 cubits. A level of 14 or 15 was too low and would leave many of the basins dry, while 19 or 20 cubits was too high and would flood the basins with too much water and damage the harvest.[8]

Over the course of the next two and a half centuries—from 1260 to 1502—the June minima oscillated but on average continued to rise at the same rate as before: roughly 10 centimeters per century.

Fig. 3 shows the increase in the June minimum between 750 and 1502. Note that the minimum has increased by 34 centimeters between 1260 and 1502: over the course of these two and a half centuries it rose at a fairly normal rate of 14 centimeters per century.[9]

However, in the fifteenth century, the records of the maximum flood in September begin to tell us a dramatically different story—a story that brings us back to our introduction and al-Maqrīzī's concern about the changing impact of high flood levels. Ibn Iyās, al-Qalqashandī, and al-Maqrīzī all report that the Nile flood was reaching abnormally high levels as measured at the Cairo Nilometer. They also report that the very high level of 20 cubits, previously considered a dangerous overflood that would ruin the crop, was now leaving many of the basins dry.[10] They all mention this phenomenon while discussing problems in the Mamluk economy and polity, including the extensive decay of the irrigation system.[11]

---

[7]The data for the Nile levels are from William Popper, *The Cairo Nilometer* (Berkeley and Los Angeles, 1951), 221-23 (hereafter Popper, *Nilometer*).

William Popper (Berkeley and Los

Indeed if we compare flood records for the Nile minima (Fig. 3) and Nile maxima (Fig. 4), we see that while the June minimum rose at its regular rate, the September maximum increased dramatically over the course of these two and a half centuries, rising by almost twice as much as it had increased in the previous five centuries. Furthermore, 90% of this increase occurred in the 150 years following the arrival of the Black Death and the onset of repeated plague epidemics.[12]

Why did the September maximum jump by such an unprecedented amount over the course of 150 years? An intensification of the Indian Ocean monsoon would be a possible cause, and yet there are no accounts of a dramatic increase in rainfall for this period in Yemen, East Africa, or the Indian subcontinent.[13] The Nile flood variations at this time are also normal compared to earlier periods in Egypt's history; again indicating that environmental factors are not to blame.[14] Shifts in the course of the Nile also occurred over time, but shifts in the river that affected the Nilometer bedrock would also appear as an aberration in the Nile minima data; they do not. William Popper briefly addressed this issue, but failed to note the true significance of the data for this period.[15]

My explanation rests upon quantitative data drawn up by a nineteenth-century hydraulic engineer who observed the Upper Egyptian basins before they had converted to perennial irrigation.[16] The Upper Egyptian basins would be filled from August 12 to the 21st of September. Each basin would be filled to an average level of one meter and the water and sediment would settle in the basin for an average of 40-50 days before being drained back into the Nile in October. Willcocks calculated the average volume of water drawn into the Upper Egyptian basins and the average loss due to evaporation before being drained back into the Nile.[17]

Now, if we take a total of some 2 million feddans (of 4200m^2 each) of basins in Upper Egypt (based on a rough computation from the 1315 Rawk al-Nāṣirī)[18] then the total volume of water drawn from the Nile in Upper Egypt from August

12 to September 21st is 8.4 billion cubic meters over this period, or 2,430 m^3/sec. Let us assume that from 1355 to 1502, the Upper Egyptian irrigation system decayed and many of the basins were no longer functioning. Most of the water formerly trapped in these basins is now being swept down to Cairo.[19] What does this do to the September maximum flood level? We have the following graph based on a table by Willcocks that allows us to correlate volumetric discharge with the maximum Nile levels based on a gauge at Cairo (Fig. 5).[20]

Note in the following table that if we take the .88 meter jump in the maximum from 1355 to 1502 and subtract 15 centimeters for normal alluvium buildup on the river bed, we have a .73 meter rise to account for. If we look at the table of volumetric discharge versus flood height we see that the difference in volumetric discharge for 1 meter (between meter 8 and meter 7 on Willcocks′ gauge) is 2200 m^3/sec. If we then multiply 2200 m^3/sec by .73 meters we end up with an additional 1600 m^3/sec (1606 m^3/sec exact) of flood water coming from Upper Egypt. This suggests that 1600 m^3/sec of Nile water out of the normal 2,430 m^3/sec is no longer being drawn off into the basins in Upper Egypt. Taken at face value, this would suggest that 1600/2430, or some 2/3, of the basins in Upper Egypt were no longer operational: all of this in the 150 years following the onset of the plagues.

---

[19]Abd al-Laṭīf al-Baghdādī′s observations for an earlier period demonstrate this phenomenon. In 596/1200 there was an unprecedented and disastrous Nile maximum of only 12 cubits and 21 fingers. The famine that followed caused the peasants to flee their villages in large numbers (this seemingly contradictory tendency of peasants to flee to urban centers during famines was due to the grain storage facilities located there—this type of rural flight was also witnessed immediately following the Black Death, although the reasons were more complex). Al-Baghdādī reports that the floods washed in and out of unmanned and uncontrolled irrigation channels and basins. This in turn led to another short and disastrous flood, although the level should have been more than enough to water all of the agricultural lands. According to his account, in the two years following the devastatingly low flood, the flood waters ″receded without the country having been sufficiently watered, and before the convenient time, because there was no one to arrest the waters and keep them on the land,″ al-Baghdādī, *Kitāb al-Ifādah wa-al-I'tibār,* 253-54. Al-Maqrīzī reports that the same phenomenon occurred following the first and most devastating outbreak of the new, mutant strain of *Pasteurella pestis* (i.e., the Black Death, 1348-1349). In 751/1350, the Nile flood ″reached 17 cubits—but then dropped down: much of the land was left dry. This ′drought′ lasted for three years and matters became grievous for the people because of the lack of peasants (*fallāḥīn*),″ *Sulūk,* 2:832-33.

[20]Willcocks, *Irrigation*, 66.

Table: Volume Discharge vs. Height of Nile

Volumetric Discharge of Water at Cairo	Height of Nile (19th Century gauge)	Difference in m^3/sec between 1m on gauge
9800 m^3/sec	8m	2200 m^3/sec
7600 m^3/sec	7m	1750 m^3/sec
5850 m^3/sec	6m	1500 m^3/sec
4350 m^3/sec	5m	1250 m^3/sec
3100 m^3/sec	4m	970 m^3/sec
2130 m^3/sec	3m	

Volume of water in 1 ″modern″ feddan square = 4200 m^3
Total number basin feddans in Upper Egypt = 2 million ″modern″ feddans
Total volume of water taken by basins in Upper Egypt over 12 Aug - 21 Sep 4200 m^3 x 2 million ″modern″ feddans = 8.4 billion m^3
Total volume of water taken per second from the Nile from 12 Aug to 21 Sep 8.4 billion m^3/(40 x 24 x 60 x 60) = 2430 m^3/sec

Let us examine another piece of this puzzle that may illuminate this linkage more clearly. Again relying on a graph drawn by Willcocks, we can observe the ordinary difference between the autumn flood profile as measured at Aswan and that measured at Cairo (Fig. 6).[21]

We can see on this graph that the flood reaches a higher peak at Aswan and then drops to a lower level much more quickly than the flood at Cairo. The peak is initially lower at Cairo because the upstream basins are being filled. The flood level then drops more slowly at Cairo as the basins are sequentially emptied. There is additionally a secondary peak at Cairo which appears in the late autumn as the last of the upstream basins are emptied at the same time. If a large percentage of the upstream basins had ceased functioning, their effect on the Nile level at Cairo would diminish and we would see the two flood profiles—Aswan and Cairo—slowly converge.

In fact we have already been looking at this process in the data above: the ″jump″ in the Nile maxima brings the Cairo flood peak up closer to Aswan′s.

---

[21]Ibid.

But there is more here: the flood profiles following the Nile maximum—in October and November—also appear to converge. In the fifteenth century there are abundant references to floods which are ″too short,″ or ″receded too quickly,″ or fell ″too soon.″ Al-Maqrīzī makes numerous references to this trend in the 1420s and 1430s, often during years in which the Nile maximum was between 19 and 20 cubits.[22]

Carl Petry quotes what may be a colorful illustration of this phenomenon from Ibn Iyās in 916/1510, when a woman′s dream about the coming flood was widely reported in Cairo: ″It was said that she beheld in a vision two angels descending from Heaven. They proceeded to the river, and after one of them touched its surface with his foot, it sank rapidly. The angel then addressed his companion: ′Truly, God the All-High did order the Nile to reach a level of twenty cubits. But when tyranny prevailed in Egypt, he caused its sinkage after only eighteen!′ Upon the woman′s awakening the next morning, the Nile had indeed fallen over the night by the foretold measure.″[23]

The data for the late autumn flood profile are far from comprehensive. Yet if they are taken together with the convergence in the Aswan/Cairo maxima—and the rest of the quantitative data—basin decay seems to be the only probable cause for the flood variations in this period.

But why did the Upper Egyptian basins decay? Was it due to rural depopulation from the plague or were there other elements involved?

It is beyond the scope of this article to go into a full analysis of the economic dynamics of the plague′s impact, but I would like to discuss one crucial development that played a major role in Upper Egypt. Here there was a seemingly paradoxical reaction to the plagues′ decimation of the rural population: as settled agriculture decayed, the power and even the population of bedouin tribes grew in tandem.[24] There were two reasons for this; both had to do with an ecological niche that was opened by *Pasteurella pestis*. The first of these was the environmental product of basin decay. The breakdown of the basin system—accelerated by the bedouin

---

[22]*Sulūk,* 4:646 in 826/1423, 4:678 in 828/1425, 4:709-10 in 829/1426, 4:750-52 in 830/1427, 4:806 in 832/1429, 4:834 in 833/1430, 4:903-4 in 837/1434, 4:931, 950 in 838/1435.

[23]Petry, *Protectors*, 105.

[24]Among the many studies which highlight this problem, see J. C. Garcin′s study of bedouin incursions in Qūṣ in Upper Egypt: Garcin, *Un centre musulman de la Haute-Egypte médiévale, Qūs* (Cairo, 1976), 468-507; Sa‘īd ‘Abd al-Fattāḥ ‘Āshūr, *Al-Mujtama‘ al Miṣrī fī ‘Aṣr Salāṭīn al-Mamālīk* (Cairo, 1993), 59-63; idem, *Al-‘Aṣr al-Mamlūkī fī Miṣr wa-al-Shām* (Cairo, 1994); Petry, *Protectors*, 106-13. Stanford Shaw notes that it took the Ottomans over a century to subdue bedouin tribes in Upper Egypt, a task that was never fully realized; see Shaw, *Ottoman Egypt 1517-1798,* 12-13, 19.

tribes themselves[25]—did not lead to desertification. The product of breakdown was rather the emergence of wasteland that was no longer suitable for grain agriculture. With the Nile flood no longer under control and water sweeping in and out of the basins, the effect was an expansion in the category of land known as *khirs*. *Khirs* was the category applied to areas not suitable for agriculture due to the proliferation of weeds and lack of proper maintenance. It was the most extreme of the three land-clearing categories (the other two being *al-wisikh al-muzdara'* and *al-wisikh al-ghālib*). It was also associated with the categories of *sharāqī* (unirrigated) and *mustabḥar* (flooded).[26] It was the natural product of any area of the flood basin which was no longer controlled by dikes and canals. It was not suitable for agriculture—not unless the irrigation system were restored and the land arduously weeded and plowed.

Yet *khirs* was quite well suited to the bedouin economy. Nomadic pastoralists, leading their grazing livestock over marginal scrub areas, could ask for no better terrain than the weedy product of Egypt's collapsing irrigation system. Their arrival in these areas, and their use of *khirs,* went hand in hand with Egypt's post-plague irrigation problems. The bedouin spread because the land was becoming increasingly suitable for their way of life, just as it had become wasteland for agriculturalists.[27]

The second contribution to the growth of bedouin powers and numbers came from another environmental factor that was just as important: the bedouin had a relative "immunity" to the plague. This was by no means an immunity in the ordinary biological sense. If any part of Egypt's population were to develop a hereditary biological immunity, it would have been the more densely populated agrarian communities and urban centers,[28] but modern medical studies have shown no evidence that human populations develop hereditary adaptive immunities to *Pasteurella pestis.*[29]

---

[25]It was often the practice of the bedouins to deliberately break the dikes as a means of taking over and adapting the land for their use. See, for example, *Sulūk,* 2:832-33; Petry, *Protectors*, 124-25.

[26]*Khiṭaṭ*, 1:100-101.

[27]This was not universally the case. When bedouin shaykhs assumed the role of *muqṭa'* for the land they controlled, some of them did oversee agrarian production. See 'Āshūr, *Al-Mujtama',* 59.

[28]Had that been the case, the bedouin would have been more vulnerable to the plague over time, not less (as was the case for other communicable diseases that appeared earlier, such as smallpox and measles).

[29]It is theoretically possible that a population of Homo sapiens, under continual and prolonged pressure from one particular strain of *Pasteurella pestis*, could develop a hereditary resistance. However, if this is the case, the mutual adaptation period must be in the range of hundreds of years. Lawrence I. Conrad stresses that twentieth century medical studies have shown no evidence

The bedouin tribes were less vulnerable because of their primary mode of subsistence. Living in less densely crowded conditions, pursuing a more autarchic economy, and engaging only tangentially in agrarian production, the bedouin were far less susceptible to the deadly locus of rat and flea concentration that devastated other population groups in Egypt.[30] This ″immunity″ allowed them to thrive during the devastating plague years. These two environmental factors thus opened a large ecological niche which allowed the bedouin to turn many areas of organized basin agriculture into pastoral land upon which they flourished.

The interaction between agrarian plague depopulation and the bedouin mode of subsistence thus offers a likely explanation for the decay of the Upper Egyptian basins. The decay of these basins further explains the ″puzzling coincidence″ between the high floods of the fifteenth century and the failure of these floods to irrigate agricultural areas in both the Nile Valley and the Delta. Finally, the hydraulic calculations allow us to estimate the scale of this phenomenon in Upper Egypt: probably half or more of the basins there were no longer functioning.

---

of adaptive immunities in exposed populations: see ″The Plague in the Early Medieval Near East,″ Ph.D. diss., Princeton University, 1981, 32-33.

[30]This pattern, and the contagious nature of *Pasteurella pestis*, was first recognized by Ibn Khaṭīb, a fourteenth century Andalusian doctor and observer of the Black Death′s impact on different segments of the population. See Michael Dols, *The Black Death in the Middle East* (Princeton, 1977), 65. For a good analysis of the bedouins′ environmental resistance to *Pasteurella pestis*, see Conrad, ″The Plague in the Early Medieval Near East,″ 466 f.

The Sultan Who Loved Sufis: How Qāytbāy Endowed a Shrine Complex in Dasūq

QĀYTBĀY´S SHRINE COMPLEX IN DASŪQ

During the Mamluk and Ottoman periods, rulers often patronized individual saints and religious institutions. In Egypt, the rural saint Aḥmad al-Badawī of Ṭanṭā (596-675/1200-76), for example, was popular among the Mamluk elite. Sultan Qāytbāy (872-901/1468-96), one of the last Mamluk rulers, is portrayed as a pious Muslim, active in building religious and public welfare institutions. One of his lesser-known establishments is a religious complex in Dasūq, in the Delta area, mentioned briefly in Heinz Halm´s register, and later by Carl F. Petry in his list of the sultan´s building activities, as ″a mosque.″[1] However, what we are discussing here is more than a mosque. This article discusses the *waqfīyah* in which Qāytbāy, in 886/1481, established a pious endowment to support the shrine of Ibrāhīm al-Dasūqī (ca. 653-96/1255-99) and several other buildings, and stipulated the whole complex to serve as an abode for Sufis and to perpetuate the memory of Sīdī Ibrāhīm.[2] On the basis of the document, we can form a picture of the various activities that took place in Dasūq.

The *waqfīyah*, together with other sources, gives us a chance to understand something of the complex motives that lay behind the establishment of pious endowments, while at the same time providing us with a view on the intertwined connections between Mamluks and ulama. It is only rarely that we have descriptions of rural cult centers. Qāytbāy´s decision to endow a large religious complex in a rural area was due to a variety of reasons which will be discussed below.

[2]Waqfīyah document no. 810, al-Majmūʿah al-Jadīdah, Wizārat al-Awqāf, Cairo. I am grateful to Carl F. Petry for providing me with a copy of the document. The document is in the form of a continuous long roll and, therefore, in the following, references will be made to the *waqfīyah* with no specific folio citations.

THE EARLY CULT OF IBRĀHĪM AL-DASŪQĪ

We know nothing about the Sufi saint Ibrāhīm al-Dasūqī prior to the fourteenth century, and how he became a saint is obscure.[3] The cult most likely reflects a local agricultural festival, since even today his *mawlid* is celebrated according to the agricultural calendar.[4] For centuries, Ibrāhīm remained an obscure figure, and it is only in the sixteenth century that a wealth of writings concerning him emerged. Of the early history of al-Dasūqī's shrine little is known. Su'ād Māhir Muḥammad mentioned, without citing her sources, that after al-Dasūqī's death a large sum of money and property was invested in a religious foundation, and that the revenues were spent on his mosque and on those working and studying there. She stated that this was done by Baybars, whom she credited with having a *zāwiyah* (a Sufi institution formed around a shaykh or a Way *[ṭarīqah]*) built for Ibrāhīm where the latter "could teach his students *(murīdūn)* and educate them in the principles of their religion."[5] Though Sultan Baybars al-Bunduqdārī (r. 658-76/1260-77) was very much involved with Sufism, there is no evidence that he endowed a *zāwiyah* or *khānqāh* for al-Dasūqī.

However, from Qāytbāy's *waqfīyah* we learn that by the fifteenth century there was an edifice on the tomb site in Dasūq, and that the complex was supported by a religious endowment *(waqf),* though the original patrons are unknown. The staff of the shrine consisted of at least nine persons, who received salaries from the *waqf*.[6] We can thus see that the shrine had by that time become the vital focus of al-Dasūqī's posthumous cult and miracles. All these constructions remained as part of Qāytbāy's shrine complex.

By the fifteenth century, Sufi practices had been incorporated into the religious ceremonies of the Mamluk sultans, who established numerous Sufi *khānqāh*s,

---

[3]The grammarian Ibn al-Mulaqqin briefly mentioned him in 1385 in his Sufi genealogy; a little later, he was also mentioned by al-Maqrīzī, who like Ibn al-Mulaqqin stated that the tomb of al-Dasūqī was visited to obtain blessings, since al-Dasūqī was described as being "possessor of mystical states." Shams al-Dīn ibn Muḥammad ibn 'Abd al-Raḥmān al-Sakhāwī, *Al-Ḍaw' al-Lāmi' li-Ahl al-Qarn al-Tāsi'* (Beirut, n. d.), 5:319. On Ibrāhīm al-Dasūqī and the evolution of his cult, see Helena Hallenberg, "Ibrāhīm al-Dasūqī (1255-96)—a Saint Invented" (Ph.D. diss., Institute for Asian and African Studies, University of Helsinki, 1997).

[4]Al-Dasūqī's *mawlid*s were celebrated in the spring at harvest time and in August around the beginning of the flood. The latter celebration, called the big mawlid *(al-mawlid al-kabīr),* is nowadays celebrated in November, coinciding with the end of the cotton harvest and following the big *mawlid* of al-Badawī. Hallenberg, "Ibrāhīm al-Dasūqī," 169-73. See also Edward B. Reeves, *The Hidden Government: Ritual, Clientelism and Legitimation in Northern Egypt* (Salt Lake City, 1990), 15; 'Alī Bāshā Mubārak, *Al-Khiṭaṭ al-Tawfīqīyah al-Jadīdah li-Miṣr al-Qāhirah wa-Mudunihā al-Qadīmah wa-al-Shahīrah* (Bulaq, 1306/1890), 11:7:8.

[6]Waqfīyah document no. 810.

which operated independently of the Sufi orders. The Sufis were paid a monthly salary in addition to the food and shelter they received, and thus had a post *(waẓīfah)*.[7] The *awqāf,* including Sufi *khānqāh*s, served as public welfare institutions and thus could potentially increase a ruler's popularity. In addition, the donor was able to safeguard his own economic interest by nominating himself or one of his family members as supervisor of the *waqf*.[8] The sultan may have sought political support from influential Sufi circles in this way, but we should not ignore spiritual motives; some sultans were greatly influenced by their Sufi shaykhs, to the extent that they built establishments for them.[9]

QĀYTBĀY ESTABLISHES A SHRINE COMPLEX IN DASŪQ

During the Mamluk era, the sultans thus had both economic and spiritual motives for patronizing a saint, whether living or dead. The patron of Ibrāhīm al-Dasūqī and his shrine, Qāytbāy, is described in contemporary sources as a just and pious ruler, and his construction activities included many charitable projects not only in the capital but in the outlying provinces.[10] This may have made him popular among the peasants. The historian Ibn Iyās recorded that in 884/1479, Qāytbāy visited Dasūq and the tomb of Ibrāhīm al-Dasūqī.[11] Two years later he made the shrine *(maqām)* of al-Dasūqī the beneficiary of a pious endowment consisting of real estate in Dasūq. In doing this, he incorporated the old *waqf* into his new endowment. He also added a number of constructions (as alms, *ṣadaqah*), and these renovations gave new prestige to the site and turned the shrine into a shrine

[11]Ibn Iyās, *Badā'i' al-Ẓuhūr fī Waqā'i' al-Duhūr,* ed. P. Kahle and M. Mustafa with M. Sobernheim, Bibliotheca Islamica 5, c, d, and e (Istanbul, 1931-36), 3:156.

complex.[12] The document *(waqfīyah)* confirming this was signed on 29 Sha'bān 886/23 October 1481, and is preserved in the Ministry of Pious Endowments (Wizārat al-Awqāf) in Cairo. The description below is based entirely on this document.[13]

The shrine was intended for mendicant Sufis *(fuqarā')*, with no attachment to a particular order stipulated, for visitors *(wāridūn, mutaraddidūn)* to the shrine *(maqām)*, and for other Muslims connected with it *(murābiṭūn)*, most likely referring to the staff and local laymen who performed tasks for the shrine and received food as compensation, so that "they would benefit from sitting there during their visitation *(ziyārah)*, have a rest, and find shelter."

First the document states the location of the premises:

> It is located in the *nāḥiyah* [according to Carl F. Petry, fiscal area, sometimes but not always equal to a village][14] of Dasūq in the West, close to Rosetta on the blessed river Nile. It is known for the tombs *(maqābir)* of our lord and master, the God-knowing helping axis saint *(quṭb al-ghawth)*, Sīdī Ibrāhīm al-Dasūqī—may God bless him. According to what is told, he—may God grant him victory—was a servant *(jārī)* in the hand of God and in [? unclear].[15]

Then follows a description of the endowment and the premises maintained by its revenues. The *waqf* consisted of houses *(duwar)* outside the shrine complex, on the other side of the street, and of fields outside the village, which were leased to peasants. The rent of these properties was the source of income for the endowment.

The most important of the additions made by Qāytbāy was a congregational mosque *(jāmi')*, which was "added *(mulāsiq)* to the shrine *(maqām)* of Sīdī Ibrāhīm al-Dasūqī." From the congregational mosque there was a door leading to "the mausoleum-mosque *(masjid wa-maqām)* of al-Dasūqī." Sometimes the whole complex is referred to as "the graves" *(maqābir)*, since it included the tombs of both Ibrāhīm al-Dasūqī and his brother Mūsá. Because of these and many other

---

[12]Qāytbāy seems to have established an abode for Sufi scholars called Bayt al-Barāhinah, "The House of the Burhānīs," in Cairo as well. See the seventeenth-century travel account of 'Abd al-Ghanī ibn Ismā'īl al-Nābulusī (1050-1143/1641-1731), *Al-Ḥaqīqah wa-al-Majāz fī al-Riḥlah ilá Bilād al-Shām wa-Miṣr wa-al-Ḥijāz*, ed. Aḥmad 'Abd al-Majīd Harīdī (Cairo, 1986), 294. The Burhānīs are the same as the Burhāmīs; their name refers to Ibrāhīm (=Burhān al-Dīn) al-Dasūqī.

[13]Waqfīyah document no. 810.

[14]Oral communication from Carl F. Petry.

[15]The signing of the *waqfīyah* took place in the presence of two witnesses (or notaries, *shāhid*) and a man who probably was an expert appointed by the Dīwān al-Awqāf to inspect the premises. On building experts, see Fernandes, *Evolution*, 6.

overlappings in the terminology it becomes difficult to draw a clear picture of the area.[16] The congregational mosque, also called *jāmi'-masjid,* was intended ″for prayers, the Friday prayer, and gatherings, and for reciting the Book of God and the hadith of the Prophet.″ As for the *maqām* of Sīdī Ibrāhīm, it was endowed ″as a mosque *(masjid)* to God in order [for people] to devote themselves to all legal forms of worship *('ibādāt shar'īyah).″*

The renovations made by Qāytbāy in the establishment—specifically mentioned in the document as renovated *(mustajaddah)*—include a *maydanah* (?mydnh), which presumably refers to a large square or opening, the façade *(wājihah)* of the shrine-mosque *(masjid)* with eleven new doors, a garden, the interiors of the stores *(ḥānūts)* reserved for livestock, and two large domes above the tombs *(ḍarīḥ)* of Ibrāhīm al-Dasūqī and Jamāl al-Dīn 'Abd Allāh al-Dasūqī (d. ca. 850/1446), the third *khalīfah* of the Burhāmīyah Order. Then there is a long list of buildings for which there is no indication as to who built them. A very detailed list indicates a variety of activities which Qāytbāy helped to maintain by instituting a religious endowment, the income of which was partly used to support these activities.

The whole area belonging to the shrine complex was surrounded by a brick wall, and one entered the complex from the street on the western side. In the east the complex was bounded by the Nile. The total space of the enclosed area was ca. 4132.67 square meters which equals approximately one *faddān* (4200.83 m^2). The mosque had a total area of ca. 363.31 square meters, and included a lecture room *(bayt khiṭābah),* which was long and narrow, probably because the students would sit in one row. Two marble pillars at the entrance of the mosque were engraved with the name of Sultan Qāytbāy.[17] Within the area, on opposite sides of the mosque, there were also residences for the superintendent *(nāẓir)* of the *waqf* on the western side, and for the shaykh/*khalīfah* of the shrine on the eastern side. In the superintendent′s residence there was also the loggia of the sultan *(maq'ad sulṭānī),* which suggests that Qāytbāy expected to spend some time in the complex whenever he came for a visit. Close to the residence of the shaykh (since he also acted as the teacher *[mudarris]*) were the teaching premises: a Quran school and a

---

[16]The word *maqām* used in *waqfīyah*s does not necessarily refer to a shrine alone but to the whole complex of buildings around a tomb and thus to the institution. The inconsistency of the terminology in the *waqfīyah*s is also pointed out by Fernandes, *Evolution,* 9. J. Chabbi notes that in medieval Egypt, *khānqāh*s often ″became part of complexes containing several institutions, e.g. *masdjid-madrasa*-mausoleum. Nevertheless, terminology remained still imprecise, and medieval historians could not always agree on the name for such and such institution.″ J. Chabbi, ″Khānḳāh,″ *Encyclopaedia of Islam,* 2nd. ed., 4:1025-26.

[17]Unfortunately, during my visits to Dasūq I was not yet familiar with the *waqfīyah* and therefore cannot say whether the pillars still exist.

recitation hall *(mudda'á)* where texts of jurisprudence *(fiqh)* were recited and learned by heart in front of the teacher. For children there was a *kuttāb-sabīl,* also referred to as *maktab.*

The Staff of the Shrine Complex

To maintain such a complex required staff as well, and we obtain a clear picture of its activities from the list of the salaries paid to the staff as well as of the duties prescribed for them. The salaries paid by Qāytbāy's *waqf* in Dasūq seem to be in proportion with those of other similar institutions of the time, which varied a great deal from one to another. The staff consisted of twenty-six persons and a number of Sufis—how many is not told.[18] The total of the salaries paid to the staff, including the two witnesses of the document, amounts to 4960 *dirham*s per month (=16.5 *dīnār*s, one *dīnār* equaling 300 *dirhams*),[19] which makes 198.4 *dīnār*s a year, excluding the stipends paid to the Sufis. Additions in the margins of the document discuss extensively which value of the *dirham* should be used, coming to the conclusion that the silver *dirham,* the value of which is three *niṣf* of silver, should be used.

The new donor *(wāqif)* of course wanted to change the key personnel, and Qāytbāy thus nominated a new *nāẓir* (superintendent, or general supervisor or controller), whose tasks are not mentioned in the document though from other sources we know that he was in charge of finance and administration. An addition in the margin indicates that the *nāẓir* was also responsible for distributing the salaries, "taking into consideration what the 'ulamā' have stipulated about the paying of the alms-tax *(zakāt)*." This left the *nāẓir* considerable liberty. He received the highest salary, 1000 *dirham*s a month, and also had a separate residence in the area. He had two administrative staff members under his command to help him to

---

[18]As a comparision, the *jāmi'ah* of Azbak (890/1485) had a staff of over forty, including twenty Sufis. Barsbāy's desert *khānqāh* (840/1436) had twenty-nine persons, of whom seventeen were Sufis. But even larger institutions may have had only a small number of Sufis, such as Qāytbāy's *khānqāh-jāmi'* (884/1479) in Cairo with its one hundred twenty persons, of whom forty were Sufis and twenty orphans. (Fernandes, *Evolution,* 85-87). Michael Winter gives much higher numbers from the sixteenthth century: the *zāwiyah* of al-Sha'rānī housed two hundred residents—we do not know the nature of the residents—and that of his teacher, Ibrāhīm al-Matbūlī, "provided food and shelter for five hundred people, not all of them necessarily Sufis." Michael Winter, *Society and Religion in Early Ottoman Egypt: Studies in the Writings of 'Abd al-Wahhāb al-Sha'rānī,* Studies in Islamic Culture and History, the Shiloah Center for Middle Eastern and African Studies, Tel Aviv University (New Brunswick, 1982), 127. For a detailed description of the different positions and their respective salaries in *khānqāh*s as calculated based on *waqfīyah* documents, see Fernandes, *Evolution*, 47 ff., esp. 69 f; on the different *waẓīfah*s in *khānqāh*s, see Muḥammad Muḥammad Amīn, *Al-Awqāf wa-al-Ḥayāh al-Ijtimā'īyah fī Miṣr 648-923/1250-1517* (Cairo, 1980), 184-204.

[19]See Petry, *Protectors or Praetorians?,* 227.

collect the revenues from the *waqf*'s leased lands, to register its income and expenditures, to keep accounts, and see to other administrative and financial tasks.

Some of the staff members of minor importance hired by the old *waqf* kept their positions, such as the imam and the two muezzins. Through Qāytbāy's stipulations three Quran reciters were added, one of whom recited the Quran at the tomb *(ḍarīḥ)* of Ibrāhīm al-Dasūqī. The second reciter together with the shaykh was responsible for recitations during the *dhikr,* and a third one was to recite every day after the evening prayer by the window of the dome *(qubbah)* of al-Dasūqī.

The *waqfīyah* contains no separate information about the shaykh of the complex, which one usually finds in such documents. Normally, his duties are listed along with the qualities he should possess and the law school he must represent.[20] Instead, we find his duties listed under the title of teacher, *mudarris,* also called *muḥaddith.* This combined shaykh-teacher was explicitly told to instruct the students in Shafi'i law, which was favored by the majority of the Egyptian population. The teacher was further expected to provide instruction in *mī'ād* (public reading sessions with commentaries on religious texts), exegesis of the Quran *(tafsīr),* and hadith—thus the whole apparatus of conventional Sunni doctrine—but also in exhortative sermons *(mawā'iẓ)* perhaps composed by Ibrāhīm al-Dasūqī, the subtleties of Sufi rhetoric *(raqā'iq kalām al-qawm),* and the virtuous deeds, or *manāqib,* of Ibrāhīm. The *manāqib* were to be recited by the teacher "on evenings of gathering *(layālī al-jam')* and on festive days *(mawāsim al-a'yād).*" He was appointed to instruct not children but students *(ṭalabah),* of whom the majority likely consisted of Sufis, especially since he was to teach them the *manāqib* of the saint.[21] The identity of the teacher-shaykh is revealed in an addition in the margin as Shaykh Jalāl al-Dīn Abū al-'Abbās Aḥmad al-Karakī al-Shāfi'ī, the *khalīfah* of the Dasūqī shrine *(al-maqām al-Dasūqī).* Thus, while no specific *ṭarīqah* affiliation is mentioned, the Burhāmīyah stood to profit.

THE SUFIS OF THE SHRINE COMPLEX

The absence of any mention of the Burhāmīyah Order (there is no stipulation that the Sufis need be affiliated with the Burhāmīyah) tells us that the order was still evolving and did not play a vital role in the shrine complex. The Sufis are collectively referred to as "the *fuqarā',*" "mendicants," "the Sufis," or "the *ṣūfīyah,*" the Sufi

---

[20]Compare this with the detailed description of the duties of the shaykh of the *khānqāh*s. Fernandes, *Evolution,* 47 f., see also 30-31.

[21]Secular subjects were not taught among the Sufis even during the early Ottoman period, and it is therefore no wonder that subjects such as grammar are not listed. Winter comments that many Sufis had a reserved attitude towards even al-Azhar, since its curriculum included subjects they considered secular. Winter, *Society and Religion,* 229.

brotherhood. This was thus a complex not reserved for any particular *ṭarīqah* but serving general religious needs and Sufi aspirations, while at the same time perpetuating the memory of Sīdī Ibrāhīm. Most of the Sufis seem to have been temporary visitors, and the number of visitors was likely very high, since they were provided with various facilities and services. The number of permanent residents was likely less than twenty, perhaps as few as ten, to judge from what we know of other establishments of similar size. They were to receive free lunch and supper, provided that there was surplus in the income of the *waqf*, plus a sum of fifty *dirham*s each month on the condition that they were ″in the presence of the shaykh *(yaḥḍurū al-shaykh),*″ that is, received instruction. Clothing, normally provided by *khānqāh*s, is not mentioned. In addition both the shaykh and the Sufis, probably collectively, received each day fifty *dirham*s after the afternoon prayer.

On the basis of the *waqfīyah*, we can reconstruct how in the complex most of the day, from early afternoon till dark, was spent in religious practices, the length of time varying according to the season of the year. After the dawn prayer, which in January in Egypt falls around 5:20 A.M. and in the summer around 3:30 A.M., some of the Sufis sat in Ibrāhīm′s dome and started reciting the Quran at his tomb. There was a window opening to a street outside, so that the voice of this ″window reciter″ *(qāri' al-shubbāk)* would carry out to people passing by and bring blessings to them. He was to recite the same prayers as stipulated for the *ḥuḍūr,* described below, and to conclude with a prayer for the late *nāẓir* of the shrine, al-Sayfī Abū Yazīd. Teaching took place in the early morning in the lecture room and recitation room provided for that purpose. Among the students were perhaps also people other than Sufis. After the midday prayer, around noon, those not engaged in the window recitation likely assisted visitors or were absorbed in private worship. The early afternoon in Egypt is still today normally spent resting, and we can imagine visitors taking their nap in the cool interior of the mosque. The Sufis probably retired to their solitary cells and chambers of retreat (the words *khalāwá* and *ma'āzil* are used), but what kind of meditation or recitation they practiced can only be guessed. They probably used the invocations composed by Ibrāhīm al-Dasūqī, recited the Quran, or practised ascetic exercises consisting of fasting and vigilance. Their residences were likely very spartan, but at least some of them were located on the second floor of the mosque, with a view overlooking the garden, and seeing the lemon, orange and pomegranate trees and the fountain with ornamented tiles may have encouraged them to contemplate beauty and God′s grace in creation.

The daily communal service was called *ḥuḍūr al-taṣawwuf,* and it lasted from the afternoon prayer (from around 3:00-3:30 P.M.) until the sunset prayer at 5:15-7:00 P.M. It took place in Ibrāhīm′s dome, where the presence of the saint could be felt,

and started with Quran recitation, of "whatever [parts of the Quran] they take delight in." The shaykh then read a fourth part of the Quran, which was followed by various prayers: to the Prophet, to Sīdī Ibrāhīm, his parents and brothers, to "the protector of the shrine *(mawlá al-maqām),* the donor *(wāqif)*, whose name be praised," to the shaykhs of the shrine, and to all Muslims. Visiting shaykhs perhaps also came to organize *ḥuḍūr* sessions for Sufis, as can be concluded from the plural used *(mashāyikh),* which of course may also refer to senior Sufis at the shrine.[22] The daily *ḥuḍūr* was followed by a short break, after which they gathered again after the evening prayer, which took place around 6:45-8:30, and possibly stayed up until late at night. Some Sufis would recite again by the window of the dome.

The only exception was Friday night, when they would perform the *dhikr* and spend part of the night reciting the *ḥizb,* or invocation, of Ibrāhīm and praise the Lord "in the Sufi manner" *('alā 'ādat maqāmāt al-awliyā').*[23] This was followed by a public recitation of religious texts, and the night was concluded by prayers for the Prophet and others, as mentioned above.[24] In this, the shaykh was assisted by some of the Sufis. Except for the *dhikr,* the reciters were free to choose whatever surahs from the Quran they preferred. We do not know how the Sufis of Dasūq performed the *dhikr:* whether they were sitting or standing, whether they used instruments or chanting, whether men and women were together, or whether they attained ecstasy. We see from the stipulations that in the *ḥuḍūr,* the Sufis were free to recite any surahs they desired, whereas in many *khānqāh*s' *waqfīyah*s the parts of the Quran to be recited were specifically mentioned, as were other recitations and incantations. As shown by Emil Homerin, this ritual of the *ḥuḍūr* formed the *waẓīfat al-taṣawwuf,* the Sufi duty, or office, which was their main task in a *khānqāh*.[25]

Qāytbāy, or the shaykh in charge of writing down the stipulations, considered it important that all the residents as well as the visitors should perform the *dhikr* according to the Sunnah. Therefore, "a pious and knowledgeable man" *(rajul min*

---

[22]By the fourteenth century, the institution of *mashyakhat taṣawwuf*, or "group of Sufis who met daily with their shaykh for the hudur," had appeared in mosques and madrasahs. The shaykhs were free to move from one place to another, and this made it possible for Sufis to practice the rituals without belonging to any institution. By the fifteenth century, most mosques and madrasahs had a *mashyakhah* and the Sufis who belonged to it received a salary. Fernandes, *Evolution,* 33, 54.

[23]A *ḥizb* is a prayer asking God for spiritual blessings and may be recited at any time. Most Sufi orders have more than one *ḥizb,* of varying length. Valerie Hoffman, *Sufism, Mystics and Saints in Modern Egypt* (Columbia, S. C., 1995), 131-32.

[24]In the fifteenth century sessions of readings with commentaries on religious texts *(mī'ād 'āmm)* were opened to the public after the Friday *jum'ah* prayer. Fernandes, *Evolution,* 50.

[25]Homerin, "Saving Muslim Souls," 71.

ahl al-khayr wa-al-dīn wa-al-ʻilm) was to instruct the *fuqarā'* and other Muslims in the Sunnah and other information necessary in order to learn the *dhikr*. During the Mamluk period, Sufis were sometimes accused of practicing alchemy in their convents; any such attempts were severely punished, and it was partly in order to avoid such accusations that Sunni practices were stressed.[26]

The Sufi Sisters

In the shrine complex in Dasūq, there were places for women to relax, referred to as a *maqṣūrah,* ″a closed area,″ which is typically reserved for female visitors to mosques and shrines and ″keeps them from mixing with men.″ Women had separate toilets as well. These may also indicate the presence of female Sufis residing at the shrine. During the Mamluk period there were convents or hospices, called *ribāṭ*s, for women, and some women acted as shaykhahs; the sixteenth-century al-Shaʻrānī took it for granted that women performed *dhikr* as well.[27] Even if we cannot necessarily draw conclusions from today′s practices to describe the past, it is worth noting that Valerie Hoffman mentioned the Burhāmīyah Order in the 1980s as among the most flexible as far as the relations between the sexes is concerned.[28]

Further, al-Sahkāwī has a special section about holy women in his *Al-Ḍaw' al-Lāmiʻ,* and Huda Lutfi, in her study of that section, has drawn conclusions about the social and economic status of women in the fifteenth century. She focuses attention on the large number of widowed women and on the fact that many were left without any family to look after them; therefore the *ribāṭ*s established by wealthy men or women were a welcome asylum for many. The Sufis were especially active in patronizing orphans and widows.[29] It is possible that the shrine of Ibrāhīm al-Dasūqī also hosted some women who probably were family members of those employed by the shrine. In that case they lived either outside it or within its premises, in the residences of the shaykh and the superintendent.[30] The term ″*ribāṭ* for ladies″ is used in the document once but its meaning is ambiguous. It seems to have been a two-winged room or building with vaults located beside the mosque, and from it there was access to the cells *(khalāwá)*. This could be an

[29]Huda Lutfi, ″Al-Sakhāwī′s Kitāb al-Nisā' as a Source for the Social and Economic History of Women during the 15th C. AD,″ *Muslim World* 71:2 (1981): 104-24.

[30]Those employed by *khānqāh*s were allowed to have their families with them, and sometimes even married Sufis were accepted to reside on the premises. Fernandes, *Evolution,* 31, 34, 43.

indication that there were female Sufi residents who had their own cells. On the other hand, the *ribāṭ* is said to be separated by a ″painted silk,″ by which a curtain is obviously meant, and this could rather refer to a separate ladies′ section in the mosque itself and not to a separate residence. All this points to women participating in the life of the shrine.

Michael Winter assumes that in the sixteenth century, ″the Sufis who were active in the countryside formed a much more homogeneous group socially than did those in Cairo.″[31] In the case of a small agricultural village such as Dasūq it almost certainly was so. The people residing in or visiting the shrine consisted probably of local fellahs, fishermen, craftsmen and the like, and their wives, sisters and daughters, with a limited number of educated people. Urbanization was not a large-scale phenomenon, and even many Sufis of Cairo had their background in the villages and provinces.[32] With Qāytbāy patronizing this rural cult, it gained status, and perhaps on his initiative, the traditions on Sīdī Ibrāhīm were recorded. This made the cult and the shrine more acceptable to the urban, literate ulama, and incorporated the cult into the larger religious topography of Egypt.

Other Activities of the Shrine Complex

A religious endowment of this size naturally would have staff for the service of the public as well; it was, after all, an institution meant for public welfare. For that purpose, there was a gate-keeper *(bawwāb),* servants (sing. *khaddām*/*khādim*, both forms used) in charge of maintaining the facilities, a caretaker of the waterwheel *(sawwāq)* who also filled the ablution basins and watered the garden, and a teacher *(mu'addib)* who taught children to read and write in the *kuttāb-sabīl* or *maktab*. For the riding animals of the visitors, there was a *wakālah* (caravanserai). Since providing public meals was often one of the functions of pious endowments, there was a separate bakery to provide ″bread for the shrine *(maqām)* and the visitors.″ Bread was the staple food then as it is now; in some *waqfīyah*s the amount of bread the Sufis were to receive daily is mentioned, and decreasing the daily rations was used as a means of punishment. Meals were also served, and there was an inspector of the kitchen *(mushrif al-maṭbakh)* and a cook *(ṭabbākh)*, who was also expected to know how to knead dough and bake bread. Storehouses and an oil press were located close to the kitchen.

Our *waqfīyah* also contains instructions concerning surplus income, expenses, and other points vital to the functioning of the institution. The surplus of the

[32]Ibid., 131 and 276-77. On the relationship between the orders and various guilds, see idem, *Egyptian Society under Ottoman Rule, 1517-1798* (London and New York, 1992), 155.

income *(ray‘)* remaining after the salaries had been paid was to be spent on lunch and supper for the *fuqarā’*, those visiting the shrine, and the laymen, and on meals to be served on festive days and during *mawlid*s. Here the plural *mawālīd* is used with no reference as to whose *mawlid* is meant, but we may take it that Ibrāhīm al-Dasūqī′s saint′s day and the Prophet′s birthday celebration are indicated. The latter was an established practice by then, and by no means limited to observance by Sufis but rather a state festival financed by the government.[33] If something was still left over from the income, the *nāẓir* was instructed to invest it in real estate, according to detailed advice given in the document, and to use it for repairs needed at the shrine complex. In case this could not be done or was not needed, and some income still remained, it was to be divided ″among the *fuqarā’* and the poor *(masākīn)* Muslims wherever they are.″

AMIR MUGHULBĀY, THE SUPERINTENDENT

From an addition in the margin we learn that the *nāẓir* of the *waqf* was Amir al-Sayfī Mughulbāy al-Muḥammadī al-Bahliwān al-Malikī al-Ashrafī, who also was the witness (or notary, *shāhid*) of the *waqfīyah*. The name of the superintendent gives us some clues about his life, even if his genealogy remains unclear—for Mamluks, as slaves, are given no lineage. He belonged to the highest rank of the Mamluk military hierarchy, officers who were given the title of amir.[34] The name Mughulbāy, ″the Mongol lord,″ implies Mongol origin, which would not be unusual. But, as pointed out by David Ayalon, especially during the late Mamluk period, names had sometimes lost their function of indicating origin.[35]

Mughulbāy probably received his military training from an amir of the sultan Qāytbāy, after which he was manumitted and entered the service of the sultan. He was thus called Qāytbāy′s personal mamluk, as revealed by his title al-Malikī al-Ashrafī, ″Belonging to the Malik, or King, al-Ashraf″ (Qāytbāy′s honorific). The ″al-Sayfī″ is short for Sayf al-Dīn, ″the Sword of Islam.″ The Mamluk historian al-Qalqashandī wrote that most Mamluks had this title, or *laqab,* in their names, due to its association with power and forcefulness. Towards the end of the Mamluk period almost every amir was given the *nisbah* al-Sayfī. The ″Muḥammad″ in his

---

[33]On the *mawlid*s during the sixteenth century, see Winter, *Society and Religion,* 177 f. The first mention of al-Dasūqī′s *mawlid* comes from ‘Abd al-Wahhāb al-Sha‘rānī (d. 973/1565), *Laṭā’if al-Minan* (Cairo, 1357/1938-39), 2:207; quoted by Winter, *Society and Religion,* 181. We may, however, assume that it had been celebrated earlier.

[34]On the hierarchy of the Mamluk state, see Sartain, *Jalāl al-Dīn al-Suyūṭī,* 1:1-9.

[35]David Ayalon, ″Names, titles and ′nisbas′ of the Mamlūks,″ *Israel Oriental Studies* 5 (1975): 189-232. Repr. in David Ayalon, *The Mamlūk Military Society,* Collected Studies (London, 1979), 219f.

name refers to the person to whom Mughulbāy belonged before Qāytbāy. This could be the slave merchant or the amir who had bought him for the sultan, or it could be the master who had taught him his military skills. He must have been a man who had influenced Mughulbāy greatly or for whom he had great respect, since he decided to keep his name as a *nisbah* even after entering the service of Qāytbāy, which was not usual.[36]

One of the conditions set by sultan Qāytbāy was that the guardianship *(walāyah)* of the *waqf* was to be in his own name as long as he lived; after him in the name of Amir Mughulbāy; and after him in the name of whoever was the sultan. The second condition concerns the expenditures and income of the *waqf,* and Mughulbāy was assigned his fair share of the profit. This is further stated in an addition in the margin, which indicates that he had the right to dispose freely of everything that was contained in the shrine, including all the votive offerings *(nudhur)* brought there.

We can be sure that Qāytbāy wanted to favor his amir for one reason or another, and that the *naẓr,* or control, of the *waqf* was assigned to him as a reward and a means of income. On the basis of our evidence, it seems at first that Mughulbāy was not left penniless. However, his control over the *waqf* was not hereditary; this means that it was not within his power to transfer it to his descendants.[37] In fact, the shrine had earlier been controlled by another Mamluk amir named al-Sayfī Abū Yazīd, for whom prayers were to be recited at the tomb. It would be interesting to speculate as to how much influence Mughulbāy as *nāẓir* really had on the affairs of the *waqf,* but on this we have no information.

Looking at the matter more closely, Mughulbāy's position may not have been as personally lucrative as it first appears, for even if Qāytbāy favored his amir, his motives for establishing an endowment were at least partly economic. It is worth remembering that the revenues of the *waqf* benefited the sultan himself as long as he lived, and only after his death did they benefit Mughulbāy. Through the

---

[36]Ibid., 191-92, 213-14. Ibn al-Sayrafī mentions a person by the name of Mughulbāy who was a commander of ten *(amīr 'asharah),* later the *nā'ib* (governor) of Jerusalem and the sultan's cupbearer *(sāqī).* However, the information about this person's activities concern much earlier years (813/1410, 816/1413 and 823/1420), and he is said to have been appointed to a post already in 813/1410. From that time until the signing of the *waqfīyah* there are seventy-one years (seventy-three lunar years). If he was around twenty years old at the time of his appointment, he would have been over ninety at the time of the signing. This makes it unlikely that he is our man. Ibn al-Sayrafī, *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān* (Cairo, 1971), 1:287, 330, 478.

[37]The situation was similar when a professional army officer was granted an *iqṭā',* a form of administrative grant, because "the area granted and the grantee were constantly changed." Cl. Cahen, "Iḳṭā'," *Encyclopaedia of Islam,* 2nd. ed., 3:1088. Sartain has pointed out that "an emir held his fief *(iqṭā')* in the province in which he served and if transferred to a different province he received a new fief." Sartain, *Jalāl al-Dīn al-Suyūṭī,* 1:5-6.

stipulations in the *waqfīyah,* Qāytbāy in fact remained in control of the *waqf*. Qāytbāy was facing a war with the Ottoman sultan Bāyezīd II, and in order to raise money, seven months′ income was demanded of all *awqāf*.[38] It was under these financially troubled circumstances that Qāytbāy′s *waqf* in Dasūq was established.

SULTAN QĀYTBĀY′S SPIRITUAL ADVISORS

All of this does not mean, of course, that Qāytbāy′s motives for establishing the endowment could not have been spiritual as well. He was influenced by several religious persons, even if we cannot always prove that they directly advised him. Among the spiritual advisors who surrounded him were his personal imam, Ibn al-Karakī, who had a great impact on him, and a Sufi saint, Ibrāhīm al-Matbūlī, who roused the sultan′s interest in the local saint of Ṭanṭā, Aḥmad al-Badawī. We shall now focus on the relationship between the sultan and his imam, which changed from a close friendship to the latter′s dismissal. The scope of the influence that the imam had on the sultan′s affairs will be discussed, as well as the colorful circumstances of his dismissal. As a result, the sultan was drawn to Shaykh Jalāl al-Dīn al-Karakī for comfort and advice. This shaykh was a follower of Ibrāhīm al-Dasūqī, and although we do not know the precise nature of their relationship, Qāytbāy appointed Jalāl al-Dīn as the shaykh of the shrine complex in Dasūq.

THE SUFI SHAYKHS

Al-Sha‘rānī noted in his *Ṭabaqāt* that there were Sufi shaykhs in Sultan Qāytbāy′s life, such as ‘Abd al-Qādir al-Dashṭūṭī (d. 923/1517), whom the sultan admired to the extent that he kissed his feet and asked him to bless his army. Another was Ibrāhīm al-Matbūlī, who was an illiterate Malāmatī Sufi with a convent *(zāwiyah)* of his own, and who performed miracles such as foretelling the future. According to al-Sha‘rānī, who was his student, he guided the sultan for many years. Al-Matbūlī wore a red garment as a token of his affiliation with the followers of Aḥmad al-Badawī.[39] Al-Matbūlī′s biography is given by al-Sakhāwī, who met him personally and wrote that before moving to Cairo, the saint used to live at the tomb of al-Badawī in Ṭanṭā, where he later established a large mosque *(jāmi‘)*.[40]

---

[38]The same recklessness continued during Qānṣūh al-Ghawrī′s reign, and the pious foundations remained under a heavy burden: one year′s income was demanded, but due to rioting it was reduced to seven months′ income. Sartain, *Jalāl al-Dīn al-Suyūṭī,* 1:16-17.

[39]‘Abd al-Wahhāb al-Sha‘rānī, *Al-Ṭabaqāt al-Kubrá = Lawāqiḥ al-Anwār fī Ṭabaqāt al-Akhyār* (Cairo, 1343, 1355/1925, 1936), 2:77-80.

[40]Al-Sakhāwī, *Al-Ḍaw' al-Lāmi‘,* 1:85-86; Winter, *Society and Religion,* 95 f. and 271; Boaz Shoshan, *Popular Culture in Medieval Cairo,* Cambridge Studies in Islamic Civilization (Cambridge, 1993), 76.

Al-Sakhāwī, however, did not mention anything of al-Matbūlī's connection with Qāytbāy, but only said that many notables *(akābir)* came to see al-Matbūlī in search of blessing *(tabarruk)*—this in spite of his illiteracy. If we can rely on al-Sha'rānī's words about the role of al-Matbūlī in Qāytbāy's life—which he may have exaggerated since he himself had high appreciation for his teacher al-Matbūlī—we can believe that the sultan was influenced by Aḥmadī ideas. For the Mamluks to support the Aḥmadīs was not in itself strange, since the cult had gained root in society, especially among the ruling elite.[41] During his many trips to the Delta the sultan visited Ṭanṭā in 903/1498 and ordered al-Badawī's tomb to be enlarged.[42]

The Hanafi Imam

The Mamluks favored the Hanafi school of law, and the personal imam of Qāytbāy was a Hanafi judge by the name of Ibrāhīm (also called Burhān al-Dīn) ibn 'Abd al-Raḥmān ibn al-Karakī. Ibn al-Karakī was an educated and learned man, among whose teachers were some members of the famous al-Bulqīnī family. He had much influence on Qāytbāy and received many high posts; he was, among other duties, responsible for reciting the *Ṣaḥīḥ* of al-Bukhārī in the Citadel of Cairo.[43] The tie between Sultan Qāytbāy and Imam Ibn al-Karakī was perhaps made closer by the fact that both had Circassian mothers. Al-Sakhāwī says that Ibn al-Karakī was in favor with Qāytbāy already when the latter was still an amir, and when al-Matbūlī died in 880/1475, Qāytbāy was drawn even closer to his imam. While accompanying him on the pilgrimage in 884/1480, the imam composed poetry in honor of the sultan. They were so close that it was recorded that Qāytbāy said that he wanted Ibn al-Karakī to recite the Quran at his tomb and visit it after his death.[44]

---

[41]See, e.g., Catherine Mayeur-Jaouen, *Al-Sayyid Aḥmad al-Badawī: Un grand saint de l'Islam égyptien,* Textes arabes et études islamiques, 32 (Cairo, 1994), 751.

[42]Ibn Iyās, *Badā'i' al-Ẓuhūr,* 3:199, 330; also summarized in Shoshan, *Popular Culture,* 77.

[43]During the Mamluk era, the recitation of *al-Ṣaḥīḥ* took place every year at the end of Ramaḍān in the Citadel, and during times of crisis also at the tombs of Imam al-Shāfi'ī and Sayyidah Nafīsah. Annemarie Schimmel, "Kalif und Kadi im spätmittelalterlichen Ägypten," *Die Welt des Islams* 24 (1942): 78-79.

[44]Al-Sakhāwī, *Al-Ḍaw' al-Lāmi',* 1:59-64; 'Abd al-Ḥayy Ibn al-'Imād al-Ḥanbalī, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Beirut, n. d.), pt. 8, 103. Ibn al-'Imād gives the complete name as Burhān al-Dīn Abū al-Wafā' Ibrāhīm ibn Zayd al-Dīn Abī Hurayrah 'Abd al-Raḥmān ibn Shams al-Dīn Muḥammad ibn Majd al-Dīn Ismā'īl al-Karakī, also known as Ibn al-Karakī. He was born on 9 Ramaḍān 835/10 May 1432 in Cairo. Al-Sakhāwī (d. 902/1497) states that Ibn al-Karakī died in 898/1492-93. It is therefore strange to read of his "resurrection" in the *Badā'i' al-Ẓuhūr* of Ibn Iyās (d. 930/1524), who writes that Ibn al-Karakī was dismissed from his post as Hanafi judge in 906/1501. Summarized in Petry, *Twilight of Majesty,* 146.

Ibn al-Karakī´s important position is revealed in the stories describing the conflict between Sultan Qāytbāy and the learned but arrogant scholar Jalāl al-Dīn al-Suyūṭī (d. 911/1505). Al-Suyūṭī had refused to pay the official monthly visit to the sultan, until finally, on 1 Muḥarram 899/12 October 1493, he appeared in the Citadel wearing a cloth called *ṭaylasān* over his shoulders. *Ṭaylasān* was a cloth of honor worn by the learned only, covering the turban and shoulders and hanging down the back.[45] Qāytbāy was offended by this, taking it as a Maliki tradition, and in this he was supported by his imam Ibn al-Karakī, who was angry about the incident even though he himself was not present. During another incident, according to al-Suyūṭī´s biographer, Ibn al-Karakī was doing

> his utmost to provoke [the sultan] . . . , and kindling fires which will burn against [al-Suyūṭī] in his grave. . . . He persuaded him [the sultan] that the sultan´s order was to be obeyed, that obedience to him was obligatory, and that anyone who disobeyed him, sinned and rebelled.[46]

Ibn al-Karakī thus had considerable influence on Qāytbāy, who listened to his advice and acted accordingly. However, from Ibn al-ʻImād (d. 1089/1679) we learn that the good relationship between Qāytbāy and his imam lasted only until 886/1481, when ″the sultan´s opinion about him and his company deteriorated (lit. became miserable).″ Ibn al-ʻImād gave no reason for this sudden change. Imam Ibn al-Karakī thus did not recite the funerary prayers for Qāytbāy as the latter had wished. Instead, he kept to his house and concentrated on his studies, until he was appointed as the Hanafi qadi of Cairo in 903/1497, the year following Qāytbāy´s death, during the short reign of the deceased sultan´s minor son al-Nāṣir. Ibn al-Karakī stayed in this position for only three years, after which he was dismissed (Shawwāl 906/May 1501) because, as Ibn Iyās (d. 930/1524) tells us, he had earned the ire of Qānṣūh al-Ghawrī for sheltering one of this new sultan´s political opponents. Therefore, Ibn al-Karakī was dismissed and a favorite of Qānṣūh al-Ghawrī, Sarī al-Dīn ʻAbd al-Barr ibn al-Shiḥnah, was appointed in his place.[47]

At this point Ibn al-Karakī was 68 years old and withdrew into seclusion, perhaps exhausted by the rapid succession of sultans and their changing whims.

---

[45]See, e.g., Schimmel, ″Kalif und Kadi, ″56-57.

[46]Sartain, *Jalāl al-Dīn al-Suyūṭī,* 1:89, quoting ʻAbd al-Qādir al-Shādhilī´s biography of al-Suyūṭī, ″Bahjat al-ʻĀbidīn bi-Tarjamat Jalāl al-Dīn.″

[47]Ibn al-ʻImād, *Shadharāt al-Dhahab,* pt. 8, 103. Ibn Iyās, *Badāʼiʻ al-Ẓuhūr,* 3:367; summarized in Petry, *Twilight of Majesty,* 146. Schimmel, based on Ibn Iyās, gives a detailed description of how Ibn al-Karakī and Sarī al-Dīn were each nominated for the post and, after a few months or even days, were replaced by one another. Schimmel, ″Kalif und Kadi, ″103-4.

He lived on to be 84 and met a sad but pious death. He used to climb down stairs to a pool for his ablutions in his wooden clogs; on 5 Shaʻbān 922/2 September 1516 his clog slipped and he fell into the pool, with no one to help him. When people came to look for the old man, they found one of his clogs on the stairs, his turban on the water, and later his dead body. As an honor to him he was buried close to Qāytbāy.[48]

THE IMAM WHO FELL INTO DISGRACE

Why should Qāytbāy, after such a close relationship, have dismissed Imam Ibn al-Karakī in 886/1481, only one year after they had performed the pilgrimage together? The reason given by al-Sakhāwī is that in the end of Jumādá I 886/end of July 1481—thus two months before the signing of the *waqf* document in Dasūq—the *muhtār*[49] of Qāytbāy lodged a complaint against Ibn al-Karakī. He claimed that the imam had insulted him by polluting his clothes with excrement. This had happened at Ibn al-Karakī′s home in Birkat al-Fīl; though we are not told the details about the heated discussion that led to such an extreme outburst of anger, we can imagine the sight, and what was probably involved: the imam threw his chamber pot at the *muhtār* (a severe insult indeed, which leads to a state of ritual impurity). As the victim came, likely rushing, out of the house, a crowd of curious people gathered around him to hear about the outrageous behavior of the imam. Al-Sakhāwī describes the scene:

> The complainant *(mushtakī)* explained vividly what is not proper to be mentioned, and hastened to send [Ibn al-Karakī] his garments because there was excrement on them. . . . Then he [Ibn al-Karakī] forbade him to enter his house, and at that moment his [Ibn al-Karakī′s] status among the spectators sank because of this, and people eagerly discussed the matter.[50]

Then the son of Shaykh al-Shumunnī, who together with Ibn al-Karakī was in charge of the *mashyakhah* of the mosque of Qāytbāy, where the latter taught Hanafi *fiqh,* interceded in the matter. He was probably horrified by such conduct

---

[48]Ibn al-ʻImād, *Shadharāt al-Dhahab,* pt. 8, 103-4. Ibn al-Karakī′s residence in Birkat al-Fīl was bought for him by Qāytbāy in the early years of the latter′s sultanate (thus some time after 872/1468), on Ibn al-Karakī′s previous residence, see al-Sakhāwī, *Al-Ḍaw' al-Lāmiʻ,* 1:63.

[49]< Turkish *mehter*, meaning ″a doorkeeper at the Sublime Porte; official who announced the award of promotions or decorations; a soldier in charge of setting up the Sultan′s tent; or Ottoman military musician.″ Tuncer Gülensoy, ed., *Doğu Anadolu Osmanlıcası: Etimolojik Sözlük Denemesi* (Ankara, 1986), s.v. *mehter*.

[50]Al-Sakhāwī, *Al-Ḍaw' al-Lāmiʻ,* 1:63.

by a religious scholar, and as al-Sakhāwī says, he ″was agitated to make complaints as well.″ He took the insulted man to see a Shafiʻi qadi, and the matter was settled, the man receiving 100 *dīnār*s as compensation.[51] After such behavior, Ibn al-Karakī was not deemed worthy of reciting in the Citadel, and Qāytbāy expelled him because to allow him to continue would have meant a disgrace to his own authority—though al-Sakhāwī implies that the sultan did this reluctantly and tried not to put Ibn al-Karakī to shame.[52] The sultan then saw to it that the insulted *muhtār* received new clothes. He nominated other persons for the posts formerly held by Ibn al-Karakī, but the post of imam was left empty, since he ″held back the imamate *(waffara al-imāmah)*.″ Years passed, and so eager was Qāytbāy to have his favorite imam back that he asked one of his amirs to find out if there could be any excuse made for the Ibn al-Karakī′s behavior. But since nothing came of this, in 895/1490 the sultan simply pardoned his former imam and began to associate with him again. He made Ibn al-Karakī sit in front of him in the Citadel among the Hanafi officials of the executive secretary *(dawādār)*—thus in a place of very high rank and respect. But the matter had not been forgotten in the nine years that had passed. The public appearance must have been painful to Ibn al-Karakī, but he seems to have controlled himself bravely, for al-Sakhāwī writes:

> He was pointed at and talked about, and nobody wanted to show him any signs of approval, but he showed very firm persistence at this trial he had to face, and he behaved very intelligently.[53]

After Ibn al-Karakī was restored to his former position, he still had considerable influence on the sultan; the case of al-Suyūṭī, mentioned earlier, took place after the reconciliation.[54] His final absolution took place when Qāytbāy gave him permission to participate in the celebration of the Prophet′s birthday in the Citadel.[55] There, on the night of the *mawlid* (12 Rabīʻ I 895/2 February 1490), the sultan publicly spoke of his affection for him.[56]

---

[51]Ibid.

[52]″The sultan was extremely angry at this, and he threatened the Imam, but his nature was good to the extent that the matter was suppressed/concealed *(ikhtafá)* and he began to reconcile through [the intercession] of some of his amirs. But this did not have a wholesome effect *(mā anjaʻa)* on the continuation of his authority *(istimrār jihātihi),* and he therefore expelled him from reciting the Tradition in the Citadel and employed the shaykh′s nephew instead.″ Ibid.

[53]Ibid., 64.

[54]Ibid., 63-64.

[55]Here only the word *mawlid* is used, and I have interpreted it to refer to *mawlid al-nabī*.

[56]Al-Sakhāwī, *Al-Ḍaw' al-Lāmiʻ,* 1:63-64.

What would the imam who in anger throws a chamber pot at the sultan′s high official have to do with the establishment of a religious foundation in Dasūq? Perhaps more than is evident at first sight. The *waqfīyah* stipulated that a man called Jalāl al-Dīn al-Karakī—not to be confused with Ibn al-Karakī, the imam of Qāytbāy—was to act as shaykh and teacher of the shrine complex. Jalāl al-Dīn acted as the teacher and *khalīfah* of the Burhāmīyah Order, following his father Khayr al-Dīn, from 888/1483 until his own death in 912/1506.[57] His salary as a teacher was as much as 400 *dirham*s a month; what he received on the basis of an earlier *waqfīyah,* if anything, is obscure. His status was well established, and he may have had an important position in Qāytbāy′s life as a spiritual advisor.

From the day when Qāytbāy′s imam Ibn al-Karakī fell into disfavor and was dismissed, until he officially regained royal favor again, nine years elapsed. Since Qāytbāy could not be in touch directly with his polluted imam, and since his former Sufi advisor al-Matbūlī had died, he most likely felt the need for a new spiritual advisor. During this period (886-96/1481-90) the sultan may have consoled himself through a friendship with Shaykh Jalāl al-Dīn in Dasūq. This is speculation, but we know for certain that the imam was dismissed in July, and in October of the same year Qāytbāy made the shrine the beneficiary of a religious endowment. Fifteen years passed between the establishment of the *waqf* and the death of Qāytbāy in 901/1496, and there was thus ample opportunity for him to go and visit Dasūq. We know that between 875 and 891/1470 and 1486 the sultan made several trips to the Delta, and it is easy to believe that he also on those occasions performed a *ziyārah* to Sīdī Ibrāhīm′s tomb and consulted Shaykh al-Karakī. The content of their conversations or the advice al-Karakī may have given to the sultan are lost to us, but there may have been a soft spot in Qāytbāy′s heart for the Deltan saint Ibrāhīm al-Dasūqī and his shaykh, Jalāl al-Dīn al-Karakī. It was perhaps at Qāytbāy′s initiative that Jalāl al-Dīn wrote the biography of Sīdī Ibrāhīm. Since rulers are known to have built *zāwiyah*s and mosques for their favorite shaykhs, the shrine complex in Dasūq was perhaps established to honor Shaykh Jalāl al-Dīn.

Qāytbāy in Search of Immortality

The study of Qāytbāy′s connections with his religious advisors shows us how intertwined politics and religion were during the late Mamluk period. It provides

---

[57]His name is given in the catalogue of manuscripts in the library of Dār al-Kutub in Cairo as Jalāl al-Dīn Aḥmad ibn Khayr al-Dīn al-Karakī (d. 912/1505), which makes Jalāl al-Dīn a son of Khayr al-Dīn. This is very possible. *Qā′imat al-Ḥaṣr al-Makhṭūṭāt al-ʻArabīyah bi-Dār al-Kutub wa-al-Wathā'iq al-Qawmīyah* (Cairo, n.d.), s.v. Lisān al-Taʻrīf. The *waqfīyah* gives the name of Jalāl al-Dīn′s son as well: ʻAbbās.

us with a glimpse of what was going on behind the façade of establishing religious institutions, and of how complex the motives of the donors could be.

The shrine complex in Dasūq was endowed by Qāytbāy for various reasons. The stress in the *waqfīyah* on formal Islamic education and on following the Sunnah suggests that the shrine was meant not only to preserve the memory of Sīdī Ibrāhīm but to consolidate the status of Islamic education in the rural Delta area—and thus to bring it within the power of the urban ulama.[58] Qāytbāy also sought to manifest his power by adding a congregational mosque *(jāmi')* to what was already a popular religious center. His name would be mentioned not only in the Friday *khuṭbah*s, but also in the prayers of the Sufi gatherings in the mausoleum-mosque *(masjid wa-maqām)* of al-Dasūqī. This way, Qāytbāy took advantage of the fame of a local holy man to promote his own fame. The shrine complex acted as a constant reminder of the sultan's power all over Egypt, and may have helped to legitimize his status among the rural population.

During his first trip to Dasūq Qāytbāy had perhaps witnessed the great number of visitors coming to the shrine and bringing votive offerings. Inspired by the example of Ṭanṭā and its flourishing Badawī cult, he incorporated the earlier *waqf* in Dasūq into his new endowment and enlarged the shrine complex—making sure that he remained in control of the revenues that helped him to finance his war with Bāyezīd II.

However, being a pious man and inclined to Sufism, Qāytbāy may have had genuine spiritual motives as well: his decision to promote the memory of a seemingly minor rural saint was perhaps due to his own personal devotion to Sīdī Ibrāhīm, the shrine serving as a token of this devotion. And in the constant presence of death cause by plague, the need to have staff to recite prayers for his immortal soul must have influenced his decision.[59] The construction of a religious complex in itself would bring immortality to its constructor by preserving his name and memory.

The reasons why Sultan Qāytbāy established a pious endowment in Dasūq were thus a combination of economic and spiritual ones. He may have been seeking spiritual consolation in times of crisis, while at the same time safeguarding his economic interests. Whatever the reasons, Qāytbāy helped to develop and activate the cult of Ibrāhīm al-Dasūqī, and it was in the sultan's interest to promulgate the fame of this saint to attract more people to the site and to make it the famous center of pilgrimage which it remains today.

---

[58]As Vincent Cornell has pointed out, in pre-thirteenth-century Morocco, Sufi institutions served as efficient means to spread Islamic doctrine to rural areas. Vincent J. Cornell, *Realm of the Saint: Power and Authority in Moroccan Sufism* (Austin, 1998), esp. 3-31.

[59]This may have been the primary purpose of the whole *khānqāh* establishment, as suggested by Emil Homerin. Homerin, "Saving Muslim Souls," 77 f., esp. 83.

Rethinking Mamluk Textiles[*]

With the emergence of Mamluk studies as a distinct area of specialization within Islamic studies, an evaluation of the current ″state-of-the-field″ of Mamluk art and architecture is required.[1] Although textiles are included in most discussions of Mamluk art, a full-length review of the literature, goals, and methods of this field has not yet appeared. The following article is a contribution to this end.

The literature on Mamluk textiles is vast and varied. Because of the centrality of textiles in medieval culture, textile analysis has been of interest to scholars from a variety of disciplines.[2] Art historians, more traditional historians, and archaeologists have all written on the subject; sometimes, but not always, their work is done in consultation with textile specialists, who have contributed their own body of scholarly literature.[3] Archaeologists, for example, have taken a special interest in Mamluk textiles, because of their superior preservation in excavations. More complete pieces have been preserved from the Mamluk period than from

---

[*]This article grew out of a post-doctoral fellowship in textiles (Veronika Gervers Research Fellowship) I held at the Royal Ontario Museum in the fall of 1998 and a paper on Mamluk textiles and ceramics given at the MESA annual meeting in Chicago in December of the same year. All pieces illustrated herein belong to the Abemayor Collection of the Royal Ontario Museum in Toronto and were photographed by Brian Boyle. I am grateful to Bruce Craig for the invitation to contribute this study.

Walker, ″The Later Islamic Periods: Militarization and Nomadization,″ *Near Eastern Archaeology* (″Archaeological Sources for the History of Palestine″ series) 62 (1999), in progress.

[2]Lisa Golombek has written eloquently about the ″textile mentality″ of medieval Islamic society in her ″The Draped Universe of Islam,″ in Priscilla P. Soucek, ed., *Content and Context of Visual Arts in the Islamic World* (University Park, PA, 1988), 25-38.

[3]In archaeological reports, textile analysis is generally contained in a separate chapter and is written by a textile consultant. Two of the more notable, and successful, joint efforts by art historians and textile specialists are Ernst Kühnel and Louisa Bellinger, *Catalogue of Dated Tiraz Fabrics: Umayyad, Abbasid, and Fatimid,* The Textile Museum (Washington, D.C., 1952) and Lisa Golombek and Veronika Gervers, ″Tiraz Fabrics in the Royal Ontario Museum,″ in Veronika Gervers, ed., *Studies in Textile History in Memory of Harold B. Burnham*, Royal Ontario Museum (Toronto, 1977), 82-125.

any other time.[4] For economic historians, textile analysis is particularly significant. Textiles were the ″most important form of bourgeois wealth″ and appear regularly in medieval texts as a commodity of import and export.[5] Moreover, the textile industry has been described as a mainstay of the Mamluk economy, and, along with metalwork, Mamluk fabrics were the largest exports to the Far East in the thirteenth through fifteenth centuries.[6]

Scholars of social and political history have emphasized the politicization of textile production by the Mamluks. The manipulation of costume by the ruling establishment for state functions, such as pageants, banquets, and processions, is a familiar phenomenon for medieval Europe, as well as the Islamic world.[7] As Bierman and Sanders have illustrated, the Fatimids appreciated the political potential of textiles and used them, along with the architectural backdrop of the city of Cairo, to punctuate their official ceremonies.[8] The Mamluks, even more than the Fatimids, made expensive fabrics, particularly inscribed silks *(ṭirāz, zarkash),* tools of state by incorporating certain kinds of dress and the change of dress into their court rituals. The elaboration of official ceremonial by al-Nāṣir Muḥammad and the codification by rank of dress which went along with it are important phenomena to consider in this regard.[9] Most of what has been written on Mamluk ceremonial in recent years has made reference to dress.[10] Similarly, there has been

Rabbat, *The Citadel of Cairo: A New Interpretation of Royal Mamluk Architecture*

an interest in textiles used by the contemporary Mongol courts, as exemplified by the work of Allsen and Wardwell.[11]

The purpose of this article is to reevaluate the contributions of these disciplines in light of the results of recent scholarship in Mamluk studies. Specifically, the coexistence of two distinct groups of patrons (military and civilian) is considered for its impact on the production, consumption, and artistic development of textiles in Mamluk Cairo.

Historical Developments in Mamluk Textile Production

Two themes dominate discussion of the Mamluks′ textile industry: the increasing privatization of production throughout the fourteenth century and the decline of this industry in the fifteenth. There has been a heavy reliance on Maqrīzī′s *Khiṭaṭ* for information on the operation and ownership of *ṭirāz* factories in the Mamluk period.[12] According to this historian, robes of honor *(khila‘)*—a broad category of official garments, including textiles we traditionally call *ṭirāz,* and ensembles of clothing, equipment, and accessories—were manufactured in the state-run *dūr al-ṭirāz* well into the fourteenth century. Ibn Khaldūn, furthermore, situates the *dār al-ṭirāz* of his day in Cairo′s marketplace rather than the palace, as was the case in the Fatimid period.[13] The date 1340-41 is recognized as a turning point in the textile industry in Egypt, because in that year the administration of the royal workshop in Alexandria was delegated to an appointee of a local government official. Alexandria′s *dār al-ṭirāz* closed soon afterwards.[14] Whether seen as a growing disinterest in textile manufacture by the central authority or as a step towards directing Egypt′s best textile production and sales to Cairo, this action was only one example of the ways in which the industry was transformed. Production was increasingly privatized with the expanding influence of the amirs. Lapidus

(Leiden, 1995).

mentions several instances of amirs in Damascus transferring silk and cloth markets to their own *qayṣarīyah*s, in at least one case in violation of an endowment benefiting the Umayyad Mosque.[15]

Contemporary sources leave no doubt that the manufacture and sale of expensive fabrics and costumes were lucrative. Surprisingly, there was no consistent policy towards this industry in the Mamluk period. Maqrīzī explains that after a period of private manufacture and sale, the market, in his day, had been taken over once again by the sultan. In his description of the *Sūq al-Sharābīshīyīn* (a specialized cap market) he writes:

> And the people greatly benefited from this, and they amassed an immense fortune through the regulation of business in this industry. For this reason no one could sell [robes of honor] except to the sultan. The sultan appointed the *nāẓir al-khāṣṣ* to buy all he needed. If anyone other than the sultan′s agents tried to buy from this market, he would be punished accordingly.[16]

The ″owners″ of these businesses, while they were still independently run, were probably both amirs and civilian merchants. Privatization of this level of the textile industry may have also contributed to a change of fashion among non-Mamluks, as the most prestigious garments were now available, at a price, to wealthier civilians.[17] The result of the sultan′s renewed monopoly over *khila‘* would have been not only a concentration of resources but also restricted access to the most valuable fabrics and costumes, reinforcing the hierarchy of dress codes which reached its full development under al-Nāṣir Muḥammad.

The introduction of chinoiserie was one of the most significant developments in textile production. While oriental motifs begin to appear in Mamluk art of the late thirteenth century, their powerful presence in the mature Baḥrī style of the fourteenth may be related to the success of the Yüan silk export market. The well-known reference by Abū al-Fidá to the gift of 700 silks from the Il Khan Abū Sa‘īd to al-Nāṣir Muḥammad, in celebration of the 1323 peace treaty, is usually cited as evidence for the large-scale import of Mongol silks.[18] The impact of Yüan silks on the Mamluk textile industry, if not the other way around, not to

mention the differentiation of Mongol (Yüan or Il Khanid) from Mamluk silks, are still matters of debate.[19]

Scholars are increasingly emphasizing the third reign of al-Nāṣir Muḥammad as a watershed in textile development. Al-Nāṣir Muḥammad's elaboration of official ceremonial was complemented, and in fact buttressed, by the beautification of official apparel and the institution of a strict hierarchy of dress according to rank.[20] Mayer's *Mamluk Costume* is to this day the single most important reference for information on official costumes and their codification. Mayer was able to attribute many textile innovations to this period, such as gold *ṭirāz,* gold brocade, and gold belts. Fashions for the military changed under his rule, with the introduction of the "Sallārī" and "Tartar" coats and the *aqbiyah maftūḥah.*[21] The art historical record confirms the picture the Arabic sources paint of this sultan. The majority of historically inscribed silks (both Mamluk and Yüan) name him, and some of the highest quality damasks can be dated to his third reign on a stylistic basis.[22]

The art historical literature suggests that while the Mamluk textile industry fully blossomed in the fourteenth century, the fifteenth century witnessed its decline. The oft-quoted reference to the reduction in the number of Alexandria's silk looms (from 14,000 in 1394 to a mere 800 in 1434) illustrates vividly the extent to which textile production suffered at the turn of the century.[23] Prices for textiles, in some cases, doubled and even tripled, as price lists provided by Ashtor indicate.[24] Ashtor further argues that the high price of domestic textiles led to a change of dress in the fifteenth century, as a cheaper European woolen fabric *(jūkh)* became fashionable.[25]

Three factors are supposed to have contributed to this state of affairs: the Black Death of 1348, the return to royal monopolies over textile production, and the flooding of Mamluk markets with high-quality, less expensive fabrics from

Europe.[26] Mackie has observed that ″the textile industry was a vital force in the prosperity and subsequent decline of the Mamluk economy.″[27] It is impossible to determine the percentage of Cairo′s population in the fifteenth century that was occupied with the production, finishing, and sale of textiles, but by the eighteenth century, we are told, one-fifth of the city′s artists continued to specialize in the manufacture of textiles and one-quarter of its merchants sold them.[28]

PROBLEMS OF MAMLUK TEXTILES

The main characteristic of textiles which makes their study problematic is their fragility. Mamluk fabrics are woven from linen (from native flax fibers), cotton, wool, and silk. Plant and animal fibers, such as these, are vulnerable to attack from insects and are easily broken down by humidity, mildew, and the acidity of human sweat. In fact, the structure of a fabric begins to weaken the moment it is first worn; the normal wear-and-tear of wearing and laundering clothing is a constant factor in the eventual destruction of the garment. It is nothing short of miraculous that textiles as much as 700 years old survive at all. The fact that Mamluk textiles have been preserved in greater numbers and more completely than from any other period in medieval Islamic history is due to the special conditions of Egypt′s physical environment. Egypt′s air is dry and the soil relatively low in acidity. Perishable materials, such as textiles, basketry, paper and parchment, and even hair, skin, and foodstuffs, have survived when buried, to the delight of archaeologists.

One characteristic of Mamluk silks that has mitigated against their preservation is the inclusion of metal threads. *Nasīj al-dhahab al-ḥarīr* (*nasīj* for short and also known as *zarkash* in Mamluk sources) was a gold brocade, or a silk woven with supplementary wefts of gold ″threads″ for decoration.[29] It became very popular as a fabric for official dress (and for robes of honor) in the fourteenth century. In Mamluk *nasīj* gold filaments were twisted around silk threads and then wrapped around a substrate of animal gut or leather.[30] While pure gold is not corrosive, other metals are. Copper filaments have been woven into the fabric of the Ottoman towel illustrated in Fig. 1. Two roundels containing four lines of embroidered

---

[26]For a complete discussion of these factors, one should consult Michael W. Dols, *The Black Death in the Middle East* (Princeton, 1977); Carl F. Petry, *Protectors or Praetorians? The Last Mamluk Sultans and Egypt′s Waning as a Great Power* (Albany, NY, 1994); Ashtor, *A Social and Economic History*; and idem, *Levant Trade in the Later Middle Ages* (Princeton, 1983).

[29]Allsen, *Commodity and Exchange,* 2.

[30]Ibid., 97.

greetings and well-wishes are punctuated with dots or bosses in copper-wound threads. The copper has eaten holes into the surrounding linen.

Ironically, the antiquities market has further contributed to the destruction of Mamluk textiles. The cutting up of textiles into smaller pieces by collectors and dealers increases their financial return while destroying their integrity as complete garments. Inscribed pieces have been particularly vulnerable to this kind of dissection, as borders containing Arabic inscriptions were torn from the surrounding fabric and sold separately. This probably accounts for the high proportion of *ṭirāz* in museum collections.[31] Some of the finest fragments of brocade were cut up into smaller pieces and sewn into medieval church vestments. This practice has, on the other hand, preserved many Mamluk silks.

At the same time, textile fragments in collections are often sewn together, in an attempt to reconstruct the larger piece and to prepare specimens for display. While the intent is conservation, the result for analysis is that the form of the original costume is lost and the overall pattern becomes more difficult to make out (Fig. 2).

Preservation is only one factor that makes the study of Mamluk textiles problematic. The interest in Mamluk textiles by specialists from different disciplines, most of whom work and write independently of one another, exacerbates preexisting methodological problems while introducing new ones. Art historians have traditionally focused on textile decoration. While their literature is almost dominated by what one may call the "*ṭirāz* obsession," important contributions have been made towards determining dates and provenances for groups of objects on the basis of decorative motifs and overall design.[32] Decorative parallels from historically inscribed textiles, as well as examples from other media which have been confidently dated, provide a range of dates to which similarly decorated fragments could belong. In addition, defining the Mamluk style has been an overriding concern for art historians. There has been a lively debate on how to differentiate Egyptian (Mamluk) silks from Il Khanid and Yüan weaves, what characterizes Egyptian rugs from those produced in Spain and Anatolia in the fifteenth century, and how to distinguish locally manufactured block prints from those imported from India. Moreover, there is still some question about distinguishing Mamluk from Ayyubid

---

[31]This is certainly true for Mamluk earthenware ceramics with incised inscriptions ("sgraffito"). The dominance of inscribed and heraldic bowl rims and wells in museum can be attributed to the same pattern of retrieval and collection (Walker, "Ceramic Correlates of Decline," 223 ff).

[32]Some important work has been done recently on the social and political implications of *ṭirāz:* Irene Bierman, *Writing Signs*; *Islamische Textilkunst des Mittelalters: Aktuelle Probleme* (Riggisberg, 1997); and Carol Fisher, *Brocade of the Pen, the Art of Islamic Writing,* exhibition catalogue, Kresge Art Museum (East Lansing, 1991).

textiles. Stylistic analysis, without the aid of other methodological approaches, is limited by the kinds of questions it asks and can answer.

Fortunately, there has been a growing number of joint contributions by art historians and textile specialists. In addition, most museum catalogues and textile analyses in archaeological reports are written by textile specialists.[33] These specialists are generally interested in a different set of questions than art historians or archaeologists; stated another way, they look for information about similar issues in very different ways. Textile specialists focus on the technical aspects of the textiles: their structure, fabric composition, method of coloring, methods of decoration, how hems and edges are finished, how the garment was prepared for wearing. Groups of textiles, for the purpose of dating and determining provenance, are established on the basis of these characteristics. Textile experts have been the most successful in defining Egyptian production and explaining changes in weaving and decorating techniques in this period. Important in these respects are their emphasis on the introduction of the drawloom, the shift to Z-spinning, and the appearance of new embroidery stitches, all of which are attributed to the Mamluks.

The contributions of historians, in addition to studies by art historians and textile specialists, have expanded our present understanding of the political and social contexts of Mamluk textiles. In their scholarship the objects themselves fade into the background, as textual sources are spotlighted and scrutinized. Historians′ interest in textiles has been, by and large, limited to three areas: identifying costume, defining terminology, and describing the use of textiles in ceremonial.[34]

In spite of the central role played by textiles in medieval society, we have only a vague notion of what the garments worn by the Mamluks, and their civilian compatriots, looked like. Illustrations of costume from other media are very rare, and when textiles are depicted they are rendered in short-hand form. Miniature paintings, for example, do not do justice to the variation in cut, fabric, type, and decoration of Mamluk-period textiles. The illustrators of the *Maqāmāt, Kalīlah wa-Dimnah,* and the automata and *furūsīyah* texts showed little interest in what the characters in their tales wore outside of long, flowing gowns, decorated with

---

[33]A comprehensive list of specialized studies is beyond the scope of this article. However, some of the most useful archaeological reports are Louise Mackie, ″Textiles,″ in Wladislaw Kubiak and George T. Scanlon, eds., *Fustat Expedition Final Report,* vol. 2, *Fustat-C*, (Winona Lake, IN, 1989), 81-97; Gillian Eastwood, ″A medieval Face-veil from Egypt,″ *Costume* 17 (1983): 33-38; idem, ″Textiles, 1978 Season,″ in Donald S. Whitcomb and Janet H. Johnson, eds., *Quseir al-Qadim 1980* (Malibu, FL, 1982), 285-326; Elisabeth Crowfoot, ″The Clothing of a Fourteenth-Century Nubian Bishop,″ 43-51.

[34]The term ″costume,″ as opposed to ″textile,″ which is simply a woven fabric, refers to an entire way of dressing, designating complete garments along with accessories.

an overall, almost water-marked patterning, and turbans with *ṭirāz* bands. One noticeable exception is the frontispiece of the Vienna Ḥarīrī, which is quite precise in its detailing of surface decoration and differentiation of native Egyptian from imported Mongol dress.[35] In contemporary metalwork, an inlaid bowl and basin signed by one Ibn al-Zayn (the so-called ″Vasselot bowl″ and ″St. Louis′ basin″), dated to around 1290-1310, present in thought-provoking detail the headgear, coats, pants, boots, weapons, and accessories of the *khāṣṣakīyah* at the turn of the fourteenth century.[36]

Contemporary European depictions of Mamluk dress are more informative than Egyptian or Syrian illustrations. Mayer has brought attention to a series of line drawings done by European pilgrims to Mamluk lands during the fifteenth and sixteenth centuries, including those of Bernhard von Breydenbach and Arnold von Harff.[37] Renaissance Italian paintings are quite lively for the color, variations, and luxuriance with which they bring to life patterned silks worn at the Mamluk court. Among the most notable of this group are *The Embassy of Domenico Trevisano to Cairo in 1512, Reception of an Ambassador in Damascus* by the Bellini school (1490s), the St. George cycle by Carpaccio (sixteenth century), and the *Episodes in the Life of St. Mark* of Mansueti (1499).[38]

Because detailed miniatures of costume are few, historians have tried to reconstruct the appearance of Mamluk textiles, and how they were worn, draped, or tied on or wound around the body as garments, from textual accounts. There were several early attempts to collect and decode all the technical terms for textiles (garment types, fabrics, colors, types of weave, etc.) that are found in contemporary Arabic sources. The first serious attempt to collect vocabulary pertaining to dress appeared in Quatremère′s edition and notes to Maqrīzī′s *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk*.[39] Soon to follow was Dozy′s dictionary of

---

[35]Clearly, a specific kind of dress is intended in this illustration. The bowl-shaped hats and an outer coat with a diagonal cut are probably Mongol, although Mayer suggested that the coat better fit textual descriptions of the ″*Sallārī* coat″ (Mayer, *Mamluk Costume*, 24).

[36]For illustrations and discussions of both vessels see Esin Atıl, *Renaissance of Islam: Art of the Mamluks* (Washington, DC, 1981), 74-79, cat. #20-21; D. S. Rice, *The Baptistère de Saint Louis*, (Paris, 1953); idem, ″The Blazons of the ′Baptistère de Saint Louis′,″ *Bulletin of the School of Oriental and African Studies* 13 (1950): 367-80; and Walker, ″Ceramic Correlates of Decline,″ 292 ff.

textile terminology, an encyclopedic effort which has not been repeated on such a scale since.[40] The most useful reference on Mamluk dress by a historian, however, has been Mayer′s *Mamluk Costume*. While this work is not a comprehensive study, by any means, and does not take into account the contributions of art historians or archaeologists (and for this it has been criticized), *Mamluk Costume* is a good place to find rich descriptions of a wide variety of clothing worn by the Mamluk elite. Some of the most important references are borrowed from Ibn Khaldūn (on the organization of *ṭirāz* factories), Abū al-Fidá, Maqrīzī, and Ibn Faḍl Allāh (for a detailed classification of robes of honor). For information on fabric types and production centers, Serjeant′s *Islamic Textiles* is a good initial reference. However, it only covers sources up to the Mongol invasions.

The collection of Arabic terminology is, unfortunately, as far as most historically-based studies of textiles have gone. There have been some notable exceptions, studies concerned with specific textile categories and their social context.[41] These in addition to critiques of textiles and ceremonial, as noted earlier, are the historians′ greatest contributions. Most studies, however, fall short of their potential because they are done without the collaboration of art historians, textile specialists, or archaeologists. One senses that lexicography has taken precedence over the material culture, which is, of course, the primary object of study.

Basic Characteristics of Mamluk Textiles

Textiles from the Mamluk period are usually grouped into one of five categories, each characterized by its method of decoration, ground fabric, and repertoire of decorative motifs. Each textile type seems to have served a special purpose, to which the technique of manufacture and decoration was best suited. These categories form the basis of organization for Baker′s monograph on Islamic textiles, as well as Atıl′s section on the same in her survey of Mamluk art.[42] For further reading on

any subject discussed herein, one might refer to the textile bibliography which came out in print by the Textile Museum last year.[43]

SILKS

Mamluk silks are generally woven on drawlooms. The drawloom, introduced into Egypt sometime in the middle of the thirteenth century, facilitated the production (and reproduction) of complex designs, repeat patterns, and double- and triple-cloth. Threads are predominately Z-spun, and much use is made of gold and silver filament-wound threads in the most expensive fabrics. In terms of color, blue, brown, and ivory dominate. The most common patterns tend to be stripes (vertical and horizontal), ogival lattices, and undulating vines and large blossoms. Silk was the favored fabric for robes of honor.

CARPETS

S-spun, asymmetrically knotted, wool pile rugs appear suddenly in Egypt sometime in the fifteenth century. They generally adhere to a three-color scheme (deep reds, greens, and blues), with occasional highlights in lighter shades of pink, yellow, and white. The layout of design adheres to what has been called the ″international style″ of carpets for the fifteenth and sixteenth centuries: radiating patterns of geometric elements (stars, rosettes, hexagons) with repeat patterns and lattices and cartouche bands.

APPLIQUÉ

″Appliqué″ refers to the technique of sewing onto a ground fabric another fabric pattern. In Mamluk appliqué the ground fabric is usually a tabby of cotton, linen, or wool, and the applied ornament a tabby of similar fabrics (colored or plain), rolled over and lightly ″hemmed″ onto the backing fabric with basting. What is significant about this technique is its association with ″military surplus″: emblazoned saddlebags, caps, horse and camel gear, and the like. The most common ornament is the amiral blazon. Appliqué blazons are easily removed, thereby simplifying the transfer of ″army issue″ equipment from one amir to another. *Ṭirāz* bands are occasionally applied to garments in this manner.

PRINTS

Because linen (a native Egyptian fabric) does not take inking well, Mamluk prints are usually made of Z-spun cotton. They are block-printed, more often with indigo than any other colorant, probably under the influence of imported Indian block

---

[43]*Islamic Textile Arts: Working Bibliographies,* The Textile Museum (Washington, DC, 1998).

prints. They share the same patterns as silks and embroideries. Printed fabrics are one of the most inexpensive decorative textiles used by the Mamluks.

EMBROIDERY

Although traditionally viewed by art historians as a ″plebeian″ form of decoration produced by women at home, there is textual evidence for the use of embroidered fabrics in all segments of Egyptian society and for a variety of purposes (see below). The art of embroidery experienced a revival under the Mamluks, as their numbers in collections of Mamluk textiles indicate. The majority of Mamluk embroideries are created with dyed floss silk (indigo, brown, or red) on Z-spun, undyed linen or cotton tabby. A wide range of new stitches appeared with the Mamluks, some, it would seem, to accommodate the reproduction of popular patterns used in figured silks.

Mamluk Textiles: The Issues

SILKS

It is difficult to differentiate Mamluk figured silks from those manufactured in China, Italy, and Spain in the thirteenth through fifteenth centuries. This was a period of active international exchange of top quality textiles, including silks and rugs, which resulted in the development of what could be called an ″international style.″ Moreover, European silks imitated Oriental silks, while weavers in China produced Islamic designs for the Mamluk market. The characterization, then, of Egyptian or Syrian products on the basis on decoration alone is misleading. Wardwell has suggested that Mamluk and Yüan silks can be differentiated from each other by a single structural detail: the gold and silver brocades in Egypt and Syria were accomplished by wrapping the metal threads around a silk core, while those in China were either wrapped around a cotton core or animal substrate or were replaced by gilded strips of mulberry paper.[44]

Dating Mamluk silks is equally problematic. As is the case generally with Egyptian art of the thirteenth century, it is not clear what the characteristics of early Mamluk silks are as opposed to late Ayyubid (Figs. 2 and 3). Earlier this century, striped silks were identified as Ayyubid because of the absence of figural decoration.[45] Not until excavated contexts ascertained the continuity of these designs into the fourteenth century could art historians be sure that they did not belong to an earlier period.[46]

Within the Mamluk period, there is very little precision in dating individual pieces. Historically inscribed silks, all Baḥrī Mamluk, which name an identifiable personality (a sultan), have been used to classify and date silks through related designs.[47] These designs fall into one of four categories: stripes (Fig. 4), chinoiserie, ogival patterns, and geometric latticework.[48] Vertical and horizontal stripes, inscriptional registers, or friezes with running animals and floral designs are considered the earliest because of their similarity to Ayyubid decoration. Moreover, there was an indigenous tradition of horizontal banding in Egyptian tapestry weaving, which was apparently adapted to drawloom weaving with the change in looms.[49] The introduction of Chinese motifs (such as the peony, lotus, clouds, phoenix, and fluid floral designs) is often attributed to Kitbughā, although chinoiserie became more common with the third reign of al-Nāṣir Muḥammad. The use of repeat patterns of ogival or tear-drop medallions in lampas weave is quite characteristic of Mamluk silk production, but it has not been properly dated. Their depiction in mid-fourteenth- to mid-fifteenth-century Italian paintings has provided a convenient range of dates for the ″Burjī Mamluk″ style of diamond and square-shaped lattices, which appear as yellow or green on an indigo-colored tabby or twill ground.[50]

Much has been made about the introduction of the drawloom at the beginning of the Mamluk period and the new predominance of Z-spun fabrics. The shift from tapestry to drawloom weave was a very significant one that revolutionized the Mamluks′ textile industry, transforming costume and making possible the mass-production of what we would call ″robes of honor.″ The drawloom is a horizontal loom that allows complex patterns to be ″tied into″ the warp, facilitating the reproduction of large figures, repeat patterns and mirror-images (Fig. 5), and elaborate, long inscriptions.[51] Fabrics also became more complicated, as colorful double-, fancy double-, incomplete double-, and triple-cloths became more common. It has been suggested that the drawloom was brought to Egypt in the thirteenth century by weavers fleeing the Mongol advances. They could have come from Iraq, Iran, or even Spain, where the technology already existed.[52]

#254.

[47]Mackie, ″Toward an Understanding,″ reviews Mamluk silks which have been securely dated in this manner. See also Atıl, *Renaissance of Islam,* 224-25.

[52]Blair and Bloom, *The Art and Architecture of Islam 1250-1800,* 108; Mackie, ″Toward an

One of the best explanations for technical peculiarities in Mamluk weaving and embroidery was provided by Louisa Bellinger in a larger catalogue of *ṭirāz* fabrics.[53] Silk, she argues, was an imported fabric in a country where linen ruled supreme. The tapestry loom, used since pre-Islamic times for weaving wool, was adapted to weaving silk with *ṭirāz* inscriptions in the Fatimid and Ayyubid periods (Fig. 3). Drawloom weaving replaced tapestry weaving in the Mamluk period, as more complicated fabrics and designs for more elaborate forms of costume were required by the court. Both the fashions and the technology to produce them were imported from the east. At the same time, the Z-spinning of Iraq and Iran more or less replaced the Egyptian tradition of S-spinning. Z-spinning was not regularly used with linen until the Mamluk period. This technology was an imported one, ″a habit caught from people used to other fibres without a natural spinning direction, such as wool and cotton.″[54] The abandonment of the tapestry loom and the adoption of Z-spinning were ways of adapting to the demands of a more silk-dominated textile industry.

How were the Mamluk silks on display in museums used? Are we justified in calling these ″*khila*ʿ″? Atıl claims we have no extant examples of the ″robes of honor″ *(khilaʿ)* which appear regularly in Mamluk-period texts.[55] Contemporary sources describe *khilaʿ* as textile ensembles that included silks (fur-lined for the highest grades) and, particularly, gold brocades. Children′s tunics, shoes, caps, and a few silk robes are among the complete garments retrieved from archaeological excavations. If anything in our collections comes close to qualifying as *khilaʿ* it would be the silk robes, but most of these are fragmentary and are not sturdy enough to have been used on any regular basis or as an outer robe. Furthermore, there is no evidence of their having been lined or trimmed with fur.[56] If we associate *khilaʿ* with *ṭirāz* fabrics, we have a comparable dilemma. Most of the *ṭirāz* bands, which number into the thousands, belong to turbans, thin outfits (perhaps summer apparel), and household items such as towels, sashes, and handkerchiefs.[57] Moreover, these textiles are made of linen and cotton. It is quite possible that what was meant by the terms *khilaʿ* and *ṭirāz* must have included a much wider range of materials and costumes than have survived.

Understanding,″ 128.

[56]Granted, fur is usually devoured by insects. However, there is no evidence that these thin robes were ever lined with any material.

[57]Golombek and Gervers, ″Tiraz Fabrics in the Royal Ontario Museum,″ 85. Franz Rosenthal groups together smaller inscribed items like the handkerchief and towel in his ″A Note on the *Mandīl*,″ 63-99.

Ṭirāz is borrowed from the Persian term for embroidery. It appears that the original sense of *ṭirāz* was of an elaborately embroidered band on a textile. In an art historical sense it denotes any decorative band on textiles, specifically one carrying an Arabic inscription. This meaning has been extended to all media, incorporating registers of writing, borders or braids, and decorative strips of a variety of forms.[58] A more precise technical definition, one based on the kinds of textile fragments normally identified as *ṭirāz* in museums, has been provided by Golombek and Gervers: "those fabrics of linen, cotton, or *mulḥam* upon which the decoration is executed in a technique differing from that of the ground weave."[59]

One could, alternatively, define *ṭirāz* fabrics as those textiles which were produced in the royal factory, or *dār al-ṭirāz*. Two kinds of *ṭirāz* factories, *khāṣṣah* (royal) and *ʻāmmah* (public), produced textiles for two different markets. In the Umayyad and Abbasid periods the *dār al-ṭirāz* was located in the ruler's palace. According to Ibn Khaldūn, under the Mamluks the workshops were found in the public *sūq*, at times under direct control of the sultan and his amirs and at other times run independently of the state.[60] Approximately 50% of all extant Mamluk silks contain inscriptions.[61] The most common formula of the period, *ʻizz li-mawlānā al-sulṭān . . . ʻazza naṣruhu,* replaces the Fatimid pattern of well-wishing while transforming the formulae used to name the ruler and list his titles. With the exception of customs stamps, the place of manufacture or point of transfer is not named on Mamluk textiles.[62] It has been argued that the heraldic arrangement of short, dedicatory *ṭirāz* paved the way for the development of the military inscriptions of the fourteenth century.[63]

Garments with *ṭirāz* borders bestowed upon officials or given as diplomatic gifts came to be known as "robes of honor" or *khilaʻ* (singular *khilʻah*). The term *khilʻah* comes from the Arabic verb for "to take off" and refers to the taking off of one's garment and giving it to another as a sign of personal protection. It was first used in an official sense in the Abbasid period.[64] The term practically supersedes *ṭirāz* in Mamluk sources and, in fact, may have meant the same thing. The matter

[60]Ibn Khaldūn in Mayer, *Mamluk Costume*, 33. The *kiswah,* on the other hand, was made in the Mashhad al-Ḥusayn during the Mamluk period, according to al-Qalqashandī (Grohmann, "Ṭirāz," 788).

[61]Mackie, "Toward an Understanding," 130.

[62]One example is a striped silk in the Islamic Museum in Cairo, stamped with the place name "Asyūṭ" (Baker, *Islamic Textiles,* 71).

[63]L. A. Mayer, "Das Schriftwappen der Mamlukensultane," *Jahrbuch des Asiatischen Kunst* 2, no. 2 (1925): 183-87; Grohmann, "Ṭirāz," 788.

[64]N. A. Stillman, "Khilʻa," *EI*^{2}, 5:6.

of terminology is further complicated by Ibn Khaldūn′s association of *zarkash* (gold brocade) with *ṭirāz;* he states that textiles with the name of the sultan or an amir are called *zarkash,* the same material which was formerly referred to as *ṭirāz*.[65]

Medieval Egyptians may have understood terms like *ṭirāz* and *khil'ah* on different levels, different circumstances evoking different meanings. In the Mamluk period *ṭirāz* in its most basic sense probably referred to a textile inscription, regardless of how it was executed or in what material. Garments with official inscriptions naming the sultan or an amir and executed in gold embroidery or woven in gold brocade were referred to as *zarkash,* the term acting as much as an adjective as a noun. ″*Zarkash*″ described the decorative quality of the garment. In discussing an account by Abū al-Fidá, for example, Mayer describes contemporary *ṭirāz* bands in the following fashion:

> [he] distinguishes between the brocaded band *(ṭirâz zarkash)* on the upper coat *(fauqânî)* and the gilt bands *(ṭuruz mudhhaba)* on the under-tunic *(thaub)*. Since the top coat . . . was gorgeous enough . . ., whereas the under-tunic . . . was hardly visible, the difference between the two kinds of *ṭirâz* is obviously one of importance as well as of form.[66]

In this case, the inscription on the under-tunic may have been stamped in gold, while the one on the outer garment was embroidered or woven in gold thread. The term *zarkash,* then, would have both qualitative and technical connotations.

A *khil'ah,* in the Mamluk sense, was an ensemble of clothing and equipment that included a *zarkash* robe (with cut and fabric suitable for the recipient′s rank), bestowed in an official manner. The inclusion of *khila'* distributions during a variety of elaborate Mamluk ceremonies, while it had precedent in Egyptian (Fatimid) court protocol, may have been directly influenced in the fourteenth century by Il Khanid practice. The Mongols did the most to politicize silk through their reliance on silk and gold in their banquets, drinking parties, and other state celebrations. In ceremonies that strongly resemble Mamluk practice in the fourteenth century, we know from travelers′ accounts and official court records that the Great Khans of the thirteenth century distributed gold silks and gold belts studded with precious stones and pearls at nearly every important occasion at court.[67]

[65]Ibn Khaldūn in Mayer, *Mamluk Costume,* 33.

[66]Ibid., 34, note 1.

[67]Walker, ″Ceramic Correlates of Decline,″ 290 ff; Aldo Ricci, *The Travels of Marco Polo* (London, 1950), 131 ff; Reay Tannahill, *Food in History* (New York, 1973), 135 ff; Peter Jackson, *The*

Allsen´s groundbreaking work on the Mongol textile industry has proven the existence of colonies of West Asian silk weavers in the east, some working under forced labor, others as more or less independent tradesmen.[68] They produced *nasīj,* a gold brocade, for the Mongol court. These textiles were distributed as *khila‘* in the Mamluk court.

The relationship between Il Khanid and Yüan and Mamluk silks, either in the historical sources or as extant fragments in collections, is far from clear. *Ṭirāz* (an official textile inscription), *zarkash* (gold embroidered or woven *ṭirāz*), *nasīj* (gold brocade), and *khil‘ah* (an assortment of officially distributed gifts including *nasīj* or *zarkash* textiles) were clearly important terms within the vocabulary of Mamluk silk-weaving, but they are extremely ambiguous. We still do not know how surviving Mamluk silks relate to these textile categories or how silk functioned outside the ceremonial apparatus of the Mamluk state.

RUGS

There has been quite a lot written about Mamluk rugs. A good part of the literature describes the red wool rugs we normally associate with Mamluk Egypt as part of an ″international style″ of pile rug production which was fashionable from Spain to eastern Anatolia in the fifteenth and sixteenth centuries.[69] In spite of the quantity of studies which have been done on the topic, however, we still cannot say for certain when the tradition began, how it came to Egypt, where in Egypt these rugs were manufactured, and to whom they were sold. Scholars writing on the subject have generally agreed, however, that their production in Egypt can be dated from 1470 to 1550, that the style was introduced sometime after 1467 with the migration

Mission of Friar William of Rubruck: His Journey to the Court of the Great Khan Möngke 1253-1255 (London, 1990); and J. A. Boyle, *Genghis Khan: History of the World Conqueror* (Manchester, 1997).

Denny, eds., *Oriental Carpet and Textile Studies, II: Carpets of the Mediterranean Countries 1400-1600,* (London, 1961); Ernst Kühnel, *Cairene Rugs and Others Technically Related, 15th-17th Century,* The Textile Museum (Washington, DC, 1957); Donald King and David Sylvester, *The Eastern Carpet in the Western World from the 15th to the 17th Century* (London, 1983); Charles Grant Ellis, ″Gifts from Kashan to Cairo,″ *Textile Museum Journal* 1, no. 1 (1962): 33-46; idem, ″A Soumak-Woven Rug in a 15th-Century International Style,″ *Textile Museum Journal* 1, no. 1 (1962): 4-20; idem, ″Mysteries of the Misplaced Mamluks,″ *Textile Museum Journal* 2, no. 2 (1967): 2-20; and idem, ″Is the Mamluk Carpet a Mandala?,″ *Textile Museum Journal* 4, no. 1 (1974): 30-50. *Halı* 4, no. 1 (1981) and *The Muslim World* 73, no. 3 and 73, no. 4 (1983) are special issues highlighting Mamluk rugs.

of rug weavers from the fallen Karakoyunlu Turkmen state, and that they were manufactured in Cairo for mosque and palace interiors.[70]

Carlo Suriano has challenged this interpretation in an article on Mamluk blazon carpets published in a recent issue of *Halı*.[71] He argues that the geometric patterns and overall layout adhere to an international style that characterized not only Turkmen but also Ottoman, Safavid, and Nasrid production. While the form of the composite blazon dates the three carpets between 1468 and 1516, Suriano cites fragments of pile carpets, claimed to have been excavated at Fusṭāṭ and structurally related to the emblazoned examples, as possible evidence of Cairene production in an earlier period.[72] Donald Little, in response to Suriano′s article, emphasizes references to Cairene carpets *(min ʻamal al-sharīf bi-Miṣr)*[73] by Ibn Taghrībirdī and Maqrīzī for the fourteenth century.[74] The origin of Mamluk carpets, therefore, remains an open issue.

The colors of Mamluk rugs have attracted a lot of attention and debate. The deep reds, blues, and greens of these rugs have been compared to stained glass windows[75] and jewels.[76] Moreover, there was a long tradition in Egypt (from pre-Islamic to Fatimid times) of weaving wool in these very same colors.[77] In her analyses of Mamluk and Anatolian rugs, Louise Mackie has suggested that the silk industry had a significant impact on not only the color scheme of Mamluk rugs, but also their decorative patterning.[78] She claims that each of the three colors was integral to the overall design, just as in incomplete silk triplecloth. Small motif compositions and repeat patterns are characteristic of both Mamluk silks and rugs.[79]

[79]See also Ellis, ″Gifts from Kashan to Cairo,″ 39.

The rug industry was thriving, however, at a time when the other textile industries in Egypt were in decline. Because of the technical differences in Mamluk weaving and rug-making (threads spun in different directions, use of different looms), it is unlikely that one industry simply replaced the other. Woven stuffs and rugs appear to have served different purposes and were, perhaps, made for different markets. Until the sources are combed for relevant data, nothing conclusive can be said about the marketing of Mamluk rugs. We do know, however, that this was no passing ″fad.″ Mamluk rugs continued to be produced in Cairo until approximately the middle of the sixteenth century, when the local workshops began to manufacture floral and prayer rugs for the Ottoman courts. The workshops continued to operate until well into the eighteenth century.[80]

APPLIQUÉ

While woven silks and pile rugs adhere to an international style, appliqué is, by contrast, characteristically Mamluk. Amiral blazons are the most common form of applied decoration. It is significant that amiral blazons, while they proliferate in almost all media are, with the exception of appliqué fabrics, rare in textiles.[81] The appearance in silks of the sultanic cartouche and inscriptions dedicated to the sultan may indicate that silks and appliqué fabrics were put to different uses. Silk production was, at times, monopolized or regulated by the sultan. Furthermore, inscribed silks were distributed as *khilaʿ* by the sultan and worn during public processions as a sign of fidelity to the ruler.[82] On the other hand, the regular association of appliquéd ornaments with amiral heraldry suggests that these fabrics were ″army issue″: when equipment passed to another amir, the blazon could be changed accordingly.

Fig. 6 is an interesting exception. This fragment boldly proclaims the sovereignty of the sultan with the phrase ″ʿizz li-mawlānā al-sulṭān,″ a dedication more appropriate to woven silks than to a coarse cotton tabby. The *ṭirāz* appliqué in this instance reflects function, as the durability of the fabric would make it suitable for a saddlebag or flag. Another fragment from the Royal Ontario Museum is illustrated in Fig. 7. It has been tentatively dated to the Mamluk period, because of the characteristic zigzag pattern and a stylistic similarity with Mamluk appliqué. The piece in question achieves an appliqué effect through laid-and-couched work in undyed linen, which secures the underlying blue linen threads. As the blue threads

are completely covered by the linen embroidery and were, apparently, never intended to be seen, they may have been yarn left-over from another embroidery. I know of no other examples of imitations of appliqué in other techniques. However, it would not be surprising if they did exist. The Mamluk elite were fashion-setters, and Cairo′s civilian population was quick to imitate the dress, tastes, and mannerisms of the amiral class.

Block Prints

The type of Mamluk textile most often retrieved from archaeological excavations is the block print.[83] First identified during the excavations of Fusṭāṭ, they were initially attributed to India, because of the superficial resemblance of their patterns to Gujarati architectural decoration.[84] This idea has been recently challenged by Barnes, who has cited parallels for Z-spun cotton and block printing with indigo in Iraq, Iran, and Yemen.[85] While many printed textiles found on excavations were imported, most were probably produced in Egypt. Indigo, the primary colorant for Mamluk block prints, was cultivated and processed locally and was relatively inexpensive.[86] Moreover, Z-spinning was known in Mamluk Egypt, used primarily in woven silks and alternately with S-spinning in woven cottons and linens.[87]

The designs on block prints are largely derivative. Inscriptional registers on a densely scrolled ground and bands with cartouches are borrowed from contemporary metalworking.[88] Repeat patterns of whirling rosettes, geometric shapes, and medallions replicate the patterns of woven silks. While prints are monochrome, the colors of choice are reminiscent of silks: blue, ivory, and brown.

Mamluk prints are usually made of lightweight, but quality, cotton. It is the most sensible fabric for the warmest months in Egypt and makes comfortable

daily wear. Prints imitating silk patterns no doubt constituted clothing, but one wonders about those fragments that bear metalwork designs. In his thought-provoking essay on the *mandīl*, Rosenthal has described a variety of ways in which smaller pieces of decorated textiles were used.[89] Many covered serving vessels during banquets. Such prints could have been used in this fashion.

EMBROIDERIES[90]

Embroidery is a decorative needlework in fancy thread. In the case of Mamluk embroidery, the needlework was usually done in floss silk on an uncolored, tabby cotton or linen background. The needlework alone enlivened what was an otherwise plain textile. As the most common way of trimming the edges of everyday clothing, it could be a simple, often inexpensive, and readily available way of making textiles of any form beautiful.

Embroidery, as opposed to weaving, was a cottage industry. While some needlework was produced by professionals in the public marketplace, most was made at home by women (Fig. 8).[91] Embroideries were an important component of the bridal trousseau during the Fatimid and Ayyubid periods, as we know from the Geniza documents.[92] The average person in medieval Cairo, for instance, was well-informed about embroideries and had a sophisticated sense of what was of high quality and aesthetically pleasing. One Ja'far ibn 'Alī al-Dimāshqī, writing shortly before 1175, stated:

> People's tastes vary in regard to the ṭirāz borders and the ornamented embroideries . . ., but they are agreed in the preference of that

[89]Rosenthal, "A Note on the *Mandīl*."

[90]The textile fragments illustrated in this study belong to the Abemayor Collection in the Royal Ontario Museum in Toronto. The Abemayor family business was in Cairo, and it was in this city that the collection was built up. The collection contains some 114 items which have been identified as Mamluk, in addition to a considerable number of early Islamic *ṭirāz* bands and tunics from various periods. Most of the Mamluk samples are embroideries, none of which had been the focus of extended analysis until now.

[91]S.D. Goitein, *A Mediterranean Society* (Los Angeles, 1967), 1:128 ff. It would seem that embroidery was not so strictly regulated in the marketplace in the fourteenth century; see Ibn al-Ukhūwah's [d. 1329] entries on embroidery *(raqqām)* and needlework *(naqshīyah)* (Ibn al-Ukhūwah, *Kitāb Ma'ālim al-Qurbah fī Aḥkām al-Ḥisbah* (Cairo, 1976), 221 and 328. For an interesting comparative study of domestic embroidery in modern Morocco, see Louise Mackie, "Embroidery in the Everyday Life of Artisans, Merchants, and Consumers in Fez, Morocco, in the 1980's," in *Textile Society of America Proceedings 1992* (1993), 10-20.

[92]Goitein, *A Mediterranean Society,* 3:342.

> which is of the finest thread and closest of weave, of the purest white, of the best workmanship, red and golden . . .[93]

Embroidery experienced a revival in the Mamluk period. With a rise in quality came a rise in prices. Maqrīzī describes finely embroidered goods that could be worth a small fortune:

> Among the stuffs woven in Alexandria is this linen cloth which is called sharb, one drachm of which is worth a dirham of silver, and those kinds of embroideries which are sold for several times their weight in silver.[94]

Most museum and private collections of Mamluk textiles consist in large part of embroidered fragments. In spite of this, they have not been the object of focused investigation. There are no monographs on the subject and, outside of entries in exhibition catalogues and archaeological reports, very few studies.[95] To this day, Kühnel's classification of excavated fragments is used to assign relative dates to embroideries.[96] These categories heavily emphasize stylistic attributes with little consideration of independent criteria for dating. Most embroideries can be dated no more precisely than by a century or two.

There has been a passing interest, however, in medieval Islamic embroidery by scholars of European needlework. The work of the late Veronika Gervers, a former curator of textiles at the Royal Ontario Museum, represents this trend. The original accession catalogue in the museum's files makes frequent comparisons between fragments in the medieval Egyptian collection and Renaissance needlework. More convincing arguments are made in two posthumous works, which look for the origins of some Hungarian embroidery patterns in Ottoman work.[97] There is no such direct correlation between Mamluk and this kind of

European needlework. The Mamluk penchant for rigid geometry contrasts markedly with Ottoman floral designs.

One of the best interpretations of Mamluk embroidery is Louisa Bellinger's technical analysis of *ṭirāz* fabrics cited earlier.[98] She reviews the long and very complex history of embroidery in medieval Egypt and comes to some interesting conclusions. First, embroidery was a foreign technique, brought to Egypt from the Far East as an easier and cheaper method of making silk patterns. Second, the development of Egyptian embroidery is intimately tied up with producing inscriptions in textiles. Embroidery began to replace tapestry weaving for colored and inscriptional designs by the end of the Fatimid period and was more or less completed with the Mamluks. The kinds of stitches used in Egypt relied rather heavily on tapestry technology.

What is most useful about Bellinger's arguments are the functional and etymological connections she makes between the *ṭirāz* industry and Egyptian embroidery and the reasons she gives for idiosyncrasies in the Mamluk craft. One of the most characteristic innovations of Mamluk embroidery, for example, was the preference for counted stitches (Figs. 9 and 10). This Bellinger relates to the way linen in Egypt was prepared for embroidery; the practice of counting stitches from a base thread, she claims, was borrowed from the design of inscriptions in tapestry weaving.[99] I have argued elsewhere that new embroidery stitches appeared in the fourteenth century to respond to changes in silk production, which were generated by heightened demand and the expansion of ceremonial.[100] In both its origin and later development, Mamluk embroidery was indebted to local traditions of silk weaving.

The kinds of stitches used by Mamluk embroiders were uniquely suited to producing inscriptions and repeat patterns and creating the surface appearance of woven silk. The crewel or stem stitch, known from well before the Mamluk period, outlined patterns and produced inscriptions. The fluid chain stitch, also familiar from early Islamic needlework, was used for *naskhī* inscriptions and chinoiserie (Fig. 11). The most characteristic stitch used by Mamluk embroidery was the "Holbein," or square, stitch, a sturdy, reversible counted stitch that is most often associated with repeat patterns in blue (Figs. 12 and 13). Several stitches also appeared which intentionally reproduced the effect of silk, such as the weaving and satin stitches (Fig. 14).

[98]Louisa Bellinger, "Technical Analysis."

[99]Ibid., 104 ff.

[100]Bethany Walker, "Material Correlates of Decline in Mamluk Egypt: Ceramics and Textiles," paper given at MESA Annual Meeting in Chicago, IL, December 4, 1998.

Mamluk embroideries are very broadly dated according to Kühnel′s stylistic groups of the 1920s.[101] To the thirteenth-fourteenth centuries are attributed various abstract geometric motifs, including hooked-X′s, the checkerboard pattern, the omnipresent trellis of lozenges or hexagonal cartouches (Fig. 15), rosettes (Fig. 16), and triangular-shaped pseudo-epigraphic motifs (Figs. 12 and 15). Most of what we normally identify as Mamluk dates to the fourteenth century and includes embroideries with blue-dyed silk or linen (Figs. 12 and 13), the Holbein stitch (Figs. 12 and 13), historical inscriptions (Fig. 14), blazons, an ″impressionistic and nervous style,″[102] double-ended arrows, zigzags (Fig. 13), and teardrop-shaped medallions (often surrounded by barbs, or ″hooks″ [Fig. 17]). In the later Mamluk period can be placed the common angular S-shaped motif (Figs. 9 and 10), hooked triangles, angular motifs on a ground of interlacing bands, and a preference for a marine blue-brown dye.

Embroidered bands generally decorated the edges of garments and accented sleeve openings and collars. Embroidered *ṭirāz* encircled the upper arm and wound around turbans. However, most of the fragments illustrated in this article probably did not belong to clothing. One piece is reversible, which would indicate it was used as a towel (Fig. 13). The first of two inscribed examples, while preserved only in part, is long enough to have been a ″tablecloth″ or light cover of some sort (Fig. 11). The layout of its decoration, with inscriptions legible from opposite ends of the fabric, strengthens this attribution. Fig. 14, a formally inscribed piece, could have served the same purpose or formed part of a banner or panel of an *ʻabā'* cloak.[103] Fig. 18 belongs to a group of finely worked panels called ″laps,″ which were hung off of poles as flags or banners. Many smaller embroidered pieces probably belonged to the multi-purpose category of ″*manādīl,*″ items used as handkerchiefs, napkins, cloth envelopes, or head or face coverings.[104]

The written sources are ambiguous in their descriptions of embroideries and the kinds of textiles which they embellished. The word ″*ṭirāz*″ comes originally from the Persian ″*tarāzīdan,*″ which means ″to embroider.″[105] In modern Arabic, ″*taṭrīz*″ is the term generally employed for ″embroidery.″ It means, alternatively, ″embellishment″ or ″garnish.″ ″*Tanmīq*″ (ornamentation) and ″*tawshiyah*″ (ornamentation with color), although not as common, may also imply an embroidered

[105]A. Grohman, ″Ṭirāz,″ 785.

ornament. In a similar fashion, medieval Arabic sources do not always differentiate between ″embroidery″ and ″decoration″; in fact, there may not have been a technical term for this kind of needlework. Ibn al-Ukhūwah does differentiate between regular needlework *(naqshīyah)* and what we may call embroidery *(raqqām),* but most sources do not.[106] Any embellishment of a textile, whether sewn or painted on, woven into, or stamped upon, could be called *″ṭirāz,″* for instance.[107] It seems not to have been the technique of application but the visual effect which was important. Mamluk sources use many terms which, in one way or another, make reference to the appearance of embroidered designs: *mushaḥḥar* or *marqūm* (striped), *muzarkash* (a brocade, embroidered with silver and gold thread), *ṭirāz* (an embroidered inscription), and *manqūsh* (colored/striped or inscribed).[108]

While most everyday embroidery was produced at home by women, there existed at the same time a market industry which catered to the court. Embroidered fabrics, second only to brocades, were the most decorative and sought-after textiles in Mamluk Egypt. Embroidered garments were not only worn at home by most people; they also made up the textile ensembles known as *khilaʻ*. Serjeant reproduces the following description, related by Maqrīzī, of robes of honor given by the sultan al-Nāṣir Muḥammad to his most important amirs:

> [They consisted of] a kind of cloth called ṭardwaḥsh made in the ṭirāz factory which was in Alexandria, Miṣr (Cairo) and Damascus. It was embroidered with bands (mudjawwakha djākhāt) which were inscribed with the titles of the sultan. It had bands (djākhāt) of ṭardwaḥsh, and bands of different colors intermingled with gold-spangled linen (ḳaṣab mudhahhab), these bands being separated by embroideries in color (nuḳūsh), and a ṭirāz border. This was made of ḳaṣab [linen], but sometimes an important personage (among the officials) would have a ṭirāz border embroidered with gold (muzarkasha bi-dhahab) with a squirrel . . . and beaver . . . fur upon it. . . .[109]

[106]See note 89. The term *raqqām* would seem to be related to the more common *″marqūm,″* which denotes a striped (embroidery) in most Mamluk sources. *″Raqqām″* may also be connected to the use of counted stitches.

[107]*Ṭirāz* generally means ″embroidery″ in the Geniza documents, where invoices for textile orders are calculated. For example, we read of bleaching, pounding, cleaning, scraping, mending, and ″embroidery″ *(ṭirāz)* of an ordered garment and the individual prices of each (Goitein, *Letters of Medieval Jewish Traders,* 275, no. 3).

[108]Most of the references to these terms can be found in Mayer, *Mamluk Costume,* and Serjeant, *Islamic Textiles*.

[109]Serjeant, *Islamic Textiles,* 150.

Once again, the terminology is confusing. What Serjeant defines as "embroidery" may be any one of several techniques. For instance, "*zarkash*" may designate true brocade, in this case a woven silk with supplementary weft threads in gold or silver thread. "*Zarkash*" could, alternatively, also be a decorative band embroidered (as opposed to woven) in a baser fabric in gold or silver thread. "Stripes" and "bands" could be painted on the fabric, woven into it, or embroidered. In other words, the medieval Arabic terms describe the decorative function of the colored threads, not how they were structurally related to the ground fabric.

It is likely, however, that in this passage several techniques are implied and that embroidery was simply one of many ways to embellish a textile. We tend to think in terms of a hierarchy of textile techniques (woven designs are much better than printed designs, for example). The medieval textile connoisseur, on the other hand, discriminated on the basis of fabric and color. A beautifully executed silk embroidery (on linen) may have been in as much demand as equally colorful decoration woven into the fabric. It would appear that the finest embroideries decorated robes of honor, that the court special-ordered embroidered fabrics, and that some embroideries were quite expensive and cherished by their owners.

These passages, of course, only refer to the highest quality embroideries which were manufactured in the *sūq* and destined for the court. There was a second and larger market, for civilian Cairenes. These were made at home by women. What the domestic style looked like may be reconstructed from surviving pieces. Angular and geometric patterns may be related to what we can call the "folk art" of the period, while designs imitating silks patterns would belong to a more official strain of Mamluk art. The differentiation of domestic from Mamluk textiles requires further study.

CONCLUSIONS

What kinds of questions should we be asking about Mamluk textiles? It is easy to become preoccupied with the minutia of stitch and thread counts, extensive motif descriptions, and terminology. While such details are useful starting points, it is crucial that we conceptualize the broader social issues. What were these fragments used for, why were they decorated the way they were, who owned them, what did they mean to their owners? In short, in what ways were textiles socially significant?

The significance of the "militarization" of Mamluk art has been often discussed by art historians.[110] Whelan relates the widespread use of military imagery, amiral

---

[110]Most sources on Mamluk art make this point, but see especially Nasser Rabbat, "The 'Militarization' of Architectural Expression in the Medieval Middle East (11th-14th Century): An Outline," *Al-'Uṣūr al-Wusṭá* 6, no. 1 (1994): 4-6; Atıl, *Renaissance of Islam*; and Estelle Whelan, "Representations of the *Khāṣṣikīyah* and the Origins of Mamluk Emblems," in *Content and Context of Visual Arts in the Islamic World,* 219-43. For studies on heraldry in Islamic art, consult the bibliography in

blazons, and specialized inscriptions of dedication (which contain the owner's military titles) throughout the Islamic world in the twelfth through fourteenth centuries to the development of *khāṣṣakīyah* imagery.[111] I have suggested that the appearance of heraldic devices and militarized inscriptions in all media in the fourteenth century was the result of increased patronage within an empowered amiral class during al-Nāṣir Muḥammad's sultanate.[112] The correlation between the rise of a military class and the popularization of such imagery is a phenomenon paralleled in contemporary Cyprus (where Crusader coats-of-arms and court scenes are omnipresent in arts sponsored by all classes),[113] in contemporary France (where the tastes of the *parvenus*—professional soldiers—affected the growth of knightly art and culture),[114] and in Byzantium (where in the twelfth century the military aristocracy sponsored a militarization of culture which affected official imagery, poetry, leisure activities, and official ceremonial).[115]

Official ceremonial was one area which al-Nāṣir Muḥammad cultivated to consolidate his power vis-à-vis his amirs. If the popularization of amiral symbols in public art was evidence of the growing power of the amiral class, the elaboration and regularity of "state ceremonies" could be seen as the sultan's response to its challenge. The daily repetition of rituals designed to demonstrate the exalted status of the sultan over the mamluks reinforced the Mamluk hierarchy while emphasizing his sovereignty.[116] Participation in these ceremonies by both the military elite and the civilian population, however obligatory, was a physical symbol of loyalty to the sultan, and in this sense can be compared to the recitation of his name in the *khuṭbah* every week or the pledge of allegiance upon his investiture.[117]

A greater part of al-Nāṣir Muḥammad's building projects were focused on the Citadel, to accommodate the expansion of these official ceremonies.[118] In addition to banquets *(asmiṭah),* royal audiences, and investitures, military officers were required to participate in drinking parties (where *qumiz*—a fermented mare's

milk—was consumed in large quantities), bi-weekly polo games, formal hunting excursions, and processions.[119]

Processions, like banquets, were held at most important state occasions and during religious festivals; they marked investitures, military victories, hunting excursions, the return of a sultan or an important amir from abroad, the two *'Īd*s, the plenitude ceremony, and the *maḥmal* procession.[120] As at banquets, strict rules were observed regarding the order of the participants (or their seating arrangements), the color and material of costume, and protocols of address and behavior.

The visual effect of these ceremonies must have been impressive. This was, of course, the intention. Large, elaborate, colorful parades and banquets, in particular, were meant to have an impact on both the Mamluk participants and the civilian spectators of Cairo. The material expressions of these events—costumes, objects of office, and serving vessels—were created by local artisans to meet the ceremonial requirements of the state.

Like Mamluk art in general, the textile industry was ″militarized″ in the fourteenth century to respond to demands by the elite for appropriate garments to be used in processions and other ceremonies of state. Mamluk costume had changed and began to adopt the cut of Mongol and Chinese court dress.[121] In terms of decoration, the Mamluks had developed a taste for combining military designs (such as blazons and inscriptions) with fluid chinoiserie. Weavers responded to these demands by making use of the drawloom, which aided in production of triple cloth. With this technology, complicated designs and, particularly repeat patterns could be produced, and reproduced, fairly quickly.

Civilian Cairo quickly developed a taste for silk brocade *(ṭardwaḥsh, nasīj).* Public processions were draped in expensive textiles, from the participants′ costumes to the mounts′ saddles and covers, the banners used in the parades and those hung over the city gates through which the procession progressed, the ″brocades″ which were out along the parade route, the decorations of shops along the way, and temporary pavilions which were set up to distribute refreshments. In a society that was already ″textile conscious,″ this regular and dramatic display of fine textiles rapidly induced a hunger for silk among the non-elite. Moreover silk was woven in the public *sūq*. With the closure of the royal textile workshops in 1341, brocades were not only produced but sold openly in the marketplace. It did not take long

[119]Walker, ″The Ceramic Correlates of Decline,″ 283.

[121]Mayer, *Mamluk Costume,* and Allsen, *Commodity and Exchange,* cite contemporary sources on this subject.

for civilian Cairenes to begin dressing, shopping, and otherwise behaving like the Mamluk elite did just a few years before.[122]

Embroidered work was yet another industry that underwent considerable expansion in the fourteenth century. Mamluk embroidery to a large degree imitated the patterns and surface effects of woven silk, although it gradually developed its own distinctive decorative repertoire. The craft must have specialized, to some degree, since the late Fatimid period. The many Arabic terms used to designate embroidered work in contemporary sources (*marqūm, zarkash, ṭirāz, nuqūsh*) reflect a variety of materials, patterns, and functions. Embroidery was also used for the ceremonial garments of the elite and in the robes of honor distributed by the sultan.

We can differentiate between two distinct styles of embroidery during the fourteenth century. Geometric designs seem to have catered to civilians and may have been produced at home. This domestic, or ″folk,″ art contrasts with the inscriptional and flowing compositions that still retained a visual affiliation with silk designs. These fabrics served a different purpose than the geometric embroideries and may have been destined for a more elite clientele.

Technological changes in embroidery in the fourteenth century kept pace with developments in ceremonial and the market demands of the amiral elite, as well as the urban bourgeoisie who imitated them. Types of stitches which had been known before, such as the chain and crewel stitches, were now used to produce inscriptions and the fluid designs of Chinese silks. New stitches (the Holbein and a group of techniques known as the ″weaving stitch″) were developed to recreate repeat patterns and the sheen of woven silk.

Technical developments in many media (textiles, ceramics, metalworking, architecture) can be explained to a large degree by the elaboration of official ceremonial. How textiles were socially significant on an unofficial level, what the mechanisms were for private production and sale, and to what extent we can differentiate between civilian and Mamluk styles of decoration are promising areas of future research.

Appendix: Catalogue of Illustrated Pieces

Figure 1. ROM, Abemayor, cat. #978.76.117
Towel fragment
Egypt, Ottoman
yellow, green, pink, and white cotton embroidery on white linen; copper threads
H: 19 cm, W: 37 cm
Technical analysis: 2/2 twill and looped weave, embroidery in double-running stitch and satin stitch couching
For further reading: Maçide Gönül, "Some Turkish Embroideries in the Collection of the Topkapi Sarayi Museum in Istanbul," *Kunst des Orients* 6, no. 1 (1969): 43-76.

Figure 2. ROM, Abemayor, cat. #978.76.802
Fragment sewn together from three pieces
Egypt, late Ayyubid-early Mamluk
red and blue silk embroidery on undyed linen
H: 82.5 cm, W: 23 cm
Technical analysis: tabby ground, embroidery in chain stitch
Inscription: "Everlasting glory and prosperity . . . to its owner" (in *naskhī*)

Figure 3. ROM, Abemayor, cat. #978.76.574
"*Ṭirāz*" fragment
Egypt, Ayyubid or early Mamluk
red and yellow silk, blue linen
L: 4.6 cm, W: 4 cm
Technical analysis: tabby with tapestry-woven inscriptional register (yellow on red)
Parallels: Cornu, *Tissus Islamiques,* BAV 6797 (p. 575) and 6928 (p. 576)

Figure 4. ROM, Abemayor, cat. #981.207
Silk fragment, *khil'ah?*
Egypt, Mamluk (14th century)
dark blue, light blue, and ivory silk
L: 37.5 cm, W: 25 cm
Technical analysis: weft-faced compound tabby with warp-faced tabby stripes, triple-cloth
Inscription: "Sulṭā[n]"
Parallels: Atıl, *Renaissance of Islam,* cat. #119 (p. 236)—nearly identical

Figure 5. ROM, Abemayor, cat. #970.364.4
Silk fragment, *khil'ah?*
Egypt, early Mamluk
dark and light brown silk
H: 19 cm, W: 23 cm
Technical analysis: lampas weave—satin ground and tabby pattern
Inscription: ″al-Sulṭān al-Malik . . .″ (in register, in *thuluth*), pseudo-epigraphy in crescent (related to ″al-'ālim″ or ″al-'ālī″?)

Figure 6. ROM, Abemayor, cat. #978.76.291
Appliquéd ″*ṭirāz*″ fragment
Egypt, Mamluk (14th century)
undyed, red, and blue cotton
L: 21 cm, W: 25 cm
Technical analysis: coarse tabbies, Z-spun threads
Inscription: ″Glory to our Lord the Sultan . . .″ (in *thuluth*)

Figure 7. ROM, Abemayor, cat. #978.76.1110
Fragmentary band of couched work
Egypt, Mamluk
undyed and blue linen
Technical analysis: tabby ground (two layers), embroidery in satin stitch couching (border registers) and laid and couched work (main design)
Parallels: Lamm, ″Some Mamluk Embroideries,″ Figure 3

Figure 8. ROM, Abemayor, cat. #978.76.799
Embroidery fragment
Egypt, Mamluk
red and blue linen embroidery on undyed linen
Technical analysis: tabby ground, embroidery in chain and stem stitches
Inscription: illegible
Parallels: For an illustrated embroidery sampler see Baker, *Islamic Textiles,* 75 (right)

Figure 9. ROM, Abemayor, cat. #978.76.1148
Embroidery fragment
Egypt, Mamluk
brown silk embroidery on undyed linen
Technical analysis: tabby ground, embroidery in satin stitch and some laid and couched work; double cloth
Parallels: Lamm, ″Some Mamluk Embroideries,″ Figure 5 (for stippling)

Figure 10. ROM, Abemayor, cat. #978.76.1148

Figure 11. ROM, Abemayor, cat. #978.76.348
Large embroidered fragments, repaired
Egypt, probably Ayyubid
blue, green, and black silk embroidery on undyed linen
H: 35 cm, W: 28 cm
Technical analysis: tabby ground, embroidery in chained feather stitch
Inscription: difficult to read, possibly ″Everlasting glory, blessings, and happiness to its owner″ (in floriated *naskhī*)
Parallels: Cornu, *Tissus Islamiques,* BAV 6929 (Pl. VIII and p. 581)

Figure 12. ROM, Abemayor, cat. #978.76.292
Embroidered *″ṭirāz″* fragment
Egypt, Mamluk
blue silk embroidery on undyed linen
L: 12 cm, W: 56 cm
Technical analysis: tabby ground, embroidery in Holbein and counted zigzag stitches
Inscription: pseudo-epigraphy in diamonds (related to ″al-‘ālim″ or ″al-‘ālī″?)
Parallels: Lamm, ″Some Mamluk Embroideries,″ Figures 2 and 3

Figure 13. ROM, Abemayor cat. #978.76.178
Towel fragment
Egypt, Mamluk
blue linen embroidery on undyed linen
L: 20 cm, W: 17 cm
Technical analysis: tabby ground, embroidery in Holbein and counted zigzag stitches
Parallels: Lamm, ″Some Mamluk Embroideries,″ Figure 3; Gönül, ″Some Turkish Embroideries,″ 50

THE AMERICAN UNIVERSITY OF BEIRUT

The Patronage of al-Nāṣir Muḥammad ibn Qalāwūn, 1310-1341*

The explanation for the nature of Mamluk architectural patronage that is now widely accepted by scholars is that the Mamluks, who were slave soldiers who had illegally seized the throne from their masters, the Ayyubids, sponsored monuments, mostly madrasahs, that would redound to their economic as well as political advantage. Under the law, the Mamluks had no right of inheritance; therefore, they sought to build religious institutions whose endowment would enable them to transfer their wealth, give employment to their children, establish local ties, and win the favor of the religious elite, the ulama, all at the same time. This patronage was also interpreted as a means of political legitimation: their sponsorship of madrasahs displayed a commitment and devotion to the Ayyubid Sunni revival and thus made them legitimate heirs of the Ayyubids.[1]

This thesis, though valid as far as it goes, does not account for the change in the social structure of the ruling elite over time. It cannot be applied to individuals who ceased to fit the profile constructed for Mamluk rulers by choosing not to perpetuate the system, but to change its course. In particular this was true of the house of Qalāwūn, who did inherit the throne of the Mamluk sultanate and whose most distinguished figure was al-Nāṣir Muḥammad ibn Qalāwūn. Al-Nāṣir was not a slave soldier and did not rise to power through the army. His reign stands in sharp contrast to those of his predecessors. Unlike the short unstable regimes of Mamluk military generals, al-Nāṣir's third reign placed on the throne a free-born ruler who succeeded his father and brother and ruled for over thirty years in peace and prosperity. His patronage of architecture also stands in contrast to that of his predecessors; it shifts from the founding of madrasahs to the building of congregational mosques. This shift was not only due to practical reasons but has symbolic significance, as this article will make clear.

*This article was originally part of my dissertation, "Urban Form and Meaning in Bahri Mamluk Architecture" (Harvard University, 1992), and was presented as a lecture at the Sackler Museum, Harvard University, on 20 November 1992.

[1]See R. Stephen Humphreys, "The Expressive Intent of the Mamluk Architecture of Cairo: A Preliminary Essay," *Studia Islamica* 35 (1972): 69-119, and I. M. Lapidus, "Mamluk Patronage and the Arts in Egypt: Concluding Remarks," *Muqarnas* 2 (1984): 173-81.

Muḥammad ibn Qalāwūn was raised to the sultanate for the first time in 693/1293, with the title al-Malik al-Nāṣir (victorious king).[2] He was only nine years of age at the time, and power was in the hands of his viceroy, Kitbughā al-Manṣūrī, and his vizier, ʿAlam al-Dīn al-Shujāʾī.[3] The next year Kitbughā deposed the boy king, removed him from the palace, and confined him and his mother to an apartment in the Citadel;[4] he then claimed the throne for himself as al-ʿĀdil Kitbughā, and appointed as viceroy Ḥusām al-Dīn Lājīn, the former governor of Damascus who had emerged from hiding after his involvement in the assassination of al-Ashraf Khalīl ibn Qalāwūn.[5]

Kitbughā′s two-year reign ended when al-Manṣūr Lājīn deposed him in turn and exiled al-Nāṣir Muḥammad to al-Karak.[6] In 698/1299, the mamluks of al-Ashraf Khalīl, aided by Burjī mamluks, revolted against Sultan Lājīn, murdered him while he was at prayer in the Citadel, and brought al-Nāṣir Muḥammad back from exile at al-Karak to his rightful throne.[7] A new government was formed. Amir Sayf al-Dīn Salār was appointed to the office of viceroy and Amir Baybars al-Jāshankīr to the office of *ustādār*.[8] But this only began yet another struggle between Amir Salār, the leader of the Ṣāliḥī and Manṣūrī mamluks, and Amir Baybars, the leader of the Burjī mamluks. The increasing rivalry between them, and their interference with the authority of al-Nāṣir Muḥammad, resulted in al-Nāṣir′s losing his throne once again. He fled back to al-Karak in 708/1308.[9]

Baybars al-Jāshankīr was declared sultan in 708/1309,[10] and Salār was appointed to the office of viceroy.

This time al-Nāṣir Muḥammad prepared his return to the throne of Egypt. He gained the support of the bedouin Arabs in al-Karak and of the governors of Aleppo, Ḥamāh, Jerusalem, and Ṣafad. Although Baybars had seized all his wealth, al-Nāṣir was still able to recruit some of the mamluks of his brother Khalīl in addition to defectors from Baybars′s rule.[11] In a triumphal procession al-Nāṣir Muḥammad entered the city of Damascus.[12] On Friday, the twelfth of Sha'bān of the year 709/1310, the *khuṭbah* was delivered in the name of al-Malik al-Nāṣir Muḥammad instead of Baybars in Damascus, and the amirs gave their oath of allegiance to the sultan. On the nineteenth of Ramaḍān, the name of al-Nāṣir replaced that of Baybars in the *khuṭbah* in Cairo. From Damascus, al-Nāṣir proceeded to Cairo, where he arrived on the first of Shawwāl of the year 709/1310.[13] Baybars had fled with his mamluks, and the city had prepared to receive the sultan. Al-Nāṣir mounted the throne for the third time at the age of twenty-four, this time to stay.

Al-Nāṣir′s third accession to the throne ushered in a new era in Mamluk history. He began by eliminating the amirs who had betrayed him; both Baybars al-Jāshankīr and his viceroy Salār were executed.[14] They were replaced by the mamluks who supported him, most of whom were former mamluks of his brother al-Ashraf Khalīl. They were promoted to the rank of amir and assigned official posts.

Al-Nāṣir governed with a limited number of trusted men of high caliber, whose long terms are reflective of the stability of al-Nāṣir′s court. Among them were Tankiz al-Ḥusāmī, the governor of Damascus (1312-40),[15] 'Alā' al-Dīn Alṭunbughā, governor of Aleppo (1314-17, 1331-41),[16] and Arghūn al-Dawādār al-Nāṣirī, viceroy of Egypt (1310-26),[17] who earlier had been chancellor and was something of an intellectual: he collected books and studied hadith and Hanafi

law, and was permitted to issue *fatwá*s.[18] Tankiz al-Ḥusāmī was an effective governor in Damascus for most of al-Nāṣir′s reign; imitating al-Nāṣir′s efforts at urban reform in Egypt, he both restored and built a large number of institutions, reformed the management of *waqf*s, and built an aqueduct to supply the city with water.[19]

Al-Nāṣir was a strong, autocratic ruler; his third reign lasted thirty-one years, until his death in 741/1341. Those years have been described as the ″climax of Egyptian culture and civilization,″[20] a time when ″the empire reached the highest pinnacle of its power.″[21] He was popular with the people, and established strong ties with the bedouin tribes who had supported him while he was in exile. He was the first of the Mamluk sultans to speak fluent Arabic. Twice a week, he administered justice before the people in the Dār al-ʻAdl of the Citadel.

At the frontiers of the Mamluk empire, al-Nāṣir′s third reign was better known for peace than war. The reign of al-Ashraf Khalīl had seen the fall of Acre and an end to the Crusades in Syria. In al-Nāṣir′s second reign the Mongol invasion under the Ilkhan Ghazan Maḥmūd in 699/1299[22] was defeated by the Mamluk army in 702/1303 at Shaghab.[23] The threat from Mongol Iran was completely eliminated during al-Nāṣir′s third reign. In their last attempt to invade Syria in 712/1312, led by the Ilkhan Öljeitü, Ghazan′s successor, the Mongols were forced by the Mamluks to retreat beyond the Euphrates.[24] A peace treaty, the treaty of Aleppo, was later negotiated and signed with the Ilkhanid Abū Saʻīd, Öljeitü′s successor, in 720/1320.[25] Freed from these problems, al-Nāṣir Muḥammad could direct his efforts at establishing diplomatic relations and encouraging trade.[26] His court was said to have received eight embassies in a single year (716/1316),

among them representatives from the Byzantine Emperor, the Khan of the Golden Horde, and the Ilkhan Abū Sa'īd.[27] To further strengthen his relations with the khan, al-Nāṣir proposed to marry Abū Sa'īd's daughter, but no agreement could be reached about her dowry. Eventually a descendant of Chingiz Khan was sent as wife to al-Nāṣir Muḥammad to establish ties between them.[28] Other fronts were also secured. Expeditions between 720/1320 and 738/1337 resulted in an agreement with Cilician Armenia to double the annual tribute to which it had consented during the reign of Lājīn.[29] To secure trade with the East, al-Nāṣir strengthened diplomatic relations with both the sultan of Delhi and the Rasulids of Yemen.[30]

Having stabilized and secured his empire the sultan turned his attention to public works. Roads, irrigation systems, bridges, mosques, and religious institutions were built. Al-Nāṣir's enthusiastic patronage of architecture set the tone for his followers and initiated a building boom. The sultan was beyond doubt the most lavish patron of architecture in the Mamluk period. Mamluk historians acknowledge this when they compare him to his predecessors. Writes al-Maqrīzī:

> Al-Nāṣir was fond of architecture. From the time that he returned from al-Karak for his third sultanate he kept on continuously building until his death. His expenditure was estimated at eighty thousand *dirham*s per day. When he saw something he disliked, he demolished it entirely and rebuilt it to his satisfaction. No king before him equaled his expenditure on architecture. When al-Manṣūr Qalāwūn desired to build a covered *maṣṭabah* to sit on, protected from the heat of the sun, and al-Shujā'ī wrote for him an estimate of its cost (four thousand *dirham*s), he took the paper from the hands of al-Shujā'ī and tore it up. He said: "I sit in a *maq'ad* of four thousand *dirham*s! Erect me a tent when I descend [the Citadel], for I will not release anything from the treasury for such a thing." This was the case with al-Ẓāhir Baybars and those who preceded him; they did not spend money but saved it conservatively and fearfully.[31]

Al-Nāṣir instituted an official *dīwān* for the administration of building projects: "He built extensively, assigned Aqsunqur to manage construction, and brought

[31] Al-Maqrīzī, *Al-Sulūk,* 2:2:537.

construction workers from all over Syria. For construction, he designated a *dīwān* whose expenditures amounted to eight to twelve thousand *dirham*s per day."[32] These projects were paid for by the new wealth brought in by the reform achieved by al-Nāṣir's *rawk* (land survey) in 715/1315.[33] Under the old system, used by al-Ẓāhir Baybars and al-Manṣūr Qalāwūn, the cultivatable land was divided into twenty-four shares, and was distributed so that the sultan and his mamluks had four, the *ḥalqah*[34] had ten, and the amirs had ten. This was slightly modified by Lājīn to a four, nine, and eleven distribution. Al-Nāṣir's *rawk* awarded himself ten shares, with the remainder going to the *ḥalqah* and the amirs.[35]

Among al-Nāṣir's extensive projects was the canal at Alexandria, around which grew the town of al-Nāṣirīyah,[36] a *maydān* at the foot of the Citadel,[37] the Khānqāh of Siryāqūs,[38] and al-Jāmi‘ al-Nāṣirī.[39] In the Citadel he built the Qaṣr al-Ablaq,[40]

---

[32]Ibid., 2:1:130.

[33]Ibn Iyās, *Badā'i‘ al-Zuhūr,* 1:1:446.

[34]*Ḥalqah* literally means "ring." During the Ayyubid period the term referred to a small group of bodyguards around the sultan. During the Mamluk period the term came to refer to the free-born members of the Mamluk army. See D. Ayalon, "Studies on the Structure of the Mamluk Army-II," *Bulletin of the School of Oriental and African Studies* 15 (1953): 448-49.

[35]Al-Maqrīzī, *Khiṭaṭ,* 1:87-89.

[36]This project was carried out in 710/1310, employing one hundred thousand men according to Ibn Taghrībirdī, and forty thousand according to al-Maqrīzī. See Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 9:178; al-Maqrīzī, *Al-Sulūk,* 2:1:111; idem, *Khiṭaṭ,* 2:171.

[37]It is called Maydān Ṣalāḥ al-Dīn today. The history of this *maydān* goes back to the time of Aḥmad Ibn Ṭūlūn. It was rebuilt by the Ayyubid sultan al-Kāmil in 611/1214. During the reign of al-Nāṣir the *maydān* was revived, planted with trees, supplied with water, and enclosed by a stone wall. It became an important urban feature that provided pleasant scenery as viewed from the Citadel, especially from al-Qaṣr al-Ablaq. Al-Maqrīzī, *Khiṭaṭ,* 2:228; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 9:179.

[38]The area of Siryāqūs, outside of al-Qāhirah to the north, received a great deal of attention from al-Nāṣir Muḥammad, who developed it and built in it a number of palaces, houses, and gardens. The *khānqāh* incorporated a Friday mosque and was completed in 725/1324. Al-Maqrīzī, *Khiṭaṭ*, 2:422; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 9:79; Ibn Ḥabīb, *Tadhkirat al-Nabīh,* 2:149.

[39]It was built by al-Nāṣir Muḥammad in 711-12/1311-12 on the shore of the Nile at the southern tip of the Grand Canal outside of Fusṭāṭ. This mosque also incorporated a *khānqāh.* Ibn Duqmāq, *Al-Intiṣār li-Wāsiṭat 'Iqd al-Amṣār* (Cairo, 1893), 4:77, 101; al-Maqrīzī, *Khiṭaṭ,* 2:304; Ibn al-Dawādārī, *Kanz al-Durar*, 9:211.

[40]Built by al-Nāṣir in 713-14/1313-14. It was described by Ibn Iyās as three interlinked palaces with five *qā‘ah*s. See al-Maqrīzī, *Khiṭaṭ,* 2:209-10; idem, *Al-Sulūk,* 2:1:129; and Ibn Iyās, *Badā'i‘ al-Zuhūr,* 1:1:445. Remains of this palace were standing at the time of the French expedition, and are thus documented in drawings. See J. Jomard, "Description de la Ville et de la Citadelle du Kaire," *Description de l'Égypte par les Savants de l'Expédition Francais. Etat Moderne* (Paris, 1812).

the Great Īwān,[41] the mosque,[42] and the seven *qā'ah*s.[43] He built a number of residences for his amirs, including palaces for Ṭaqtimur al-Dimashqī in Ḥadrat al-Baqar, Baktimur al-Sāqī on the lake of al-Fīl,[44] and the two palaces of Alṭunbughā al-Māridānī and Yalbughā al-Yaḥyāwī in Rumaylah.[45] His restoration efforts included the Jāmi' al-Nāṣirī around the mausoleum of al-Sayyidah Nafīsah in 714/1314[46] and the rebuilding of the mosque of Rashīdah[47] in 741/1340.[48] Among his public works were a number of bridges *(qanāṭir,* sing. *qanṭarah):* the al-Jadīdah bridge and the al-'Āwiz bridge were constructed over the Grand Canal in 725/1324.[49] When the new canal named al-Khalīj al-Nāṣirī was finished,[50] the bridge of Bāb al-Baḥr was built across it in 725/1324.[51]

---

[41]This *īwān* has not survived; it was known as Dār al-'Adl. It was built by al-Manṣūr Qalāwūn and was renovated by his son al-Ashraf Khalīl. Al-Nāṣir Muḥammad renovated the *īwān* twice before ordering its demolition. He rebuilt the *īwān*, to which he added monumental granite columns and a great dome, in 734/1333. For a description of the *īwān* see al-Maqrīzī, *Khiṭaṭ,* 2:206; idem, *Al-Sulūk,* 2:1:148-49.

[42]The existing mosque was built by al-Nāṣir Muḥammad in 735/1334. On its site there was a much smaller mosque which was demolished by Sultan al-Nāṣir and rebuilt in 718/1318. That mosque was in turn demolished to be replaced by the existing mosque. Al-Maqrīzī, *Khiṭaṭ,* 2:212.

[43]Overlooking the *maydān,* the *qā'ah*s were built by al-Nāṣir to house his one thousand two hundred concubines. See al-Maqrīzī, *Khiṭaṭ,* 2:212.

[44]This palace was built by al-Nāṣir Muḥammad for a favored amir, al-Sāqī, whose daughter later married al-Nāṣir's son Ānūk. It was built in the year 717-18/1317-18. It is described as one of Cairo's greatest palaces to which a large and well-equipped stable was attached. 'Alī Basha Mubārak, *Al-Khiṭaṭ al-Tawfīqīyah al-Jadīdah li-Miṣr al-Qāhirah* (Cairo, 1888), 2:328-29; al-Maqrīzī, *Khiṭaṭ,* 2:68.

[45]The two palaces were built in 738/1337 by al-Nāṣir Muḥammad opposite each other at the foot of the Citadel, on the *maydān* of al-Rumaylah. They were demolished by al-Nāṣir Ḥasan ibn Muḥammad ibn Qalāwūn, who built on the site his *jāmi'*-madrasah complex in 757-63/1356-62. See al-Maqrīzī, *Al-Sulūk,* 2:2:537-41; idem, *Khiṭaṭ,* 2:71; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 9:121.

[46]Al-Maqrīzī, *Khiṭaṭ,* 2:306; Ibn Iyās, *Badā'i' al-Zuhūr,* 1:1:485.

[47]This mosque was built in 393/1002 by the Fatimid caliph al-Ḥākim. When it fell into ruin around the year 738/1337, it was looted. According to al-Maqrīzī, Amir al-Māridānī transferred a number of columns from it to his mosque on al-Tabbānah Street in al-Qāhirah.

[48]Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 4:177; al-Maqrīzī, *Al-Sulūk,* 2:1:517.

[49]Al-Maqrīzī, *Khiṭaṭ,* 2:148.

[50]This canal was dug by al-Nāṣir Muḥammad in 725/1324. It was to supply the area of Siryāqūs in which al-Nāṣir built his *khānqāh,* palaces, and pleasure gardens. See al-Suyūṭī, *Ḥusn al-Muḥāḍarah fī Akhbār Miṣr wa-al-Qāhirah* (Cairo, 1882), 2:389; al-Maqrīzī, *Khiṭaṭ,* 2:145-46.

[51]Al-Maqrīzī, *Khiṭaṭ,* 2:151; Ibn Ḥabīb, *Tadhkirat al-Nabīh,* 2:145.

The amirs followed in al-Nāṣir′s footsteps: fourteen bridges were constructed across the Grand Canal and five across al-Khalīj al-Nāṣirī.[52] Al-Nāṣir encouraged this patronage by offering both moral and financial support. Ibn Taghrībirdī related that al-Nāṣir, upon being informed of a new project, offered his thanks publicly and his financial support privately.[53] In this building frenzy whole new neighborhoods developed: ″The Island of al-Fīl and the site of Būlāq were built up. After having been empty sand on which mamluks shot arrows and amirs played ball, they were covered with houses, palaces, mosques, markets, and gardens.″[54] The most significant impact of al-Nāṣir′s patronage on the city itself was the expansion of al-Qāhirah beyond its walls. The extension of the city at its southern edge is of particular significance because that part of the city had acquired a ceremonial function. It linked the walled city of al-Qāhirah to the Citadel, thus extending its processional routes along which prestigious monuments were erected.

At the architectural level, al-Nāṣir′s patronage resulted in the revival of the hypostyle mosque, which had fallen into disuse. In fact, in Cairo, for a period of a century and a half (555-711/1160-1311)[55] only one congregational mosque had been built, and that was the Great Mosque of al-Ẓāhir Baybars north of the walled city of al-Qāhirah in 665-67/1266-69.[56] In contrast, during the time of al-Nāṣir Muḥammad, over thirty of them were built.[57] Three by al-Nāṣir Muḥammad himself used the traditional hypostyle plan and were outside the walled city. The first built by al-Nāṣir was the Jāmiʻ al-Nāṣirī on the shore of the Nile north of Fusṭāṭ; the second was constructed around the mausoleum of al-Sayyidah Nafīsah; and the third was al-Nāṣir′s royal mosque in the Citadel.

The Jāmiʻ al-Nāṣiri was built in 711-12/1311-12.[58] It no longer exists, but Ibn Duqmāq left a detailed description:

> It has four doors: one is in the qiblah wall, which is the door to the chamber of the *khaṭīb;* the second is in the *baḥrī* wall opening onto

[52] ʻAlī al-Mīlayjī, ″ʻAmā'ir al-Nāṣir Muḥammad al-Dīnīyah″ (master′s thesis, Cairo University, 1975), 93, 99.

[53] Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 9:185.

[54] Al-Maqrīzī, *Al-Sulūk,* 2:2:539.

[55] In 555/1160, the last of the Fatimid congregational mosques was built by al-Malik al-Ṣāliḥ Ṭalā'iʻ ibn Ruzzīk.

[56] During that period a very small number of *jāmi*ʻs were built outside the city, in the Qarāfah and on private farmland in the outskirts of the city, for example the *jāmi*ʻ near the mausoleum al-Shāfiʻī, built in 607/1210, and the *jāmi*ʻ of al-Ṭaybarsī, built in 707/1307. See al-Maqrīzī, *Khiṭaṭ,* 2:296-304.

[57] They are listed by al-Maqrīzī in *Al-Sulūk,* 2:2:544.

[58] Al-Manṣūrī, *Al-Tuḥfah al-Mulūkīyah,* 226; al-Maqrīzī, *Khiṭaṭ,* 2:304; Ibn Duqmāq, *Al-Intiṣār,* 1:76.

> the blessed Baḥr al-Nīl; the third is in the eastern wall that is reached from between the two gardens of ʿAlāʾ al-Dīn Ṭaybarsī al-Wazīr; and the fourth is reached from the small street which separates it from the well and leads to the door of the Qāʿat al-Khaṭabah and all else. It also has three doors, each leading to the roof. . . . It has three mihrabs on the wall of the qiblah: the large one is in the dome, the second to the east of it, and the third is to the west of it. It also has its enclosed *maqṣūrah,* which has three doors, and its *maqṣūrah* which is in its *baḥrī* side, adjacent to its eastern side, which is dedicated to the *fuqarāʾ* who are installed below and above. . . . [There are] one hundred thirty-seven columns, of which the columns of the dome, and they are ten, are large and solid. Between the dome and the roof of the *jāmiʿ* are again eight solid columns; they are shorter and thinner than the first ones. On the eastern front area, between the domed area and the eastern wall, are twenty-six columns. On the western front is an equal number, that is, twenty-six columns. On the eastern side of the *ṣaḥn,* between the *ṣaḥn* and the eastern wall, are sixteen columns. In the western side of the *ṣaḥn* is the same number. On the flank of its eastern end are thirteen columns, and on the flank of its western end the same number. Flanking the mihrab are two columns. In the *maqṣūrah* of the Sufis there are seven columns.[59]

It is clear from this description that this was a domed hypostyle mosque with a *ṣaḥn* and four *riwāq*s, the largest of which was the *riwāq* of the qiblah, three mihrabs on the qiblah wall (reminiscent of the treatment of the qiblah wall in late Fatimid mosques), and an axial symmetrical arrangement. According to the measurements given by Ibn Duqmāq, the Jāmiʿ al-Nāṣirī was one hundred *dhirāʿ* [65.5 m] on its *qiblī* and *baḥrī* sides, one hundred twenty on its eastern side, and one hundred ten on its western side, and thus was not a perfect rectangle.

The second *jāmiʿ* founded by al-Nāṣir Muḥammad was begun in 714/1314 around the mausoleum of al-Sayyidah Nafīsah. It too has not survived, but, according to the brief description of Ibn Duqmāq, it was also of the hypostyle type.[60]

---

[59]Ibn Duqmāq, *Al-Intiṣār,* 1:76.
[60]Ibid., 124.

The third *jāmi'* of al-Nāṣir was built in the Citadel in 718/1318 on a site originally occupied by a small mosque believed to have been built by the Ayyubid Sultan al-Kāmil,[61] which was demolished along with the royal kitchens.[62] By 735/1334, the mosque was again judged not fit for royalty and it was rebuilt once more. The extent of that reconstruction is unclear in Casanova's study, since none of the Mamluk historians consulted by him clearly identified the parts which were rebuilt at that time.[63] But Ibn al-Dawādārī, who lived during the reign of al-Nāṣir, provides detailed information. "In it [the year 735/1334] royal decrees were issued to demolish the *jāmi'* erected by our master the sultan, may his victory be exalted, in the Citadel, and to renovate its structure. The interior was demolished: the *riwāqs*, the *maqṣūrah,* and the mihrab. It was rebuilt to a structure the likes of which no eye has seen. He raised the arches of the *riwāqs* to an enormous height, also the dome was raised until it became very high. He brought to this mosque huge columns which were left in the city of Ashmūnayn."[64] These antique granite columns were brought to Cairo on boats and carried up to the Citadel by thousands of workers. The reconstruction of the interior involved increasing the height of the walls, which produced the reaction by Briggs that "its walls are higher in proportion to their length than those of Ibn Ṭūlūn or Ḥākim."[65]

The Jāmi' of al-Nāṣir is almost square in plan, measuring 63 by 57 meters (Fig. 1). The *ṣaḥn* is a large rectangle measuring 35.50 by 23.50 meters; it originally had a fountain in the center, but that no longer exists.[66] The qiblah *riwāq* is four bays wide and each of the side *riwāq*s are two bays wide. As in the Jāmi' of al-Ẓāhir Baybars (Fig. 2), the area in front of the mihrab, covering nine square bays, is covered by a dome carried by wooden stalactite pendentives resting on ten cylindrical granite columns.[67] Neither the original mihrab nor the marble paneling

[63]Including the accounts of al-Maqrīzī, Ibn Taghrībirdī, and al-'Umarī, who discussed the rebuilding but failed to indicate the changes made to the first structure.

[64]Al-Mīlayjī in "'Amā'ir al-Nāṣir Muḥammad al-Dīnīyah," 205-6, discloses the important account of Ibn al-Dawādārī, *Kanz al-Durar*, 9:382.

[65]M. Briggs, *Muhammadan Architecture in Egypt and Palestine* (New York, 1924), 101.

[66]This fountain was documented by Watson in 1886. The *ṣaḥn* of the mosque remains bare today. His survey and description of the mosque were published in *Journal of the Royal Asiatic Society* 18 (1886): 477-82.

[67]The original dome was covered with green tiles; it collapsed and was rebuilt during the reign of Sultan Qāytbāy in 893/1487, but this dome has also perished. The present dome is a modern addition made by the Comité in 1935. Ibn Iyās, *Badā'i' al-Zuhūr,* 3:253; Ḥasan 'Abd al-Wahhāb, "Dawlat al-Mamālīk al-Baḥrīyah: 'Aṣr al-Nāṣir Muḥammad ibn Qalāwūn," *Majallat al-'Imārah* 7-8 (1941): 295.

of the interior walls has survived.[68] Three projecting portals provide access to the mosque. The main portal is of the stalactite type; it is in the center of the northwestern facade on an axis with the mihrab (Fig. 3). The second portal is placed in the center of the northeastern facade and leads to the *ṣaḥn;* it has a trilobed arched recess. The third is located at the end of the southwestern wall; its pointed-arched recess features an *ablaq* medallion. This portal opens onto the qiblah *riwāq* and gives access to the royal *maqṣūrah* to the right of the mihrab.[69] It was the entrance used by the sultan on Fridays; the amirs entered through the portal on the northwestern wall.[70]

The two minarets built of stone and adorned with faience mosaics that rise above the structure contrast with the otherwise austere exterior. One minaret is located above the main portal; the other occupied the eastern corner of the mosque. The minaret above the portal has a conical shape of three stories; two balconies with stone-paneled parapets separate the shafts. The lower two shafts are carved with zigzag motifs; the upper shaft is ribbed and carries a bulbous ribbed top below which is an inscription band of white faience mosaic. The whole of the upper shaft is covered with white, blue, and green faience mosaic. The eastern minaret has a rectangular base and a cylindrical second shaft, both undecorated. The third story is similar to that of the first minaret only in that the upper structure is raised on an open arcade. Both the bulbous shapes and the use of faience mosaics testify to the participation of Persian craftsmen.[71] The interior facade of the *ṣaḥn* is articulated by a row of arched windows running across the facade above the arcade (Fig. 4). Painted *ablaq* masonry highlights the frame of the windows and the voussoirs of the arcade below. The wall is capped by stepped crenellation. At each of four corners is a sculptural element featuring the *mabkharah* minaret top.

Al-Nāṣir′s example was followed by many amirs who built Friday mosques within the city. The privilege of building congregational mosques was no longer reserved for the sultan. Five examples of the hypostyle *jāmi'* dating to this period

---

[68]The marble paneling was dismantled and transferred to Istanbul by Sultan Selim. Both the mihrab and the marble dado were reconstructed by the Comité on the basis of photographs in 1947. See Doris Behrens-Abouseif, *Islamic Architecture in Cairo: An Introduction* (Leiden, 1989), 109; Al-Milaīgī, ″'Amā'ir al-Nāṣir Muḥammad al-Dīnīyah,″ 216-17.

[71] For further discussion, see Michael Meinecke, ″Die mamlukischen faience Dekorationen: Eine Werkstatte aus Tabriz in Kairo (1330-1355),″ *Kunst des Orients* 11 (1976-77): 85ff.

are extant. The Jāmiʿ of Qūṣūn al-Nāṣirī, the son-in-law of al-Nāṣir Muḥammad,[72] was constructed in 730/1329[73] outside of Bāb Zuwaylah, on the street of al-Qalʿah. Today only the *riwāq* of the qiblah remains; the rest was demolished when the street of Muḥammad Alī was constructed. ʿAlī Pasha Mubārak proposed a design for its reconstruction that was implemented in 1893. The only remaining part of the original structure is the northwestern portal containing the foundation inscription: "Qūṣūn al-Sāqī al-Malākī al-Nāṣirī ordered the construction of this blessed *jāmiʿ* during the reign of our master al-Malik al-Nāṣir . . . in the year seven hundred thirty [1329]."[74]

The Jāmiʿ of Ulmās al-Ḥājib, the chamberlain of the imperial court,[75] located at the intersection of Ḥilmīyah Street and the Boulevard Muḥammad Alī, was begun in 729/1328-29 and completed in 730/1329 (Fig. 5). Attached to the *jāmiʿ* is the mausoleum of the founder. It occupies the northern corner of the *jāmiʿ* in the sharp angle formed by the adjustment between the edge of the street and the orientation of the qiblah wall. The site is very irregular so the *riwāq*s differ in size; their organization is maintained by a shift in the main axis of the building.

Amir Bashtāk al-Nāṣirī[76] constructed his *jāmiʿ* opposite a *khānqāh*[77] he had built (it no longer survives) and linked the two with a bridge.[78] According to

---

[72]Qūṣūn al-Nāṣirī was a mamluk of al-Nāṣir Muḥammad, who came to Cairo in the company of Khawand Ibnat Uzbek, the wife of al-Nāṣir Muḥammad, in 720/1320. He was drafted, trained in the Citadel, and appointed to many posts until he was promoted to a commander of a thousand mamluks. The sultan was married to his sister but also became his father-in-law in 727/1326-27. Al-Nāṣir appointed him guardian to his son Abū Bakr, whom he executed and replaced with another son of al-Nāṣir, the five-year-old al-Ashraf Kuchuk. Qūṣūn ruled the country as *nāʾib al-salṭanah* in Cairo. He was murdered by the amirs who allied with Aḥmad ibn al-Nāṣir Muḥammad in his quest for the throne in 742/1341. Ibn Ḥajar, *al-Durar al-Kāminah,* 3:257; al-Maqrīzī, *Khiṭaṭ,* 2:307.

[73]Al-Maqrīzī, *Khiṭaṭ,* 2:307.

[74]Cited by Suʿād Māhir Muḥammad, *Masājid Miṣr wa-Awliyāʾuhā al-Ṣāliḥūn* (Cairo, 1971-83), 3:191.

[75]Ulmās al-Ḥājib also held, though not officially, the office of viceroy when Amir Arghūn left the post and was appointed governor of Aleppo. Al-Nāṣir left him in charge of the Citadel when he traveled to the Ḥijāz in 732/1331. He lost the trust of al-Nāṣir Muḥammad in 734/1333 and was killed under mysterious circumstances in that year. See Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 3:89-91.

[76]Amir Bashtāk al-Nāṣirī was a mamluk of al-Nāṣir Muḥammad. It is said that al-Nāṣir wanted to purchase a mamluk who looked like the Ilkhan Abū Saʿīd; Bashtāk was sold to him for six thousand *dirham*s, and for that he was favored by the sultan. He grew rich by confiscating the wealth of Baktimur al-Sāqī after his death. Conflict between him and Amir Qūṣūn ended his life in 742/1341. See Ibn Ḥajar, *al-Durar al-Kāminah,* 1:477; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 9:18-19.

[77]The *sabīl* built by Ulfat Hānim in 1280/1863 stands on the site of the *khānqāh* today.

[78]Al-Maqrīzī, *Khiṭaṭ,* 2:262.

al-Maqrīzī, the *jāmi‘* was completed in 736/1335,[79] but the inscription carved on the door of the minaret leading to the roof of the *jāmi‘* indicates a completion date of 727/1326-27. It is located outside the walled city on the street of Qabū al-Karamālī on Birkat al-Fīl (Port Sa‘īd Street today). This *jāmi‘* was rebuilt by Princess Ulfat Hānim, the mother of Muṣṭafá Pasha Fāḍil, in 1278/1861 and is now called the Jāmi‘ of Muṣṭafá Pasha Fāḍil. Only the main portal and the minaret remain of the original structure (Fig. 6).

The Jāmi‘ of Sitt Miskah (Fig. 7), located in Sūwayqat al-Sibā‘īyīn was founded by Sitt Miskah al-Qahramānīyah (also known as Sitt Ḥadaq), the majordomo of the harem of al-Nāṣir,[80] in 741/1340.[81] The inscription on a wooden panel above the door of the minbar provides the date of its completion, 746/1345.[82] In its northwestern corner, the *jāmi‘* contains Sitt Miskah′s tomb; there is a band of Quranic inscription (from Sūrat Yāsīn) carved in stone on the exterior of the building, and a religious poem carved in wood in the interior.[83] The qiblah wall is lavishly decorated in marble. Marble columns also support the elaborate roof structure of the qiblah *riwāq*. The courtyard has a well—the ablution fountains are outside the *jāmi‘*—and its walls are decorated in stucco.[84]

---

[79]Ibid., 309.

[80]Sitt Miskah al-Qahramānīyah al-Nāṣirīyah was a concubine who was brought up under the sultan′s roof. Admiring her competence, the sultan appointed her to administer the royal harem. She was in charge of all affairs of the harem, from raising the sultan′s children to organizing celebrations and weddings. The responsibilities she assumed and the control she demonstrated granted her the respected title ″Sitt.″ She had an influential role in the sultan′s decision to relieve merchants of unjust taxation. See Ibn Ḥajar, *al-Durar al-Kāminah,* 2:7; al-Maqrīzī, *Khiṭaṭ,* 2:116.

[81]Al-Maqrīzī, *Khiṭaṭ,* 2:326.

[83]Mubārak, *Al-Khiṭaṭ al-Tawfīqīyah,* 1:3:91.

[84]See H. Al-Harithy, ″Female Patronage of Mamluk Architecture in Cairo,″ *Harvard Middle Eastern and Islamic Review* 1, no. 2 (1994): 152-74, and C. Williams, ″The Mosque of Sitt Hadaq,″ *Muqarnas* 11 (1994): 55-64.

The Jāmi' of Alṭunbughā al-Māridānī, the son-in-law of al-Nāṣir,[85] is located outside of Bāb Zuwaylah on al-Tabbānah Street (Fig. 8).[86] It was begun in 738/1337 and completed in 740/1339.[87] Al-Maqrīzī, in a rare instance, gives us the name of the architect as Ibn al-Suyūṭī, al-Nāṣir's chief architect and the architect responsible for the Madrasah al-Aqbaghāwīyah (740/1340) attached to the Mosque of al-Azhar.[88] Like the *jāmi'*s of al-Nāṣir, al-Māridānī's has a traditional hypostyle plan (Fig. 9) but was built inside the city. The hypostyle plan was, therefore, adapted to its urban setting. Internally, it maintains a symmetrical axial arrangement around the open courtyard. The plan is rectangular, measuring 20 by 22.5 meters, with the northern corner carved out. To retain its symmetrical interior, a chamber was built in the southern corner of the qiblah *riwāq*, which comprises four bays; the remaining three *riwāqs* have two bays each. Three entrances lead to the *ṣaḥn,* with a fountain in the center. The first is on the northeastern side opening onto al-Tabbānah Street. The second entrance is across the *ṣaḥn* from the main portal and is the simplest of the three. The third is on the northwestern side on an axis with the mihrab. The side entrance on al-Tabbānah Street is transformed into the main entrance, for it links to one of the major ceremonial streets of Cairo through which the sultan's procession passed on its way to the Citadel from Bāb al-Naṣr.

In this series of mosques two significant architectural developments are worth noting. The first was the attachment of the mausoleum to the *jāmi',* as was already customary with madrasahs. The second was the revival of the hypostyle *jāmi'* and the adaptation of its plan to the constrained sites within the urban fabric. In the case of al-Māridānī, for example, the mosque is located at a bend in the street. To accommodate the bend, the corners are cut at an angle to reflect the change in the direction of the street; the axial symmetry of the interior was maintained by building a cell to occupy the right corner of the qiblah *riwāq*. The portal is placed in the section of the building that is set back from the street, thus forming a pocket in front of the entrance which becomes part of its transitional spatial sequence. The minaret is located in the most visible section of the building. The jagged corner of the building joins the entry porch to make the portal appear to be projected, a reference to the tradition to which the mosque belongs that includes the Mosque of al-Ḥākim and the Mosque of al-Ẓāhir Baybars, both of which have projected portals.

The number of *jāmi'*s built during the third reign of al-Nāṣir Muḥammad has been attributed simply to the growth of the city and its population, but it may also

---

[85]Amir Alṭunbughā al-Māridānī al-Sāqī was a favored mamluk of al-Nāṣir Muḥammad, who appointed him to the post of *sāqī* (cup-bearer) followed by many other posts until he became commander of a thousand. After the death of al-Nāṣir Muḥammad, his son al-Manṣūr Abū Bakr ascended the throne and imprisoned Alṭunbughā al-Māridānī in 742/1341. He was released after al-Manṣūr was deposed and replaced by his brother al-Ashraf Kuchuk in the same year. In

have broader significance. It can be first explained in light of the shift in authority from the Shafi'i to the Hanafi rite, whose law differed on the number of *jāmi'*s allowed in the city.[89] During the Ayyubid period no congregational mosques were built; the Friday *khuṭbah* was suspended from the Jāmi' of al-Azhar, and the number of *jāmi'*s in which the Friday *khuṭbah* had taken place during the Fatimid period was now reduced to two: the Jāmi' of al-Ḥākim in al-Qāhirah and the Jāmi' of 'Amr ibn al-'Āṣ in Fusṭāṭ.[90] Though the Ayyubids were Hanafis, Shafi'i law predominated during the Ayyubid period, and only Shafi'is were appointed to the position of *qāḍī al-quḍāh* (chief justice), assisted as well by other Shafi'i qadis. The Shafi'i law allows only one congregational mosque in each city. The situation continued during the early years of the Mamluk period until al-Ẓāhir Baybars built his *jāmi'* in 665/1266 in the new quarter of al-Ḥusaynīyah and Sultan Lājīn restored the Jāmi' of Ibn Ṭūlūn and its Friday *khuṭbah* in 696/1296. When al-Ẓāhir Baybars ordered the restoration of the Friday *khuṭbah* in the Jāmi' of al-Azhar in 665/1266, the Shafi'i *qāḍī al-qudāh* Tāj al-Dīn ibn Bint al-A'azz issued a *fatwá* that two Friday *khuṭbah*s should be allowed in the same city and the Hanbali *qāḍī al-qudāh* Shams al-Dīn al-Ḥanbalī issued a *fatwá* contradicting the Shafi'i qadi.[91]

The Shafi'i rite gradually lost its dominance. First al-Ẓāhir Baybars in 663/1264 appointed four people to the office of *qāḍī al-qudāh,* one for each of the four rites, instead of a single Shafi'i *qāḍī al-qudāh*.[92] The Shafi'i rite continued to dominate for a while—the positions of imam and *khaṭīb* were reserved for the Shafi'is, and the Shafi'i qadi led the hierarchical order of seating at court. During the fourteenth century, however, the Hanafi rite gradually gained popularity, and the number of madrasahs devoted to it increased. Towards the end of the Baḥrī period, the Hanafis enjoyed the special favor of the sultan, who reserved the most prestigious positions for them.[93] The Friday *khuṭbah* and prayer were even held in madrasahs after Amir Jamāl al-Dīn Aqūsh obtained a *fatwá* in 730/1329 from Majlis al-Qaḍā' to conduct the Friday prayer in the madrasah of al-Ṣāliḥ Najm al-Dīn.[94] This shift away from Shafi'i dominance, combined with al-Nāṣir's patronage, resulted in the large number of congregational mosques in the city.

743/1342, during the reign of al-Ṣāliḥ Ismā'īl ibn Muḥammad ibn Qalāwūn, he was appointed governor of Ḥamāh and later Aleppo. He died in Aleppo in 744/1343. Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 4:67-70; al-Maqrīzī, *Khiṭaṭ,* 2:308.

[86]The mosque was restored by the Comité in 1314/1896.

The shift from the building of madrasahs to the building of congregational mosques can also be explained in light of al-Nāṣir Muḥammad's competitive streak, especially where al-Ẓāhir Baybars, the founder of the Mamluk sultanate, was concerned. A number of incidents that took place during the reigns of al-Nāṣir reveal a certain resentment of rulers who interrupted the reigns of the house of Qalāwūn, and a very competitive attitude towards al-Ẓāhir Baybars al-Bunduqdārī. Kitbughā al-Manṣūrī and Baybars al-Jāshankīr were the two Mamluk sultans who had interrupted al-Nāṣir's own rule, deposed him, and sent him into exile. Al-Nāṣir acquired the madrasah built by Kitbughā and replaced Kitbughā's name in the foundation inscription with his own. He also ordered the royal title of Baybars al-Jāshankīr to be removed from his *khānqāh*. Al-Nāṣir's actions can be interpreted as a gesture of disapproval of their claim to the throne on the one hand, and a desire to establish an uninterrupted royal lineage for the house of Qalāwūn on the other.

Having erased the imprint of the sultans who unjustifiably interrupted the rule of the house of Qalāwūn, al-Nāṣir must have viewed himself in direct competition with the memory of al-Ẓāhir Baybars, who was not only the founder of the Mamluk dynasty but a ruler known for his architectural patronage. Al-Nāṣir saw in him a legend in Mamluk military and political history, a rival against whom he felt the need to compete. He set about outdoing his achievements. In the Citadel al-Nāṣir built the Qaṣr al-Ablaq to match the Ablaq Palace al-Ẓāhir Baybars had built in Damascus. Contemporary historians did not miss the point: al-Maqrīzī writes, "In this year [713/1313] [al-Nāṣir] began construction of al-Qaṣr al-Ablaq on the site of the royal stable at the beginning of the year, and [it] was completed on the seventh of Rajab. He intended it to rival the palace of al-Ẓāhir Baybars outside of Damascus; he recruited craftsmen from Damascus and called on the craftsmen of Egypt."[95] Al-Nāṣir built other architectural parallels to those of al-Ẓāhir Baybars as well. Baybars had founded the royal suburb of al-Ḥusaynīyah, north of the walled city, around the congregational mosque and palace he built on the bank of the Grand Canal.[96] To match it, al-Nāṣir built the royal suburb of Siryāqūs in the northern outskirts of the city around his *jāmi'-khānqāh* complex after the building of the new canal, al-Khalīj al-Nāṣirī, in 725/1324.[97]

This competitive streak is best illustrated by the events of the year 735/1334. Al-Nāṣir proposed to rebuild Qanāṭir al-Sibā' (the Bridge of the Panthers), which had been built by al-Ẓāhir Baybars. Al-Maqrīzī tells the story:

[93]Leonor Fernandes, "Mamluk Politics and Education: The Evidence From Two Fourteenth Century Waqfiyyas," *Annales Islamologiques* 23 (1987): 94.

> It was originally built by al-Malik al-Ẓāhir Rukn al-Dīn Baybars al-Bunduqdārī. He placed on it panthers of stone, for his emblem was in the shape of a panther. It was then called Qanāṭir al-Sibā‘ [the bridge of panthers] for that reason. It was lofty and high. After al-Malik al-Nāṣir Muḥammad ibn Qalāwūn built the royal *maydān,* on the site of Bustān al-Khashshāb by Mawridat al-Balāṭ, he frequently went there and had to go over Qanāṭir al-Sibā‘ in order to reach the *maydān* from the Citadel. He was discomfited by its height and told the amirs: ″When I ride to the *maydān* across this bridge, my back hurts from its height.″ It is said that though he spread that [excuse], the reason was his dislike of having to look at an edifice of one of the kings who preceded him, and his hatred of having anyone other than himself be associated with something by name. Whenever he passed by it, he saw the panthers, which were the emblem of al-Malik al-Ẓāhir, and wished to remove them so that the bridge would be attributed to him and known by his name.[98]

The sultan ordered the bridge to be rebuilt wider and at a shallower angle. At first the reconstruction did not incorporate the panthers, which did not go unnoticed by the public.

> Amir Alṭunbughā al-Māridānī fell ill, went to the royal *maydān,* and stayed there. The sultan [al-Nāṣir] visited him frequently. Al-Māridānī was made aware of the public′s talk that the sultan only destroyed Qanāṭir al-Sibā‘ in order for it to become attributed to him, and that he ordered Ibn al-Marwānī to break to pieces the stone panthers and to throw them in the river. It is said that he [al-Māridānī] was healed after the completion of the construction of the *qanṭarah* and rode to the Citadel. The sultan was happy to see him, for he had loved him. He asked him about his health and conversed with him until the *qanṭarah* was mentioned. ″How do you like its construction?″ asked the sultan. ″By God, the likes of it has never been made,″ he replied, ″but it is not finished.″ ″How?″ [asked the sultan]. ″The panthers which were there have not been

> put back, and the people say that the sultan's purpose in removing them was because they are the emblem of another sultan." The sultan was ill-humored.[99]

On the advice of al-Māridānī the sultan ordered the panthers to be put back in their original place.

The unprecedented number of congregational mosques built by al-Nāṣir Muḥammad and members of his family and court may have encapsulated another symbolic intention beyond competing with the memory of al-Ẓāhir Baybars. Al-Nāṣir built no madrasahs but many hypostyle congregational mosques. His patronage was aimed at reinforcing the royal lineage of the house of Qalāwūn and overcoming the stigma associated with their slave origin. Building madrasahs was a tradition associated with the Mamluks advertising themselves as heirs to the Ayyubids, a legitimacy based on the slave-master relationship. Al-Nāṣir Muḥammad, a non-slave who was born a free Muslim and spoke fluent Arabic, had no wish to associate himself with such a tradition. He sought rather to revive and establish an association with a much older tradition of Islam, the caliphal tradition of building great congregational mosques.

Linda S. Northrup, *From Slave to Sultan: The Career of al-Manṣūr Qalāwūn and the Consolidation of Mamluk Rule in Egypt and Syria (678-689 A.H./1279-1290 A.D.)* (Stuttgart: Steiner Verlag, 1998). Pp. 350.

Reviewed by Robert Irwin, London, England

This has, I believe, been a long time coming. However, it has been worth waiting for. It is lucid, assiduously annotated, and in quite a few areas it breaks new ground. The opening chapter on sources is exceptionally clear. I note that she is more positive than Donald Little (in *The Cambridge History of Egypt*) in her assessment of Ibn al-Furāt. It is also curious to note that the Copt Mufaḍḍal ibn Abī Faḍā'il appears to have identified so strongly with the anti-Crusader enterprise that he even refers to Qalāwūn as *al-Shahīd.* Her portrait of Qalāwūn, the man, brings few surprises. He was, as earlier historians have judged him to be, capable, cautious, and unusually clement to defeated rivals. What is unusual in Northrup's monograph is her close focus on such matters as the sultan's real and theoretical relationship with the caliph, the phrasing of the *'ahd* or investiture diploma, and the underlying significance of the sultan's entitulature. She points again and again to the ways in which Qalāwūn took care to associate himself with the traditions of al-Ṣāliḥ Ayyūb. Also welcome is her use of the *tadhkirah*s, which were drawn up to guide Qalāwūn's deputies during his absences from Egypt, in order to shed light on details of administration and especially the supervision of irrigation and agriculture.

Even more striking is Northrup's repeated emphasis on the strength of civilian hostility to Qalāwūn. It is one of her leading themes. Some of the sources for this are rather late, but she is inclined to believe them (and so am I). According to al-Maqrīzī, Qalāwūn was at first at least so unpopular that he did not dare ride out in a traditional accession procession. The reasons for the antipathy of many of the ulama towards Qalāwūn seem to have been various, but the main issue seems to have been the high-handed fund-raising procedures of Qalāwūn and Sanjar al-Shujā'ī and their ready resort to confiscations and misappropriations of *waqf*s. It is also clear that Syrians resented Egypt's dominance and, for example, the Syrian chronicler Ibn Kathīr stated that Egypt "was a place where wrongdoing was perpetrated with impunity."

Doubtless there were others who suspected that Qalāwūn had not dealt honestly with the sons of Baybars. The death of al-Malik al-Sa'īd, possibly of a fall from his horse, must have looked suspicious. Ibn Taghrībirdī claimed that, because

Qalāwūn poisoned the prince, he was loathed until he started making conquests. Qalāwūn's grand charitable gesture, the building of the Manṣūrī Bīmāristān and Madrasah, was also very unpopular, because of the extravagance and the corvées. It is also interesting to note that, at first at least, amirs must have had reservations about their new sultan, as they threatened to depose him if he did not advance against the Mongols in northern Syria.

Finally with regard to Qalāwūn's unpopularity, on page 155 Northrup notes that Qalāwūn "was met with demands for an end to his rule on what should have been his triumphal return to the city following the conquest of Tripoli in 688/1289," but tantalizingly she does not dwell any further on this final disappointment (unless I have missed it).

Northrup believes that there were commercial reasons for Qalāwūn's final offensives against Tripoli and Acre: "Repossession of the ports of the Syrian Littoral, therefore, gave the sultanate access to a port in which the slave trade had figured and greater control over the trade routes to the interior as well as the revenues from the commerce that passed through the ports and along those routes." Yet the history of the Syrian Littoral and its once great ports for at least the next half century or so was one of desolation. The trade routes to the interior were in abeyance and almost the only revenues to be earned were earned by a small band of troopers stationed at Acre who sold caged birds to the occasional pilgrim. (But Northrup has a much better case when she argues against Meron Benvenisti's contention that the Mamluks systematically destroyed Palestinian agriculture.)

I do have one other substantial reservation. On page 47, in a discussion of the value as a source of the chronicle of Qirṭay al-ʻIzzī al-Khazindārī she notes that I have raised doubts about its veracity, but does not refer to the article in which I did so. (I did so in "The Image of the Greek and the Frank in Medieval Arab Popular Literature" in Benjamin Arbel et al., eds., *Latins and Greeks in the Eastern Mediterranean after 1204* [London, 1989], 226-42; also published in *Mediterranean History Review* 4 [1989]: 226-42.) Northrup goes on state that while she believes that "it is too early to dismiss the entire chronicle as fiction, it is perhaps necessary to use it with caution." While I did not dismiss all of Qirṭay's chronicle as fictional, I did note that some of his most improbable and exciting information is not corroborated by other chroniclers and I concluded that the "fact that the pages he devoted to the embassy to England are demonstrably nonsensical should encourage us to look with a colder eye on the other original snippets of information he offers elsewhere." When Qirṭay is the only source, as he is, for example, on Qalāwūn's recruitment of the sons of Baḥrīyah from the riffraff of the Bāb al-Lūq quarter (Northrup, 83), or on Qalāwūn's riding out on an accession procession (Northrup, 84), I think that we have to look on these reported incidents with great suspicion. The question mark over Qirṭay's reliability is not without

importance, as Northrup quotes *in extenso* an account relayed by Qirṭay of how Qalāwūn on separate days successively delegated military power, financial power, and spiritual power to three of his trusted officers. It is a fascinating narrative and one is grateful to see it translated, but I fear that its only value may lie in the light it sheds on the way that Qirṭay, or his alleged source Ibn al-Wāḥid, thought about things. As Northrup herself notes, we know practically nothing about the third officer, Ṭughrīl al-Shiblī, and there is no other evidence at all to suggest he was the supremo over spiritual affairs in Egypt. While on the subject of unreliable sources, I used to believe that the *waṣīyah* of the dying Sultan al-Ṣāliḥ Ayyūb was an authentic document. (It is cited by Northrup in a note on p. 163 on the need for military discipline.) But I now believe it should be read more carefully in order to determine, if possible, who forged it.

LI GUO, *Early Mamluk Syrian Historiography: Al-Yūnīnī's Dhayl Mir'āt al-zamān* (Leiden: E. J. Brill, 1998). Two volumes.

REVIEWED BY DONALD P. LITTLE, McGill University

Readers of this journal will be familiar with the name Li Guo as a member of its editorial board and as author of the important review article, "Mamluk Historiographic Studies: The State of the Art," which appeared in the first issue.[1] The present work is a revised version of his Ph.D. dissertation on al-Yūnīnī's continuation of Sibṭ ibn al-Jawzī's famous history *Mir'āt al-Zamān*.[2] Since the *Dhayl* has long been recognized as one of the key contemporary sources for Baḥrī history during al-Yūnīnī's lifetime (640-726/1242-1326) spent mainly in Syria, both Guo's edition and translation and his clarification of its relationship to other Mamluk histories should be of considerable interest to scholars.

Unfortunately, publication of the *Dhayl* has been sporadic, piecemeal, and, until Guo's work, sometimes incompetent. The most substantial portion of the text appeared in four volumes some forty years ago, covering the years 654-86.[3] Ironically, this section is of secondary significance, being based for the most part

[2] "The Middle Baḥrī Mamluks in Medieval Syrian Historiography: The Years 1297-1302 in the *Dhayl Mir'āt al-Zamān* Attributed to Quṭb al-Dīn Mūsá al-Yūnīnī; A Critical Edition with Introduction, Annotated Translation, and Source Criticism," Ph.D. diss, Yale University, 1994.

[3] (Hyderabad,1954-61).

on secondary sources, which Guo identifies as Ibn Khallikān, Abū Shāmah, Ibn Ḥamawayh al-Juwaynī, Ibn Shaddād, Ibn ʻAbd al-Ẓāhir, and Ibn Wāṣil (1:60-63). In recognition of this fact a dissertation by Antranig Melkonian, published in 1975, produced the text and German translation of the years 687-90,[4] a period when al-Yūnīnī's "originality" became more strikingly evident, that is, when he seems to have relied on his own observation and that of his informants and colleagues, although, in fact, he was heavily indebted to the work of his Syrian contemporary, al-Jazarī. Now with Guo's book we have the text for another segment, 697-701, which means, however, that the years 691-96 and 702-11 are still available only in manuscript.

Why, we might ask, did Guo choose to edit these particular years rather than pick up where Melkonian left off? Unless I have missed something he does not explicitly say, though in his historiographic article he does declare his intention to complete "the remaining ten-year portion (702-711),"[5] leaving 691-96 unclaimed. Presumably a combination of factors historiographical and historical guided his choice. In any case, of the twenty-three known manuscripts, he has based his edition on two: one at Yale, the other in Istanbul. Another complicating factor is that Guo's edition of the *Dhayl* has been collated with the text of al-Jazarī's *Ḥawādith al-Zamān* for the years 697-99 in a separate footnote apparatus. Since, however, al-Jazarī's text in the Paris MS used by Guo covers the years 689-99 he could presumably have chosen the years 691-95, say, and still collated them with a1-Jazarī and followed Melkonian's sequence. I am sure that there must be a good reason for Guo's decision not to do so. I'm just not sure what it is.

Since I have not been able to compare his edition with the two manuscripts, I cannot judge his editorial skills with any authority But signs of his competence and care are plentiful inasmuch as Guo follows in many respects Claude Cahen's suggestions for editing Arabic texts by collating the best manuscripts and "providing the textual, linguistic and historical explanations which help him [the reader] in understanding the narrative, but also give him the references to all other sources.'"[6] Thus Guo introduces his edition with a summary of what is known of al-Yūnīnī's life, a descriptive survey of the twenty-three extant manuscripts of parts of the *Dhayl,* an analysis of the formation of the text, and a description and analysis of the two manuscripts he used for his edition, including paleographic, orthographic, and grammatical discussions. To find the reasons why Guo opted to adapt and "correct" orthographic peculiarities and grammatical irregularities (due to the

[5]"Historiographic Studies," 16.

[6]"Editing Arabic Chronicles: A Few Suggestions," *Islamic Studies* (Sept., 1962): 1-25, quoted by Guo in "Historiographic Studies," 26.

influence of colloquial usages) in the text and to relegate the originals to the footnotes, one must refer to his already-cited article, where he contrasts ″free editing″ with ″the traditional Orientalist method.″[7] By the former he apparently means arbitrary, if not whimsical, tampering with a text, whereas the latter results in a faithful transcription of a text with its errors and peculiarities with ″corrections″ relegated to the footnotes. Arguing that a free edition is capricious and that a traditional transcript could be reproduced by a photocopy, Guo takes the conservative option of standardizing the unpunctuated text and footnoting irregularities. This, of course, is a matter of editorial choice of no great importance as long as the reader interested in linguistic issues related to Middle Arabic can cut through the editorial apparatus to find the original text. The addition of variations from al-Jazarī′s *Ḥawādith al-Zamān* in the footnotes is not as confusing as it might sound, given the fact that the *Dhayl* and the *Ḥawādith* are virtually the same for the years Guo has edited.

The relationship between these two authors, plus another contemporary, al-Birzālī, is the main issue addressed by Guo in the prefatory analysis. As other scholars have already shown, ″until A. H. 690, the two texts are clearly independent of each other and contain their exclusive stories supported by their own sources″ (1:42), even though these same sources ″demonstrate that the mutual borrowing between the two, often without acknowledgment, did take place in certain portions (covering the years prior to A. H 690) of their works″ (1:41). In addition, I myself have claimed that for the annals 694, 699, and 705, al-Yūnīnī copied al-Jazarī without explicit acknowledgment, and this portion should be regarded as al-Yūnīnī′s copy of al-Jazarī′s lost work, the extant copies of which end at the beginning of 699.[8] Guo confirms this impression on the basis of his painstaking comparative analysis for 691-99, concluding that this part of the *Dhayl* should be regarded as a synthesis of *Ḥawādith* edited by al-Yūnīnī. But then Guo goes a step further to argue that the remaining portion of the *Dhayl,* for 699-711, represents a nearly verbatim edition of al-Jazarī′s work but ″was wrongly attributed to al-Yūnīnī by a later editor″ (1:59). Although he stops short of identifying that editor as al-Birzālī (he is often quoted as a source by both authors), Guo does state that al-Birzālī′s ″stamp was so deeply marked on these two works that one wonders whether the insertion of al-Jazarī′s collection into al-Yūnīnī′s ′third volume′ of the *Dhayl* and the probable misattribution of the ′fourth volume′ of the text may somehow be due to al-Birzālī′s involvement″ (1:80). This explanation is certainly plausible, but it seems to me that the evidence for misattribution is slim, consisting as it does of instances in which Yūnīnī is mentioned by name not only as a narrator

[7]″Historiographic Studies,″ 21-23.

[8]*An Introduction* to *Mamlūk Historiography* (Wiesbaden, 1970), 57-61.

but as a subject of narration (possibly a scribal interpolation?). In any case, as Guo concedes, the question of authorship is not so important from a historical, as opposed to a historiographical, point of view, since the Yūnīnī/Jazarī version is one of our most important sources for mid-Baḥrī history, no matter who the original author may have been. For this reason alone we are indebted to Li Guo for making a key segment of this central source available to scholars, quite apart from the light he sheds on how history was composed by a group of early fourteenth-century Syrian scholars.

As far as the translation is concerned, spot checks show it to be accurate and idiomatic and accompanied by informative footnotes. Needless to say, I do have a few complaints. First of all, I wonder why only the *ḥawādith* have been translated, when the obituaries constitute so sizable a chunk of the text. In his dissertation Guo says only that the *wafāyāt* have not been translated, being ″reserved for the use of specialists.″[9] Surely the purpose of translating the *Dhayl* is to make it available to non-specialists, meaning non-Arabists; I′m not sure that the latter will gain an adequate view of al-Yūnīnī and al-Jazarī or ″the Syrian school″ of historians from this partial translation. Probably Guo′s consideration was practical: enough is enough. Also missing are translations of some of the verses that appear in the annals. Although the dissertation contains a helpful glossary of Arabic terms, the published version does not. This is especially unfortunate since the English index includes only names of persons and places. True, volume 2 contains an index of technical terms in Arabic, but these don′t help the non-Arabist. Also frustrating is the lack of headers on the pages of the translation; worse, there are no cross page—much less line—references between text and translation, so that it is not easy to check one against the other. But given the fact that this is basically a revised and improved dissertation, one can only express admiration and appreciation for the extraordinary effort and skill required to produce such an impressive and useful work. It is also gratifying to observe that with Li Guo Mamluk historiographic studies have passed into capable hands.

MUḤAMMAD MAḤMŪD AL-NASHSHĀR, *'Alāqat Mamlakatay Qashtālah wa-Arājūn bi-Salṭanat al-Mamālīk, 1260-1341 M/658-741 H* (Cairo: 'Ayn lil-Dirāsāt wa-al-Buḥūth al-Insānīyah wa-al-Ijtimā'īyah, 1997). Pp. 319.

REVIEWED BY KENNETH J. GARDEN, The University of Chicago

In this work, Muḥammad Maḥmūd al-Nashshār provides a detailed examination of diplomacy between the Mamluk sultanate and the kingdoms of Aragon and Castile respectively from 608/1260 to 741/1341. He gives a comprehensive portrayal of the circumstances of both Aragon and Castile that shaped their diplomatic agendas and charts the unfolding of their relations with the Mamluks in a way that is clear to readers not familiar with the history of these kingdoms. The book is written for those with a familiarity with the Mamluk sultanate and its diplomatic agenda. Its treatment of the relations between Castile and Aragon and the Mamluk Sultanate focuses almost exclusively on the Iberian states and has little to say about the concerns and reactions of the Mamluks.

The book begins with a review of the sources used by the author. These include published collections of diplomatic documents from Aragonese archives, Mamluk chronicles, Aragonese chronicles, and Castillian chronicles, as well as other documents found in the Aragonese archives. From here he begins his study, which he divides into five chapters dealing with three topics. These are the historical backgrounds of Castile, Aragon, and the Mamluk Sultanate before and during the period covered in the book, the political relations of Castile and Aragon with the Mamluks, and trade relations between them.

Chapter one outlines the broader historical background of the period covered. After their establishment, Castile and Aragon were initially concerned with their survival and then were too engrossed in the *reconquista* to have any foreign diplomatic concerns until the period covered by the book. Beginning in this period, both nations sought to foster trade with the east. Aragon was concerned with finding allies in its struggle against the papacy and France to maintain control over the island of Sicily. This situation changed when the dispute was resolved under Jaime II. A brief section is also devoted to the concerns of the Mamluks who sought to obtain war materiel from abroad as well as to prevent an alliance between the Crusaders and the Mongols and reinforcements to the remaining crusader outposts in the eastern Mediterranean.

Chapters two and three are devoted to the political relations between Aragon and the Mamluk sultanate. As the ruling military power in the western Mediterranean and one of the leading trading powers in the whole of the Mediterranean at the time, it is natural that Aragon would have more diplomatic concerns with the Mamluks than Castile would. One of Aragon´s major concerns early in this period

was its search for allies in the Mediterranean during its conflict with France and the papacy over its control of the island of Sicily. To this end, Aragon signed a treaty of alliance with the Mamluks in 1287. This suited the Mamluks as well, as it allowed them to circumvent a ban issued by the pope on trade in strategic materials with them. It also allowed them to count on Aragon's not sending reinforcements to the remnants of the Crusaders in the eastern Mediterranean. The treaty only lasted as long as the conflict over Sicily. This was briefly resolved in 1291, when Alfonso III signed the treaty of Tarascon, at which point Aragonese-Mamluk relations entered a period of "confusion." The treaty was, however, rejected by Alfonso III's successor Jaime II when the former died shortly after its signing. Jaime II quickly renewed his alliance with the Mamluks. The alliance ended when Aragonese relations with the pope and France were restored in 1295 with the signing of the treaty of Anagni. Aragon's return to the good graces of the pope affected its relations with the Mamluks. After briefly flirting with the idea of an alliance with the Mongols and a new crusade, Jaime II began to press the Mamluks for recognition as patron of the Christians of Egypt and the Levant and for the release of Christian prisoners held in Egypt.

Chapter four, devoted to political relations between Castile and the Mamluks, is much briefer than the section devoted to Aragonese-Mamluk political relations because Castile had few political issues to resolve with the Mamluk sultanate. However, owing to the personality of Alfonso X (the Wise) and his interest in Arabic culture, Castillian diplomatic relations with the Mamluks actually preceded Aragonese-Mamluk relations. These were shortlived, however. They consisted mainly of exchanges of gifts and requests for trading privileges and came to an end after the death of Alfonso X, at which point Castile entered into a period of protracted civil war.

Chapter five deals with trade relations of both Aragon and Castile with the Mamluks. Again, Aragon is the principal player in this story due to its possession of Barcelona, one of the busiest Mediterranean ports of the era. Aragon wanted to insure that Barcelona remained a major player in trade in eastern goods throughout this period. The main obstacle to this was the papal ban on trade in commodities of strategic importance with the Mamluks. Prior to the treaty of Anagni, this was not a difficult obstacle to overcome as Aragon was anyway at odds with the papacy and flagrantly violated the ban. After Jaime II returned to the papal flock, he had to be more circumspect in carrying on this lucrative trade with the Mamluks. One way around the ban was to send merchants along with diplomatic missions. As for Castile, Alfonso X encouraged trade in hopes that revenues generated thereby could solve Castile's chronic economic difficulties. To this end he sent ambassadors to Cairo to discuss matters of trade. Castile, though, was not as well positioned geographically for trade as was Aragon. Such diplomatic missions

were never as important to the Mamluks as were those of Aragon and they anyway ceased nearly entirely after the death of Alfonso X and the ensuing civil war.

Following chapter five is an afterword that provides a synopsis of the book and appendices of diplomatic documents with partial translations into Arabic, as well as charts of the kings of the Spanish kingdoms in the Middle Ages and maps of the Iberian peninsula in that period. That there are no maps provided of Egypt or lists of the Mamluk sultans confirms the point made above that this is a book for readers already familiar with Mamluk history.

Readers of the *Mamlūk Studies Review* can rest assured that they fit the profile of the book′s intended audience, though even Mamlukists (or perhaps especially Mamlukists) will find themselves wishing at times for a greater emphasis on Mamluk responses and motivations. The book′s organization is, in some ways, well suited to readers who are not familiar with the history of the western Mediterranean. The three-topic approach—general background, political relations, trade relations—means that the history of Castile and Aragon and their relations with the Mamluk sultanate is told three times with a different emphasis in each telling. While some repetition may be welcome for those unfamiliar with Iberian history, another repetition of much of the information is unnecessary by the third telling. Combining the section on trade relations with the section on political relations would not only have avoided a retelling of events but perhaps would have better illustrated the ways in which trade and political concerns interacted in determining policy. The book is poorly edited. In addition to typographical errors in the Arabic text, the text in Latin characters is especially full of errors. Consistent use of both *hijrī* and common era dating would have been welcome. Sometimes one, sometimes the other and sometimes both are used. Aside from these minor problems, the book provides a clear description of relations between the kingdoms of Castile and Aragon and the Mamluk sultanate. It is a useful resource for those interested in a detailed history of the Mamluks′ diplomatic relations with a particular region.

HENRI AND ANNE STIERLIN, *Splendours of an Islamic World: Mamluk Art in Cairo 1250-1517* (London and New York: Tauris Parke Books, 1997). Pp. 219.

REVIEWED BY BERNARD O´KANE, American University in Cairo

A pithy but cogent judgement of this work has already appeared within the pages of volume three of this journal:

> With the publication of a splendid full color luxury book by the noted team of Henri Stierlin and Anne Stierlin, the study of Mamluk Art and Architecture has finally made it into the Big Time. The Stierlins, who have previously brought us books on Islamic Architecture, Mughal architecture, Ottoman architecture and the Alhambra, have now brought us the first affordable ($59.50) coffee-table book on Mamluk art and architecture. Dramatic long shots compete with exquisite details for the viewer´s attention which, in the tradition of architectural photography, is rarely, if ever, distracted by the attention of people, apart from the picturesque natives populating reproductions of David Robert´s nineteenth-century lithographs. Their stunning photographs of Mamluk buildings and objects will explain to even the most sceptical audiences why Mamluk art has had its devotees for over a century; the text, infelicitously translated from the French, is mercifully brief and appears oblivious of the content (although not the titles) of recent scholarship on the subject.[1]

One might wonder why a coffee table book merits a review in this journal, but the quality of the photographs is truly such as to provide an inspiration for potential students of the subject. If they can indeed attract attention to our field then we should be grateful. It is all the more important, therefore, that the photographs be identified accurately, but as there are numerous errors in this respect I concentrate in the following on setting the record straight.

The text is not so brief that it does not also have its share of mistakes and misleading information. Its organization is somewhat haphazard, although most chapters are straightforward accounts of the monuments that they illustrate. While the text may be generally accurate, a few examples of its more serious errors may be sufficient to show that not too much reliability should be placed on it:

---

[1]Jonathan M. Bloom, ˝Mamluk Art and Architecture: A Review Article,˝ *Mamluk Studies Review* 3 (1999): 31.

14: ″the Ilkhans of Amou-Daria″
12: ″Greeks (Syrian or Byzantine) . . . often played a role in [Mamluk] art and architecture.″ I know of no evidence for this, and none is proffered.
24: The dome of the mosque of Baybars is no longer standing.
26: ″the *khanka*, or monastery for soldier monks . . .″
29: ″Mangu controlled the Mongols of the Golden Horde″—a reference to the Ilkhanid Möngke-Temür.
49: ″the eleventh-century Tulunid period″
178: It is curious, to say the least, when several Mamluk examples have survived, to pick the Ottoman house at Darb al-Labbān as representative of Mamluk style.

The writing can be eccentric, leading to such statements as (p. 98) ″the centripetal space lends itself to the teaching of the four theological schools of Islam″ (the central courtyard of the complex of Sultan Ḥasan and its *īwān*s [whether or not one thinks of them as centripetal] were a congregational mosque); or, referring to the complex of Faraj ibn Barqūq, ″Everything is ruled by a seemingly natural order, based on the right angle, as part of an all-pervasive orthogonal system″ (p. 140), despite the unusual total lack of flat roofs in the hypostyle areas of the complex.

Moving to the photographs, the eye for detail is remarkable. A judicious number of these, combined with medium and long distance shots and redrawn plans, gives a viewer the best possible impression both of the spatial qualities and the textural variety of the decoration of the major monuments. The numerous ways in which the Mamluks exploited sunlight dappling on diverse surfaces are captured imaginatively. Would that the captions were of the same standard:

18: ″The crenellated walls of the Madrasa of Sultan Hasan . . .″ The crenellated walls visible in this photograph belong instead to the nineteenth century mosque of al-Rifāʻī.
44: ″the quarter of the Mosque of Ibn Tulun at Fustat″—it is in the quarter of al-Qaṭā'iʻ, far to the north of Fusṭāṭ.
53: ″Constructed immediately after Sultan Baibars took power, the Mausoleum ′of the Abbasids′ (1242) . . .″ Baybars took power in 1260; the date of 1242 comes from earliest cenotaph preserved within it.

72-73: The details of the doors of the complex of Qalāwūn are surprisingly repeated on an even larger double spread on pages 76-77.
79: This is not the front façade of the mausoleum of Qalāwūn, but rather the façade leading from the vestibule to the interior of the mausoleum.
89: The detail of the mihrab of al-Nāṣir Muḥammad, also used as the illustration on the jacket, is of one which was almost totally reconstructed in 1948 (only partially on the lines of the original).[2]
90: This is not from the madrasah of Sultan Ḥasan.
107: This is the mausoleum of Qāytbāy, not of Sultan Ḥasan.
154: The background is of glass paste rather than ceramic.
167: The mihrab is from the mosque of al-Mu'ayyad, not the Qāytbāy complex.
169: This is not the madrasah of al-Ghawrī.
170: The tomb is on the right and the madrasah on the left, not the other way around.
176: The captions to this page are to be found on p. 181.
178: not the window of the Bashtak palace, but the façade of the *wakālah* of Qāytbāy at Bāb al-Naṣr. The caption, misplaced on p. 182, wrongly identifies it as the *wakālah* of Qawṣūn.
180: The caption to this, the Ottoman house at Darb al-Labbān, is found on p. 185.
181: The basin used in the restoration of the Bashtak palace is of an unknown provenance; it was lying for some years behind the shops fronting the façade of the madrasah of al-Ṣāliḥ Najm al-Dīn Ayyūb until reused in the restoration of the palace by the German Archaeological Institute of Cairo.
184: This is the interior of the northern mausoleum in the complex of Faraj ibn Barqūq (the correct caption is on p. 189).
185: This is again the *wakālah* of Qāytbāy at Bāb al-Naṣr, not the *wakālah* of Qawṣūn.
186: The private collection in which this Quran stand is held is not identified. However, judging from the photograph, it appears be a nineteenth century copy of a virtually identical stand in the Museum of Islamic Art in Cairo (a detail of the stand, with a misplaced caption, is shown on p. 183).

---

[2]Mona Zakariya, ″Technique de Construction du miḥrāb mamlūk,″ *Hommages à la mémoire de Serge Sauneron* (Cairo, 1979), 2:377-82.

188: The caption to this, the mosque of Ibn Ṭūlūn, has been misplaced on p. 193.

In short, the relative inexpensiveness of the volume makes it a suitable tool to fire the visual imagination, provided the text is used with caution.

N. MAḤMŪD MUṢṬAFÁ, *Al-ʻAṣr al-Mamlūkī—Min Taṣfiyat al-Wujūd al-Ṣalībī ilá Bidāyat al-Hajmah al-Ūrūbbīyah al-Thāniyah, 642-923/1258-1517* (Cairo: al-Maʻhad al-ʻĀlamī lil-Fikr al-Islāmī, 1996). Pp. 177.

REVIEWED BY STEPHAN CONERMANN, University of Kiel

Every Western scholar who does research in the field of Islamic studies would in principle agree with the statement Carl F. Petry issued in the first volume of *Mamlūk Studies Review*: ″And since so much contemporary scholarship in Arabic is neglected by Western readers for obvious linguistic reasons, the inclusion of recent works in this language by the editorial staff of *Mamlūk Studies Review* for assessment is to be commended.″[1] Unfortunately, Petry himself was anything but impressed by the book of an Arab colleague that the journal had offered him for review. In his opinion, the work suffered from at least five considerable deficiencies: (1) the monograph′s value derives exclusively from its factual information; (2) it contributes no fresh methodological insights; (3) it does not significantly alter existing perceptions of the commercial economy of prominent Red Sea ports throughout the Middle Ages; (4) while numerous monographs published in Arabic are listed in the bibliography, these fall into the same particularistic category as the book under review; and (5) few works of broader scope, either in Arabic or other languages, are noted.[2]

One might say: ″Well, perhaps the author did his work after a fashion, but the reviewer had no real interest in it,″ but after a careful reading of Maḥmūd Muṣṭafá′s *Al-ʻAṣr al-Mamlūkī—Min Taṣfiyat al-Wujūd al-Ṣalībī ilá Bidāyat al-Hajmah al-Ūrūbbīyah al-Thāniyah, 642-923/1258-1517,* I came to the same conclusions as Petry. All the shortcomings he criticized in his review accorded with my own

[1]See his review of ʻAlī al-Sayyid ʻAlī Maḥmūd′s *Al-Ḥayāh al-Iqtiṣādīyah fī Jiddah fī ʻAṣr Salāṭīn al-Mamālīk, 648-925 H./1250-1517 M.* (Cairo, 1991) in *Mamlūk Studies Review* 1 (1997): 128-29.

[2]Ibid., 128.

findings: this book has, as it were, some value as a first survey of intra-Arab relations during the age of the Mamluks, but in general it consists of mere facts, offers no methodological approach, gives no new insights, is based on old and outdated secondary literature, and completely ignores recent research on this topic.

Was this coincidental, or could it be that these books represent typical scholarly output in Arab countries? Instead of jumping to final conclusions I decided to reread all reviews of historical works written in Arabic that had been published in the first two volumes of *Mamlūk Studies Review*. With the exception of two titles,[3] all books under review were sharply critcized. Thus, Richard T. Mortel writes on ʻAlī al-Sayyid ʻAlī Maḥmūd′s *Al-Ḥayāh al-Thaqāfīyah fī al-Madīnah al-Munawwarah: ʻAṣr al-Salāṭīn al-Mamālīk, 642-923 H.*: ″After a careful reading of the work I must, however, confess to a serious disappointment. ʻAlī al-Sayyid′s book . . . appears to this reviewer as a verbose and quite undisguised apology for the Mamluks lacking in sophistication or the application of any identifiable modern historical methodology.″[4] Similarly, Linda S. Northrup criticizes Muḥammad Ḥamzah Ismāʻīl al-Ḥaddād′s *Al-Sulṭān al-Manṣūr Qalāwūn: Tārīkh Aḥwāl Miṣr fī ʻAhdihi, Munshaʼatuhu al-Miʻmārīyah*: ″There are, in my opinion, two problems with this study, the first of which is methodological. There is no apparent thesis. Further, the author fails to define the relation between the historical and descriptive sections of the work. . . . Al-Ḥaddād brings neither new information nor a new perspective to his narrative. Nor does he use his synthesis as a framework within which to interpret the findings of his survey of the monuments. . . . A second criticism concerns the historiographical basis of al-Ḥaddād′s monograph. . . . Although al-Ḥaddād has used current secondary literature in Arabic, his failure to supplement older, and still valuable, foreign scholarship with more recent research . . . is unfortunate. Important recent foreign studies treating aspects of Qalāwūn′s reign are not cited in the narrative.″[5] Virtually identical argumentation can be found in the remarks of Warren C. Schultz on Ḍayf Allāh Ibn Yaḥyá al-Zahrānī′s *Zayf al-Nuqūd al-Islāmīyah: Min Ṣadr al-Islām ḥattá Nihāyat al-ʻAṣr al-Mamlūkī,* in Anne F. Broadbridge′s comments on Fāyid Ḥammād Muḥammad ʻĀshūr′s

[5]*Mamlūk Studies Review* 1 (1997): 145-48.

Al-Jihād al-Islāmī ḍidda al-Ṣalībīyīn wa-al-Mughūl fī al-ʻAṣr al-Mamlūkī, and in the reviews of Ḥayāt Nāṣir al-Hajjī's books.[6]

What kind of conclusions can be drawn from these findings? It seems to me that we find ourselves in an orientalist predicament. On the one hand, considering the postmodern reappraisal of the colonial past, generally it is politically incorrect to make derogatory remarks about the scholarly works of Arab historians. As a product of Western socialization, one is not only suspected of judging the ″natives″ as foolish and incompetent but also of reducing them again to the rank of mere objects to be studied. On the other hand, in the age of ongoing globalization the Western scientific approach carries the day. If science stands for a special kind of communication that has been (at least temporarily) established by scholars who dominate *this* discourse, it can be taken for granted that everyone who wants to be part of the game has to follow its rules. This is of course—in spite of the overall calling for authenticity—the endeavour of the majority of Arab scholars.

It is therefore legitimate to ask for the reasons for the insufficiencies in their books. Without getting into the details of the much-discussed internal discourse of the colonized, according to my own judgement, first and foremost three simple factors are responsible for the above-mentioned assertion: (1) the old-fashioned structure of higher education in most Arab countries leads to the adoption of strictly hierarchical patterns in which the students have to follow the beaten tracks of their teachers; (2) the overwhelming majority of Arab researchers have access neither to new publications in foreign languages nor to sources that have been edited and published in the West; (3) for that reason, many Arab colleagues have not had the opportunity to follow the early debates of the ′60s and ′70s over methodological and theoretical questions, nor is it possible today for them to keep abreast of the still ongoing discussion. In their works they take no account of the recent interchange of views in journals like *History and Theory, American Historical Review, Past & Present, Central European History, Annales; economies, societes, civilisations, Storia della storiografia, Journal for Interdisciplinary History* or *Journal of the History of Ideas*—just to mention a few.

What can be done in view of these circumstances? The East European historians who faced a similarly difficult situation before 1989—and some Russian scholars still do—delved into the accessible local archives and confined their efforts to writing articles and books with a microhistorical approach or to editing the material and adding a commentary and some introductory remarks. In limiting their ambitions

[6]See John L. Meloy's review of her *Ṣuwar min al-Ḥaḍārah al-ʻArabīyah al-Islāmīyah fī Salṭanat al-Mamālīk* (Kuwayt, 1412/1992) in *Mamlūk Studies Review* 1 (1997): 149-50 and Li Guo's remarks on her *Anmāṭ min al-Ḥayāh al-Siyāsīyah wa-al-Iqtiṣādīyah wa-al-Ijtimāʻīyah fī Salṭanat al-Mamālīk fī al-Qarnayn al-Thāmin wa-al-Tāsiʻ al-Hijrīyayn/al-Rābiʻ ʻAshar wa-al-Khāmis ʻAshar al-Mīlādīyayn* (Kuwayt, 1995) in *Mamlūk Studies Review* 2 (1998): 222-25.

to this kind of research some of these East European scholars were able to build up an excellent international reputation. Perhaps Arab historical scholarship should also limit itself in this way, since all reviewers in *Mamlūk Studies Review* of text editions produced by Arab scholars not only warmly welcome these works but highly praise them. It seems that this indeed could be a way out of their predicament.[7]

Ibn Zunbul, *Wāqi‘at al-Sulṭān al-Ghawrī ma‘a Salīm al-‘Uthmānī,* edited by ‘Abd al-Mun‘im ‘Āmir (Cairo: al-Hay’ah al-Miṣrīyah al-‘Āmmah lil-Kitāb, 1997). Pp. 209.

Reviewed by Nabil Al-Tikriti, The University of Chicago

This edition—a slightly revised reprint of an earlier 1962 edition[1]—renders accessible to a wide audience one of only a few eyewitness accounts from the Mamluk side of the 1516-17 Ottoman conquest of Egypt and Syria, extending up to the Mamluk-turned-Ottoman governor Jānbirdī al-Ghazālī´s abortive attempt to restore Mamluk independence in Syria following the accession of Sultan Süleyman (1520-66).[2] The author, Aḥmad Ibn Zunbul al-Rammāl al-Maḥallī (d. ca. 1552-53), by virtue of his position as a geomancer at the Mamluk court, appears to have been privy to many of the sensitive and tortured debates among the leading Mamluk amirs concerning how to deal with tens of thousands of Ottoman troops bearing down on Cairo armed with blisteringly effective small firearms and a train of cannon.

[1]In this 1997 reissue of ‘Abd al-Mun‘im ‘Āmir´s 1962 edition, a confusing editor´s postscript describing medieval Cairo was deleted. No more publishing details were available in the photocopy of the older edition examined by this reviewer.

[2]Names of Ottoman characters or authors are transliterated here according to the norms of modern Turkish.

The editor, ʿAbd al-Munʿim ʿĀmir, starts his introduction with a brief historical survey celebrating the Cairo-ruled Egyptian and Syrian unity of the Ayyubid and Mamluk periods and blaming corruption and divisiveness for bringing an end to that unity. Following this opening survey, ʿĀmir states that he has published the complete version of this text for the first time, basing his edition on a comparison of Dār al-Kutub MS 376 Taymūr (copied in 1654-55) with MS 714 Taymūr (copied in 1794-95) and an Alexandria University manuscript previously owned by a German library. The editor has discounted a significantly variant text, identified as Dār al-Kutub MS 44 Tārīkh.[3] The first part of this mysterious text was copied in 1921 from a text held by the Orthodox Coptic Patriarchate in Cairo, and is ″defective″ in many parts. The second part, however, was copied in 1657. Taken together, this text is far longer than the version common to the other three copies due to extensive poetic interludes as well as numerous digressions on ancient mythology and other such matters which ″have no connection to the events between Selim and al-Ghawrī″ (p. 11). In this reviewer′s experience, such digressions and poetic asides fit the style of a sixteenth-century geomancer′s account more closely than the rather straightforward version presented here. These digressions, combined with other incongruities based on a summary comparison of the first and last pages of MS 44 Tārīkh with the three editions, suggest that the text has not remained stable through its various recensions and editions.

In a possible sign of textual evolution, the narrative occasionally quotes Ibn Zunbul, stating ″al-Shaykh Aḥmad Ibn Zunbul al-Maḥallī has related″ (pp. 33, 100). In addition, at one point the narrative voice mentions in an offhand fashion that ″al-Qāḍī Aṣīl al-Ṭawīl always spoke of the strange and wonderful stories he had witnessed . . . and he died in 970 [1562-63]″ (p. 178). Finally, while discussing Süleyman′s accession to power the narrative states that ″he came to rule 48 years″ (p. 189). The combination of widely variant texts and references to people and events dating nearly fifteen years *after* Ibn Zunbul supposedly died leads this reviewer to speculate whether the text presented here might be an abridged version of Ibn Zunbul′s account produced at some point between the mid-sixteenth and mid-seventeenth centuries, with the variant MS 44 Tārīkh text perhaps closer to an ″original″ account.

While the narrative presents an omniscient point of view by including deliberations within the Ottoman camp, the story is told mostly from the Mamluk side. As such, this text can be compared with other contemporary sources covering the same set of events, such as Ibn Iyās′s (d. ca. 1524) celebrated chronicle[4] and

---

[3]For a listing of other extant manuscripts, see Carl Brockelmann, *Geschichte der Arabischen Litteratur* (Leiden, 1938), S2:409-10; and ibid., 2:384-85.

[4]Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Wiesbaden-Cairo,

the numerous Ottoman narrative histories from this period.[5] As the Ottoman sources offer far less detail concerning events and debates within the Mamluk camp, Ibn Zunbul′s narrative is a valuable source to use as a check against the only other extant Mamluk source as well as a supplement to the more numerous Ottoman sources.

Much of the text reads like a morality play, intent on demonstrating the correct behavior of an amir. Both Khā'ir Beg and Jānbirdī al-Ghazālī are repeatedly condemned as traitors to their [Mamluk] ″Circassian brotherhood.″ Sultan Qānṣūh al-Ghawrī (1501-16) is blamed for neglecting his supporters, failing to control his forces, and playing the diplomatic game poorly. In one example, al-Ghawrī is said to have made a mistake of epic proportions: when his geomancer—probably Ibn Zunbul—informed al-Ghawrī that the next ruler′s name would begin with the letter *sīn,* the wily sultan concluded that the Mamluk amir Sībāy[6] was out to get his crown rather than that the Ottoman Padishah Yavuz Selim (1512-20) was out to get his empire (p. 17). Meanwhile, the Mamluk amirs Kartbāy, Sībāy, Shārdbeg, and Tūmānbāy are portrayed through their respective noble actions and passionate monologues as courageous leaders who fought for their families, beliefs, and properties against impossible odds.

The ″Rūmīs″ [Ottomans] are portrayed as weak fighters who could not possibly have defeated the Mamluks without firearms or Mamluk treachery. Selim, despite the congratulatory opening *du'ā'* deleted in this edition, is castigated repeatedly—through dialogue rather than the narrator′s own voice—for attacking fellow Muslim rulers without sufficient cause and for having the audacity to use firearms against chivalrous Muslim fighters. Without doubting the authenticity of such viewpoints in the original text, the concept of heroic forces defeated due to internal disunity while facing an unscrupulous and technologically superior invader from the north must have had a certain resonance with Egyptian readers when this edition first appeared in 1962.

1961-75).

[5]Some of the more valuable Ottoman narrative sources for these events include the Turkish *Selim-nâme*s by Celalzade Mustafa Çelebi (d. 1567), Hoca Sadettin Efendi (d. 1599), Kemal Paşazade (d. 1534), Sücûdi (fl. 1520), and Şükrü-i Bitlisi (fl. 1521); the Persian *Salīm-nāmah*s by Idrīs-i Bitlīsī (d. 1520), Kabīr ibn 'Uvays Qāḍīzādah (fl. 1518), and Ādā'ī-yi Shīrāzī (d. 1521); and Arabic equivalents by Muḥammad ibn 'Alī al-Lakhmī (fl. 1516) and Jār Allāh ibn Fahd al-Makkī (d. 1547). For descriptions of these and other works, see: Ahmed Uğur, *The Reign of Sultan Selîm I in the Light of the Selîm-name Literature*, Islamkundliche Untersuchungen 109 (Berlin, 1985); and M. C. Şehabettin Tekindağ, ″Selim-nâmeler,″ *Tarih Enstitüsü Dergisi* 1 (1970): 197-231.

[6]Sībāy was the Mamluk governor of Damascus who had rebelled against al-Ghawrī while governor of Aleppo in 1504-5. See P. M. Holt, ″Ḳānṣawh al-Ghawrī,″ *Encyclopaedia of Islam*, 2nd ed., 4:552-53.

This text contains a number of memorable episodes, some of which suggest that Ibn Zunbul drew freely from older themes to embellish his morality tale. When the Mamluks send a militant and haughty delegation, Selim orders his men to shave their leader Mughulbāy′s chin and parade him around on a donkey (p. 27). When a number of Sufi shaykhs who had supported al-Ghawrī were caught trying to flee after Marj Dābiq, Selim had all one thousand of their necks wrung, one by one and without distinction according to status (p. 50). At one point, a number of Mamluks who had accepted Selim′s offer of safe passage were beheaded or strangled and thrown in the Nile (p. 68). After a couple of small victories over the Ottomans, Shārdbeg inscribes on the Pyramids ninety-two verses of Arabic poetry celebrating their heroism (pp. 93-98). In an episode reminiscent of Muḥammad ʻAlī Paşa′s (r. 1805-48) famous 1811 Citadel massacre of Mamluks,[7] Jānbirdī al-Ghazālī launched his bid for independent rule in Damascus by inviting the local Ottoman commanders to a feast and having all of them murdered (p. 193).

Other passages offer valuable anecdotes concerning religious and ideological components of the conflict. Shārdbeg and a number of Ottoman troops trade curses labelling each other as ″infidel louts″ *[kuffār,ʻulūj]* and ″profligates″ *[fujjār]* (p. 124). The Ottoman battle formation is described as including seven banners carrying Quranic battle slogans and the names of Selim′s forefathers, with a large white flag said to represent the ″banner of Islam″ (p. 135). Tūmānbāy accuses Selim of attacking Muslims without cause and contrasts the Ottomans′ ″worship of idols and crosses″ with the Mamluks′ ″unitary Islam″ (pp. 142-43). Confronted with these and similar accusations, Selim responds that he would not have attacked without a *fatwá* from the ulama authorizing an attack against those ″sons of Christians with no lineage″ who had helped the *rawāfiḍ* (pp. 166, 187). After Tūmānbāy was executed, his widow marries the Halveti Shaykh İbrahim Gülşeni′s son (p. 178).

ʻĀmir′s edition appears to follow closely an earlier edition published in Cairo in 1861-62. This edition, used extensively by David Ayalon for his study on Mamluk firearms,[8] was entitled *Tārīkh al-Sulṭān Salīm Khān ibn al-Sulṭān Bāyazīd Khān maʻa Qānṣūh al-Ghawrī Sulṭān Miṣr*. Note that in the century between these two editions, following the intervening Cairene political perceptions, al-Ghawrī′s relative titular pre-eminence grew and Selim′s fell. The only significant differences between these editions—other than the choice of title and the lack of footnotes in the earlier edition—come at the beginning and the end of the text.

[7]E. R. Toledano, ″Muḥammad ʻAlī Pasha,″ *EI*[2] 7:423-31.

[8]David Ayalon, *Gunpowder and Firearms in the Mamluk Kingdom: A Challenge to a Mediaeval Society* (London, 195_), especially 86-97.

ʿĀmir deleted the following congratulatory *duʿāʾ* offered to Selim in the beginning of the text, present in the 1861-62 edition:[9]

> Praise be to God, Lord of the two worlds. May God bless our master Muḥammad, his family, and his companions. May God preserve this treatise treating the invasion of the paramount sultan, exalted khāqān, master of the slaves of all nations, master of sword and pen, deputy to God in this world, protector of the kings of the Arabs and ʿAjam, knight on the field of courage, guardian of the foundation of gallantry, killer of pharaohs and tyrants, Khusraw of the Khusraws and the Caesars, completer of Ottoman fortune, guide for sultanic codes, the sultan son of the sultan, Sultan Salīm Khān, son of Sultan Bāyazīd Khān with Qānṣūh al-Ghawrī, sultan of Egypt, and the deeds contained in it . . .

While it may be true, as David Ayalon pointed out,[10] that this *duʿāʾ* does not fit the tenor of the rest of the treatise, it is striking that ʿĀmir chose to delete it altogether. In addition, the 1997 edition reviewed here extends beyond the 1861-62 edition, which ends with Süleyman′s 1521 conquest of Rhodes. This brief extension includes a summary of events and governors of Egypt until the death of ʿAlī Bāshā al-Tawāshī.

There are some intriguing historical inaccuracies in the text which suggest that either the author, some of the copyists, or the editor(s) were not at all intimate with Ottoman developments of the time. On p. 22 the narrator states that Selim′s brother Korkud (d. 1513) had fled and taken refuge with al-Ghawrī upon Selim′s coming to power and ordering the execution of his brothers. According to the text, Selim requested his return, al-Ghawrī refused, and this was the earliest cause for enmity between the two rulers. In fact, Korkud had visited Cairo as al-Ghawrī′s guest while ostensibly on the *ḥājj* and returned in 1511—a full year before Selim came to power.[11] Other persistent inaccuracies include the mistaken statements that Selim fled to ″Kūfah″ rather than ″Kafah″ after losing a skirmish with Bayezid′s forces in 1512 and that Süleyman conquered ″Russia″ [Rūs] rather than ″Rhodes″ [Rūdus] when he came to power. There are also consistently peculiar spellings for

---

[9]This *du'ā'* is also present in Yale MS Landberg 461.

[10]The ″submissive eulogy to Sultan Selim I . . . is only to camouflage his real attitude. In reality the book reflects the agonized protest against a hated and despised conqueror of a humiliated military caste. . . .″ Ayalon, *Gunpowder and Firearms*, 86.

[11]For a detailed account of the events leading up to Selim′s coming to power, see Çağatay Uluçay, ″Yavuz Sultan Selim Nasıl Padişah Oldu?″ *Tarih Dergisi* 6/9 (1954): 53-90, 7/10 (1954): 117-42, 8/11-12 (1955): 185-200.

″Janissary″ *[al-Yakinjarīyah]* and ″Shahsuwār″ *[Shahwār]*. The fact that these peculiarities were present in both this edition and the 1861-62 edition suggest that ʿĀmir may have concentrated less on textual comparison than on reissuing a forgotten nineteenth-century edition.

In conclusion, ʿĀmir has provided neither a critical nor a mistake-free edition. The edition lacks critical apparatus. The footnotes, while useful for an understanding of Egyptian geography and certain military or administrative terms, are neither very extensive nor entirely accurate. Two footnotes in particular, one explaining that ″Edirne is a city in Shām″ (p. 24) and the other describing ″Jīlān″ [Gīlān] as ″a Persian clan which moved from around Persepolis *[Istakhr]* to one side of Baḥrayn on the Arab Gulf″ (p. 40)[12] struck this reviewer as indicative of careless editing. While any edition of such a rare and valuable text is to be welcomed in the fields of both Ottoman and Mamluk studies, the text itself does not appear to have remained consistent through the years and this edition has not been carefully prepared. In order for this source to be used with greater confidence, more careful philological and editing work remains to be done.

NAJM AL-DĪN AL-ṬARSŪSĪ, *Kitāb Tuḥfat al-Turk. Oeuvre de combat hanafite à Damas au XIVè siècle,* edited and translated by Mohamed Menasri (Damascus: Institut Français de Damas, 1997). Pp. 47 + 209.

REVIEWED BY BERNADETTE MARTEL-THOUMIAN, Université Paul-Valéry, Montpellier III

The starting point of this work is the textual edition of a tract, *Kitāb Tuḥfat al-Turk,* whose author, Najm al-Dīn al-Ṭarsūsī (d. 758/1357), completed his redaction in 1353. This edition is followed by an annotated translation, then an introduction situating the work in its religious as well as cultural and political context. The editor, Menasri, outlines the condition of the different juristic schools in Damascus under Mamluk control (Baḥrī period) and provides us with information concerning the author′s personal life—at any rate what he could gather about someone already dead at 37, in his prime. If one considers that the purpose of this work is to make known a text which is presently unedited, one cannot fathom why the presentation of the manuscript is so brief. Indeed, in the section dedicated

[12]It is clear from the context that the *region* Gīlān is meant—the coastal area south of the Caspian Sea in northern Iran.

to this, Menasri even fails to indicate the number of pages (one realizes this from reading the Arabic text, in which 91 folios are marked). Similarly, he seems to be unaware of the existence of copies other than those he has used, which are held in the Bibliothèque Nationale in Paris (they number two, pp. 54-56). The text does not seem to be furnished with a colophon, but the copyist's name is specified (p. 54). The date of the copy, quite frankly, has not been established, the author merely referring to Baron de Slane. These various points, which bear significantly on the framework of a document which Menasri styles a juridico-political manual, have not received any comment by him. How, further, does one evaluate the importance of this work if one cannot gauge its dissemination? It is difficult to imagine that this tract could have had a ″favorable reverberation in the service of the Mamluks″ if it remained secret. If that were not the case, one would like to know if the Shafi'i *madhhab,* sued by al-Ṭarsūsī repeatedly, reacted and counterattacked, and if comparable writings as a consequence have come to light (knowing, of course, that the author was to die just a few years later). Does the work of al-Ṭarsūsī reflect the positions of the Hanafi school of Damascus, for which he would have played in some fashion the role of spokesman? This issue seems the most interesting, for in reality, considering all those who were bound up with the government, be they military, civil, or religious, could al-Ṭarsūsī have been sufficiently naive to believe that his masters would be grateful for his precious advice and modify their criteria for recruitment when they were themselves the primary beneficiaries of certain practices (e.g., venality of office)? The study of biographies and chronicles shows that moralization had not become manifest but rather that prohibited practices had, for all intents and purposes, become a way of governance. If, as Menasri suggests, power appears to have affected the author′s position regarding the Hanafi *madhhab,* which seems to have acquired more importance, one can always ponder if the question was really one of honest compliance with the practices remonstrated against by Abū Ḥanīfah, or if personal self-interest carried all before it; but this, only a detailed study would allow us to know.

As a final comment, we must note that this tract is not "a hitherto unpublished text" as the abstract claims. It has been published by Riḍwān al-Sayyid (Beirut, 1992), based upon manuscripts from Berlin, the Umayyad Mosque, and Medina.

IBN ḤAJAR AL-ʻASQALĀNĪ, *Dīwān,* edited by Firdaws Nūr ʻAlī Ḥusayn (Madīnat Naṣr: Dār al-Fikr al-ʻArabī, 1416/1996). Pp. 358.

REVIEWED BY THOMAS BAUER, Universität Erlangen

In the ninth/fifteenth century seven ″shooting stars″ (*shuhub*) were sparkling in the heaven of poetry in Egypt, as we learn from al-Suyūṭī.[1] These *shuhub* were seven poets, all of them bearing the name Shihāb al-Dīn Aḥmad, who were counted among the best poets of their time. Due to the almost complete neglect of the Arabic literature of the Mamluk period, the names of these once much admired artists fell into oblivion and their works, despite their undisputable quality, are still in manuscript.[2] There is, however, one exception. One of these Shihāb al-Dīns was none other than Ibn Ḥajar al-ʻAsqalānī, whose fame as one of the most ingenious hadith-scholars of Islam has endured. Few people may, however, be acquainted with the fact that this same Ibn Ḥajar started his career as an *adīb* and poet, eulogizing the rulers of the Rasulid dynasty of the Yemen. Even later in his life, Ibn Ḥajar never ceased to appreciate and to compose poetry. The importance Ibn Ḥajar assigned to his own poetic production is shown by the fact that al-Suyūṭī mentions three different recensions of Ibn Ḥajar′s *Dīwān,* obviously compiled by the author himself.[3] Of these three recensions at least two seem to have survived. A larger one, represented by a manuscript now in the Escorial, gives the poems in alphabetical order. It still awaits edition. The smaller recension is a selection of those poems that Ibn Ḥajar considered to be his best. The arrangement of the poems is rather sophisticated and shows again Ibn Ḥajar′s care for his poetry. The poems are organized in seven chapters, each chapter comprising seven poems. The only exception is the last chapter, which consists of seventy epigrams (each comprising two lines), since it was Ibn Ḥajar′s idea that ten epigrams would equal one long poem. As might have been expected, the book starts with poems in praise of the prophet *(nabawīyāt),* followed by a chapter comprising poems in praise of princes (mainly from the Rasulid dynasty) and the caliph *(mulūkīyāt),* and a chapter with poems in praise of other members of the military and civilian

[1]*Naẓm al-ʻIqyān fī Aʻyān al-Aʻyān*, ed. Philip K. Hitti (New York, 1927), entries 20, 34, 37, 39, 42, 43.

[2]A major exception is the recent edition of two collections of *ghazal*-epigrams (a smaller one dedicated to girls, a larger one dedicated to young men) by Shihāb al-Dīn Aḥmad al-Ḥijāzī, *Al-Kunnas al-Jawārī fī al-Ḥisān min al-Jawārī* and *Jannat al-Wildān fī al-Ḥisān min al-Ghilmān,* ed. Raḥāb ʻAkkāwī (Beirut, 1418/1998).

[3]See *Naẓm al-ʻIqyān,* 50. The editions mentioned in this review in all probability contain the recension mentioned by al-Suyūṭī under the title *Al-Sabʻah al-Sayyārah,* though this title does not appear in the title pages of the manuscripts.

élite *(fī al-amīrīyāt wa-al-ṣāḥibīyāt)*. The fourth chapter is dedicated to love poems *(al-ghazalīyāt)*. Chapter five is made up of poems of different genres, among them an interesting elegy on the death of Ibn Ḥajar′s teacher al-Bulqīnī. The following chapter is dedicated to the *muwashshaḥāt*. Most of the epigrams that form the last chapter deal with love, just as do all of the *ghazalīyāt* and the *muwashshaḥāt*. It goes without saying that Ibn Ḥajar′s book is of primary importance not only for literary history, but also for the history of culture and mentalities. Apart from this, the main themes of his poetry being praise and love, Ibn Ḥajar′s *Dīwān* offers ample material for the study of Mamluk representations of social relations.

It was certainly mainly Ibn Ḥajar′s fame as a scholar that first aroused the interest of modern scholars in his poetry. The outcome was that today Ibn Ḥajar is the only Mamluk poet whose poetry is accessible in more than one edition. To my knowledge, his *Dīwān* (in the shorter recension) has been edited at least four times. A Ph.D. thesis from 1962 by Syed Abul Fazi was not accessible to me. The edition by Ṣubḥī Rashād ʿAbd al-Karīm (Ṭanṭā: Dār al-Ṣaḥābah 1410/1990), certainly no philological masterpiece, is criticized in detail in the introduction of Nūr ʿAlī Ḥusayn′s edition (pp. 4-7). So there remain two editions that deserve attention: (A) Nūr ʿAlī Ḥusayn′s (the book under review), and (B) an edition by Shihāb al-Dīn Abū ʿAmr, published 1409/1988 in Beirut (Dār al-Dayyān) under the title *Uns al-Ḥujar fī Abyāt Ibn Ḥajar*. Both editions present a reliable text. (A) is based on six, (B) on three manuscripts. The greater textual basis of (A) is, however, not very significant, since the range of variants in the different manuscripts is fairly small. Most variants noted in the apparatus of (A) are either obvious misspellings or mere orthographic variants that hardly deserve to be mentioned. Unfortunately, (B) does not record variant readings. But whereas (A) gives scarcely any commentary on the poems, (B) is in fact, as its subtitle notes, a *sharḥ balāghī,* a commentary explaining the tropes used by the poet, whereby it becomes an absolutely indispensable tool for every serious reader of Ibn Ḥajar′s poetry. Typical for most poets of this period, Ibn Ḥajar makes more than ample use of rhetorical devices, especially of the *tawriyah,* a form of *double entendre* that has been considered to be the most characteristic trait of Mamluk literature. Consequently, for the modern reader many lines of Mamluk poetry remain obscure without further explanation. Since even specialists of Arabic poetry are often confronted with insuperable difficulties, the number of good commentaries is fairly rare. Shihāb al-Dīn ʿAmr′s commentary, however, is a masterpiece. The author (another ″shooting star″!) not only explains the meaning of every difficult line, but gives an inventory of all rhetorical devices used by Ibn Ḥajar. His edition can thus be considered a valuable contribution to the growing interest in rhetoric in general and Arabic rhetoric in particular. Beyond helping to understand Ibn Ḥajar′s verses,

ʿAmr′s commentary may also be used as a textbook for the study of *balāghah* and *badīʿ*. Though Nūr ʿAlī Ḥusayn′s (poorly printed) edition is not completely superfluous (due to its critical apparatus), Shihāb al-Dīn ʿAmr′s beautiful and erudite edition and commentary remains first choice.

CHRISTOPHER S. TAYLOR, *In the Vicinity of the Righteous:* Ziyāra *and the Veneration of Muslim Saints in Late Medieval Egypt* (Leiden: Brill, 1999). Pp. 264.

REVIEWED BY PAUL E. WALKER, Chicago, IL

Every visitor to Cairo is soon aware of the presence of the massive cemetery complexes that lie adjacent to the city on its eastern side just beneath the Muqaṭṭam plateau, particularly of the one known as al-Qarāfah, which stretches for a considerable distance southward from the Citadel. The placement there of thousands upon thousands of Muslim burials, and with them often impressive aboveground mausoleums, has always seemed as if it constituted a city in its own right. Inhabited from the beginning by a full complement of the living alongside the dead, it is a special feature of the Islamic urban pattern. But the meaning and role of the city of the dead, as the residence not merely of ordinary deceased individuals, is even more complex. Home to numerous saints who radiate blessings to those who live in close proximity and to those who come to visit them, the cemetery is a celebrated abode of righteousness and piety. Despite fairly consistent rejection from the earliest days by strictly traditional Islamic authorities and constantly renewed attacks against the practice, saint veneration—a universal phenomenon in any case—is an integral feature of local religious devotion. Having the saints nearby or available for ready visitation increases the sanctity of the neighborhood. It serves as well to draw pilgrims from farther away. And, although the importance of these sacred spaces on the border of the modern city remains active, for the medieval inhabitants both living near and being buried in the vicinity of the holy dead provided enormous religious benefits that are not quite so obvious now.

The intrinsic value of a cemetery like the Qarāfah is frequently made clear even in passing references in the standard chronicle histories of Egypt. But as the accumulation of saints and the number of their tombs in it grew over time, it increased to the point that a special literature was created to record the many loci of such special sanctity and to guide the increasing numbers of pilgrims by giving them rules of proper behavior in the presence of a saint (do not, for example, sit on the saint′s tomb!) and a topographical inventory of the places to visit along

with a catalog of the miracles and other achievements of the person buried there. Of many such guides to the Qarāfah that are known to have been written, four in fact survive from the medieval period. They, together with other writings about saints and other examples of their veneration, offer an almost irresistible source for a sociology of Islamic practice, especial for the thirteenth through fifteenth centuries from which these particular guidebooks come.

However, although these subjects—cemeteries, tomb visitation, and saint veneration—possess their own natural fascination, and there exists a literature dedicated to them in this instance, shaping the information to serve a scholarly purpose cannot be an easy task. It is not simply that much about the subject involves what is often called ″folk″ or ″popular″ Islam but that the sources—the pilgrims′ guides—tell stories about a timeless ahistorical world that, although supposedly rooted in the real presence of individual persons, proves surprisingly imprecise and unspecific. It is not confined by time and space. The guides, for example, serve poorly as a tool to reconstruct the actual landscape of the Qarāfah in the period they cover, partly because the details in them seldom match the surviving physical evidence, but partly also because they, like other literature about saints, are not as much concerned with this world as with the next. The lives of saints tend to take on generic qualities; a saint here is much like a saint there, places blur and times merge.

Nevertheless, succumbing to the more obvious attractions of this material, Christopher Taylor in this fine study of the Qarāfah, of the literature about it, and the whole subject of saint veneration in late medieval Egypt, approaches the task with admirable resolution and skill. He has had *per force* to assume a mastery over the material and thereafter to extract from it a suitably scholarly analysis from which to fashion his sociology of this aspect of Islamic observance. Nicely written for the most part this book presents an often vivid picture of life in and around the tombs, of the city of the dead′s liminal role in the sacred universe of Muslims, and of the ambiguity of official and unofficial attitudes toward it. Basing himself primarily on the following four guidebooks: *Murshid al-Zuwwār ilá Qubūr al-Abrār* by Ibn ʻUthmān (d. 1218), *Miṣbāḥ al-Dayājī wa-Ghawth al-Rājī wa-Kahf al-Lājī* by Ibn al-Nāsikh (d. about 1297), *Al-Kawākib al-Sayyārah fī Tartīb al-Ziyārah fī al-Qarāfatayn al-Kubrá wa-al-Ṣughrá* by Ibn al-Zayyār (d. 1412), and *Tuḥfat al-Aḥbāb wa-Bughyat al-Ṭullāb fī al-Khiṭaṭ wa-al-Mazārāt wa-al-Tarājim wa-al-Biqāʻ al-Mubārakāt* by ʻAlī al-Sakhāwī (d. about 1483), he necessarily limits his perspective to the Qarāfah and to the time frame defined by these sources. The many additional cemeteries both in Egypt and in other Muslim countries, as well as funerary practice before and after this period, are not covered. Also, since his focal point is the Qarāfah and its saints, he largely avoids or stays away from the issue of saint veneration and visitation elsewhere. He did not

consider Christian and Jewish (nor ancient) practice, as another example, although in Egypt it parallels that of the Muslims.

In covering his several basic themes, he offers individual chapters on 1) the history, topography, and role of the Qarāfah itself; 2) the *ziyārah* as an institution; 3) notions of righteousness and piety; 4) *barakah,* miracles, and mediation as related to the saints and their tombs; 5) an analysis of the legal attack against visitation and veneration (Ibn Taymīyah and Ibn Qayyim al-Jawzīyah); and 6) the defense of them (al-Subkī). There are of course many limitations in his coverage of any one of these topics and it shows in his discussion of them. Such restrictions were in part dictated by the narrow scope that is inherent in the original sources from which he began. Some historians will, accordingly, find too little that is truly historical; those wanting a topography will be frustrated by the vagueness of the physical mapping; and even for the sociologists of religion the citation and consideration of parallel materials or theory could have been richer. Still, Taylor was able to extract from his material a highly interesting, often intriguing portrait of his subject and that represents an impressive success which will certainly please most readers, both the specialist and the non-specialist.

The Cambridge History of Egypt. Vol. 1, *Islamic Egypt, 640-1517*, edited by Carl F. Petry (Cambridge: Cambridge University Press, 1998). Pp. 645.

REVIEWED BY ROBERT IRWIN, London, England

When *The Cambridge History of Islam* came out in 1970 it attracted much criticism (and some praise). Edward Said, in *Orientalism,* was particularly cruel: ″For hundreds of pages in volume 1, Islam is understood to mean an unrelieved chronology of battles, reigns, and deaths, rises and heydays, comings and passings, written for the most part in a ghastly monotone.″ One knows what he means. Happily standards in the writing of medieval Islamic history have improved quite a bit in the last few decades, and *The Cambridge History of Egypt* cannot fairly be accused of offering a monotonous chronology of the doings of exotic bigwigs. All the contributions to the new volume seek to address broad institutional, social, and ideological issues and, sometimes, methodological issues too. The contributions are argumentative, so that at times, as we shall see, *The Cambridge History of Egypt* appears to argue with itself, and that is no bad thing.

As Carl Petry notes, this is the first such survey in a European language to have been attempted since Gaston Wiet′s *L′Égypte Arabe* (1937). Yet is Egypt a

self-standing, coherent unit with a continuous history? Some contributors, those dealing with the Fatimids and the Mamluks, are writing about the heart of a great empire. Other contributors, for example those dealing with Byzantines and the Ottomans, are discussing a province which was being milked of its resources. Thierry Bianquis, writing about the Tulunids and Ikhshidids, shows Egyptian history being shaped by developments in Iraq. At times, Egypt's affairs are impossible to disentangle from those of Syria and under the Ayyubids Egyptian interests were often subordinated to those of Syria. It is not surprising then that Michael Chamberlain's chapter on the Ayyubid period devotes a great deal of attention to Syria. Also Donald Little's chapter pays almost as much attention to Syrian historians as it does to Egyptians.

Contributions dealing with the pre-Mamluk period may be dealt with selectively and briskly. Hugh Kennedy's chapter on Egypt in the Umayyad and Abbasid periods stresses the degree to which we are dependent on the restricted coverage of the sources, both Muslim and Christian. It is also strong on institutional history and is heavily weighted towards the way in which the army in Egypt was paid for. Kennedy concludes by remarking that Egypt's failure to develop a strong local elite prepared the way for the coming of the Turkish soldiery. The next chapter, "Autonomous Egypt from Ibn Ṭūlūn to Kāfūr, 868-969" by Bianquis is commendably wide-ranging and packed with vivid detail. I learned a lot about the Tulunids and Ikhshidids that I did not know before. Paul Walker's 'The Ismāʻīlī Daʻwa and the Fāṭimid Caliphate' has a tighter focus than its precursors. One gets the impression that the Fatimids liked Cairo well enough but it was not Baghdad. Yet their stooge Basāsīrī's brief occupation of Baghdad proved to be the kiss of death for Fatimid ambitions. Paula A. Sanders writes about the Fatimid state. The main activity of the Fatimid army seems to have been to fight itself. Its endemic military factionalism seems to foreshadow that of the Mamluks. I note that in a later chapter on art and architecture, Irene A. Bierman refers to a major institutional change regarding the way *waqf* was centrally administered, which led to the rapid increase in the building of major monuments and pious endowments supported by rural revenues. According to Bierman, this took place around the time Badr al-Jamālī became vizier, i.e., ca. 1075. However, neither Walker nor Sanders discusses this phenomenon. (They do not discuss *waqf* at all.)

Although the next chapter by Michael Chamberlain, on Ayyubid Egypt, rightly pays a great deal of attention to Egypt's relations with the Crusader regime, this has not been prepared for in the Fatimid chapters, so that we hear nothing in them about Amalric and Manuel II's Egyptian project or, more generally, about the havoc wreaked by various Crusader expeditions in the Delta area prior to the coming of Saladin. Chamberlain's chapter on the Ayyubids stresses the informality of office-holding and of social and administrative procedures in general. Men

made their own authority and offices were molded to fit the office-holder rather than the reverse. His argument is persuasive, yet his contribution is in marked contrast to later chapters on Mamluk history and society which, as might have been expected, emphasize the importance of hierarchy, discipline, and set career patterns.

The coverage of this first volume of *The Cambridge History of Egypt* is heavily weighted towards the Mamluk period. Linda Northrup's "The Baḥrī Mamlūk Sultanate, 1250-1390," while covering much ground that is uncontroversial, judiciously deals with two issues which are debatable and debated. In the first of these, regarding the degree of continuity between the Ayyubid military system and that of the Mamluks, she favors Ayalon's view of the essential continuity between the late Ayyubid and early Mamluk regimes. The institutional changes, whenever they did come, seem to have been carried out while the chroniclers' backs were turned, so that we are not sure whether they happened in the reign of Baybars, Qalāwūn, or later yet. The second issue is whether changes initiated by al-Nāṣir Muḥammad ibn Qalāwūn had a deleterious effect on the sultanate or not. According to Northrup, "the political, military and economic reforms instituted by al-Nāṣir Muḥammad, although intended to strengthen his political and economic position, led in the long term to the end of Qalāwuñid and Kipchakī-Turkish rule." However, as Maynard Keynes once observed, "In the long run we are all dead," or, as Ibn Zunbul put it, "It is God who decrees an end to all dynasties." Al-Nāṣir Muḥammad is indicted for presiding over "demamlukization" of the regime by appointing non-mamluks to senior military posts, but this was not necessarily a bad thing. He is also condemned for running down the Egyptian *ḥalqah,* but it seems likely that by the 1320s this was already a diminished and ineffective force (unlike the Syrian *ḥalqah*). The thesis that the *khānqāh* was used by the Mamluk regime to promote "moderate Sufism," as Northrup contends, remains unproven. However, these positions can be defended and doubtless will be defended in seminars and essays for years to come.

Incidentally, Northrup's chapter on the Baḥrī Mamluks starts by citing Ibn Khaldūn. (When shall we ever be free of this man and his brilliant insights?) Elsewhere, in the chapter on "Culture and Society in the Late Middle Ages," Jonathan Berkey refers to Ibn Khaldūn's views on the splendor and wealth of Cairo. Ibn Khaldūn thought that the Mamluks were marvellous and the saviors of Islam and he perceived the capital city over which they presided to be thriving. Ibn Khaldūn's enthusiasms are in cheerful contrast to al-Maqrīzī's later grumps and glooms. However, Ibn Khaldūn was in Egypt most of the time from 1382 until his death in 1406 and I note that, if we turn to Jean-Claude Garcin's chapter, "The regime of the Circassian Mamluks," we find that Ibn Khaldūn's Egyptian sojourn overlapped with a famine as well as not one but three plague epidemics.

Both Barqūq and Faraj had to fight for their thrones and at times Cairo was the battlefield, as in 1497, ″when the battle line stretched from Fusṭāṭ in the south to Maṭarīyah in the north.″ It was a battle for control of not much more than the Delta region, for in the opening decades of the fifteenth century control of Upper Egypt had passed into the hands of the Bedouin. When Tīmūr invaded Syria in 1399, the Mamluk army was too disorganized to face him in open battle. In the light of all this, Ibn Khaldūn′s Pollyannaish approach towards the Mamluks seems misplaced.

Warren Schultz′s ″The monetary history of Egypt, 642-1517″ has an attractive rigor and iconoclastic bite. Because of its engagement with methodological issues, it can be recommended not just to Mamluk historians, but to anyone with an interest in pre-modern history. It can particularly be recommended to anyone who has cracked his or her skull trying to master Hennnequin′s long, dense, and fiercely argued papers on Islamic coins and currency problems. Irene A. Bierman′s ″Art and Architecture in the medieval period″ makes interesting points about urban topography and architecture. She is good on the history of the study of Egyptian architecture and, for example, she points out the damage done by the Comité de conservation des monuments de l′art arabe. However, the chapter is almost wholly devoted to architecture. The treatment of metalwork is perfunctory, glass is hardly mentioned, and miniatures and Mamluk carpets are not discussed at all. Berkey′s ″Culture and Society during the late Middle Ages″ pays more attention to these sorts of artifacts. Berkey, among other points of interest, stresses the piety and learning of a significant number of sultans and amirs and, more generally, the degree to which the military intermingled with civilians in the Mamluk period.

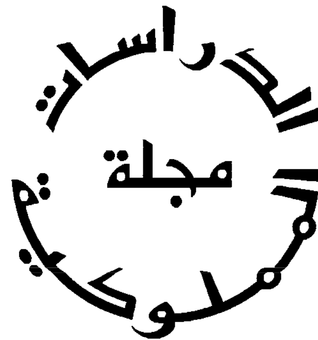
Berkey′s stress on the *gravitas* of at least some of the Mamluk elite is echoed in a different key by Garcin′s chapter on the history of the Circassian Mamluks. This is one of the best chapters in the book and makes many cogent points, but if there is one big argument he is advancing, it is, I think, that Mamluk politics at the top was much less violent and chaotic than it appeared to earlier historians such as Muir, Lane-Poole, and Wiet. He suggests that the ″sultanate was acquiring the appearance of a military magistrature, no longer threatened by the ambition of the amirs.″ Moreover, ″a new political mechanism had gradually been imposed: any amir who rose to be sultan had first to remove his predecessor′s recruits relying on the previous age group that had been kept waiting in the wings until that point, which marked their genuine entry into the political arena. The initial rhythm of Mamluk political life was thus much slowed down.″ Indeed, it is hardly an exaggeration to describe late medieval Egypt as a gerontocracy. Incidentally Garcin′s researches on Upper Egypt, published as *Un centre musulman de la Haute-Égypte médiévale: Qūṣ* (1976) can now be seen to have been one of the

most influential books on Mamluk Studies. Almost every contributor to *The Cambridge History of Egypt* makes some reference to Garcin's work on such matters as shifting trade routes in Upper Egypt, the contribution to intellectual life made by men from Qūṣ, the role of the Bedouin, and the eventual dominance of the Hawwārah over that region.

I think that Garcin exaggerates the incapacity of the last Mamluk sultans to innovate and I think Carl Petry thinks so too. In "The military institution and innovation in the late Mamluk period," he presents a convincing portrait of Qānṣūh al-Ghawrī as a thorough-going innovator. "Under trying circumstances, the military institution was capable of exploring creative ways of reconstituting its hegemony." Michael Winter, in his chapter on the Ottoman occupation, is more inclined to labor the alleged conservatism of the last generation of Mamluks. Winter remarks quite rightly that Ibn Zunbul "was not a reliable chronicler and his work is a kind of historical romance," but he spoils this by going on to observe that nevertheless "it is important as a genuine expression of the mamluks' view of themselves and their ethos." But why should a geomancer from Bahnasā who worked in the household of a sixteenth-century Ottoman pasha be taken as a *porte-parole valable* for the Mamluks? Winter claims that Ibn Zunbul, as the best exponent of the Mamluk military ethos, "regarded firearms as un-Islamic and unchivalrous." Yet all the evidence suggests that Qānṣūh al-Ghawrī and Tūmānbāy had no prejudice against guns. Indeed what doomed Tūmānbāy at the Battle of Raydanīyah was his over-reliance on artillery. It is tempting to rely on Ibn Zunbul, as otherwise the modern historian is almost entirely at the mercy of Ibn Iyās. The trouble with Ibn Iyaš is that one cannot, as it were, walk round him, in order to discover what realities he may have been concealing. Ibn Iyās was certainly anti-Mamluk. (He did not realize that the Ottomans were going to be worse.) Although one cannot avoid using Ibn Iyās, nevertheless one can supplement his evidence with that of the Turkish chroniclers and this is what Winter has done in his valuable chapter.

In "Historiography of the Ayyubid and Mamluk epochs," Donald Little notes how Ibn Iyās shared the tendency of al-Maqrīzī and Ibn Taghrībirdī to idealize the Baḥrī period. This is certainly true. Our view of Mamluk history would be transformed if Qānṣūh al-Ghawrī had maintained a servile court historian like Ibn ʻAbd al-Ẓāhir, while Baybars I had been systematically denigrated by the carping of an *ʻālim* like Ibn Iyās. Although Little is chiefly concerned with chroniclers and biographers from the point of view of their value to the modern historian, he does also sometimes linger on their literary qualities as well (an approach pioneered by Ulrich Haarmann). On a minor point, Little states that Ibn ʻAbd al-Ẓāhir's topography of Cairo is lost. In fact it survives in the British Library, but unfortunately it turns out to be a rather brief and dull treatise. The original source or sources for so much of al-Maqrīzī's *Khiṭaṭ* remain to be discovered.

Little notes that, though Mufaḍḍal ibn Abī Faḍā'il was a Copt, his chronicle cannot be seen as having been produced outside the Islamic tradition. Indeed "he occasionally copied Muslim religious formulae into his work!" The Islamization of the Coptic community is a leading theme of Terry G. Wilfong's "The non-Muslim communities; Christian communities." For example, Coptic men sought to impose controls on their women which mimicked those of the Muslim community. One consequence of the Islamization of Coptic culture is that it seems unsafe to deduce conversion to Islam on the basis of the adoption of Arab names. Although the chronology of Coptic conversion remains unclear, there is a perfect consensus among the contributors to this volume that the Copts suffered a catastrophic decline in their numbers and fortunes in the course of the fourteenth century.



In "Egypt in the world system of the later Middle Ages," R. Stephen Humphreys has drawn together common themes and places Egypt in a wider political and commercial context. There is very little agreement in this volume even about the broadest outlines of Egypt's commercial history. Humphreys argues that the destruction of the Crusader ports, while it crippled Syrian trade, had the advantage of channelling all the Mediterranean trade through Alexandria. On the other hand, Sanders believes that in the Fatimid period it was precisely the establishment of the Crusader states which led to a diversion of one of the main routes for international commerce from the Red Sea to the Nile Valley and that this was a leading source of Fatimid prosperity. Both Humphreys and Northrup seem to be implying that the spice trade only became an important part of the Mamluk economy in the Baḥrī Mamluk period. This is very likely true, though one does not get the impression that the spice trade ranked high in the thinking of Baybars or Qalāwūn or even al-Nāṣir Muḥammad. It is possible that Northrup takes an excessively bleak view of the Mamluk economy in the late fourteenth century. She states that there was "a shortage of specie" in this period, but it is hard to see why this should have been so, as most (or even all?) Europeans in this period were under the impression that the balance of trade in this period was very much in Egypt's favor. (Northrup here cites Abraham Udovitch, who in a brief survey article published in 1970 placed too much trust in al-Maqrīzī's *Ighāthah*). Schultz, on the other hand, states that by the end of the fourteenth century "both the numismatic and literary evidence indicates that there were many different types of precious metal coins in circulation." Northrup suggests that there was a lack of exports in the late fourteenth century. This seems intrinsically unlikely, given the granting to Venice of Papal licenses to trade with Egypt from the 1340s onwards. Venice's regular convoys to Egypt only began in 1346. Eliyahu Ashtor in *The Levant Trade in the Later Middle Ages* (1983) identified the period from 1291 to 1344 as the years of commercial crisis. By contrast, he presented the period from 1345 to 1421 as a boom period. It does seem likely that the volume and importance of the

spice trade increased yet further under the Circassians. Garcin suggests that threats posed to the overland routes by the wars of Tīmūr and the Turkomans benefited Red Sea commerce and consequently the coffers of the sultans. Therefore a model of Mamluk economic (or military, or social) history in which everything just gets worse and worse is implausible.

As can be seen from the above, there is plenty in *The Cambridge History of Egypt* to engage the mind and interest of anyone with a background in Mamluk studies. For students coming new to the subject, it will also of course serve as a work of reference and a history which, besides engaging with complex social and institutional issues, tells the essential chronological story. It is an immensely valuable work, a compendium of state-of-the-art syntheses of research in the field. Still it is a pity that there is no chapter on Egyptian literature. It is sad not to see any sustained discussion of the works of Bahā' al-Dīn Zuhayr, Ibn al-Fāriḍ, Ibn Dāniyāl, Ibn Sūdūn, and others. Finally, there is the odd charming misprint. On page 313, we learn of the "building by al-Ghawrī alongside the Nilometer (*Miqyās*) of a royal palace where a veil fluttering at a widow announced that the flood had reached its maximum . . ." This reminds me of a friend who, while he was working on a *Time-Life History* part-work, typed in the sentence "All of Egypt's prosperity depends upon the headwaters of the Nile," only to have it corrected by his spell-checker to "All of Egypt's prosperity depends upon the headwaiters of the Nile."

MAMLŪK STUDIES
REVIEW

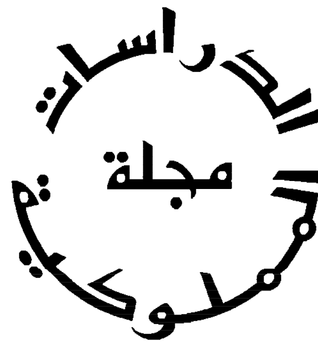
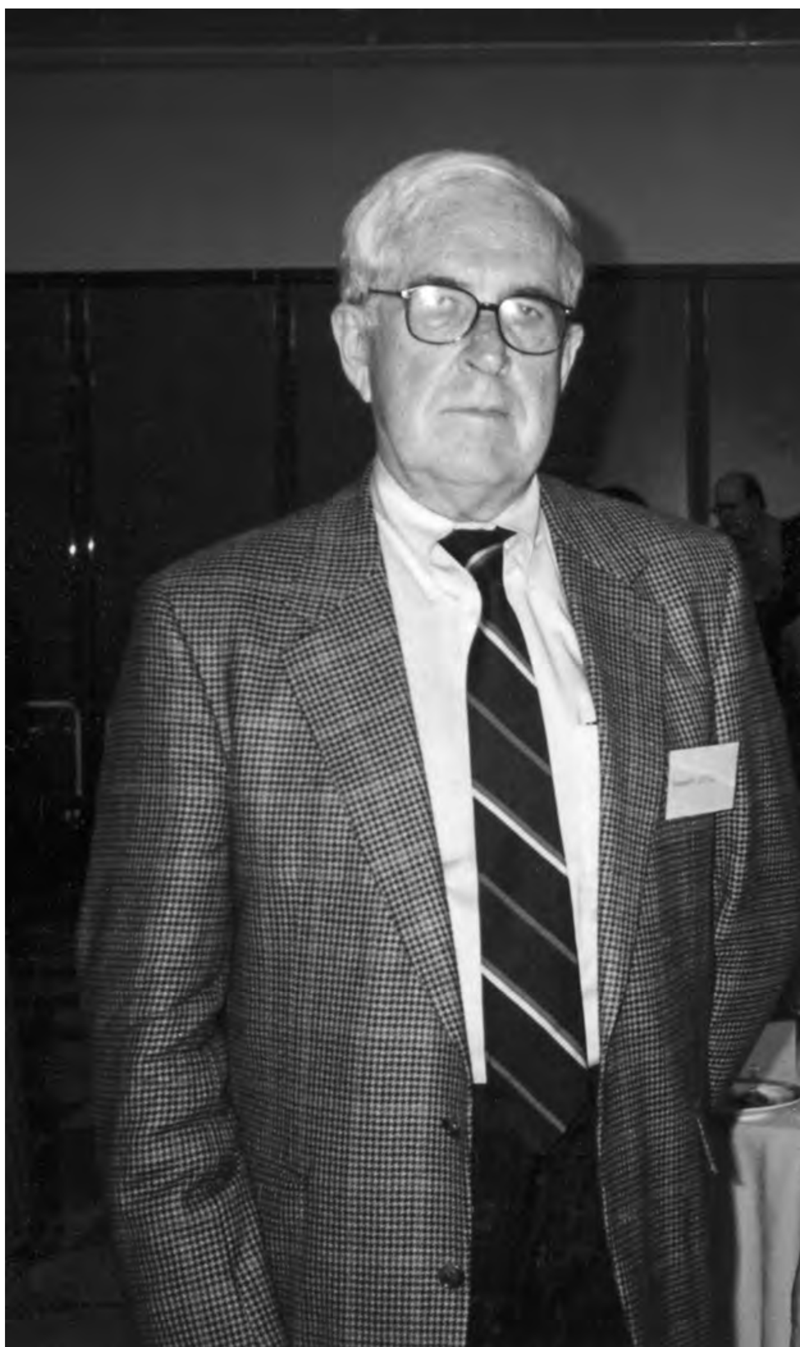
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk or online, together with a printed copy. The print copy should have full and proper diacritics, but the disk or online copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of primary and secondary sources, created and maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review.*



ISSN 1086-170X.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

Mamluk Era Documentary Studies: The State of the Art*

Introduction

Manuals on historiography routinely say that the discipline of history is shaped by documents. In this context, the word ″document″ is interpreted in a broad sense as the traces left behind by the thoughts and actions of men. More pragmatically, what is understood in the field of history as a document are the authentic traces of tools necessary for the needs of daily life (thus administrative and private documents, coins, buildings, etc.), or put in other words ″everything that has remained immediately and directly of the historical facts or events.″[1]

All these materials are the subjects of particular disciplines, that is to say papyrology, epigraphy, numismatics, and archeology, better known as the auxiliary sciences of history. Each one studies a documentation defined as impartial, because documents are not reckoned to lie (although forgeries are sometimes found); that must be the starting point for research, ″the historian′s choice morsels″ to quote one documents expert.[2] It is thus clear that in speaking of documentary studies, one could expect this article to treat all these disciplines. It does not, but rather aims at presenting the state of actual research on handwritten documents from the Mamluk period. I do not say papyrology because I think this word is unfortunately misleading. Although influenced by the discipline developed by scholars of antiquity, Arabic papyrology does not deal exclusively with documents written on papyrus. In the Islamic context, this would be nonsensical, as other writing materials

*To Donald Little for the countless hours he has devoted to Mamluk documents. This article is the revised version of a paper presented at the Conference on Mamluk Studies organized by the University of Chicago (7–8 May, 2003). On various occasions, I benefited from the help and information provided by several colleagues, among whom are Gladys Frantz-Murphy, Anne Regourd, Donald Little, Geoffrey Khan, Johannes Pahlitzsch, and Christian Müller. I wish to express to all of them my gratitude for having shared with me their experience and their knowledge.

[1]Ahasver von Brandt, *Werkzeug des Historikers,* 15th ed. (Stuttgart, 1998), 52, cited in Klaus U. Hachmeier, ″Private Letters, Official Correspondence: Buyid *Inshā'* as a Historical Source,″ *Journal of Islamic Studies* 13 (2002): 127. Von Brandt names this category *Überreste* and divides it into three classes, which comprise the written *Überreste,* that is private and official documents, as well as some literary works not primarily intended as historical evidence.

[2]Hans Robert Roemer, ″The Sinai Documents and the History of the Islamic World: State of the Art—Future Tasks,″ in *Studia Arabica et Islamica: Festschrift for Iḥsān ʻAbbās on His Sixtieth Birthday,* ed. Wadād al-Qāḍī (Beirut, 1981), 386.

were used together with papyrus (ostracum, parchment, and at a rather early stage paper, but also cloth, and such odd materials as ostrich eggs, etc.). On the other hand, as we will see, archives have been preserved in institutions for which the documents had been issued. If we were considering only papyrology, they would not be included in this survey since they were not discovered through excavation, or in a cave.[3] Numismatics,[4] epigraphy, and archeology are thus left aside even though they clearly involve documents and some of them are of great help in corroborating information found in handwritten documents. I particularly think of the Mamluk decrees found on monuments in Egypt and Syria which reproduce originals that once were written on paper.[5] Documents, in the sense just defined (handwritten), are thus the exclusive focus of this article.

Students of medieval Islamic history are confronted with a leitmotiv that until the sixteenth century Islamic civilization has left only a few documents. This calamitous statement, somewhat tempered for Egypt, which historically, even in antiquity, has preserved more documents than other areas like Syria, the Arabian peninsula, or even North Africa, has been reassessed recently, particularly by R. Stephen Humphreys, who judged the situation to be encouraging,[6] and Donald Little, who said some time ago that ″original documents [for the Mamluk period] or remnants of archives are exceedingly important.″[7] I do not know if this is a problem of the bottle being half full or half empty, but I am rather optimistic, too.

---

[3]Arabic papyrologists generally consider that their discipline covers all the documents from the dawn of Islam until the emergence of Ottoman rule on the grounds that official archives prior to this period have not been preserved. I agree that it is difficult in Islamic studies to trace a border line between papyrology and diplomatics, which in Western studies defines archival materials in a broad sense, but I tend to believe that differences remain between the study of a papyrus of the first century of Islam and a document of the late Mamluk period, and the criteria invoked by papyrologists are not relevant, in my opinion.

[4]Numismatics has lately been the subject of a review article: Warren Schultz, ″Mamluk Monetary History: A Review Essay,″ *Mamlūk Studies Review* 3 (1999): 183–205.

[5]Jean Sauvaget, ″Décrets mamelouks de Syrie,″ *Bulletin d′études orientales* 2 (1932): 1–52; 3 (1933): 1–29; 12 (1947–48): 5–60; Gaston Wiet, ″Répertoire des décrets mamlouks de Syrie,″ in *Mélanges syriens offerts à Monsieur René Dussaud* (Paris, 1939), 2:521–37; Janine Sourdel-Thomine, ″Deux décrets mamelouks de Marqab,″ *BEO* 14 (1952–54): 61–64; Gaston Wiet, ″Un décret du sultan mamlouk Malik Ashraf Shaʻban à La Mecque,″ in *Mélanges Louis Massignon* (Damascus, 1957), 3:383–410. Recently an important tool has been published by the Fondation Max van Berchem that puts at the disposal of searchers a database of all Arabic, Persian, and Turkish inscriptions, published or unpublished, up till 1000 A.H. The latest update covers Egypt and now includes more than 20,000 searchable items. See *Thesaurus d′épigraphie islamique*, ed. Ludvik Kalus and Frédérique Soudan, CD-ROM (Paris and Geneva, 2003).

[7]″The Use of Documents for the Study of Mamluk History,″ *MSR* 1 (1997): 9.

Of course, compared to medieval Europe or China, the situation is not so good and it has led some scholars to allege that medieval Islamic civilization (not the Ottoman one) was less bureaucratic than, say, Sung China or the Italian states.[8] This statement is based on the surviving evidence, but is a non sequitur. It is as if Assyriologists, prior to the discovery of thousands of tablets through excavations, would have said that the chancery of the Assyrian kingdom was not fond of red tape. The problem, for medieval Islam, lies in the fact that few official documents which have been preserved are the original documents that were issued by the chancery and given to the beneficiary. What we lack are the state archives, because we know that for every original document issued, a copy was made in the various bureaux in charge of the affair treated. These state archives have completely disappeared, except for one item, almost a hapax, going back to the Fatimid period,[9] which offers us the opportunity to imagine how the registers prepared by chancery clerks must have looked.

To explain the disappearance of the state archives, different scholars have offered various explanations. One of the most repeated is that, unlike what happened in Europe, Islam had no legally organized social bodies which could have preserved archives, the unique exception being the *waqf* documents, as shown by Carl Petry. This means that only state archives could exist. Secondly, it has been argued that written documents do not establish the law (*kitābun yushbih kitāban:* one writing looks like another writing and can be exchanged with it), but if so why would non-Muslim communities have held for centuries documents that had no legal value and that were referred to in case of necessity? Thirdly, it has been alleged that in Europe most of the documents are of a judicial nature, while in Islam, on the other hand, these kinds of documents were kept by the qadis. When they became useless or obsolete, they were discarded. Whatever the case may be, my feeling is that an answer must be found in the sources, considering both state archives and private documents, including original documents issued by the chancery and handed over to the beneficiaries. In the first case, an important protagonist of the Mamluk sultanate, who experienced the transition between the Qipchak and Circassian regimes, witnessed a decisive event for our purpose: al-Maqrīzī (d. 845/1442). Speaking of his experience as a secretary in the chancery, he notes that in 791–92/1389–90, during Sultan Barqūq's reign, all the documents kept in the

[9]Geoffrey Khan, "A Copy of a Decree from the Archives of the Fāṭimid Chancery in Egypt," *Bulletin of the School of Oriental and African Studies* 49 (1986): 439–53. According to the author (oral communication), other documents originating from the archives of the Fatimid chancery are preserved in the Geniza papers.

room of the *dīwān al-inshā'* at the Citadel of Cairo were removed and sold by weight,[10] probably to paper merchants. Clearly, the disappearance of the state archives of the first Mamluk dynasty may be explained by this testimony, and this behavior must have been repeated in the periods that preceded and followed. As for private archives, the sources remain silent, although we may surmise that the same conduct prevailed. Original documents were often recycled and used as scrap paper. A unique case of this phenomenon, for the Mamluk period, has recently been discovered in several autograph manuscripts of al-Maqrīzī.[11] To conclude with this crucial problem, documents were obviously no longer valuable after a given period of time, and depending on various circumstances (political events, need for money, etc.), they were either destroyed, or more appropriately, reprocessed due to economic reasons.[12]

SURVEY

In what follows, the reader will find a census that aims at surveying quite exhaustively the collections that hold documents from the Mamluk period.[13] Two approaches to the subject may be employed: either to take into account the venue of the collections, or to consider the nature of the documents as described above. I chose the first because it gives a more unequivocal idea of the number of documents preserved and their location.

Islamic documents, generally speaking, whatever their nature may be, are to be found in two different forms: copies preserved in historical or literary sources,

---

[10]Al-Maqrīzī, *Al-Mawā'iẓ wa-al-I'tibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Būlāq, 1853), 2:225–26. See now Frédéric Bauden, "The Recovery of Mamlūk Chancery Documents in an Unsuspected Place," in *The Mamluks in Egyptian and Syrian Politics and Society,* ed. Michael Winter and Amalia Levanoni, The Medieval Mediterranean, no. 51 (Leiden, 2004), 74.

[11]See Bauden, "The Recovery of Mamlūk Chancery Documents," and below, pp. 56–57. Other examples may be found in the Geniza papers, as shown previously (see n. 9).

[12]Interestingly, it could be added that Islamic civilization has been described as the civilization of the book. No other civilization for the medieval period has produced such a vast quantity of works and manuscripts. Among those preserved, estimated at 3 million, how many of them come from the Abbasid, Fatimid, or Ayyubid periods, with the exception of Qurans? Here too, undoubtedly, political events entailed looting which caused destruction of material.

[13]For previous presentations of Muslim documents in general, see Claude Cahen, "Du Moyen Âge aux temps modernes," in *Les Arabes par leurs archives,* ed. Jacques Berque and Dominique Chevallier (Paris, 1976), 9–15; Humphreys, *Islamic History,* 40–49, 170–72, 217–21, 261–65. As for Egypt in particular, see Hans Robert Roemer, "Über Urkunden zur Geschichte Ägyptens und Persiens in islamischen Zeit," *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 107 (1957): 519–38; idem, "Documents et archives de l'Egypte islamique," *Mélanges de l'Institut dominicain d'études orientales du Caire* 5 (1958): 237–52. Regarding the Mamluk period, see Little, "The Use of Documents," 1–13.

and original documents held in different institutions in various countries, mostly in Europe, North America, and the Middle East. None of these categories are sufficient due to the limited number of documents, but placing them side by side and examining them does allow the raising of questions, and even the verification of their respective value. From this starting point, a more detailed investigation will be carried out, which will lead to broader conclusions.

SOURCES

The literary and historical sources from the Mamluk period are renowned to be, if not comprehensive, at least plentiful in comparison with other periods of Muslim history. It is one of the features that has attracted many of us to Mamluk studies. Critical editions of important sources are becoming more available, even if some gaps remain, as Li Guo noted in his state of the art article on historical sources.[14] It is a well-known fact that some of them have preserved in one form or another copies of official or private documents and it is easily understandable why these have been the source of numerous studies on treaties concluded with other Muslim rulers or Christian rulers. However, we must insist on the fact that historical and literary sources be used with the greatest caution. They raise numerous problems, particularly that of authenticity. The historian must always bear in mind that what he has in hand is only what the author wanted to transmit, adding to this the problems of the accuracy of the copy, and sometimes of falsification. When several authors quote a document from different sources, it is possible to establish the discrepancies between the versions,[15] and this calls once more for caution. Generally speaking, we must keep in mind that these copies are important for their content. As for diplomatics, it realizes little benefit from this kind of source because most of the authors systematically disregard the less interesting parts, in their eyes; yet elements such as preamble formulas, customary expressions of the various bureaux of the chancery, dates, names of persons, mottos, as well as paper sizes, may be crucial in terms of diplomatics.

OFFICIAL DOCUMENTS

Confronted with the apparent scarcity of archives from the Mamluk period, historians first settled for documents quoted in the narrative sources. Their works mainly dealt with the edition, translation, and analysis of the correspondence exchanged between the Mamluk sultans and their counterparts or others. The result is a quite detailed knowledge of the nature of the relations between the Mamluk sultanate

[15]A clear example of this is to be found in William M. Brinner, "Some Ayyūbid and Mamlūk Documents from Non-Archival Sources," *Israel Oriental Studies* 2 (1972): 117–43.

and other states and how this was expressed in diplomatic terms. The copies of these documents have been retrieved from sources the nature of which may vary greatly. They may be classified as follows:

I. Historical and Literary Works

Among the most widely-used sources of this type are the *Tashrīf al-Ayyām wa-al-ʻUṣūr fī Sīrat al-Malik al-Manṣūr* by Ibn ʻAbd al-Ẓāhir,[16] *Al-Faḍl al-Maʼthūr min Sīrat al-Sulṭān al-Malik al-Manṣūr* by Shāfiʻ ibn ʻAlī,[17] *Zubdat al-Fikrah* by Baybars al-Manṣūrī,[18] all three of them dealing with Qalāwūn′s reign; and finally Ibn al-Furāt′s *Tārīkh al-Duwal wa-al-Mulūk*[19] for the other periods. As we will see, documents are sometimes found in European archives in translation and this allows a comparison with the Arabic versions. The stage of inventory and study of these texts is well advanced and it can be said that no surprises are awaiting us, even if some sources are still available only in manuscript form. Among these studies, P. M. Holt′s are particularly noteworthy. These are devoted to the treaties concluded with Christian states,[20] and his pioneering book on those concluded

mainly with Crusader states has remained unsurpassed.[21] He translated them and made an historical and diplomatic commentary, comparing them with other sources, in particular Christian ones. The Muslim sources to which he traced these treaties are Ibn ʻAbd al-Ẓāhir, Ibn al-Furāt, and al-Qalqashandī. Beside Holt, other studies are useful, such as the one carried out by Daoulatli[22] on an exchange of letters between Qalāwūn and rulers of Ifrīqīyah on the basis of Ibn ʻAbd al-Ẓāhir's text. It is this same source which recently gave Reuven Amitai-Preiss the opportunity to examine the correspondence between the Mongol ruler Abagha and Baybars.[23] Despite the numerous articles published on the subject, some sources have been neglected, particularly the *Tārīkh Bayrūt* by Ṣāliḥ ibn Yaḥyá (fl. 1424–37). He was a member of a family of amirs in Lebanon (the Buhturids) and his text was available to scholars as early as 1898,[24] although a more accurate edition, by Francis Hours and Kamal Salibi, appeared in 1969.[25] This is a special case in the category of historical sources because the author reproduced archival documents of his family, such as nomination documents to the rank of amir. This is not

---

Michele Amari also studied a peace treaty preserved in Ibn ʻAbd al-Ẓāhir's *Tashrīf al-Ayyām* regarding the King of Aragon and the King of Sicily: Michele Amari, *Bibliotheca arabo-sicula ossia raccolta di testi arabici che toccano la geografia, la storia, le biografie e la bibliografia della Sicilia* (Lipsia, 1857), 342–52. See also Francesco Gabrieli, "Trattato di Qalawūn coi Templari di Tortosa," in *Storici Arabi delle Crociate,* ed. idem, Scrittori di storia, no. 6 (Turin, 1957), 305–12, 314–21.

Very early, de Sacy published a similar letter exchange between Baybars and Timur's son on the basis of the evidence found in Khalīl al-Ẓāhirī's *Zubdat Kashf al-Mamālik:* "Lettre du Sultan Mélic-alaschraf Barsébaï, à Mirza Schahrokh, fils de Timour," in *Chrestomathie arabe* (Paris, 1826; repr. Osnabrück, 1973), 2:71–87 and Arabic text, 11–17. Furthermore, documents regarding private affairs may also be found in this kind of source, as demonstrated by Ṣalāḥ al-Dīn al-Munajjid, "Marsūm mamlūkī šarīf bi-mukhālafat ʻaqīdat Ibn Taymīyah," *Majallat al-Majmaʻ al-ʻIlmī al-ʻArabī/Revue de l'Académie arabe de Damas* 33 (1958): 259–69 (document found in Ibn al-Dawādārī's *Al-Durar al-Fākhirah*).

[25]*Tārīkh Bayrūt: Akhbār al-Salaf min Dhurriyat Buḥtur ibn ʻAlī, Amīr al-Gharb bi-Bayrūt,* ed. Francis Hours and Kamal Salibi, Recherches publiées sous la direction de l'Institut de lettres orientales de Beyrouth, série 4: Histoire et sociologie du Proche-Orient, no. 35 (Beirut, 1969).

exceptional, but what makes it valuable is that in this particular case he indicated in great detail all the elements appearing on the documents, which were commonly disregarded by others, and if we now have a good knowledge of which motto was used by which sultan, it is largely thanks to his work.

Besides Egyptian sources, it must be kept in mind that other sources may be useful. Although copies of Mamluk correspondence are rarely found in the works of Andalusian historians, in one instance they are (al-Maqqarī, d. 1632).[26] Christian sources may also prove interesting and reliable in this respect as was demonstrated by Marius Canard,[27] who found a copy of a letter sent by al-Nāṣir Ḥasan to the Byzantine emperor John VI Cantacuzene (dated 1349), a document which gives valuable information on the fate of Christians in the Mamluk sultanate, events about which Mamluk chronicles remain silent. The letter was found in the chronicle written by the emperor himself at the end of his life, and although it is preserved only in its Greek translation, it undoubtedly reflects the Arabic original as Canard was able to prove by a comparison of the epithets reserved for the Byzantine emperors according to Muslim chancery manuals.

II. Chancery Encyclopedias and Manuals

Among all the sources, this kind of work is one of the most useful in tracing the evolution of diplomatics, particularly in the Egyptian context. Written by several authors at various periods, they offer the possibility to recreate the functioning of the Egyptian chancery over several centuries. The most famous of these manuals is unquestionably al-Qalqashandī's *Ṣubḥ al-Aʻshá fī Ṣināʻat al-Inshāʼ*. Available in a rather good edition with an index,[28] its value has been quickly recognized and it is no surprise if we find it frequently utilized in the studies published so far. Its major shortcoming lies in the fact that it is not practical to use, even with the indexes, and Björkman is to be commended for having given a clear account of its contents,[29] although he failed to supply the required diplomatic commentary. Since that time, several parts of the *Ṣubḥ al-Aʻshá* have been translated, the most recent

being Maria Pia Pedani´s book on the *dār al-ṣulḥ,*[30] where the section dealing with truces (sing. *hudnah*) is translated into Italian. The *Ṣubḥ* is renowned for the great number of documents it has preserved, and these have been the subject of various articles. In addition to Holt´s studies already mentioned, the articles of Canard on the relations with the Merinids in the fourteenth century and with the Byzantines[31] are important, and also those of Urbain Vermeulen concerning the correspondence exchanged between the Crusaders and the Mongols.[32] Unfortunately, most of these lack a diplomatic commentary.

Besides al-Qalqashandī, other works, some of which he used extensively, have been made available in critical editions. Ibn Faḍl Allāh al-ʻUmarī´s *Al-Taʻrīf bi-al-Muṣṭalaḥ al-Sharīf,*[33] Ibn Nāẓir al-Jaysh´s *Tathqīf al-Taʻrīf bi-al-Muṣṭalaḥ al-Sharīf,*[34] and al-Nuwayrī´s *Nihāyat al-Arab fī Funūn al-Adab* are now completely

published.[35] Other minor works may still prove useful for specific subjects, as is shown by Rudolf Veselý, who published a short treatise by the same Ibn Faḍl Allāh al-ʿUmarī: the *ʿUrf al-Taʿrīf,* one of the sources used by al-Qalqashandī, which was considered lost, and of which he discovered a unique copy in the Chester Beatty Library (no. 3849). He provided an edition of this notable work on official letters to which he added the text of another treatise ascribed to the same author and dealing with the same subject,[36] providing an essential supplement to the references available on this subject.

III. *Munshaʾāt*

Compared to the manuals which have a wider aim, these anthologies of models are more restricted. Their authors had a different aim, that is collecting various models of documents issued by the chancery, so that they could be used by uninspired clerks. Once again, caution is required for the use made of them. Few of them are available in published form, although manuscripts have been identified for a long time. A quick glance in catalogues of manuscripts arranged according to themes will inform students of the work that remains to be done. Among the most valuable, let us note the Paris Ms. 4439, entitled "Al-Maqṣid al-Rafīʿ."[37] Already described by Max van Berchem at the beginning of the last century,[38] its interest has diminished since most of its sources (al-Qalqashandī, Ibn Faḍl Allāh al-ʿUmarī, Ibn Nāẓir al-Jaysh) have been published. However, it remains important for the documents issued under the last sultans. Another manuscript, held by the same institution under shelfmark 4440, is also noteworthy.[39] Anonymous and with no title recorded, it is divided into two parts: one containing examples of letters written by high government officials, and another preserving samples of letters addressed by the Mamluk sultans to other Muslim rulers. The manuscript is undated, but the most recent document goes back to 1468. Despite its value, since it supplements previous sources for the correspondence exchanged with other Muslim powers, it has not been thoroughly studied. Colin studied five letters among which

one had been issued by Baybars,[40] while Darrāj published two letters exchanged with the Indian sultanate of Malwa[41] (one was issued by Qāytbāy's chancery).

Less known but nonetheless significant, the *Qahwat al-Inshā'* of Ibn Ḥijjah al-Ḥamawī (lived beginning fifteenth century) is preserved in several manuscripts. It deals with another kind of model (writs of investiture) and Veselý called our attention to its value in 1991.[42] As early as 1967, Rose di Meglio studied a copy held by the Naples library. She published one of these deeds dealing with the governorship of Tripoli under the rule of Khushqadam (866), confirming that in this case too the chancery rules as prescribed in manuals had been applied.[43]

Other texts of this kind are still waiting to be discovered and studied. Recently, Veselý published[44] new data about a Leiden manuscript whose title ("Zumrat al-Nāẓirīn wa-Nuzhat al-Nādirīn") reveals nothing about its contents. After having examined the whole manuscript, which contains more than 100 documents and letters all connected to the Qaramanid princes of Larende, he was able to demonstrate that these were original documents, not models, and that the volume was a copy of documents found in the Qaramanid archives by a professional clerk. As for the Mamluk period, 31 letters regarding international affairs (letters exchanged with Barqūq about Timur's threat) as well as private matters (e.g., demand for the return of a young kidnapped boy) complete our knowledge of the relations established between these two powers. It is to be hoped that Veselý will complete an edition of this important text in the near future.

Private Documents

As for private documents, Muslim scholars devoted various works to their composition. The most important ones for our purpose are those dealing with the judicial formularies *(shurūṭ),* whose main aim was to provide judges with models of legal documents so that their own could withstand scrutiny and legal challenges. Donald Little has shown, on several occasions, that a serious study of legal documents cannot be undertaken without the help of these works, which provide indispensable help in the deciphering of technical terms. The restriction put forward regarding documents found in historical sources and chancery manuals is confirmed for this kind of source: these manuals offer to the reader models where the scholar finds interesting information on the formularies used in a great variety of circumstances illuminating judicial and *a fortiori* social life, but no genuine documents.[45] Some of these valuable texts have been published, mainly for periods preceding the Mamluk sultanate. For this period, Mamlukists have had at their disposal, for a long time, al-Asyūṭī's treatise,[46] one of the most important in this genre. There is still new material which requires study and publication. To this end, Gabriela Linda Guellil published in 1985 a study of al-Ṭarsūsī's *Kitāb al-I'lām,* an important *shurūṭ* work for the judicial system of Damascus in the fourteenth century.[47]

Private documents may also be found in historical sources, as Carl Petry has shown.[48] He discovered an account of a divorce case mentioned in al-Ṣayrafī's *Inbā' al-Ḥaṣr bi-Abnā' al-'Aṣr*. In his capacity as deputy judge, al-Ṣayrafī used to record the proceedings of the court, and it is on these notes that he relied to report this case, giving quite a detailed account of it, and in particular the text of the petition. The value of this example lies mainly in the information it provides on the status of women in medieval Egypt and their rights in marriage. Another significant source of this type of data lies in the many collections of judicial

[45]On the discrepancies noted between these theoretical treatises and the surviving evidence, see Monika Gronke, "La Rédaction des actes privés dans le monde musulman médiéval: théorie et pratique," *Studia Islamica* 59 (1984): 159–74; Wael B. Hallaq, "Model *shurūṭ* Works and the Dialectic of Doctrine and Practice," *Islamic Law and Society* 2 (1995): 109–34.

decisions *(fatāwī),* very numerous for the period under consideration. They allow us to get a glimpse of various social strata in their disparate circumstances.[49]

DOCUMENTS

NON-MUSLIM COUNTRIES

I. Archival Collections

Dozens of documents from the Mamluk period are preserved in the archives of the contemporary Latin states (mainly Venice, Genoa, Pisa, Florence, Ragusa, and Barcelona).[50] This figure is however less than what one might expect in view of the close relations between some of these states over the centuries and even more so when one takes into account that European institutions kept well-organized archives. This is partly explained by the fact that Arabic documents, as well as others in foreign, exotic languages, were translated and their content transcribed into the official records *(Libri commemoriali, Libri iurium)*. Some of them, however, have survived despite this practice. As expected, these collections contain above all else documents regarding diplomacy, and they throw some light on the nature of the relations that two states, one being Muslim, could establish. Despite this, it is not surprising to discover documents of a private nature, such as those regarding European merchants in the Levant. But here again, these deliver more information on the conditions of *dhimmī*s in the Muslim country than on the country itself. A Mamlukist might therefore believe that their benefit is less than other documents, but he must keep in mind that thanks to them we know how the Mamluks treated citizens from the *Dār al-Ṣulḥ* or the *Dār al-Ḥarb*. Moreover, if these documents have been preserved in their original form, they permit us to see how these chancery or private documents issued for foreign non-Muslim countries looked and how the chancery operated.

The majority of these documents may be classified in two categories: one comprising original documents, and the other translations (into Latin, Italian, or Spanish) of Arabic documents. The historian of the Mediterranean world must be able to handle both types, because those of the second type turn out to be helpful,

---

[49]See for instance Aziz Suryal Atiya, "An Unpublished XIVth Century *Fatwā* on the Status of Foreigners in Mamlūk Egypt and Syria," in *Studien zur Geschichte und Kultur des Nahen und Fernen Ostens: Paul Kahle zum 60. Geburtstag,* ed. W. Heffening and W. Kirfel (Leiden, 1935), 55–68 (includes edition and translation of a judicial decision dated to 754 A.H. and found in British Library MS Or. 9509, fols. 1–4); Benjamin O'Keeffe, "Aḥmad ibn Taymiyya: *Mas'alat al-kanā'is* (The Question of the Churches)," *Islamochristiana* 22 (1996): 53–78.

[50]A general assessment of this kind of source was proposed in the following article, which was however too brief to be useful: Aḥmad Darrāj, "Les documents arabes sur l'Egypte islamique dans les archives européennes," in *Colloque international sur l'histoire du Caire/Al-Nadwah al-Duwalīyah li-Tārīkh al-Qāhirah, Cairo 27 March–5 April 1969,* ed. André Raymond et al. (Cairo, n.d.), 131.

above all when the translation is faithful to the original (rather than a paraphrase, as in most cases). Comparisons with other preserved documents of the same sort (either original or copies in manuals) afford us the opportunity to complete their study. Finally, the bulk of preserved archives regarding merchants and their business illuminates their trading practices in the Levant, and correspondingly commercial activities under Mamluk rule. The last example is eloquent: Georges Jehel's study of the Genoan trade in the eastern Mediterranean is based exclusively on such documents.[51]

Under the influence of Occidental diplomatics, the study of documents preserved in these countries, in particular Italy, began as early as the nineteenth century. The great Arabist de Sacy took an interest in these kinds of documents and published some of them.[52] However, it was Amari, above all, who should be considered the founder of the study of Arabic documents preserved in Europe, which were the basis of several of his works.[53] A summary work, always valuable, is that of L. de Mas Latrie, who gathered in a thick volume all the peace and commercial treaties concluded by Latin states with the Muslim countries of North Africa (Egypt included).[54] The majority of the documents he gathered had already been the subject of studies by other scholars, but it would be erroneous to believe that their work does not call for revision. Firstly, the diplomatic commentary is frequently defective or obsolete. On the other hand, for the period we are considering, reproductions are rarely provided. These remarks are based on personal experience, although others, like John Wansbrough, had already noticed it. Recently, I have been charged with the task to reexamine in the light of recent research documents

De Mas Latrie reproduced documents in their original language, when it was an Occidental one, and only the translation of the Arabic documents.

published by Amari.[55] These documents consist of two peace treaties concluded between the Banū Ghāniyah amirs of Majorca (one dated to 1181 and the other to 1188) and Genoa.[56] Along with another one issued in favor of Pisa,[57] these are rare witnesses, almost unique, of the existence and functioning of the Almoravid chancery in these islands which were to be conquered a couple of decades later by the Christians. This work allowed some corrections to Amari's readings, but more essentially the reinterpretation of the texts in the light of the latest developments in the field. Anxious to compare both documents with the only other surviving example of this chancery bureau (the document issued in favor of Pisa), I was soon disappointed to learn that the original had been destroyed during the World War II bombing of Naples in 1944, where the document had been sent for an exhibition. No facsimile or photograph is known for this document and this means that the unique third witness of the activity of Almoravid chancery practice in Majorca has definitely been lost.

Among the most important archives from the Mamluk period in European countries, the collection of Venice is undoubtedly the one that holds the most value for Egypt and Syria. Almost 20 commercial treaties were concluded and are preserved in the State Archives. Most of them are in Latin or Venetian, which is explained by the fact that original documents were commonly held by the Signoria in Alexandria while the translations were sent to Venice. The whole collection was published by Tafel and Thomas in the nineteenth century.[58] However, Wansbrough, who devoted his Ph.D. thesis to the commercial relations between the Italian states and Egypt in the Mamluk period,[59] discovered several Arabic documents from the Circassian period that he published in several articles (a letter

of Qāytbāy dated 1473 and a study of the embassy of Taghrībirdī in 1507).[60] More recently, Rossi studied Venetian documents regarding an embassy sent to the Mamluk sultan in 1490,[61] even if in this case they are less important for our field. But more documents are to be discovered. Thus, Benjamin Arbel has discovered, in a manuscript held by the Marciana library, a copy of an Italian translation of a letter written by the *dawādār*, who was in 1473 at the head of an expeditionary force in Northern Syria, directed to the Venetian authorities.[62] This document, although it has been preserved only in a translation, is important in that it bears witness to the fact that official correspondence was exchanged between functionaries other than rulers.

Moreover, some time ago, Maria Pia Pedani,[63] Professor at the University of Venice, who probably knows better than anyone else the Arabic and Turkish documents preserved at the State Archives as she worked there as an archivist for many years, brought to my attention the existence of 15 Arabic documents pertaining to the Mamluk period. A first examination reveals that we are dealing with documents of a private nature (lease contracts, purchase deeds, sworn declarations, etc.)[64] as well as official documents concerning the Venetian community in Alexandria. They owe their preservation to the fact that they were found in the archives of a former Venetian consul in the harbor city and were sent to Venice with the rest of his estate.

Documents are also held in Florence, Pisa, and Genoa. They were the subject of two books published by Amari in the nineteenth century, scarcely available for consultation these days.[65] The main critique to be made with regard to these studies concerns the fact that almost no reproduction of the documents is provided. Their reconsideration by modern scholars has revealed that part of the work must be revised in light of the most recent research. Wansbrough republished in 1971 a safe-conduct granted by Qānṣūh to the Republic of Florence in 1507,[66] adding to his edition and translation a complete study of *amān*s in Islam, and particularly those issued by the Mamluk chancery. He also discovered unpublished material in Arabic in Florence at the Biblioteca Mediceo-Laurenziana consisting of Mamluk treaties dated 1489[67] and 1497.[68]

These were the main Republic cities in Italy, but the less important Republic of Ragusa, competitor of Venice in the late Middle Ages, also had contacts with other Mediterranean powers and it is not surprising to find within the holdings of the State Archives of this city (now Dubrovnik) three Mamluk documents, all of which have been published.[69]

Closing this panorama of the main archives collections in Europe, a word must be said about the Archives of Castilla and Aragon (Barcelona). Mamluk documents preserved in this collection reveal the extent of the relations established between the Mamluk state and the West. These consist of nine treaties concluded with the King of Castilla and Aragon. Some of them were examined by Atiya for his study on the relations between Aragon and Egypt during the second and third

reigns of Muḥammad ibn Qalāwūn,[70] but not without mistakes in the dating and reading, as has been demonstrated.[71] Later, these documents were published extensively in a general catalogue of the archives collection.[72]

II. Library Collections

Besides these archival collections where the documents have been kept since their issue, there exist other small collections in Europe, particularly in libraries, where important collections of papyri are preserved.[73] The most important collection of Arabic papyri outside Egypt is the Erzherzog Rainer Sammlung at the National Library in Vienna. Here, 235 documents on paper have been discovered and studied by Werner Diem in three different catalogues according to their subject (business letters, private letters, and state letters).[74] A few of them are dated, but most are not and pose a problem since their identification as belonging to the Mamluk period must rely mainly on paleographical elements and philological

analysis. Diem has been criticized for his working method by Yūsuf Rāġib, as too hasty. Rāġib′s critiques[75] may be accepted to a certain extent, but there is no doubt that what is involved here is a settling of scores which goes beyond scientific work. Diem may be criticized for his classification (some documents that appear in a given volume are not really of this nature), his readings, and/or his translations,[76] but he must be commended for having published each time a volume of plates which illustrates all the documents, giving the reader the opportunity to verify his results. Hasty as he may have been, his work has the merit of putting at the disposal of scholars the majority of the Mamluk documents held in Vienna in a relatively short time.

The Cambridge University Library is known for its large collection of Geniza documents. Besides this, it also holds the Michaelides collection of papyri and papers. It was among these that Richards discovered a scroll acquired from Christie′s in 1971, the origin of which is unknown. The document is the product of a series of court procedures in Damascus with various acts stretching over a period of one hundred eighty years from 1366 to 1546. As Richards has shown in his study,[77] it deals essentially with a *waqf* in favor of the Yūnusīyah Sufi order in Damascus, the terms of which were confirmed during this long period. Later on, he published an article about a rare type of document issued by the army bureau[78] (called *murabba*ʻ: square decree) of which only nine examples were attested in the Ḥaram collection.

Undoubtedly, some documents, small in number, must have found their way into other library collections. Even the Cyril and Methodus Library in Sofia, which preserves several hundred Arabic and Turkish documents dating to the Ottoman period, owns a copy of a *daftar* regarding *waqf* properties in Beirut, stretching over a period of 250 years (1274–1544).[79] Ottoman copies of documents pertaining to the Mamluk period are as such significant and cannot be disregarded on the basis of chronology.

It was studied by Vera Mutafčieva, ″On the problem of landowning in Syria in the XIV–XVI c.,″ *Vizantijski vremennik* 26 (1965): 58–66.

III. Museum Collections

Museum collections undoubtedly hold Mamluk documents. However, they are seldom catalogued and known (Louvre, British Museum, etc.).[80] Recently, D. S. Richards learned of the existence of a scroll preserved at the Oriental Institute Museum of Chicago, which obtained it in 1929 from Bernhard Moritz.[81] His study has shown that it deals with Frankish commercial practice at Tripoli in 1513. It is quite a rare chancery document as it was addressed to a Muslim official. Another document, still unpublished (OIM 13789), was issued in the reign of Ṭūmān Bāy (dated to 12 Muḥarram 922/17 February 1516) and regards the trade of the Venetians in Alexandria and other ports.[82]

The University of Pennsylvania Museum is also worthy of mention as it holds four letters written by Mamluk officers. These are scattered in the middle of a collection of Arabic papyri catalogued by Levi della Vida.[83] The author provided in an appendix a reproduction of one of these letters, which served as the basis for an edition by Diem.[84] However, the remaining three still await study.

IV. Private Collections

Some documents find their way into private hands. To get a clear idea of these is almost impossible. If one surfaces, it is always by chance and depends on the collector′s good will. Most of the time, the collection has to be sold and bought by an official institution to get an exact accounting of its contents. One example of the first reality is illustrated by Denise Rémondon, who owned a Mamluk document. This was fortunately published by Cahen, who got a photograph from the owner before her death.[85] The document is interesting as it deals with a short news item of a type rarely reported by the chronicles regarding the murder of three persons

in the countryside of Egypt. An order is given to arrest the perpetrators and bring them to Cairo, but the accused prefer to pay blood money instead. Since the death of its owner it has been impossible to discover what has become of this document.

MUSLIM COUNTRIES

I. Non-Muslim Collections and Archives

A. Egypt

1. Geniza (Ben Ezra Synagogue, Cairo)

The word *geniza* designates in Hebrew a repository of discarded writings. It was a common feature among certain Jewish communities not to discard papers where the name of God was written. This explains why, for centuries, the Jewish community of Old Cairo gathered all the documents considered obsolete in a particular repository. These consist of religious manuscripts as well as private documents regarding merchants, although some official documents from the chancery were also recovered among them.[86] This huge trove was packed into a room (Geniza) during a period that stretches from the tenth to the fifteenth century (mainly to the thirteenth century). After this time, its existence was forgotten until 1890, when it was rediscovered. It gave an extraordinary impetus to Jewish studies in general, not only for Egypt, but also for all the Mediterranean area and even Asia (India). Almost half a million scraps of papers and manuscripts, sometimes almost complete, were retrieved from this room.[87] The majority are written in Hebrew or in Judaeo-Arabic. However, some 10,000 scraps of paper are in Arabic characters. Unfortunately for researchers (or fortunately, because who knows what would have happened to these documents otherwise?), most of them were bought by private collectors who gave them, or bequeathed them, to libraries in Europe and North America. Among these, two took the lion′s share: the Firkovitch collection (St. Petersburg), which is not relevant for our topic, and the Taylor-Schechter collection in Cambridge (Cambridge University Library).[88] This dispersal does not facilitate their consultation as well as the fact that, being mostly scraps of paper, the cataloguing work is still in progress. Be that as it may, study has begun and to date has thrown new light on the religious, economic, and social life of the

---

[86]For this last category, it remains questionable how they found their way into private hands, in this case Jewish. A convincing answer would be the reason invoked in the Introduction, pp. 17–18.

[87]Shlomo Dov Goitein, ″The Documents of the Cairo Geniza as a Source for Mediterranean Social History,″ *Journal of the American Oriental Society* 80 (1960): 91–100.

[88]For a good introduction to the Cambridge collection of Genizah papers, see now Stefan C. Reif, *A Jewish Archive from Old Cairo: The History of Cambridge University′s Genizah Collection* (Richmond, 2000), and idem, ″A Centennial Assessment of Genizah Studies,″ in *The Cambridge Genizah Collections: Their Contents and Significance*, ed. idem and Shulamit Reif, Cambridge University Library Genizah Series, no. 1 (Cambridge, 2002), 1–35.

medieval Jews in the Orient, and more particularly on the middle class which is rarely mentioned in the contemporary chronicles.[89] Some dated, or datable, documents go back to the Mamluk period, as has been demonstrated by S. D. Goitein in an article published in 1972, which has remained little known because it is in Hebrew.[90] Undoubtedly, Goitein is the scholar most familiar with these Geniza documents of a private nature, and his masterly study in several volumes is a prerequisite for anyone working on the Mediterranean societies in the Middle Ages (mainly eleventh–thirteenth centuries).[91] This work is essential reading, even for Mamlukists, as the author makes reference here and there to documents from this period.[92] A similar assessment can be made of Ashtor's book on the evolution of prices.[93] Unfortunately, most of the documents relevant for us are still awaiting publication and are not easily available for consultation. A list of these documents would be most welcome. Meanwhile, the researcher has at his disposal bibliographies

---

[89]Besides the essential study of S. D. Goitein (see below), the most recent results are to be found in David Marmer, "Patrilocal Residence and Jewish Court Documents in Medieval Cairo," in *Judaism and Islam: Boundaries, Communication and Interaction: Essays in Honor of William M. Brinner,* ed. Benjamin H. Hary et al., Brill's Series in Jewish Studies, no. 27 (Leiden, 2000), 67–82; Judith Olszowy-Schlanger, *Karaite Marriage Documents from the Cairo Geniza: Legal Tradition and Community Life in Mediaeval Egypt and Palestine,* Etudes sur le judaïsme médiéval, no. 20 (Leiden, 1998).

[90]Shlomo Dov Goitein, "Geniza Documents from the Mamluk Period" (in Hebrew; English summary), *Tarbiz* 41 (1972): 59–81. For a more recent, but general, assessment of the Arabic documents for all periods in the Geniza collection, see Geoffrey Khan, "Arabic Documents in the Cairo Genizah," *Bulletin of the Israeli Academic Center in Cairo* 21 (1997): 23–25.

[91]Shlomo Dov Goitein, *A Mediterranean Society: the Jewish Communities of the Arab World as Portrayed in the Documents of the Cairo Geniza* (Berkeley, 1967–93); Werner Diem and Hans-Peter Radenberg, *A Dictionary of the Arabic Material of S. D. Goitein's "A Mediterranean Society"* (Wiesbaden, 1994).

[92]See also Shlomo Dov Goitein, "The Exchange Rate of Gold and Silver Money in Fatimid and Ayyubid Times: A Preliminary Study of the Relevant Geniza Material," *Journal of the Economic and Social History of the Orient* 8 (1965): 1–46, where, despite the chronological span indicated in the title, nine documents from the Mamluk period are studied.

[93]Eliyahu Ashtor, *Histoire des prix et des salaires dans l'Orient médiéval,* Monnaie, prix, conjoncture, no. 8 (Paris, 1969). See also idem, *History of the Jews in Egypt and Syria under the Rule of the Mamluks,* vol. 3 (Jerusalem, 1970), which studies 74 documents that are undated, but that Ashtor was able to date to the Mamluk period due to exchange rates between dinars and dirhams; and more recently, Avraham L. Udovitch, "L'énigme d'Alexandrie: sa position au moyen âge d'après les documents de la Geniza du Caire," *Revue de l'Occident musulman et de la Méditerranée* 46 (1987): 71–79; idem, "Medieval Alexandria: Some Evidence from the Cairo Genizah Documents," in *Alexandria and Alexandrianism: Papers Delivered at a Symposium Organized by the J. Paul Getty Museum and the Getty Center for the History of Art and the Humanities and held at the Museum, April 22–25, 1993* (Malibu, 1996), 273–84.

published regularly for the Cambridge collections (the most recent was published by Reif in 1988 and covers the period stretching from 1896 to 1980),[94] albeit the main criticism I would make is that the material is arranged according to the shelfmark of the documents studied. This means that it allows one to know whether a document has been published or not, but it presupposes that one knows what one is searching for. It is thus like squaring the circle. Fortunately, in 1993, Geoffrey Khan published a book devoted to the study of 159 administrative and legal documents in Arabic in the Cambridge collection.[95] Among them, some are dated or datable to the Mamluk period (business and personal correspondence, wills, contracts of all kinds, bills of account, etc.), the most recent one being dated to 697/1298. The only criticism to be made, for which the author must surely not be blamed, rather the commercial editor, regards the small number (22) of documents reproduced, which does not facilitate further study by other scholars. Other documents from the Mamluk period are still awaiting publication.

2. Monastery of Saint Catherine (Mount Sinai)

This is an old story, too, in the sense that the discovery of the treasures it holds goes back to the nineteenth century. In fact, the first who paid attention to it was a traveller, Konstantin Tischendorf. During his travels in the East in 1844 and 1859, he visited the monastery, where he was shown a manuscript which was to revolutionize the field of Biblical studies, and was to be known later on as the *codex sinaiticus* (Greek translation of the Bible dated to the fourth century A.D.). Afterwards, a Prussian mission was sent in 1914 under the direction of Carl Schmidt and Bernhard Moritz. Photographs were taken not only of manuscripts, but also of documents in Arabic and Turkish. Unfortunately, despite the publication of the results of this mission,[96] all the photographs were destroyed in St. Petersburg during the First World War. The treasures of the monastery had to await an American mission in 1950 which resulted in the microfilming and measuring of all the manuscripts and documents which were presented to the staff by the librarian, some of them being discovered by A. S. Atiya. Atiya published a handlist

(this is not the only one[97]) in 1955 where 1,072 Arabic documents (from the Fatimid down to the Ottoman period) are mentioned, which makes it the most important collection of chancery documents for Islam.

However, there is a caveat, since these documents deal exclusively with the affairs of the monastery, meaning that they were issued for the benefit of non-Muslims by the successive chanceries. Nevertheless, this is a remarkable group of different kinds of official and private documents for the dynasties which succeeded each other in Egypt. Fortunately, in this case, the whole collection has been made widely available to researchers as various sets of the microfilms were distributed (Egypt, North America, and Europe). On the other hand, scholars drew attention to the importance of this collection very early, like Hans R. Roemer, who wrote at least four articles on this topic from 1957 to 1981.[98] He also succeeded in convincing some of his students to prepare Ph.D. theses on various aspects (Ayyubid and Ottoman documents in Arabic and Turkish[99]). What immediately attracted scholars were the decrees issued by the chancery bureau in answer to petitions sent by the monks to the sultan regarding problems they faced with the local authorities or populations. Their interest lies in the fact that some of the petitions have been preserved as the decree was sometimes written on the back of it. Decrees of the Mamluk period are particularly significant in this collection since they were issued

under the rule of no less than 20 sultans and cover quite comprehensively the whole period, with only a few small gaps. This gives us the opportunity to follow how a particular kind of document evolved over time through the different Egyptian dynasties. Thanks to this, the system of *maẓālim* in Egypt during the three periods (Fatimid, Ayyubid, and Mamluk) is better understood.[100] S. M. Stern's pioneering work on the study of this kind of document, within a broad context which took into account other periods and countries, especially for the diplomatic commentaries, has led the way.[101] The decrees from the Mamluk period were studied by Hans Ernst in his Ph.D. thesis, published in 1960. He edited and translated all the decrees of the given period he had knowledge about, basing himself on Atiya's catalogue (although, as already mentioned, others exist).[102] However, in some cases, Atiya misread the dates of documents, which means that some of them were not considered by Ernst. Qāsim al-Sāmarrā'ī published in 1990 an article on one of these neglected decrees which was in fact issued by the first Mamluk sultan, Aybak![103] Besides this, Ernst's book has been the object of criticism mainly for his meagre diplomatic commentary, due to the fact that he was unable to read most of the confirmation formulas of the various bureaux, and for the lack of reproductions (this last is less fair as Ernst had to publish his thesis at his own expense before presenting it). His work must be read in the light of Stern's review article,[104] where he carefully studied three of the petitions and gave a full diplomatic commentary. Since Stern's premature death, other scholars, like D.

[100]Jørgen S. Nielsen, *Secular Justice in an Islamic State: Maẓālim under the Baḥrī Mamlūks, 662/1264–789/1387*, Uitgaven van het Nederlands Historisch-Archaeologisch Instituut te İstanbul, no. 55 (Leiden, 1985).

[101]Samuel Miklos Stern, "Two Ayyūbid Decrees from Sinai," in *Documents from Islamic Chanceries,* ed. idem, Oriental Studies, no. 3 (Oxford, 1965), 9–38 + pl. I–XIX; idem, *Fāṭimid Decrees: Original Documents from the Fāṭimid Chancery* (London, 1964).

[102]Hans Ernst, *Die mamlukischen Sultansurkunden des Sinai-Klosters* (Wiesbaden, 1960). Doc. XXI was also published later by Muḥammad Muḥammad Amīn, "Marsūm al-Sulṭān Barqūq ilá Ruhbān Dayr Sānt Kātarīn bi-Sīnā': Dirāsah wa-Nashr wa-Taḥqīq," *Majallat Jāmi'at al-Qāhirah bi-al-Kharṭūm* 5 (1974): 83–113. A comparison with Ernst's reading of the decree shows that Amīn's work is not trustworthy, although it was published fourteen years later.

[103]Qāsim al-Sāmarrā'ī, "A Unique Mamluk Document of al-Malik al-Mu'izz Aybak al-Turkumānī al-Ṣāliḥī, the first Mamluk Sultan of Egypt, from the Monastery of Sinai," *Orientalia Lovaniensia Periodica* 21 (1990): 195–211 + pl. IV–VII. The document was dated by Atiya (*The Arabic Manuscripts of Mount Sinai,* no. 29) to 701 instead of [6]51. According to al-Sāmarrā'ī, no. 964 in Atiya's handlist (dated to 861 instead of 860) is also missing in Ernst's book.

[104]Samuel Miklos Stern, "Petitions from the Mamlūk Period (Notes on the Mamlūk Documents from Sinai)," *BSOAS* 29 (1966): 233–76; reprinted in idem, *Coins and Documents from the Medieval Middle East,* Collected Studies, no. 238 (London, 1986).

S. Richards and Geoffrey Khan, have followed in his footsteps and have shed new light on the system of petitions.[105]

This aspect of the royal chancery *(dīwān al-inshā')* has thus been revealed, even if our knowledge of it is based only on *dhimmī* petitions. The functioning of other bureaux, less prestigious than the chancery, remains less known as documents issued by them have rarely survived. This is the case, for instance, for the *dīwān al-jaysh,* the army bureau, which was responsible for the granting of fiefs *(iqṭā'āt)* and their control. But here, documents of the monastery can provide some relevant information. Richards studied a petition regarding a problem encountered by the monks with the beneficiary of a fief.[106] On the back of it, he found a report from the army bureau connected to the fief in question where previous attributions of it are mentioned. This significant document shows that the clerks updated their records regularly and that accurate records were available when required.

The Saint Catherine Monastery documents are probably the best studied so far. The significance of these studies for the history of the Mamluk sultanate is limited, as they essentially give us important historical and economic information on the monks (relations with the surrounding populations, the bedouins, and also their properties elsewhere, like Cairo). However, unlike the Geniza documents, they are an invaluable source of chancery practice and provide us with a unique opportunity to study the diplomatics of the Egyptian *dīwān al-inshā'*. Nonetheless, much remains to be done. Private documents have so far received little attention. Only recently, Richards has studied three of them (Muslim and Christian documents), two dating from the Mamluk period.[107] They are related to a *waqf* made in favor of

[106]Donald S. Richards, "A Mamlūk Petition and a Report from the *Dīwān al-Jaysh*," *BSOAS* 40 (1977): 1–14.

[107]Donald S. Richards, "Some Muslim and Christian Documents from Sinai Concerning Christian Property," in *Law, Christianity and Modernism in Islamic Society: Proceedings of the Eighteenth Congress of the* Union Européenne des Arabisants et Islamisants *Held at the Katholieke Universiteit Leuven (September 3–September 9, 1996),* ed. U. Vermeulen and J. M. F. Van Reeth, Orientalia Lovaniensia analecta, no. 86 (Leuven, 1998), 161–70. Similar documents regarding properties of the monastery located mainly in Cairo, but also in Alexandria, Gaza, and Siryāqūs, have been studied by the same scholar: "Documents from Sinai Concerning Mainly Cairene Property," *JESHO* 28 (1985): 225–93.

the monastery and they enabled him to demonstrate that the Christians followed the Muslim legal system for the redaction of documents of this nature.[108]

Beside the private documents, official ones, the decrees, as I said, were not all studied by Ernst and still await publication. More worrisome is the fact that probably not all the documents were microfilmed. This is evidenced by the fact that Atiya catalogued 17 decrees from the time of Qāytbāy although Schmidt and Moritz described more than 20 during the 1914 mission.[109] On the other hand, new discoveries have been made since the American mission of 1950. In 1976, cases were discovered by the librarian and their contents were placed in 47 boxes. The material consisted of papyri, parchment, and scraps of paper and was described as being mainly of a liturgical nature, but it remains unknown whether Arabic documents are among them.[110]

3. Karaite Community (Cairo)

The Karaite community in Cairo holds a small collection of Arabic documents preserved in their old synagogue, situated in the old Fatimid city (Shāri' Khurunfīsh). As early as 1904, these drew the attention of Gottheil, who published (1908) a Fatimid decree issued under the Caliph al-Ẓāhir (415/1024) and a Mamluk document (*ḥukm tanfīdhī* = order confirming previous documents) dated 860/1456, which deals with the permission to lawfully repair the synagogue which had been damaged in the course of recent riots.[111] In 1969, D. S. Richards had the opportunity to study the entire collection and he presented the results of his researches carried

---

[108]Furthermore, see for a study of two juridical documents (purchase deeds) from this collection 'Abd al-Laṭīf Ibrāhīm, "Min Wathā'iq Dayr Sānt Kātrīn: Thalāth Wathā'iq Fiqhīyah," *Bulletin of the Faculty of Arts (Cairo University)* 25 (1963): 95–133 + 4 pl.

[109]It is essential to mention here that Moritz sold a private collection of manuscripts and documents to various institutions around the world, and particularly to the University of Chicago. Surprisingly, some of these documents may originate from the Monastery of Saint Catherine and the question must be raised how he got them (see above, p. 34) Other documents were found in Istanbul, Cairo, and even in the Ägyptisches Museum in Berlin. See Stefan Heidemann, Christian Müller, and Yūsuf Rāġib, "Un décret d'al-Malik al-'Ādil en 571/1176 relatif aux moines du Mont Sinaï," *Annales islamologiques* 31 (1997): 81–107, particularly 81.

[110]Roemer, "The Sinai Documents," 381.

[111]Richard J. H. Gottheil, "Dhimmis and Moslems in Egypt," in *Old Testament and Semitic Studies in Memory of William Rainey Harper,* ed. Robert Francis Harper, Francis Brown, and George Foot Moore (Chicago, 1908), 2:353–414. He also published another document from the fifteenth century which was at that time in the possession of the Cattaoui Brothers: see idem, "A Document of the Fifteenth Century Concerning Two Synagogues of the Jews in Old Cairo," in *Jewish Quarterly Review* 18 (1927–28): 131–52.

out on the spot in an article published in 1972.[112] This detailed catalogue describes the contents of 27 documents running from the early eleventh century to the mid-nineteenth century, all of which focus on the Karaite community. With the exception of the Fatimid decree just mentioned, they are all of a private nature (deeds of conveyance, grants of ownership, deeds of *waqf,* sworn declarations, etc.). Among them, 18 pertain to the Mamluk period. Working on such collections often requires that the researcher, after having received permission to study the documents, must still bring with him all the necessary tools (camera, rule) so as to be in a position to study them properly. One should not be surprised that Richards could not measure all the documents nor photograph them completely. While he intended to return to several issues in connection with these documents, and to fully publish the texts with facsimiles, to my knowledge such a study has never appeared, so that they still await complete publication.[113]

4. Orthodox Coptic Patriarchate (Cairo)
This institution in Cairo holds several *waqf* documents concerned with Copts. They were catalogued by Muḥammad Muḥammad Amīn and will be dealt with together with the archives collections in Cairo.[114]

5. Centre of Oriental Studies/Franciscan Custody of the Holy Land (Cairo)
Our knowledge of the documents preserved in this center relies completely on articles published in 1956, where 69 items are described.[115] According to the first of these, only one document pertains to the Mamluk period (dated 914 A.H.).

B. Palestine
1. Franciscan Monastery of the Custody of the Holy Land (Jerusalem)
The Franciscan Monastery of the Custodia di Terra Santa (Mount Zion) in Jerusalem, like the Saint Catherine Monastery, is another important repository of documents,

[114]See below, pp. 44–45.
[115]E. Boers, ″Arabische Documenten in het Archief van het Studiecentrum in Muski,″ *Studia Orientalia* (Cairo) 1 (1956): 177–79. Martiniano Roncaglia, ″Catalogus documentorum Muski,″ *Studia Orientalia* (Cairo) 1 (1956): 165–75, presents the contents of a manuscript which consists of a catalog of Arabic and Turkish documents held by the Center (″Manoscritto degli Archivi del Centro di Studi Orientali del Muski″). They are all dated after the Mamluk period (the oldest is from 942 A.H.) and are thus irrelevant for our purposes.

although in this case too we are speaking of documents issued for Christians. The whole collection amounts to 2,644 documents dated from 1219 to 1902. Among them, 83 pertain to the Mamluk period, consisting mainly of decrees and legal documents (court records). As one would expect, the majority belong to the last period of the Mamluk sultanate (43 from 1427 to 1513). A study of 12 of them (dated 1309 to 1472) was published by Pourrière as early as 1898,[116] but it was not until 1922 that a general catalogue, by Eutimio Castellani, appeared.[117] This catalogue, published by the Franciscan monastery and printed in Jerusalem, was not put on the market and is as inaccessible as the documents themselves. In 1936, another Franciscan, Norberto Risciani, published a book[118] where he studied 28 Mamluk documents (21 decrees and 7 court records), all belonging to the Circassian period. This is a landmark study, due to the nature of the documents, the quality of the analysis, and the facsimiles provided, but is unfortunately as unobtainable as the preceding one. Produced under the same conditions, it even seems that the copies preserved in very fortunate libraries lack the title page, which does not facilitate research. Allusions to these studies are seldom found in the scientific literature, except from those who are fortunate enough to own a copy (Stern and Little, who made reference to some of the documents published by Risciani) or to have access to it in a library (Richards).[119]

[116]Leone Pourrière, ″Appendice I: Firmani e documenti arabi inediti estratti dall′Archivio della procura di T. S. in Gerusalemme colla traduzione italiana,″ in Girolamo Golubovich, *Serie cronologica dei reverendissimi superiori di Terra Santa: ossia dei provinciali custodi e presidenti della medesima già Commissari Apostolici dell′Oriente e sino al 1847 in officio di Gran Maestri del S. Militare Ordine del SS. Sepolcro attuali prelati mitrati, provinciali e custodi di T.S. guardiani del S. Monte Sion e del SS. Sepolcro del N.S.G.C. ecc.* (Jerusalem, 1898), 123–87 (12 documents dated from 1309 to 1472 published).

[117]Eutimio Castellani, *Catalogo dei Firmani ed altri documenti legali emanati in lingua araba e turca concernenti i Santuari, le proprietà, i diritti della Custodia di Terra Santa conservati nell′Archivio della stessa Custodia di Gerusalemme* (Jerusalem, 1922) (docs. 1–83 dated from 1247 to 1523).

[118]Norberto Risciani, *Documenti e firmani* (Jerusalem, 1936). See also *Custodia di Terra Santa, 1342–1942,* ed. Virgilio Corbo (Jerusalem, 1951), 82 (regarding doc. VI in Risciani = decree issued by Barqūq in 1396).

[119]The Library of the University of Leiden (the Netherlands) is particularly fortunate to possess two original copies of this work. Aḥmad Darrāj, *Wathā᾿iq Dayr Ṣahyūn bi-al-Quds al-Sharīf* (Cairo, 1968), is the only work so far in which the documents held by the Franciscan monastery are extensively studied on the basis of the above-mentioned catalogs. Its main focus is on Mamluk-Christian relations in Jerusalem during the period covered by these documents, with the help of other kinds of documents preserved in other places (historical sources, epigraphy).

2. Greek Orthodox Patriarchate (Jerusalem)
Jerusalem seems to be a good place for Mamlukists interested in documents. This is due to the numerous Christian institutions which were developed over time and which were eager to maintain good relations with the Muslim authorities by negotiating treaties. Until a few years ago, the Greek Orthodox Patriarchate was not particularly known for the collection it inherited from the Monastery of the Holy Cross at the beginning of the nineteenth century. Recently, Johannes Pahlitzsch was fortunate enough to gain access to it and discovered several documents, some of which date to the Mamluk period.[120] Among these is a missive addressed by Baybars to one of his amirs (665/1266), which sheds light on his relations with the Georgians.[121] The remaining items will be published progressively in chronological order. The arduous circumstances in which he had to study the documents is also symptomatic of the difficulties met with by researchers: lengthy negotiations with the Franciscan authorities, lack of adequate tools on the spot (camera, rule), etc.

II. Muslim Collections
A. Egypt
1. Archives Collections (Cairo)
What is meant by the Cairo archives are the National Archives of the Citadel[122] which, if my information is accurate, are now held by the Dār al-Wathā'iq, close to the Dār al-Kutub, the Ministry of *Waqf* (*Daftarkhānah*), the Dār al-Kutub wa-al-Wathā'iq al-Qawmīyah, and finally the Coptic Orthodox Patriarchate. Consisting of private legal documents (court records, deeds of *waqf,* contracts on subjects of all kinds [marriage, sale, partnership, lease, etc.]), they were estimated at 2,000 by a pioneering scholar in this field, 'Abd al-Laṭīf Ibrāhīm 'Alī. Dating mainly from the thirteenth century to the sixteenth century, their importance has

---

[120]For a provisory evaluation of these, see Johannes Pahlitzsch, "Georgians and Greeks in Jerusalem from the End of the 11th to the Early 14th Century," in *East and West in the Crusader States: Context, Contacts, Confrontations: Acta of the Congress Held at Hernen Castle in September 2000,* ed. Krijnie N. Ciggaar and Herman Teule, Orientalia Lovaniensia analecta, no. 125 (Leuven, 2003), 35–51.
[121]Delivered at the conference *The Mamluks in Egyptian and Syrian Politics and Society* organized by Tel Aviv and Haifa Universities in May 2000. The article will be published in a forthcoming issue of *Arabica.*
[122]Maḥkamah Shar'īyah, which became Maḥkamat al-Aḥwāl al-Shakhṣīyah wa-al-Wilāyah 'alá al-Nafs.

been quickly recognized,[123] and Daniel Crecelius and Carl Petry[124] have drawn the attention of Mamlukists to these documents *in tempore non suspecto,* before the publication of Muḥammad Muḥammad Amīn's catalogue.[125] This catalogue, published in 1981, gave for the first time a clear overview of all these documents held by the various institutions mentioned above. It inventories 888 numbers, but documents are more numerous as one number may contain more than one document. Among these, I would like to call attention to one in particular that is identified as a chancery document. This is in fact a *manshūr iqṭāʿī* (grant of a fief) dated to the reign of Qānṣūh.[126] Many studies have dealt with the feudal system of Egypt,[127] but they lacked original documents of this kind. The survival of this almost unique (see Unsuspected Places, below) witness provides the opportunity to compare its structure to the models in chancery manuals like al-Qalqashandī's, written a century before, and to study the evolution which it underwent.

Yet the most impressive, no doubt, of these documents are clearly the several endowment deeds that have survived. In a rather provocatively entitled article,[128] Carl Petry has emphasized the various issues that can be addressed thanks to the Cairene *waqf* documents. *Waqf* documents offer the greatest challenge for future study, and the recently announced foundation of a journal devoted entirely to this topic reinforces this impression.[129] The recently published article "Waḳf" in the *Encyclopaedia of Islam*[130] and the bibliography to be found in it relieve me from

giving a complete list of all the publications regarding Egyptian *waqf* documents, save for the latest of them. Undoubtedly, endowment deeds provide answers to a lot of questions and this has been understood by scholars. So far, the main studies carried out on this material have dealt with architectural,[131] social,[132] and economic issues.[133] I am quite confident that things will proceed smoothly and that the state of research in this matter is far from giving cause for concern. My main concern is that we need more text editions.[134] It is in this sense that I would like to mention an important project of the Institut Français d'Archéologie Orientale (IFAO) in Cairo. This project, under the direction of Mustafa Taher, Sylvie Denoix, and Michel Tuchscherer, aims at cataloguing all the microfilmed archival documents of Cairo (thus not only the endowment deeds, but also the sale contracts, court records, etc.), as well as those of the Saint Catherine Monastery, so as to provide researchers with a catalogue, to be published on the Internet or on CD-ROM, which would foster further research on this material, particularly editions and studies of technical terms (legal, and not just architectural). So far, since the work began in 1995, 88 reels out of 129 have been analyzed.[135]

2. Museum Collections

We have seen that European and American museums hold in their collections some Mamluk documents and we would expect the same for Muslim countries.

[131]Muḥammad Muḥammad Amīn and Laylá Ibrāhīm, *Al-Muṣṭalaḥāt al-Mi'mārīyah fī al-Wathā'iq al-Mamlūkīyah* (Cairo, 1990).

[134]This seems to have been understood only recently. See particularly *The Waqf Document of Sultan Al-Nāṣir Ḥasan b. Muḥammad b. Qalāwūn for his Complex in Al-Rumaila,* ed. Howayda N. al-Harithy, Bibliotheca Islamica, vol. 45 (Beirut and Berlin, 2001) (with Julien Loiseau's critique, however, in *Bulletin critique des Annales islamologiques* 19 (2003): 129–31); and Stephan Conermann and Suad Saghbini, "*Awlād al-Nās* as Founders of Pious Endowments: The *Waqfīyah* of Yaḥyá ibn Ṭūghān al-Ḥasanī of the Year 870/1465," *MSR* 6 (2002): 21–50.

[135]See Bernard Matheu, "Rapport d'activités," *Bulletin de l'Institut français d'archéologie orientale du Caire* 102 (2002): 536. The database created is already searchable and accessible to students and scholars visiting this institution.

a) Matḥaf al-Fann al-Islāmī (Cairo)
The museum seems to hold several documents from the Mamluk period, although it is not possible to obtain a complete census of the holdings at this time. I have had to rely on the published material to determine approximately what one can find in this museum. I found an article published in 1964 by Āmāl al-ʻUmarī where she wrote about a collection of 27 documents dealing with the purchase and sale of horses and fabrics. She only published those contracts related to the horses,[136] announcing her intention to study the remaining items (I may have missed some Arabic publications, but I have not found anything for the latter documents). There are 15 published contracts which date back to the very end of the Circassian period.

Besides these, the museum also has preserved an important group of marriage contracts written on cotton. Most of them are available to researchers through the study carried out by Suʻād Māhir,[137] a book hitherto rather neglected. It was generally thought that all the contracts had been published by her, but this was a false impression. Aḥmad ʻAbd al-Rāziq studied one of these regarding the marriage of two slaves in 1343.[138] These documents are important as far as social and economic history is concerned because they shed light on the nature of the dowry, and in this particular case on the conditions applied to slaves. Other contracts are still unpublished.

The above documents reached the museum under obscure circumstances, as is often the case. But material pertaining to the Islamic period unearthed during excavations is presented to the museum. This is the case with the material found on the site of Quṣayr al-Qadīm. Located on the Red Sea coast, approximately 100 km. from Qūṣ, this ancient seaport, in which activity is attested since the Ptolemaic and Roman periods, was still active in the Ayyubid period and began to lose its importance under the Mamluk sultans with the emerging port of ʻAydhāb as the main departure point for travel to Jedda. Digs were carried out by a team from the University of Chicago under the direction of Donald Whitcomb and Janet Johnson in 1978, 1980, and 1982. Besides the archeological discoveries, some 500 scraps

[138] Ahmad ʻAbd ar-Raziq, ″Un document concernant le mariage des esclaves au temps des Mamlūks,″ *JESHO* 13 (1970): 309–14. It is unknown whether the two marriage contracts concluded in Aswan and studied in the following article are part of this collection or of another, as no information is given by the author: ʻAbd Allāh Mukhliṣ, ″ʻAqdā Nikāḥ Kutibā fī Awāsiṭ al-Qarn al-Thāmin,″ *Majallat al-Majmaʻ al-ʻIlmī al-ʻArabī* 21 (1946): 419–26. Both were written on silk and are dated to 734/1334 and 740/1339 respectively.

of paper were found, most of them undated. Those which were dated go back to the beginning of the thirteenth century, thus clearly Ayyubid, while numismatic evidence has shown that the remaining fragments must be from the same period. These documents consist of business and private letters, all coming from a merchant's house, and are important in this respect and will no doubt throw light on trade in this remote region. Studied by Thayer in the context of her thesis,[139] they were not classified or catalogued prior to the works of Li Guo, who has devoted his attention to them.[140] Since these documents have now been clearly identified as Ayyubid they are not relevant to our subject. But since 1999, new expeditions by the University of Southampton under the direction of David Peacock and Lucy Blue have taken place. The site excavated is somewhat different. Among medieval rubbish and in the Muslim necropolis, they brought to light 300 paper fragments stretching from the thirteenth to the fifteenth century. They also consist of business and private letters, but the period is clearly Mamluk. On the other hand, the funerary context has revealed a hitherto unknown practice: Arabic inscriptions on ostrich eggs. The whole material discovered during these campaigns will now be studied in the framework of a project called "Reconstructing the Quseiri Arabic Documents."[141] Edition, translation, analysis, and interpretation of all the documents within their context will be done by a recently constituted team made up of Arabists and computer specialists. There is no doubt that this project will elicit important new data on the commercial and religious activities of this peripheral community of merchants.

b) Egyptian Museum (Cairo)

This renowned institution for Egyptology has received excavated material, mainly going back to antiquity. Nonetheless, useful discoveries for our field can be made

Li Guo has just published a detailed study of all the fragments unearthed by the Chicago team: *Commerce, Culture, and Community in a Red Sea Port in the Thirteenth Century: The Arabic Documents from Quseir,* Islamic History and Civilization, 52 (Leiden, 2004).

[141]See http://www.rqad.leeds.ac.uk. For a preliminary presentation of these documents, announcing a thorough study to come, see Anne Regourd, "Trade on the Red Sea during the Ayyubid and Mamluk Periods: The Quṣeir Paper Manuscript Collection 1999–2003, First Data," *Proceedings of the Seminar for Arabian Studies* 34 (2004): 277–92.

among its holdings. Two private letters on paper, discovered by specialists in Greek papyri, were brought to the attention of Diem, who studied them in an article published in 1993.[142] One of these letters, consisting of an invitation to a meal, has been dated by this scholar as being from the fourteenth century, and improves the knowledge we have of private letters in the period under consideration.

In an old study, Charles Bachatly brought to the attention of scholars the existence of a particular document held by the then Société Royale de Géographie (Cairo). This specimen concerns an Egyptian pilgrim who made an agreement with a camel dealer.[143]

B. Palestine

1. Islamic Museum (al-Ḥaram al-Sharīf, Jerusalem)

This is the latest significant and sizeable discovery that has been made in the last decades, and shows that we must be optimistic regarding future finds. The story is well known. Discovered, as often happens, more or less by accident, by the curator Amal Abul-Hajj, in 1974 and 1976, these 883 documents from the Mamluk period could have returned to their dusty cupboards if she had not enlisted the help of one of Donald Little′s students, Linda Northrup. This demonstrates once more the need for international cooperation in regard to archival research. Announced in 1979 in an international journal,[144] the discovery received a cool, or at least indifferent, reception in the scientific world, as Donald Little noticed in 1980.[145] But things were to change with the publication of his catalogue in 1984.[146] The documents had been measured and photographed during a mission and it is on this basis that he could prepare his work. The classification revealed that the majority of the documents were of a private nature and consisted of the papers of a judge, Ibn Ghānim, who died at the end of the fourteenth century, which makes

the discovery even more crucial. It had previously been maintained by Ottomanists that the Ottoman judges were the first to institute the principle of the *dīwān al-qāḍī* (*sijill* as they call it), on the basis that Ottoman *sijill*s alone had been preserved. Wael Hallaq has recently tackled this question[147] and demonstrated that the *dīwān al-qāḍī* truly existed in earlier Islamic times and that the qadi had to keep his records up to date. The Ḥaram documents provide another proof for this, showing that it is nonsensical to believe that an administration was not full of red tape only because the documents have not survived.[148]

This material has given scholars the opportunity to study various issues. This has been the case for some official documents, as some of them are clearly unique items: the square decrees (*murabbaʿāt*, documents issued by the army bureau), have been dealt with by Richards[149] and the petitions and their associated decrees have been addressed by Little.[150]

Yet the private documents obviously present the greatest challenges. They are of an incomparable richness for the history of Jerusalem and its environs during the given period, although it must be kept in mind that it is a short period of time. This richness is particularly noted for social and economic life. This is due to the fact that they include a great variety of deeds, the main category being represented by estate inventories (almost half of the collection) and court records. Thus, unsurprisingly, this kind of document has received first attention. An initial attempt to publish several of them in their context and to draw more general lines was provided by Kāmil Jamīl al-ʿAsalī in a three-volume work.[151] Later on, Huda Lutfi based her study[152] on them, trying to draw conclusions on a statistical basis for the social history of the city. Later, Little published a study devoted to three of these

inventories,[153] and more recently, Müller has published one of these to illustrate how the record of an estate was drawn up by the qadi′s court.[154] His study fits into the framework of a larger project dealing with the functioning of the judicial system in Jerusalem in the fourteenth century[155]

As far as the court records are concerned, Little gave an overview of their contents[156] and has lately published two of them.[157] In this study as well as in previous ones, he has followed the way paved by Stern for official documents, which consists of comparing the private documents to models as they are preserved in *shurūṭ* manuals, showing that there is a correspondence between the principles prescribed there and the documents.[158]

Attention has been paid to other categories of documents, although in a less systematic manner. Contracts were the subject of one of Little′s articles in 1981 devoted to the question of slaves.[159] Richards, in 1990,[160] has been able to define more precisely a particular kind of document called *qasāmah* (sworn declaration) and to study the evolution of the term from Fatimid times until the early Ottoman period, proving its persistence through the successive chanceries. More recently, he studied two pieces (a statement of account and an order) related to a *maktab* in charge of the education of children.[161] This unique document offers the possibility

of examining how a modest provincial foundation such as this one could exist. Legal depositions *(iqrār)* have also been the subject of detailed study.[162]

Account records may also reveal unexpected results as in the study of Richards[163] which shed new light on the Mamluk postal service, particularly in Jerusalem, some years before the collapse of the whole system after Tamerlane's invasion.

A less-expected aspect of these documents is the philological one. As is generally done for papyrological studies, Diem has recently done a thorough study of philological notes based on the various editions provided by Little, Richards, and others.[164]

Significant as they are in themselves, all these documents provide further revealing data on Mamluk society, specifically lower levels neglected by historical sources, in Jerusalem and its surroundings. These aspects have been emphasized in the various studies on individual documents as well as in broader perspectives.[165]

To conclude with this part, the Ḥaram documents have clearly received greater attention since the publication of the catalogue. Various issues have been approached and answered. Various types of legal documents have been systematically examined together with the functioning of the judicial system connected to them. Nevertheless, many documents still await editing, translation, and analysis.[166]
